endogamous sections, namely the Forest men (*Myasa* or *Vyadha*) and the Village men (*Uru*), of whom the former subsist on game and other produce of the woods, while the latter have settled down in villages and live by fishing and day labour. The tribe is subdivided into one hundred and one totemic clans or septs, many of which bear the names of plants and animals. Such clans are the Ants (*Chimalu*), the Bulls (*Eddulu*), the Buffaloes (*Yenumalu*), the Centipedes (*Jerrabotula*), the Sweet-scented Oleanders (*Genneru*), the Grasses (*Kusa*), the Dogs (*Kukkala*), the Paroquets (*Chilakala*), the Peacocks (*Nemili*), the Cows (*Avula*), the Lizards (*Udumala*), the Locusts (*Midathala*), the Gazelles (*Jinkala*), the Goats (*Mekala*), the Jackals (*Nakka*), the Sparrows (*Pichiga*), the Pigeons (*Guvvala*), Turmeric (*Pasupu*), and Sugar-cane (*Cheruku*). Other clans are named after other objects such as Butter-milk (*Majjiga*), Hand (*Hastham*), Ear (*Chevvula*), Beard (*Geddama*), Whiskers (*Misala*), Charcoal (*Boggula*), Bread (*Rottala*), Hut (*Gudisa*), Garden (*Tota*), Light (*Joti*), Fire (*Aggi*), Mat (*Chapa*), Drum (*Thappata*), etc. Members of the clans are said to shew the usual reverence for the totemic animals or plants after which they are named by not touching or using them in any way.<sup>1</sup>

The Kalingi, a caste of temple priests and cultivators in Ganjam and Vizagapatam, are divided into several exogamous clans (*gotras*), each comprising a number of families (*vamsas*), of which some are totemic, such as the Arudra or Lady Bird clan or family, and the Ravi-chettu or *Ficus religiosa* clan or family. Each section is said to worship its totem.<sup>2</sup>

The Kurni, a caste of weavers and cultivators in the Madras Presidency, comprise two main divisions, of which one is said to be subdivided into sixty-six totemic clans or septs (*gotras*). Amongst them are *arishina* (saffron), *hon* (gold), *jerige* (cummin), *kadalai* (Bengal-gram, *Cicer arietinum*), *menasu* (pepper), *nulla* (thorn), *sampige* (a flowering tree, *Michelia champaca*), and *yemme* (buffalo).<sup>3</sup>

The Vakkaliga of Madras are a caste of Canarese

<sup>1</sup> W. Francis, in *Census of India, and Tribes of Southern India*, i. 198 sq. 1901, vol. xv. Madras, Part I. (Madras, 1902) p. 146; Edgar Thurston, *Castes*

<sup>2</sup> W. Francis, *op. cit.* pp. 157 sq.

<sup>3</sup> W. Francis, *op. cit.* p. 165.

Totemic  
clans  
among the  
Vakkaliga.

cultivators, who originally belonged to Mysore and are now found mainly in Madura and Coimbatore. They are divided into exogamous and totemic clans (*kulas*), which include Chinnada (gold), Belli (silver), Khajjaya (a cake), Yemme (a buffalo), Alagi (a pot), and Jola (cholum). They employ Brahman priests and are beginning to burn their dead, but they eat animal food.<sup>1</sup>

The  
Kasubas of  
the Neil-  
gherries.

The Kasubas are a forest tribe of the beautiful Neilgherry Mountains in the Madras Presidency, but a branch of the tribe is also found in certain contiguous districts of the feudatory State of Mysore, particularly in Gundlupet, Chamarajanagur, and Yelandur. They work on the coffee plantations, which occupy clearings in the forest. Their language is a dialect of Tamil akin to the Irula language, with a strong Canarese element, and some of them claim connection with the Irulas. Kasubas and Irulas occasionally intermarry. But unlike the Irulas, the Todas, and other hill tribes of the Neilgherry Mountains, the Kasubas are divided into many totemic clans or septs, of which the following have been recorded :—

Totemic  
clans of the  
Kasubas.

1. The *Nagara-kula* or Cobra clan. The members of this clan do not kill the cobra de capello. Whenever they see the snake, they make obeisance to it and burn incense before it.

2. The *Belli-kula* or Silver clan. The women of this clan do not wear silver (*belli*) ornaments (known as *murups*) on the toes of either foot.

3. The *Bhumi-kula* or Earth clan. The members of this clan burn incense in honour of Earth on festival days, such as *Sivasathri*, a popular Hindoo festival.

Other Kasuba clans are the *Sambar-kula*, the *Or-kula*, the *Karataguru-kula*, and the *Uppiliguru-kula*; but the totems of these have not been ascertained. We may probably assume, though we are not expressly told, that all these clans are exogamous. A Kasuba man usually marries his first cousin, the daughter of his father's sister; indeed he is bound to marry her, unless she is older than himself. In that case he may marry either his first cousin, the

Cousin-  
marriages.

<sup>1</sup> W. Francis, in *Census of India, 1901*, vol. xv. Madras, Part I. (Madras, 1902) p. 182.

daughter of his mother's brother, or his niece, the daughter of his sister. The remarriage of widows is discountenanced, but not forbidden.<sup>1</sup>

The Baliyas are the chief Telugu trading caste and are scattered throughout all the districts of the Madras Presidency.<sup>2</sup> Like other Telugu castes of Southern India, the Baliyas are divided into exogamous clans or septs (*intiperu*), which bear, amongst others, the following names Tiger (*puli*), Lizard (*balli*), Cow (*avula*), Peacock (*nemili*), Buffalo (*yenumala*), Split Pulse (*pappu*), Cummin seeds (*jilakara*), coco-nut (*narikella*), Pepper (*miriyala*), Sandal Paste (*gandham*), Pearls (*mutyala*), Coral (*pagadala*), Silk house (*pattindla*), Musket (*tupakala*), Bell (*gantla*), and Rings (*ungarala*).<sup>3</sup>

The Baliyas, their exogamous clans.

The Bants are the chief land-owning and cultivating class in South Canara, and they are, with one exception, the most numerous caste of the district. Most of them profess the Hindoo religion, but about ten thousand of them are Jains.<sup>4</sup> They are divided into a number of exogamous clans or septs (*bali*), which are traced in the female line; that is, children belong to their mother's, not to their father's clan. Marriage between persons of the same clan (*bali*) "is considered incestuous, as falling within the prohibited degrees of consanguinity." Nor is the taboo limited to persons of the same clan; it extends to certain allied (*koodu*) clans as well. Moreover, a man is forbidden to marry his first cousin, the daughter of his father's brother, though she belongs to a different clan. The Bant clans take their names from animals, plants, and other objects, such for example as the tiger, scorpion, bandicoot rat, fowl, jack-tree (*Artocarpus integrifolia*), green peas, *Nux Vomica*, *Eleusine Coracana*, jaggery, ashes, and weaver.<sup>5</sup>

The Bants, their exogamous clans.

The Besthas are a Telugu caste, who gain their livelihood as hunters, fishers, farmers, bearers, and cooks.<sup>6</sup> Like

<sup>1</sup> C. Hayavadana Rao, "The Kasubas, a Forest Tribe of the Nilgiris," *Anthropos*, iv. (1909) pp. 178-181.

<sup>2</sup> *Census of India, 1901*, vol. xv. Madras, Part I., by W. Francis (Madras, 1902), p. 144.

<sup>4</sup> E. Thurston, *op. cit.* i. 149, 151.

<sup>5</sup> E. Thurston, *op. cit.* i. 163 sq.

<sup>6</sup> E. Thurston, *op. cit.* i. 218. As to the Besthas in Mysore, see further below, pp. 272 sq.

The Besthas, their exogamous clans. other Telugu castes, they are divided into exogamous septs (*intiperulu*) and *gotras*, and the members of some of the *gotras* observe certain taboos which appear to be totemic. Thus, members of the Jessamine (*malle*) *gotra* may not touch jessamine; and members of the Ippala *gotra* may not touch or use the *ippa* tree (*Bassia latifolia*).<sup>1</sup>

The Bhondari, their exogamous clans. The Bhondari are the barbers of the Oriya country, living in Ganjam.<sup>2</sup> They are divided into exogamous clans, of which some are named after the peacock (*mohiro*), the cobra, *Achyranthes aspera*, and light (*dhippo*). Members of the clan who take their name from the *Achyranthes aspera* may not touch the plant nor use its root as a tooth-brush. Members of the Light clan may not extinguish lights with their breath or in any other way, and they will not light lamps unless they are wearing silk or cloths that have been washed and dried after bathing.<sup>3</sup> A Bhondari ought not to marry his first cousin, the daughter either of his mother's brother or of his father's sister.<sup>4</sup>

The Bottadas, their exogamous clans. The Bottadas are a class of Uriya cultivators and labourers, speaking a dialect of Uriya. The caste is divided into three endogamous sections, of which one, the Bodo or genuine Bottadas, is subdivided into a number of exogamous clans or septs (*bamsa*), some of which are named the Tiger (*bhag*), the Cobra (*nag*), the Tortoise (*kochchimo*), the Lizard (*goyi*), the Monkey (*makado*), the Dog (*kukkuro*), and the Goat (*cheli*). A man may claim in marriage his first cousin, the daughter of his father's sister. A younger brother often marries the widow of his deceased elder brother.<sup>5</sup>

The Chenchus, their exogamous clans. The Chenchus are a Telugu-speaking jungle tribe, who inhabit the hills of the Kurnool and Nellore districts. Like other Telugu classes, the Chenchus are divided into exogamous clans or septs (*intiperu*), which bear amongst others such names as Horse (*gurram*), Goats (*mekala*), Plantain-tree (*arati*), Garden (*tota*), Houses (*indla*), Pit (*gundam*), and Sovereign (*savaram*, the gold coin).<sup>6</sup>

The Devangas are a caste of weavers who are found all

<sup>1</sup> E. Thurston, *Castes and Tribes of Southern India*, i. 221.

<sup>6</sup> E. Thurston, *op. cit.* ii. 26, 39.

over the Madras Presidency. Some of them speak Telugu and others Canarese.<sup>1</sup> The Telugu-speaking section of the caste is the more conservative of the two; they have not adopted the Brahmanical ceremonials to such an extent as their Canarese-speaking brethren. These Telugu-speaking Devangas are divided into a large number of exogamous clans or septs, of which the following are given as examples :—<sup>2</sup>

<i>Akasam</i> , sky.	<i>Vasthrala</i> , cloths.
<i>Anumala</i> , seeds of <i>Dolichos lablab</i> .	<i>Konda</i> , mountain.
<i>Boggula</i> , charcoal.	<i>Kaththi</i> , knife.
<i>Bandla</i> , rock or cart.	<i>Bandari</i> (treasurer).
<i>Chintakai</i> , tamarind fruit.	<i>Busan</i> , grain.
<i>Challa</i> , buttermilk.	<i>Dhondapu</i> , <i>Cephalandra indica</i> .
<i>Chapparam</i> , pandal or booth.	<i>Elugoti</i> , assembly.
<i>Dhoddi</i> , cattle-pen, or courtyard.	<i>Gattu</i> , bank or mound.
<i>Dhuggani</i> , money.	<i>Paidam</i> , money.
<i>Yerra</i> , red.	<i>Gonapala</i> , old plough.
<i>Katta</i> , a dam.	<i>Gosu</i> , pride.
<i>Kompala</i> , houses.	<i>Jigala</i> , pith.
<i>Konangi</i> , buffoon.	<i>Matam</i> , monastery.
<i>Katikala</i> , collyrium.	<i>Madira</i> , liquor or heap of earth.
<i>Kaththiri</i> , scissors,	<i>Medam</i> , fight.
<i>Moksham</i> , heaven.	<i>Masila</i> , dirt.
<i>Pasupala</i> , turmeric.	<i>Olikala</i> , funeral pyre and ashes.
<i>Pidakala</i> , dried cow-dung cakes.	<i>Prithvi</i> , earth.
<i>Pothula</i> , male.	<i>Peraka</i> , tile.
<i>Pachipowaku</i> , green tobacco.	<i>Punjala</i> , cock or male.
<i>Padavala</i> , boat.	<i>Pinjala</i> , cotton-cleaning.
<i>Pouzala</i> , a bird.	<i>Pichchiga</i> , sparrow.
<i>Pammi</i> , clay lamp.	<i>Sika</i> ( <i>Kudumi</i> : tuft of hair).
<i>Thalakoka</i> , female cloth.	<i>Sandala</i> , lanes.
<i>Thutla</i> , hole.	<i>Santha</i> , a fair.
<i>Utla</i> , ropes for hanging pots.	<i>Sajje</i> , <i>Setaria italica</i> .

The Devangas, their exogamous clans.

In this curiously miscellaneous list of names there are few plants and still fewer animals. The majority of Devangas are worshippers of Siva and wear the *lingam*. "In some parts of Ganjam the country folk keep a large number of Brahmani bulls. When one of these animals dies, very elaborate funeral ceremonies take place, and the dead beast is carried in procession by Devangas, and buried by them. As the Devangas are Lingayats, they have a special reverence

Sacred bulls.

<sup>1</sup> E. Thurston, *Castes and Tribes of Southern India*, ii. 154.

<sup>2</sup> E. Thurston, *op. cit.* ii. 160 sq.

for Basavanna, the sacred bull, and the burying of the Brahmani bull is regarded by them as a sacred and meritorious act.”<sup>1</sup> Thus like many other people in India the Devangas retain the old social organisation in exogamous clans after they have accepted the Hindoo religion.

The  
Dhombs,  
their clans.

The Dhombs are a Dravidian caste of weavers and menials, who are found in the hill tracts of Vizagapatam. They appear to be an offshoot of the Doms of Bengal.<sup>2</sup> Some of their clans or septs bear the names of Tiger (*bhag*), Bear (*balu*), Cobra (*nag*), Hanuman (the monkey god), Tortoise (*kochchipo*), Frog (*bengri*), Dog (*kukra*), Sun (*surya*), Fish (*matsya*), and Lizard (*jaikonda*). It is said that among the Dhombs “monkeys, frogs, and cobras are taboo, and also the *sunari* tree (*Ochna squarrosa*). The big lizard, cobras, frogs and the crabs which are found in the paddy fields and are usually eaten by jungle people, may not be eaten.”<sup>3</sup> A Dhomb may claim his first cousin, the daughter of his father’s sister, in marriage. A younger brother usually marries the widow of his deceased elder brother.<sup>4</sup>

Cousin-  
marriages.  
The  
Levirate.

The  
Ganigas,  
their clans  
and taboos.

The Ganigas or Gandlas are a Telugu caste whose chief occupation is oil-pressing. They are divided into clans or septs (*gotras*), some of which observe certain taboos. Thus, members of two clans may not cut the tree *Erythroxylon monogynum*; members of two others may not cut *Feronia elephantum*; and members of another may not cut *Nyctanthes arbor-tristis*. Members of certain other clans do not cultivate turmeric, sugar-cane, or a kind of millet (*Panicum miliare*). If a young man of this caste dies a bachelor, the corpse is married to an arka plant (*Calotropis gigantea*) and is adorned with a wreath of its flowers.<sup>5</sup>

The Gollas,  
their  
exogamous  
clans.

The Gollas are the great pastoral caste of the Telugu people. Their hereditary occupation is tending sheep and cattle and selling milk, but many of them have now acquired lands and are engaged in farming, and some are in Government service.<sup>6</sup> Like many other Telugu castes, the Gollas are divided into exogamous clans or septs (*intiperu*)

<sup>1</sup> E. Thurston, *Castes and Tribes of Southern India*, ii. 161 sq.

<sup>2</sup> E. Thurston, *op. cit.* ii. 173 sq.

<sup>3</sup> E. Thurston, *op. cit.* ii. 176 sq.

<sup>4</sup> E. Thurston, *op. cit.* ii. 177, 178.

<sup>5</sup> E. Thurston, *op. cit.* ii. 266, 267.

<sup>6</sup> E. Thurston, *op. cit.* ii. 284.

and *gotras*. Among the former (the *intiperu*) are the following :—<sup>1</sup>

<p><i>Agni</i>, fire.  <i>Avula</i>, cows.  <i>Chinthala</i>, tamarind.  <i>Chevvula</i>, ears.  <i>Gundala</i>, stones.  <i>Gurram</i>, horse.  <i>Gorrela</i>, sheep.  <i>Gorantla</i>, henna (<i>Lawsonia alba</i>).  <i>Kokala</i>, woman's cloth.</p>	<p><i>Katari</i>, dagger.  <i>Mugi</i>, dumb.  <i>Nakkala</i>, jackal.  <i>Saddikudu</i>, cold rice or food.  <i>Sevala</i>, service.  <i>Ullipoyala</i>, onions.  <i>Vankayala</i>, brinjal (<i>Solanum melongena</i>).</p>
--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Members of the Raghindala (*Ficus religiosa*) *gotra* in the Golla caste are not allowed to use the leaves of the sacred fig or peepul tree as plates for their food. Members of the Palavili *gotra* never construct *palavili* or small booths inside the house for the purpose of worship. Members of the Akshathayya *gotra* are said to avoid rice coloured with turmeric or other powder (*akshantalu*). Members of the Kommi, Jammi, and Mushti *gotras* avoid using the *kommi* tree, the *Prosopis spicigera*, and the *Strychnos Nux-vomica* respectively.<sup>2</sup> The Gollas have adopted the Hindoo religion, some of them worshipping Vishnu and others Siva.<sup>3</sup>

The Gudalas are a Telugu caste of basket-makers in Vizagapatam and Ganjam. Like so many other Telugu castes, the Gudalas are divided into exogamous clans or septs (*intiperulu*), amongst which are, for example, the Jackal (*nakka*) clan, the Cotton (*paththi*) clan, and the *Setaria italica* (*korra*) clan. Another clan takes its name from *ganti*, "a hole pierced in the lobe of the ear." In this caste the custom called *mēnarikam* is observed of marrying a first cousin, the daughter of the mother's brother.<sup>4</sup>

The Haddis are a low class of Oriyas, corresponding to the Telugu Malas and Madigas and to the Tamil Paraiyans.<sup>5</sup> They are divided into many exogamous clans or septs (*bamsam*). One of these takes its name from the elephant (*hathi*), and when members of this clan see the foot-prints of an elephant they take up some of the dust from the spot and mark their foreheads with it. They also draw the

<sup>1</sup> E. Thurston, *Castes and Tribes of Southern India*, ii. 290.

<sup>3</sup> E. Thurston, *op. cit.* ii. 292.

<sup>4</sup> E. Thurston, *op. cit.* ii. 300, 301.

<sup>5</sup> E. Thurston, *op. cit.* ii. 313.

Cousin-  
marriages.

figure of an elephant when they perform the memorial services for the dead (*śradh*) and other ceremonies.<sup>1</sup> Contrary to the usual Oriya custom, the Haddis permit the practice of *mēnarikam* or marriage with a first cousin, the daughter of a mother's brother.<sup>2</sup> The Haddis who inhabit the southern part of Ganjam are known as Ghasis, and among their exogamous clans or septs (*bamsam*) are the Cobra (*naga*) clan, the Horse (*asvo*) clan, the Tamarind (*chintala*) clan, and the Parched Rice (*liari*) clan.<sup>3</sup>

The  
Halepaik,  
their  
exogamous  
clans.

The Halepaik are Canarese toddy-drawers, who are found in the northern part of the South Canara district. They are Hindoos by religion, professing the worship of Vishnu, and are divided into exogamous clans or septs (*bali*), which descend in the female line. Among the names of the clans are Chendi (*Cerbera Odollum*), Honne (*Calophyllum inophyllum*), Tolar (wolf), and Devana (god).<sup>4</sup> It is recorded

Worship  
of the  
totems.

of the Halepaiks of the Canara district in the Bombay Presidency that "each exogamous section, known as a *bali* (literally a creeper), is named after some animal or tree, which is held sacred by the members of the same. This animal, tree, or flower, etc., seems to have been once considered the common ancestor of the members of the *bali*, and to the present day it is both worshipped by them, and held sacred in the sense that they will not injure it. Thus the members of the *nagbali*, named apparently after the *nagchampa* flower, will not wear this flower in their hair, as this would involve injury to the plant. The *Kadavebali* will not kill the sambhar (deer: *kadave*), from which they take their name." The Halepaiks of South Canara seem to attach no such importance to their clan names.<sup>5</sup>

The  
Janappans,  
their  
exogamous  
clans.

The Janappans or Saluppans were originally a section of the Baliyas, but they have developed into a distinct caste. Saluppan is the Tamil form of the name Janappan, which is supposed to be derived from *janapa*, "hemp," because members of the caste manufactured, and indeed still manufacture, gummy-bags of hemp fibre. Most of the caste is

<sup>1</sup> E. Thurston, *Castes and Tribes of Southern India*, ii. 314.

<sup>2</sup> E. Thurston, *op. cit.* ii. 315.

<sup>3</sup> E. Thurston, *op. cit.* ii. 319.

<sup>4</sup> E. Thurston, *op. cit.* ii. 320 *sqq.*

<sup>5</sup> E. Thurston, *op. cit.* ii. 321, quoting "Monograph, *Eth. Survey of Bombay*, 12, 1904." As to the Halepaiks of the Bombay Presidency, see also below, p. 276.

now engaged in trade or agriculture. They profess the Hindoo religion, some of them being followers of Vishnu and others of Siva. The caste usually speaks Telugu.<sup>1</sup> The Janappans of the Telugu country are divided into twenty-four clans or septs (*gotras*), some of which observe totemic taboos. Thus members of the Frog (*kappala*) clan will not injure frogs, because they say that once on a time when some of the family were fishing, they made a haul of big frogs instead of fish. Members of the Thonda clan abstain from using the fruit or leaves of the *thonda* plant (*Cephalandra indica*), though it is one of the commonest of native vegetables; and similarly members of the Mukkanda clan may not use the fruit of the *Momordica Charantia*. Again, members of the Kola clan are forbidden to eat the *kolasi* fish; and members of the Vamme clan refrain from eating the fish *bombadai*, because some of their ancestors found a number of these fish in the marriage pot in which they intended to fetch water.<sup>2</sup>

Totemic taboos.

The Jogis are a caste of Telugu mendicants, and like other Telugu castes they are divided into exogamous clans or septs (*intiperu*), of which the following are cited as examples:—<sup>3</sup>

The Jogis, their exogamous clans.

<i>Vagiti</i> , court-yard.	<i>Bindhollu</i> , brass water-pot.
<i>Uluvala</i> , horse-gram.	<i>Cheruku</i> , sugar-cane.
<i>Jalli</i> , tassels of palmyra leaves put round the necks of bulls.	<i>Chappadi</i> , insipid.
<i>Vavati</i> (relationship).	<i>Boda Dasiri</i> , bald-headed mendicant.
<i>Gundra</i> , round.	<i>Gudi</i> , temple.

In the Jogi marriage ceremony the maternal uncles of the young couple tie threads made of human hair to the wrists of the bride and bridegroom and carry the two on their shoulders into the marriage booth (*pandal*).<sup>4</sup>

Maternal uncles at marriage ceremony.

"The Kapus or Reddis are the largest caste in the Madras Presidency, numbering more than two millions, and are the great caste of cultivators, farmers, and squireens in the Telugu country. In the *Gazetteer* of Anantapur they are described as being the great land-holding body in the

The Kapus or Reddis.

<sup>1</sup> E. Thurston, *Castes and Tribes of Southern India*, ii. 447, 449 sq.

<sup>2</sup> E. Thurston, *op. cit.* ii. 494, 496.

<sup>3</sup> E. Thurston, *op. cit.* ii. 448 sq.

<sup>4</sup> E. Thurston, *op. cit.* ii. 497.

Telugu districts, who are held in much respect as substantial, steady-going yeomen, and next to the Brahmans are the leaders of Hindu Society. In the *Salem Manual* it is stated that 'the Reddis are provident. They spend their money on the land, but are not parsimonious. They are always well dressed, if they can afford it. The gold ornaments worn by the women or the men are of the finest kind of gold. Their houses are always neat and well built, and the Reddis give the idea of good substantial ryots. They live chiefly on *rāgi* (grain: *Eleusine Coracana*), and are a fine powerful race.'<sup>1</sup>

Exogamy and totemism among the Kapus or Reddis.

However, these fine, powerful, well-dressed men, these gentlemen farmers, these substantial steady-going yeomen, these leaders of society with their neat well-built houses and jewels of fine gold, nevertheless retain the primitive institutions of exogamy and to some extent of totemism. So false is the popular notion that these ancient customs are practised only by vagrant savages with no house over their heads and little or no clothing on their backs.

Exogamous clans of the Kapus or Reddis.

Among the exogamous clans or septs into which the Kapus or Reddis are divided may be mentioned the following :—<sup>2</sup>

*Avula*, cow.  
*Alla*, grain.  
*Bandi*, cart.  
*Barrelu*, buffaloes.  
*Dandu*, army.  
*Gorre*, sheep.  
*Gudise*, hut.  
*Guntaka*, harrow.  
*Kōdla*, fowl.

*Mékala*, goats.  
*Kānugala*, *Pongamia glabra*.  
*Mungāru*, woman's skirt.  
*Nāgali*, plough.  
*Tangēdu*, *Cassia auriculata*.  
*Udumala*, *Varanus bengalensis*.  
*Varige*, *Setaria italica*.  
*Yeddulu*, bulls.  
*Yēmuga*, elephant.

Totemic taboos observed by the Reddis.

Further at Conjeeveram, we are told, "some Panta Reddis have true totemistic septs, of which the following are examples :—

"*Magili* (*Pandanus fascicularis*). Women do not, like women of other castes, use the flower-bracts for the purpose of adorning themselves. A man has been known to refuse to purchase some bamboo mats, because they were tied with the fibre of this tree.

<sup>1</sup> E. Thurston, *Castes and Tribes of Southern India*, iii. 222 sq.

<sup>2</sup> E. Thurston, *op. cit.* iii. 230 sq.

"*Ippi (Bassia longifolia)*. The tree, and its products, must not be touched.

"*Mancham (cot)*. They avoid sleeping on cots.

"*Arigala (Paspalum scrobiculatum)*. The grain is not used as food.

"*Chintaginjalu (tamarind seeds)*. The seeds may not be touched, or used.

"*Puccha (citrullus vulgaris ; water melon)*. The fruit may not be eaten."<sup>1</sup>

The Komatis are the great trading caste of the Madras Presidency, and are found in almost all districts of it. They are also to be met with in Mysore, the Bombay Presidency, Berar, the Central Provinces, and as far north-west as Baroda.<sup>2</sup> Everywhere they speak Telugu and are devoted to their mother-tongue, despising the sister language Tamil. Indeed we are told that Telugu is the most mellifluous of all the Dravidian languages and sounds harmonious even in the lips of the vulgar and illiterate. It has been called the Italian of the East.<sup>3</sup>

The Komatis are a highly organised caste, being divided, and subdivided into many clans or septs which are strictly exogamous and totemic ; in other words, no man may marry a woman of the same clan as himself, and all the members of a clan revere their totem in the usual way, making no secret of their reverence. When the totem is a plant, they say that any person who breaks the totemic taboo will be punished by being born as an insect for seven generations. But it is possible to obtain exemption from the rule. A person who wishes to eat the forbidden fruit may do so by annually performing the funeral ceremonies of the totemic ancestor at Gaya, the great Hindoo place of pilgrimage, where obsequies for ancestors are celebrated.<sup>4</sup>

To enumerate all the totemic clans of the Komatis would, we are told, be tedious. The following is a select list of them with their totems :—<sup>5</sup>

<sup>1</sup> E. Thurston, *Castes and Tribes of Southern India*, iii. 231.

<sup>2</sup> E. Thurston, *op. cit.* iii. 306.

<sup>3</sup> E. Thurston, *op. cit.* iii. 307 sq., citing the opinion of Mr. Henry Morris.

<sup>4</sup> E. Thurston, *Castes and Tribes of*

*Southern India*, iii. 312, 314.

<sup>5</sup> E. Thurston, *op. cit.* 312 sq. ; compare W. Francis, in *Census of India, 1901*, vol. xv. *Madras*, Part i. (Madras, 1902) p. 162. As to the Komatis and their exogamous clans in Mysore, see below, pp. 273 sq.

## I. CLANS WITH PLANT TOTEMS

We have seen that a Komati can claim his first cousin, the daughter of his mother's brother, in marriage by virtue of the custom called *mēnarikam*.<sup>1</sup> Cousin marriages.

The Koravas or Yerukalas, as they are also called, are a tribe of vagabonds, thieves, quack doctors, and fortune-tellers, who are scattered throughout the length and breadth of India. When railways spread over the country, these gentry travelled on them with enthusiasm, partly for the purpose of robbing passengers in their sleep, partly in order to escape expeditiously from places which they had made too hot to hold them. They speak a gibberish compounded out of Tamil, Telugu, and Canarese.<sup>2</sup> The Koravas are divided into exogamous clans or septs, of which the following, given by Uppu Yerukalas, may be taken as examples :—<sup>3</sup> The Koravas or Yerukalas, and their exogamous clans.

<p><i>Dāsari</i>, Vaishnavite mendicant.  <i>Sukka</i>, star.  <i>Kampha</i>, bush of thorns.  <i>Avula</i>, cows.  <i>Thoka</i>, tail.  <i>Kānaga</i> (<i>Pongamia glabra</i>).  <i>Bandi</i>, cart.  <i>Gajjala</i>, small bell.</p>	<p><i>Mogili</i> (<i>Pandanus fascicularis</i>).  <i>Uyyāla</i>, swing.  <i>Rāgala</i>, <i>rāgi</i> grain.  <i>Pāla</i>, flowers.  <i>Katāri</i>, dagger.  <i>Ambojala</i>, lotus.  <i>Samudrāla</i>, sea.  <i>Venkatagiri</i>, a town.</p>
--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Amongst the Koravas or Yerukalas, we are informed, "totemism of some kind evidently exists, but it is rather odd that it has not always any apparent connection with the sept or house name. Thus, the totem of persons of the Konēti sept is horse-gram (*kollu* in Tamil), which they hold in veneration, and will not touch, eat, or use in any way. The totem of the Samudrāla sept is the conch shell, which likewise will not be used by those of the sept in any manner. It may be noted that persons of the Ramēswari sept will not eat tortoises, while those of the Konēti sept are in some manner obliged to do so on certain occasions"<sup>4</sup> Totemism among the Koravas or Yerukalas.

Among the Koravas or Yerukalas a custom prevails "by which the first two daughters of a family may be

Southern India," *Transactions of the Ethnological Society of London*, New Series, vii. (1869) pp. 186-188.

<sup>3</sup> E. Thurston, *op. cit.* iii. 452.

<sup>4</sup> E. Thurston, *op. cit.* iii. 453, quoting Mr. Fawcett.

Cousin marriages; right of a man to marry the daughter of his father's sister.

claimed by the maternal uncle as wives for his sons. The value of a wife is fixed at twenty pagodas. The maternal uncle's right to the first two daughters is valued at eight out of twenty pagodas, and is carried out thus:—If he urges his preferential claim, and marries his own sons to his nieces, he pays for each only twelve pagodas; and, similarly, if he, from not having sons, or any other cause, forego his claim, he receives eight pagodas of the twenty paid to the girl's parents by anybody else who may marry them."<sup>1</sup> Among the Yerukalas of the Vizagapatam district a man may marry either the daughter of his father's sister or the daughter of his mother's brother.<sup>2</sup>

The Kurubas.

The Kurumbas, a wild jungle tribe of the lower Neilgherry Hills.

The Kurubas are a caste of petty landowners, shepherds, weavers, cultivators, and stone-masons. Their complexion varies from very dark to light brown. It is a disputed question whether the civilised Kurubas of the plains and open country are related or not to the wild uncouth Kurumbas, a primitive folk, squat and broad-nosed, who dwell in the feverish recesses of the jungle and on the lower slopes of the Neilgherry Hills.<sup>3</sup> These Kurumbas are much dreaded as sorcerers by their neighbours, and their name is popularly derived from the Tamil word *kurumba*, "wickedness." However, the Badagas of the Neilgherry Hills employ them in the capacity of priests who officiate at the various seasons of the agricultural year. Every Badaga village has its own Kurumba priest. At the ploughing season he comes up from his sweltering valley to the breezy hills and ploughs the first furrow; at the sowing season he sows the first handful of grain; and at harvest he reaps the first sheaf with the sickle. For these services he receives his dues or a proportion of the ripe grain at the harvest home. And if the standing crop should be attacked by insects, which threaten to blight it, up comes the swarthy Kurumba priest again, and lowing like a calf is supposed thereby to kill the vermin.<sup>4</sup> Mr. Edgar Thurston was told

<sup>1</sup> J. Shortt, M.D., "On the Wild Tribes of Southern India," *Transactions of the Ethnological Society of London*, New Series, vii. (1869) pp. 187 sq.

<sup>2</sup> E. Thurston, *Castes and Tribes of Southern India*, iii. 484.

<sup>3</sup> E. Thurston, *op. cit.* iv. 134 sqq., 155 sqq.

<sup>4</sup> Captain Henry Harkness, *A Description of a Singular Aboriginal Race inhabiting the Summit of the Neilgherry Hills* (London, 1832), pp. 56 sq., 83

that among the Kurumbas of the Neilgherries it is the custom for several brothers to take one wife in common, and that they do not object to their women being open to others also. There is said to be no marriage rite. A man and woman will mate together and live as husband and wife.<sup>1</sup>

Whether related to the Kurumbas or not, the Kurubas are divided into clans (*gumpus*), and these again are subdivided into exogamous subclans or septs (*gotras*), which are said to be mostly of totemic origin and to retain their totemic character to this day. "The Arisana *gōtram* is particularly worthy of notice. The name means saffron (turmeric), and this was originally taboo; but, as this caused inconvenience, the *korra* grain has been substituted, although the old name of the sept was retained."<sup>2</sup> The names of sixty-six of these exogamous and totemic subclans or septs have been recorded. Among them are Elephant, Snake, Scorpion, Buffalo, Tortoise, Black Ant, Dog, Goat, Ebony, *Prosopis Spicigera*, *Basella rubra*, *Feronia elephantum*, *Hibiscus esculentus*, Cummin, Bengal Gram, Jessamine, Chrysanthemum, Millet (*Panicum miliare*), Pepper, Milk, Clarified Butter, Fire, Sun, Moon, Ocean, Silver, Gold, Bell-metal, Pearl, Conch-shell, Earth-salt, Flint, Ant-hill, Bangle, Ring, Gold Ring, Metal Toe-ring, Lace, Blanket, Cup, Drum, Pick-axe, Loom, Bamboo Tube, Cart, Booth, Hut, Devil, Headman, and Mohammadan.<sup>3</sup> Among the Kurubas of North Arcot the consent of the maternal uncle is necessary to a marriage, and at the wedding he leads the bride to the nuptial booth. A Kuruba may marry two sisters, either on the death of one of them, or if the first wife is barren or suffers from an incurable disease.<sup>4</sup>

Exogamous subclans of the Kurubas.

Marriage with two sisters.

The Madigas are the great leather-working caste of the Telugu country, corresponding to the Chakkiliyans of the Tamil area. They live in hamlets at a distance from the villages of other people, by whom they are greatly despised.

The Madigas, a Telugu caste of tanners.

*sq.*, 87, 109 note, 130 *sq.*; F. Metz, *The Tribes inhabiting the Neilgherry Hills*, Second Edition (Mangalore, 1864), pp. 115 *sqq.*; J. W. Brecks, *An Account of the Primitive Tribes and Monuments of the Nilagiras* (London, 1873), pp. 53 *sq.*

<sup>1</sup> E. Thurston, *Castes and Tribes of Southern India*, iv. 169.

<sup>2</sup> E. Thurston, *op. cit.* iv. 141, quoting Mr. H. A. Stuart.

<sup>3</sup> E. Thurston, *op. cit.* iv. 141 *sq.*

<sup>4</sup> E. Thurston, *op. cit.* iv. 147, quoting Mr. Stuart.

When an ox or a buffalo dies, the Madigas gather round it like vultures, strip off the skin and tan it, and batten on the loathsome carrion. Their habits are squalid in the extreme and the stench of their hamlets is revolting. They practise various forms of fervent but misguided piety, lying on beds of thorns, distending the mouth with a mass of mud as large as a cricket-ball, bugging up their eyes with the same stuff, and so forth, thereby rendering themselves perhaps well-pleasing to their gods but highly disgusting to all sensible and cleanly men. An unmarried, but not necessarily chaste, woman of the caste personifies the favourite goddess Matangi, whose name she bears and of whom she is supposed to be an incarnation. Drunk with toddy and enthusiasm, decked with leaves of the margosa tree (*Melia Azadirachta*), her face reddened with turmeric, this female incarnation of the deity dances frantically, abuses her adorers in foul language, and bespatters them with her spittle, which is believed to purge them from all uncleanness of body and soul. Even high-class Reddis, purse-proud Komatis, and pious Brahmans receive the filthy eructations of this tipsy maniac with joy and gratitude as outpourings of the divine spirit.<sup>1</sup> When an epidemic is raging, the Madigas behead a buffalo before the image of their village goddess Uramma, and a man carries the blood-reeking head in procession on his own head round the village, his neck swathed in a new cloth which has been soaked in the buffalo's blood. This is supposed to draw a cordon round the dwellings and to prevent the irruption of evil spirits. The villagers subscribe to defray the expense of the procession. If any man refuses to pay, the bloody head is not carried round his house, and the freethinker or niggard is left to the tender mercies of the devils. The office of bearer of the head is an ill-omened and dangerous one; for huge demons perch on the tops of tall trees ready to swoop down on him and carry him and his bleeding burden away. To guard against this catastrophe ropes are tied to his body and arms, and men hang on like grim death to the ends of them. Moreover, they slice lemons and throw the slices in the air, that the devils may

plague.

<sup>1</sup> E. Thurston, *Castes and Tribes of Southern India*, iv. 292 sq., 295-305, 308-310.

pounce on them instead of on the man. Yet with all these precautions, it is not easy to persuade a Madiga to walk about a plague-stricken village with a bloody buffalo's head on his own head and a bloody muffler round his neck.<sup>1</sup>

These things are not totemism ; but it is perhaps worth while to mention them by way of reminding the reader of a truth which he should constantly bear in mind. Even among tribes who practise it most scrupulously totemism does not exhaust or satisfy man's religious instincts. On the contrary it commonly plays only a subordinate part in the religion or superstition of a people. The fear of the dead, the awe of the great powers of nature, the reverence for the gods, may all contribute in various and often far greater proportions to the complex system of religious creed and ritual. It is the more needful to lay stress on this because in considering totemism by itself, as we do in this work, we are apt to see it out of perspective, in other words, to exaggerate its importance in comparison with that of many other factors which, because they are not mentioned, are apt to be forgotten.

The Madigas are divided into a number of endogamous sections, and these sections are in turn subdivided into many exogamous clans or septs, which take their names from the buffalo, cow, donkey, frog, scorpion, locust, tamarind, jessamine, *Eleusine Coracana*, silver, cowry shells, winnowing-basket, thread, knife, broom, and other objects.<sup>2</sup>

The Malas are another low caste of Southern India. They are described as the Pariahs of the Telugu country ; they may not enter the temples nor use the ordinary village wells. No love is lost between them and the Madigas. The two sets of ragamuffins squabble with each other about social precedence. The Madigas blackguard the Malas in foul language, and the Malas despise the Madigas for devouring carrion, and will not drink water out of the same well. The chief occupation of the Malas are weaving and working as farm labourers ; a few till their own lands.<sup>3</sup>

The  
Maravars  
or Mara-  
vans, a  
Dravidian  
tribe of  
lawless and  
predatory  
habits.

The Maravars or Maravans are a Dravidian tribe in the extreme south of India. They are found chiefly in Madura and Tinnevely, where they occupy the districts bordering on the coast from Cape Comorin northward. In the old days they were a fierce and turbulent race, famous for their military prowess. Their subjugation gave the British much trouble at the end of the eighteenth and the beginning of the nineteenth century. Once marauders, they are now to some extent peaceful tillers of the ground, but in the Tinnevely district they furnish nearly all the village police and likewise the thieves and robbers, often indeed combining the professions of thieving and catching thieves. But their natural bent is rather for committing than for detecting and punishing crime. In his double capacity of constable and robber, the Maravan is a power in the land. He levies blackmail according to a regular system, and in cattle-lifting he has no equal throughout the Presidency of Madras.<sup>2</sup> The Kodayamkottai Maravars or Maravans of Tinnevely are perhaps the purest bred of this race of freebooters and the least affected by modern civilisation. They are very dark, strong, well-built men, and being fearless, active, and energetic they are the terror of their peaceful neighbours. Though every man's hand is against them, they hold their own; even the British Government has failed to repress them.<sup>3</sup>

Exogamous  
clans  
of the  
Konda-  
yamkottai  
Maravans.

The Kodayamkottai Maravans are divided into six exogamous clans or branches, as they call them. Each clan or branch (*kothu*) is named after a plant, and is subdivided into three subclans (*khilais*). Descent is in the

<sup>3</sup> F. Fawcett, "The Kodayamkottai Maravars, a Dravidian Tribe of Tinnevely, Southern India," *Journal of the Anthropological Institute*, xxxiii. (1903) p. 58.

female line ; in other words, children belong to the clan of their mother, not to that of their father. While no man may marry a woman of his own clan, he is not free to marry a woman of any of the other clans without restriction. For example, a man of the Betel Vine clan may marry a woman of the Coco-nut clan, but not a woman of the Areca Nut clan nor of the Date clan. But the restrictions on marriage, beyond the rule of clan exogamy, are not fully known. The following is a list of the clans with their subclans :—<sup>1</sup>

Clans ( <i>Kothu</i> ).	English Equivalent.	Subclans ( <i>Khilai</i> ).
<i>Milaku</i>	pepper vine	{ <i>Viramudithanginan</i> <i>Sedhar</i> <i>Semanda</i>
<i>Vettile</i>	betel vine	{ <i>Agastyar</i> <i>Maruvidu</i> <i>Alakhiya Pandiyan</i>
<i>Thennang</i>	coco-nut	{ <i>Vaniyan</i> <i>Vettuvan</i> <i>Nataivendar</i>
<i>Komukham</i>	areca nut	{ <i>Kelnambhi</i> <i>Anbutran</i> <i>Gautaman</i>
<i>Ichang</i>	dates	{ <i>Sadachi</i> <i>Sangaran</i> <i>Pichipillai</i>
<i>Panang</i>	palmyra	{ <i>Akhili</i> <i>Lokhamurti</i> <i>Jambhuvar</i>

Among the Kondayamkottai Maravars first cousins, the children of two brothers, may not marry each other ; but first cousins, the children of a brother and a sister respectively, may and should marry each other. A man often marries a wife of his father's subclan (*khilai*) ; indeed there seems to be an idea that he ought to do so.<sup>2</sup> A widow may marry her deceased husband's elder brother, but not his younger

Cousin-marriages among the Maravars.

The Levirate.

brother. Property devolves through males. Daughters cannot inherit.<sup>1</sup>

Exogamous  
clans  
of the  
Medaras.

The Medaras are workers in bamboo in the Telugu, Canarese, Oriya, and Tamil countries. They are divided into *gotras* and exogamous clans or septs, some of which are named after animals, plants, and other objects, such as the tiger, snake, civet cat, Bengal gram, *Sesbania grandiflora*, *Butea frondosa*, ant hill, and a new pot. All the Medaras formerly worshipped Siva, but now many of them worship Vishnu also. Amongst them a man most commonly marries his first cousin, the daughter of his mother's brother; less frequently he marries his first cousin, the daughter of his father's sister. Marriage with a deceased wife's sister is regarded with special favour. A man often marries two living sisters, if one of them is diseased.<sup>2</sup>

Cousin-  
marriages.

Marriage  
with two  
sisters.

Exogamous  
clans of  
the Mogers.

The Mogers are Tulu-speaking fishermen of the South Canara district. Like other Tulu castes, they are divided into exogamous clans or septs (*balis*), some of which bear the names of *Āne* (elephant), *Bali* (a fish), *Dēva* (god), *Dyava* (tortoise), *Honne* (*Pterocarpus Marsupium*), *Shetti* (a fish), and *Tolana* (wolf).<sup>3</sup>

The Muka  
Doras and  
their  
exogamous  
clans.

The Muka Doras are a Telugu-speaking caste, who are traditionally regarded as one of the primitive hill tribes. Nowadays they are farmers and itinerant hucksters, and may be seen travelling about the country with pack bullocks at the time of the rice harvest. They are divided into two sections, one of which worships the sun and the other the cobra. Each section is further subdivided into exogamous clans or septs (*intipērulu*), the names of which, so far as they are recorded, are taken from trees or plants, namely, the *vemu* or *nim* tree (*Melia Azadirachta*), *chikkudi* (*Dolichos Lablab*), *velanga* (*Feronia elephantum*), and *kākara* (*Momordica Charantia*). A man ought to marry his first cousin, the daughter of his mother's brother; and that uncle, the father of the bride, officiates at the wedding.<sup>4</sup>

Cousin-  
marriages.

The Mutrachas are a low Telugu caste, who are most

<sup>1</sup> F. Fawcett, in *Journal of the Anthropological Institute*, xxxiii. (1903) 65.

<sup>3</sup> E. Thurston, *op. cit.* v. 65, 69.

<sup>4</sup> E. Thurston, *op. cit.* v. 103 sq.

numerous in the Kistna, Nellore, Cuddapah, and North Arcot districts. They engage in various occupations as hunters, fishers, palanquin bearers, and village watchmen. They are divided into exogamous clans or septs (*intipērula*), which are named after the cow, the tiger, the jackal, doves, the fly, the *Ficus bengalensis*, a house, a garden, a swing, a dagger, an iron measure for grain, a watchman, and so forth.<sup>1</sup>

The Mutrachas and their exogamous clans.

The Padma Sale are a Telugu-speaking caste of weavers, who are scattered all over the Madras Presidency. Like other Telugu castes they are divided into exogamous clans or septs (*intipērus*), some of which take their names from the gazelle, the horse, the scorpion, the crane, the mango, the indigo plant, tamarind seeds, *Lawsonia alba*, *Cassia auriculata*, *Acacia arabica*, cotton, ant-hill, beard, ditch, pots, and so on.<sup>2</sup> They profess the religion of Vishnu, but some of them worship Siva. The deity of the caste is Bhāvana Rishi, to whom, in some places, a special temple is dedicated. Every year a festival is held in honour of this divinity, and during its continuance the god and goddess are represented by two decorated pots placed on the model of a tiger, to which on the last day of the festival great quantities of rice and vegetables are offered. Members of the caste revere tigers and believe that the beasts will not molest them.<sup>3</sup>

The Padma Sale and their exogamous clans.

Worship of the tiger.

### § 3. *Exogamy and the Classificatory System among the Todas*

The Todas are a small tribe, now less than a thousand in number, who inhabit the lofty and isolated tableland of the Neilgherry Hills. They are a purely pastoral people devoting themselves to the care of their herds of buffaloes and despising agriculture and nearly all manual labour as beneath their dignity. Their origin and affinities are unknown; little more than vague conjecture has been advanced to connect them with any other race of Southern India. They are a tall, well-built, athletic people, with a

<sup>1</sup> E. Thurston, *Castes and Tribes of Southern India*, v. 127 sq., 130.

<sup>3</sup> E. Thurston, *op. cit.* v. 448, 449.

<sup>2</sup> E. Thurston, *op. cit.* v. 448, 451.

rich brown complexion, a profusion of jet black hair, a large, full, speaking eye, a Roman nose, and fine teeth. The men are strong and very agile, with hairy bodies and thick beards. Their countenances are open and expressive; their bearing bold and free; their manners grave and dignified; their disposition very cheerful and friendly. In intelligence they are said to be not inferior to any average body of educated Europeans. In temperament they are most pacific, never engaging in warfare and not even possessing weapons, except bows and arrows and clubs, which they use only for purposes of ceremony. Yet they are a proud race and hold their heads high above all their neighbours.<sup>1</sup> The country which they inhabit has by its isolation sheltered them from the inroads of more turbulent and warlike peoples and has allowed them to lead their quiet dream-like lives in all the silence and rural simplicity of an Indian Arcadia. For the tableland which is their home stands six or seven thousand feet above the sea and falls away abruptly or even precipitously on every side to the hot plains beneath. Its steep sides, where they approach the lowlands, are clothed with dense, almost impenetrable jungle, a hotbed of fever, in which the traveller sleeps at his peril. Above this pestilential belt, still ascending, he comes to grassy slopes and forests like those of temperate climates, and when he has reached the summit he finds himself in a cool breezy upland, a land of green rolling downs and rounded hills, the turf gay with wild flowers and interspersed with rich woods, deep in ferns and moss, where the crimson splendour of the rhododendron vies with the snowy purity of the white camelia, while the woodland glades and lonely green valleys are gladdened by purling brooks, their banks mantled thick with dog-roses and jessamine. After meandering through these beautiful glens the streams either lose themselves in sedgy morasses in the hollows of the hills, or finding their way to the brink of the tableland they tumble over the edge in roaring cataracts and clouds of glittering spray to swell

The land of  
the Todas.

<sup>1</sup> Captain Henry Harkness, *A Description of a Singular Aboriginal Race inhabiting the Summit of the Neilgherry Hills* (London, 1832), pp. 6 sqq., 12 sqq., 16 sqq.; Lieut.-Colonel

W. E. Marshall, *Travels amongst the Todas* (London, 1873), pp. 45, 58; W. H. R. Rivers, *The Todas* (London, 1906), pp. 18 sqq., 586, 693 sqq.

the rivers that sweep round the base of the mountains thousands of feet below. But in all this lovely land it is the prospect from the sharp edge of the tableland which travellers dwell upon with the most rapturous delight. The scene is perhaps most impressive early in the day, when the white sea of morning clouds at the feet of the spectator gradually opens up and rolls away like a curtain with the growing heat of the sun, revealing in its gaps now a vast crimson plain veined with dark lines of wood, now a long rocky ridge gleaming like fire in the sunlight, till a purple cloud-shadow blots it out and a fresh line of crags and ravines starts into view beyond. Jagged peaks hung with woods frame the nearer landscape and in the distance faint blue mountains melt like dreams into the azure of the sky. Under the shifting lights and shadows of the morning sun struggling with mist and cloud the scene is a phantasmagoria, a perfect dissolving view, all the colours glowing with gem-like radiance in the intense tropical sunshine and the keen thin mountain air.<sup>1</sup>

Prospect from the edge of the tableland.

In this happy and peaceful land, remote from the turbulence of the busy world, enjoying an equable, temperate, and highly salubrious climate within a few degrees of the equator, the Todas live in little villages dotted about the grassy hills and valleys where their herds of buffaloes crop the herbage. Generally a village nestles in a beautiful wooded hollow near a running stream. It is composed of a few huts surrounded by a wall with two or three narrow openings in it wide enough to admit a man but not a buffalo. The huts are of a peculiar construction. Imagine a great barrel split lengthwise and half of it set lengthwise with the cut edges resting on the ground, and you will get a fair idea of a Toda hut. The half-barrel forms the rounded thatched roof and long rounded sides of the dwelling, and juts for some feet, like the eaves of our houses, beyond the short upright wall that closes the end of the barrel in which is the door. Near the village is commonly a dairy with a

The villages of the Todas.

pen for the buffaloes at night and a smaller pen for the calves.<sup>1</sup>

The daily life of the Todas.

The sacred buffaloes, sacred dairies, and sacred dairymen.

Rules of life observed by a sacred dairyman.

The Toda religion of the dairy.

The daily life of the Toda men is spent chiefly in tending the buffaloes and in doing the work of the dairy. The milking of the cows and the churning of the butter fall mainly to the younger men and boys, though the elder men also bear a hand in these honourable labours. Women are entirely excluded from the work of the dairy; they may neither milk the cows nor churn the butter. Besides the common buffaloes there are sacred buffaloes with their own sacred dairies, where the sacred milk is churned by sacred dairymen. These hallowed dairies are the temples and the holy dairymen are the priests, almost the gods, of the simple pastoral folk. The dairyman leads a dedicated life aloof from the vulgar herd. His walk and conversation are regulated by stringent rules. If he is married he must leave his wife and not go near her or visit his home during the term of his incumbency, however many years it may last. No person may so much as touch him without reducing his holiness to the level of a common man. He may not cross a river by a bridge but must wade through the water at the ford, and only certain fords may be used by him. If a death occurs in the clan he may not attend the funeral unless he resigns his sacred office. However, there are different degrees of sanctity among the sacred dairymen. Some are diviner than others and have to submit in virtue of their superior divinity to a severer code of burdensome restrictions. In short, the greater part of the religious ritual of the Todas turns upon what seem to us the commonplace operations of milking cows and churning butter. These are the things which absorb most of the life and thoughts of this bucolic folk. To their simple minds the most sacred things in the wide world are the bells which they hang upon the necks of their buffaloes. These priceless treasures they guard with religious care in the holy dairies and daily feed them with curds and milk.<sup>2</sup>

The Todas have the institution of exogamy without the institution of totemism. The whole tribe is divided into two endogamous groups, the Tartharol and the Teivaliol. Regular marriage is not allowed between these groups, though irregular unions are permitted: a Tarthar man must marry a Tarthar woman, and a Teivali man a Teivali woman. Each of these primary divisions is subdivided into a number of exogamous clans; no man or woman may marry a woman of his or her own clan, but must marry into another clan. But while marriage is prohibited between members of the same clan, it would seem that sexual intercourse is not prohibited and indeed commonly takes place between them. In a certain religious ceremony preliminary to the entrance of a dairyman of the highest class into his sacred office a special part has to be taken by a woman who possesses the qualification of never having had carnal intercourse with a man of her own clan, and it is said to be far from easy to find such a woman.<sup>1</sup> Descent is reckoned in the male line; in other words, children belong to the clan of their father, not to the clan of their mother. The clan system is territorial, not totemic; each clan owns a number of villages and takes its name from the chief of them. Generally the villages belonging to a clan are situated in the same part of the hills, but a clan often possesses outlying villages at a considerable distance from the chief group. These villages are not all occupied at the same time. The people move about from one to another as the seasons change or the pastures in the neighbourhood begin to fail.<sup>2</sup> A man's proper wife, the

Cousin-  
marriages  
among the  
Todas.

woman whom he ought to marry, is his first cousin, the daughter of his mother's brother or of his father's sister. But he is forbidden to marry his other first cousins, the daughters of his father's brothers or of his mother's sisters. These latter cousins he includes under the general term *püliol*, which he applies to all the relatives with whom by the custom of the tribe he is prohibited from contracting marriage.<sup>1</sup>

Polyandry  
among the  
Todas ;  
the poly-  
androus  
husbands  
are  
generally  
own  
brothers.

The Todas have a completely organised and definite system of polyandry, and in the vast majority of polyandrous marriages the husbands are own brothers. Indeed, when a woman marries, it is understood that she becomes the wife of his brothers at the same time. If the husband is a boy and his wife a girl, any brother born after the marriage will in like manner be deemed to share in his older brother's marital rights. When the joint husbands are not own brothers, they may either live with the wife in one family, or they may dwell in different villages. In the latter case the usual custom is for the wife to reside with each husband in turn for a month ; but there is no hard and fast rule in the matter. When the joint husbands are own brothers they live together in amity ; in such a family quarrels are said to be unknown. The Todas scout as ridiculous the idea that there should ever be disputes or jealousies between the brother-husbands. When a child is born in a family of this sort, all the brothers are equally regarded as its fathers ; though if a man be asked the name of his father, he will generally mention one man of the group, probably the most prominent or important of them. But if they should be all dead but one, he will always call that one his father.<sup>2</sup> When the joint husbands are not brothers, they arrange among themselves who is to be the putative father of each child as it is born,<sup>3</sup> and the chosen one accepts the responsibility by performing a certain ceremony called *pursütpimi*, "bow (and arrow) we touch," because it consists in the husband formally presenting his wife with a little imitation bow and arrow. The ceremony takes place about the seventh month of the

Ceremony

<sup>3</sup> W. H. R. Rivers, *op. cit.* p. 517.

woman's pregnancy and begins on the evening before the day of the new moon. Husband and wife repair to a wood, where he cuts a niche in a tree and places a lighted lamp in the niche. The two then search the wood till they find the wood called *puv* (*Sophora glauca*) and the grass called *nark* (*Andropogon schoenanthus*). A bow is made from the wood by stripping off the bark and stretching it across the bent stick so as to form the bowstring. The grass is fitted to the little bow to stand for an arrow. Husband and wife then return to the tree. The relatives of the pair also gather at the spot and the husband and wife salute them in the formal Toda fashion by bowing and raising the feet of the honoured persons to their foreheads. The wife then sits down under the tree in front of the lamp, which glimmers in the gloaming or the dark from its niche, on a level with her eyes as she is seated on the ground. The husband next gives her the bow and arrow, and she asks him what they are called. He mentions the name of the bow and arrow, which differs for each clan. Question and answer are repeated thrice. On receiving the bow and arrow the woman raises them to her forehead, and then holding them in her right hand she gazes steadily at the burning lamp for an hour or until the light flickers and goes out. The man afterwards lights a fire under the tree and cooks jaggery and rice in a new pot. When the food is ready, husband and wife partake of it together. Meantime, while he has been cooking, the wife has tied up certain foods in a bundle and deposited it under the tree. Afterwards the relatives return from the village and all pass the night in the wood, the relatives keeping a little way off from the married pair. When the day breaks, the day of the new moon, they all return to the village to feast.<sup>1</sup>

This remarkable ceremony is always performed in or about the seventh month of a woman's first pregnancy, whether her husbands are brothers or not. It only takes place at a subsequent pregnancy when the family wish for

On the performance of this ceremony depends the social

Rivers does not tell us what is finally done with the bow and arrow. Mr. Metz says that the wife deposits them at the foot of the tree.

recognition  
of the  
fatherhood  
of the  
child.

The  
observance  
is perhaps a  
ceremony  
of marriage  
and of im-  
pregnation  
in one.

any reason to alter the fatherhood of the children. When the joint husbands are brothers, it is the eldest brother who gives the little bow and arrow. The fatherhood of the child, or rather the social recognition of it, depends entirely on the performance of this ceremony, so much so that he who gives the bow and arrow is counted the father of the child even if he be known to have had no former connection with the woman; and on the other hand if no living man has performed the ceremony, the child will be fathered on a dead man. An indelible disgrace attaches to a child for whom the ceremony has not been performed.<sup>1</sup> With regard to the meaning of these curious observances Dr. Rivers remarks that since they are only observed at a woman's first pregnancy, or when it is desired to change the fatherhood of a child, "it seems clear that they closely resemble marriage ceremonies. They would seem to be either marriage ceremonies which have been postponed till shortly before the birth of the first child, or, what is more probable, pregnancy ceremonies resembling those customary in India, which have acquired social significance and have come to resemble marriage ceremonies."<sup>2</sup> Perhaps the observance in question is an old rite of marriage and impregnation in one. We have seen that some Australian tribes regard the acceptance of food from a man by a woman not only as a marriage ceremony but also as the actual cause of conception.<sup>3</sup> Now in the Toda custom husband and wife partake of a meal together under a tree, which clearly plays an important, though obscure, part in the ceremony. In this connection we should remember that trees are often supposed to possess the power of getting women with child.<sup>4</sup> The burning lamp in the tree, which the woman gazes steadily at for some time after receiving the bow and arrow, must also be endowed, to the thinking of the Todas, with some mysterious significance; and here again it deserves to be borne in mind that sparks of fire as well as trees have been thought by some peoples to be able to impregnate the women on whom they fall.<sup>5</sup>

<sup>1</sup> W. H. R. Rivers, *The Todas*, pp. 322, 516, 517 sq., 531.

<sup>2</sup> W. H. R. Rivers, *op. cit.* pp. 322 sq.

<sup>5</sup> See my *Lectures on the Early History of the Kingship*, pp. 218 sqq., and below, pp. 259-262.

The belief in the fertilising power both of trees and of fire is retained to this day among South Slavonian peasantry, whose superstitions are redolent of the most remote antiquity. Amongst them, we are informed, "the barren woman is pitied and despised. Her position in her husband's home becomes more and more untenable. The husband tries in company with his wife to remedy the evil by means of magic. The following two charms rest on the old belief in the tree-soul which dwells in the tree in the form of a wood-worm. The wife takes a wooden vessel full of water and stands under a beam or rafter, where dust drops from the worm-eaten wood. Her husband strikes the beam or rafter with something heavy and shakes the worm-worn dust out of it. If the woman is lucky enough to catch even a pinch of the worm-worn dust, she drinks it up with the water. Many women seek for a worm in the knots of a hazel-bush, and if they find one they eat it. A spark of fire has also similar power to impregnate a woman. The woman holds a wooden vessel full of water beside the fire on the hearth. The husband meantime knocks two fire-brands together so that the sparks fly out. When some sparks fall into the vessel, the woman drinks the water out of it. Many barren women also repair to a grave, in which a pregnant woman is buried, bite grass from the grave, invoke the deceased by name, and beg her to bestow the fruit of her body upon them. After that they take a little earth from the grave and carry it constantly about with them under their girdle."<sup>1</sup>

These practices seem plainly to imply a belief that women can be got with child directly by a tree-soul, a spark of fire, or the spirit of a dead child, without the need of intercourse with the other sex. Such a belief is identical in principle with that which we have found to be held by the tribes of Central and Northern Australia and by the Melanesians of the Banks' Islands.<sup>2</sup> Those who are familiar

The South Slavonians believe that tree-spirits, sparks of fire, and the dead can get women with child.

The beliefs of the South Slavonians as to conception without sexual intercourse tally with those of the Central Australians.

<sup>1</sup> F. S. Krauss, *Sitte und Brauch der Südslaven* (Vienna, 1885), pp. 530 sq. As to the power of fire to impregnate women Miss Mabel Peacock wrote to me from Kirton-in-Lindsey, Lincolnshire, 30th October 1905: "Not long ago I was told of a

Lincolnshire saying that if a woman's apron is burnt above the knee by a spark or red-hot cinder flying out of a fire she will become a mother."

<sup>2</sup> See vol. i. pp. 188 sqq., 536 sqq., 576 sqq.; vol. ii. pp. 84 sq., 89 sqq.

with the tenacity of life possessed by superstition will not wonder at finding one of the crudest and most primitive of its manifestations still held and put in practice by European peasants. The simple truth appears to be that the physiological facts on which conception and child-birth depend are not yet clearly understood by a large part of mankind, who still imagine, like the Australian savages, that women can be impregnated by quite other means than those which nature has ordained. The same belief is still clearly indicated in many popular customs, for examples of which we need not go outside of Europe. Often the original intention of these customs is forgotten, but sometimes it is remembered. As instances we may take the common practice of strewing corn, rice, beans, peas and so forth on a bride, and another common practice of placing a male child in her lap.<sup>1</sup> Both these customs are not unfrequently observed with the avowed intention of fertilising the woman. Thus at wedding feasts in Bohemia and Silesia "peas or groats are thrown on the bridal pair in order that they may be fruitful; and as many grains as remain lying on the bride's dress, so many children will she have."<sup>2</sup> Again, at an Esthonian wedding an infant boy is placed in the bride's lap as she sits at table, and the people believe that she will bear all the more male children for having observed this custom.<sup>3</sup> Again, at Mostar in Herzegovina, as soon as a bride enters her husband's house she goes straight to the hearth, sits down beside it on a bag of fruits, and stirs the fire thrice. While she does this, they bring her a small boy and set him in her lap. She turns him thrice round, "in

Similar beliefs are indicated by certain popular customs at marriage, such as strewing the bride with corn or placing a child in her lap.

<sup>1</sup> For the practice of strewing corn, rice, etc., on a bride or both on the bride and bridegroom, see W. Mannhardt, "Kind und Korn," *Mythologische Forschungen* (Strasburg, 1884), pp. 354 sqq.; L. v. Schroeder, *Die Hochzeitsbräuche der Ehsten* (Berlin, 1888), pp. 112-122. The practice in question is rightly interpreted by both these writers as a fertilisation ceremony. For the custom of placing a male child in the bride's lap, see L. v. Schroeder, *op. cit.* pp. 123-127, who has correctly explained this custom also.

<sup>2</sup> W. Mannhardt, "Kind und Korn," *Mythologische Forschungen*, p. 360.

<sup>3</sup> Boecler-Kreutzwald, *Der Ehsten abergläubische Gebräuche, Weisen und Gewohnheiten* (St. Petersburg, 1854), p. 38. Compare J. B. Holzmayer, "Osiliana," *Verhandlungen der gelehrten Gesellschaft zu Dorpat*, vii. Heft 2 (1872) p. 91; F. J. Wiedemann, *Aus dem inneren und äussern Leben der Ehsten* (St. Petersburg, 1876), p. 318.

order that she may bring male children into the world.”<sup>1</sup> In this interesting ceremony we see clearly combined the fertilising virtue of the fruits upon which the bride sits, of the fire which she stirs, and of the male child who is placed on her lap. Such marriage rites are doubtless very ancient, far older than the marriage ceremony which is performed over the couple by the priest or clergyman in a Christian church. Similarly in the ancient Indian law-books it is prescribed that after a bride has entered her husband's house and a ceremony of placing wood on the fire has been observed, husband and wife should sit down on a red bull's hide, and he should set in her lap the son of a wife who has only sons and whose children are alive, and should at the same time speak these words, “May a male embryo enter thy womb, as an arrow the quiver; may a man be born here, a son after ten months.”<sup>2</sup> While he recited these words, as a charm avowedly intended to ensure the birth of a son, the husband fastened to his wife an arrow which had been steeped in sour milk and honey from the thirteenth to the fifteenth day of the month.<sup>3</sup> This ceremony and these words seem to furnish the clue to the Toda ceremony of presenting a pregnant wife with a bow and arrow; they confirm the interpretation of that ceremony as an ancient rite of impregnation, the arrow being regarded as a symbol of the embryo which is discharged into the woman's womb. Further, the notion that the fire has power to impregnate women is brought out very clearly in another ancient Indian ceremony which was performed for the purpose of ensuring the birth of a male child. Fire was made by the friction of two different kinds of wood, one upon another, the upper wood (*Ficus religiosa*) being regarded as a male and the under wood (*Mimosa suma* or *Prosopis spicigera*) as a female. When fire had been thus kindled, sparks from it were thrown into the melted butter of a cow which had a male calf, and

Ancient  
Hindoo

with child.

<sup>1</sup> F. S. Krauss, *Sitte und Brauch der Südslaven* (Vienna, 1885), p. 430; compare *id.* pp. 428, 447, 448. The South Slavs sometimes strew millet on a bride. See F. S. Krauss, *op. cit.* pp. 445, 448.

<sup>2</sup> *The Grihya-Sutras*, translated by H. Oldenberg, vol. i. pp. 42, 45; vol.

ii. p. 263 (*The Sacred Books of the East*, vols. xxix. and xxx.).

<sup>3</sup> *Hymns of the Atharva-Veda*, translated by Maurice Bloomfield (Oxford, 1897), pp. 97, 356 (*The Sacred Books of the East*, vol. xliii.); W. Caland, *Altindisches Zauberitual* (Amsterdam, 1900), p. 114.

this butter was pushed up the right nostril of the woman. Moreover, sparks of the fire were put into a honey-drink, which was given to her to quaff. Lastly, the fire was surrounded by the wool of a male animal, and this wool was then tied on the future mother.<sup>1</sup> These ceremonies seem clearly intended to put a male child into the woman's womb by means of the sparks which are struck out by the friction of the two woods. The same idea comes out in another ancient Indian charm spoken by a husband to his wife: "The embryo which the two Asvins produce with their golden kindling-sticks: that embryo we call into thy womb, that thou mayst give birth to it after ten months."<sup>2</sup>

Food eaten  
as a mode  
of im-  
pregnating  
a woman.

Further, it seems probable that, as I have suggested,<sup>3</sup> many of the foods which husband and wife partake of together as a marriage ceremony may have been formerly supposed, as they are still supposed by some Australian tribes, not merely to prepare the woman for conception but actually to impregnate her. To examine the instances of this widespread custom at length would lead me too far. I will cite only one. The Livonians, not content with strewing wheat, barley, oats, peas, and beans on the bride at every door in her new home, used to oblige both bride and bridegroom to eat the testicles of a goat or a bear with the avowed intention of rendering the pair prolific. For the same reason they would not allow any castrated animal to be slaughtered at a wedding feast,<sup>4</sup> no doubt

<sup>1</sup> *Hymns of the Atharva-Veda*, translated by Maurice Bloomfield (Oxford, 1897), pp. 97, 460 (*The Sacred Books of the East*, vol. xlii.); W. Caland, *Altindisches Zauberritual* (Amsterdam, 1900), pp. 115 sq. The idea that in making fire by friction the two fire-sticks represent a male and female in the act of copulation is very widespread among savages. Ample evidence of this will be given in the third edition of *The Golden Bough*, in treating of the Vestal fire-worship. Meantime see E. Kuhn, *Die Herabkunft des Feuers und des Göttertranks*<sup>2</sup> (Gütersloh, 1886), pp. 64 sqq.

<sup>3</sup> Above, vol. i. pp. 577 sq.

<sup>4</sup> J. Meletius (Maletius, Maeletius, Menecius), "De Sacrificiis et Idolatria veterum Borussorum, Livonum, aliarumque vicinarum Gentium," in *De Russorum, Muscovitarum et Tartarorum Religione, Sacrificiis, Nuptiarum, Funerum ritu* (Spirae libera civitate, 1582), pp. 261 sq.; *id.* in *Scriptores Rerum Livonicarum*, ii. (Riga and Leipsic, 1848), p. 391; *id.* in *Mitteilungen der Litterarischen Gesellschaft Masovia*, viii. (Löten, 1902) p. 192. For many examples of bride and bridegroom eating together as a marriage ceremony, see E. S. Hartland, *The Legend of Perseus*, ii. (London, 1895) pp. 343 sqq. In these ceremonies Mr. Hartland seems to see nothing more

lest by partaking of its flesh the husband should lose his virility.

The attempt to explain the curious custom observed by the Todas in the seventh month of a woman's first pregnancy has led me into a digression ; but the digression can hardly be regarded as irrelevant if it helps us to realise better how widely spread and how deeply rooted is that ignorance of the true causes of conception which appears to lie at the root of totemism. We now return to the subject from which we digressed, the polyandry of the Todas.

The custom of polyandry among the Todas is facilitated, if not caused, by a considerable excess of men over women, and that excess has been in turn to a great extent brought about by the practice of killing the female children at birth. It seems clear that female infanticide has always been and still is practised by the Todas, although in recent years under English influence it has become much less frequent. The motive for killing the girls is unknown ; there is little evidence or probability that lack of food and the consequent difficulty in rearing a large family have had anything to do with it, though a Toda has been known to allege poverty as an excuse for the crime. The murder is said to be done not by the parents but by old hags, who choke the infants. We are told that boys are never killed. However, the Todas are taciturn and reserved on the subject, and it is difficult to wring the truth from them.<sup>1</sup> We cannot therefore at present say whether the disproportion between the sexes, produced by female infanticide, has been the principal or only cause of polyandry among the Todas. It is possible that the causes both of their polyandry and of their female infanticide lie deeper down in some dark abyss of superstition, which the plummet of science has not yet sounded nor its lamp illuminated. At the present time the polyandry of the Todas tends to become combined with polygyny ; in

than a covenant or bond of union between the married pair brought about by their sharing the same food. Yet the interpretation of the ceremony as a rite of impregnation might have been suggested to him by the numerous stories, which in the same work he has

collected, of women who were impregnated by eating of certain foods.

<sup>1</sup> Lieut.-Colonel W. E. Marshall, *Travels amongst the Todas*, pp. 194 sqq. ; W. H. R. Rivers, *The Todas*, pp. 477-480, 518 sq., 520 sq.

other words men are beginning to have several wives as well as wives to have several husbands. "Two brothers, who in former times would have had one wife between them, may now take two wives, but as a general rule the two men have the two wives in common. In addition polygyny of the more ordinary kind exists among the Todas, and is probably now increasing in frequency, as one of the results of the diminished female infanticide."<sup>1</sup>

Irregular marriages of the Todas. Each man may become the secondary husband of several women, and each woman the secondary wife of several men.

In addition to their regular marriage the Toda practise an irregular, but publicly recognised and lawful, form of marriage which they call *mokhthoditi*. This is a form of group-marriage resembling the group-marriage which prevails among the Dieri and other tribes of Central Australia.<sup>2</sup> In virtue of it a man becomes a secondary husband (*mokhthodvaiol*) to one or more married women with the consent of the woman's primary husband, who receives payment from the man. A woman has been known to have three such secondary husbands in addition to her primary husband or group of husbands. On the man's side the practice of keeping secondary wives is expensive, and this seems commonly to limit their number to two at the most. Such secondary or group marriages are contracted with nearly the same formalities as the ordinary primary marriages. After the ceremony the couple may either live together like man and wife, or the man may only visit the woman from time to time in the house of her primary husband. The latter is the more usual practice. The children which a man may have by a secondary wife are not reckoned to him, but to the primary husband. It is somewhat remarkable that these secondary or group marriages are most commonly contracted between members of the two endogamous Tarthar and Teivali divisions, between whom no ordinary marriage may take place; that is to say, no Tarthar man may marry a Teivali woman, and no Teivali man may marry a Tarthar woman, in the regular way; but he may and generally does so in an irregular but still public and lawful manner. However, a man of one of these two divisions may not perform the bow and arrow ceremony for

<sup>1</sup> W. H. R. Rivers, *The Todas*, p. 521.

<sup>2</sup> See vol. i. pp. 308 *sqq.*, 363 *sqq.*

a pregnant woman of the other division ; and this disability would of itself prevent her children from being fathered upon him.<sup>1</sup>

Thus it appears that every Toda woman may have several secondary husbands as well as a group of primary husbands, and that every Toda man may have several secondary wives besides a single primary one. But this is not all. Among the Todas at the present time the marriage tie has become very loose, and wives are constantly transferred from one husband or group of husbands, to another, the new husband or husbands paying a certain number of buffaloes to the old.<sup>2</sup> Further, it appears that among the Todas adultery is not regarded as a wrong and furnishes no ground for divorce. There exists no word for adultery in the Toda language, and apparently no idea corresponding to it in the Toda mind. Far from its being regarded as immoral, the stigma of immorality seems rather to rest on the man who grudges his wife to another. So churlish a man, the Todas think, cannot after death go straight to heaven ; he must pass through what has been called the Toda hell, but what is more accurately described as a mild variety of Purgatory, in order to purge himself of his guilt, before he reaches the happy land, where there are no pigs and rats to grub up the soil and spoil the country, and where dead people walk about till they have worn down their legs to stumps, when the presiding deity sends them back to be born again with new legs into the world.<sup>3</sup> Such is, apparently, according to Toda ideas, the fate of the man who objects to be a cuckold. So lax, or rather so perverted, according to our ideas, is their standard of morality. And the laxity is said to be as great between the sexes before as after marriage.<sup>4</sup> In short, to quote the words of the latest and most accurate investigator of this peculiar people, in Toda society "there seems to be no doubt that there is little restriction of any kind on sexual intercourse."<sup>5</sup>

Lax morality of the Todas in sexual matters.

Adultery not regarded as an offence.

<sup>5</sup> W. H. R. Rivers, *op. cit.* p. 529.

The classificatory system of relationship among the Todas.

The Todas possess the classificatory system of relationship.<sup>1</sup> They have two well-marked groups of terms expressive of kinship; one set of terms is used in speaking of relatives indirectly, the other is used in addressing them directly. The latter are fewer in number and are employed in a much more general sense. In what follows, the terms applied indirectly will be given first; and the terms of address, where they exist, will be added in brackets.

The classificatory terms for "father."

Thus in the generation above his own a man applies the same term *in (aia)* "father" not only to his real father but to all the men of his father's clan who are of the same generation as his father; hence he gives the name of "father," amongst others, to all his father's brothers. In Toda society this latter extension of the term is very natural, since all of a father's brothers have a right to share his wife and beget children by her, and in such circumstances it must be a particularly wise Toda who knows his own father. Indeed, as we have seen, all the father's brothers are counted the fathers of his children, so that the children naturally bestow the title of father upon them. Further, a man applies the same term *in (aia)* "father" to all the husbands of his mother's sisters, and not merely to the husbands of her real sisters, but to the husbands of her clan sisters, that is, to all the men who are married to women of the same clan and generation as his mother. Reasoning by analogy we might suppose from this that, just as brothers are at present group-husbands, so sisters may once have been group-wives among the Todas, though they are not so now. Such a supposition would at least explain why a son calls the husbands of his mother's sisters his "fathers."

The classificatory terms for "mother."

Further, in the generation above his own a man applies the same term *av (ava)* "mother" not only to his real mother but to all the women of his mother's clan who are of the same generation as his mother; hence he gives the name of "mother" amongst others, to all his mother's sisters. This extension of the term "mother" again points

<sup>1</sup> The following account of the Toda system of relationship is derived from Dr. W. H. R. Rivers's description of it in his book *The Todas*, pp. 483-494.

A list of Toda kinship terms had previously been given by Lieut.-Colonel Marshall in his book *Travels amongst the Todas*, pp. 74-77.

to a marriage group in which a number of sisters are married to one or more husbands who hold them and the children in common. Further, a man applies the same term *av* (*ava*) "mother" to all his father's wives other than his real mother, and also to all the wives of his father's brothers. This extension of the term points to a marriage group in which a number of brothers hold their wives and children in common; and such groups, as we have seen, actually exist among the Todas.<sup>1</sup>

Taking the two sets of terms for "father" and "mother" together we infer from them a former system of marriage in which a group of brothers was married to a group of sisters. At the present day only half of this system survives among the Todas; the group of husbands who are brothers is left, but the group of wives who are sisters has disappeared.

In a man's own generation he has different terms for "elder brother" and "younger brother," and again for "elder sister" and "younger sister." Further, he has distinct terms for a brother and sister who are of the same age as himself. An elder brother is *an* (*anna*); a younger brother is *nodrvud* (*enda*); an elder sister is *akkan* (*akka*); a younger sister is *nodrvudkugh* (*enda*); a brother or sister of the same age as the speaker is *egal* (*egala*). Further, a man applies the terms for "brother" and "sister" not only to his blood brothers and sisters, but also to all the men and women of his own clan and generation, calling them "elder brother," "younger brother," "brother of the same age," "elder sister," "younger sister," "sister of the same age" according to their sex and their age in relation to his own. Further, the various terms for "brother" and "sister" are applied to each other by first cousins, the children either of two sisters or of two brothers. But on the other hand they are not applied to each other by first cousins, the children of a brother and of a sister respectively; such cousins call each other *matchuni*, and we have seen that they are the proper mates for each other in marriage; a man ought to marry his first cousin, the daughter either of his mother's brother or of his father's sister. Hence a man applies the same term *mun* (*mama*) to his mother's brother and to his wife's

<sup>1</sup> See above, pp. 263 sq.

The Toda terms for "father" and "mother" point to the marriage of a group of brothers to a group of sisters. The classificatory terms for "brother" and "sister."

father, because his mother's brother actually is, or should be, his wife's father, since he ought to marry his first cousin, the daughter of his maternal uncle. And for an analogous reason a man applies the same term *mumi* (*mimia*) to his father's sister and to his wife's mother, because his father's sister actually is, or should be, his wife's mother, since he ought to marry his first cousin, the daughter of his father's sister.

The classificatory terms for "son" and "daughter."

In the generation below his own a man applies the same terms *mokh* (*ena*) and *kugh* (*ena*) daughter to his own sons and daughters and to the sons and daughters of all the men of his own clan and generation; hence amongst others he applies them to all the sons and daughters of his brothers, and this extension of the terms is very natural in Toda society, where a man's brothers are normally also the husbands of his wife, so that his children and their children may often be indistinguishable. However, in speaking of his brother's children a Toda may, if he pleases, make clear whether he is speaking of the child of an elder or of a younger brother; thus he may say *en nodrvedvain mokh*, "my younger brother's son."

The Toda form of the classificatory system of relationship shews some advance towards a descriptive system.

In this last case, as in some other cases, the Todas occasionally define their relationships to others more exactly than is usual in the classificatory system. Thus they seem to be advancing from a classificatory to a descriptive system of relationship. On this subject Dr. W. H. R. Rivers, to whom we owe the preceding account of the Toda system, observes: "It seemed to me that the Todas afford an interesting example of a people who are beginning to modify the classificatory system of kinship in a direction which distinctly approaches to the descriptive system. The essential features of the system of kinship are those known as classificatory, but the Todas have various means of distinguishing between the near and distant relatives to whom the same kinship term is applied. Two examples of this have already been given; the son of an own sister may be called 'my sister's son,' while the son of a clan sister is called 'our sister's son,' and the own brother of a mother is simply called *mun*, while in the case of a clan brother of the mother, the name of the man is added. Further, a term which is

definitely descriptive may be used in the examples quoted above. The Todas have reached a stage of mental development in which it seems that they are no longer satisfied with the nomenclature of a purely classificatory system, and have begun to make distinctions in their terminology for near and distant relatives."<sup>1</sup>

In Dr. Rivers's opinion the Toda system of relationship is closely akin to that of the Dravidians of Southern India ; in particular he regards it as a simplified form of the Tamil system with many points of identity.<sup>2</sup> A brief account of the Tamil system will be given in the sequel.<sup>3</sup>

The Toda system is akin to the Tamil system.

#### § 4. Totemism in Mysore

In the native Indian state of Mysore there is a large caste of shepherds who take their name of Kurubas from *kuri*, "a sheep," and rank with the Sudras. They are distributed all over the state. Their language is Kannada, but those of them who border on Telugu districts have adopted the Telugu tongue.<sup>4</sup> The caste is divided into more than a hundred exogamous septs or clans which are known in the vernacular as *kulas*. Hardly any one can give a complete list of these clans. It is said that Revanna, the original ancestor of the caste, divided it into as many divisions as there are grains in four *seers* of paddy, and that being unable to find plants and animals enough after which to name them he was obliged to call some of the clans after meaner objects. Many of the names seem, it is said, to be "adopted without any inward significance"; but on the other hand it is well ascertained that the things which give their names to some of the clans are not eaten or otherwise used even now by members of the clans. Such things therefore fall within the definition of a totem.<sup>5</sup> Thus people of the *Adu* or Goat clan (*kula*) abstain from eating or killing the female goat. People of the *Ane* or Elephant clan are said not to ride on elephants but only to use them,

Exogamous and totemic clans among the Kurubas.

Reverence shewn by people for their totems.

<sup>5</sup> *The Ethnographical Survey of Mysore*, i. 5.

if at all, as beasts of burden. Members of the *Anne* clan abstain from eating the kitchen herb (*Celosia albida*) from which they take their name. People of the *Arasina* or Saffron clan formerly refrained from using or touching saffron; but as saffron is a commodity of every-day use they have transferred their respect to Navane grain or *panic* seed (*Panicum*). But still they do not grow saffron. Members of the *Arasu* clan, the meaning of whose name is doubtful, will not cut the banyan tree. Members of the *Atti* or Indian Fig clan will not cut that tree nor eat its fruit. Members of the *Bandi* or Cart clan ought perhaps strictly to abstain from using carts; but that is too much to expect of them, so they satisfy their conscience by not sitting in the cart in which their god is carried. People of the *Basari* or *Ficus infectoria* clan and people of the *Bela* or Wood-apple Tree neither cut nor burn the tree after which they are named. Members of the *Belli* or Silver clan do not use silver toe-rings. Women of the *Balagara* or Glass Bangle clan do not, or at all events should not, use glass bangles but only bangles made of bell-metal. Members of the *Bevu* or Margosa Tree clan worship the tree and will not cut it or burn it nor use its oil for lamps. People of the *Benne* or Butter clan do not use butter. Members of the *Banni* clan will neither cut nor sit in the shade of the *banni*, a prickly tree (*Prosopis spicigera*). Members of the *Chatta* or Bier clan will not carry their dead on biers but only by hand. Women of the *Honnu* or Gold clan will not wear jewels of gold. Members of the *Hurali* or Horse Gram clan do not abstain from gram, because it is deemed a necessary article of food, but they abstain instead from jungle pepper. People of the *Mcnasu* or Pepper clan neither cultivate the pepper creeper nor cut it. Members of the *Nagare* (a kind of tree) clan do not sit under the shade of the tree, much less do they cut or burn the tree. Members of the *Onike* or Pestle clan do not touch a pestle but use a wooden hammer instead of it. In all, no less than one hundred and eleven of these exogamous septs or clans are recorded. Besides those which have been mentioned there are others which take their names respectively from the dog, rabbit or hare, he-goat, she-buffalo,

scorpion, ant, ant-hill, sandalwood tree, peepul tree, tamarind tree, cummin-seed, pumpkin, jessamine, cotton, the sun, moon, night, salt, flint, bell-metal, pearl, conch shell, manure, milk, butter-milk, a drum, cage, reel of thread, arrow, knife, garland, rope, temple, pickaxe, bracelet, fire-brand, toe-ring, bamboo-tube, needle, ring, weaver's shuttle, etc.<sup>1</sup> Members of the same exogamous sept or clan (*kula*) are regarded as brothers and sisters and therefore may not marry each other. Children belong to the clan of their father. A man may not marry his cousin, the daughter of his mother's sister; but he is particularly recommended to marry his cousin, the daughter of his mother's brother. He may marry two sisters, but not simultaneously.<sup>2</sup> A widow is allowed to remarry, but she is forbidden to marry her deceased husband's brother or even any man of his clan.<sup>3</sup>

The Holeyas are an outcast or pariah caste of Mysore, who number about a tenth of the total population of the state. They are employed as agricultural labourers and artisans. They are divided into many exogamous septs or clans (*kulas*), all of which descend in the male line only. The clans take their names from the elephant, buffalo, rabbit, snake, cuckoo, fig-tree, tamarind, beans, plantain, musk, jessamine, a thorny plant (*naggaligaru*), ears of corn, pigeon pea, betel leaf, garland, milk, honey, sun, moon, earth, gold, silver, lightning, ant-hill, burial-ground, temple, sheep-fold, oil-mill, bolt, bag, crowbar, nose-ring, saw, umbrella, etc. When the name of the clan denotes an edible plant, grain, and so forth, the members of the clan abstain from eating the thing from which they take their name. When the thing is a tree, people of the clan shew their reverence for it by not felling it or burning the wood. It is said that when a man of the *Naggaligaru* clan is pierced by a thorn of the plant, he may not pluck it out for himself, but must get a member of another clan to do so for him.<sup>4</sup> A man may not marry his cousin, the daughter of his mother's sister, but he generally marries either his niece,

Cousin marriages.

the daughter of his elder sister, or his cousin, the daughter of his mother's brother or of his father's sister. He ought not to marry a niece who is the daughter of his younger sister; but if no other suitable wife is to be found, the objection may be overruled. A man or a man and his brother may marry two sisters simultaneously, but the custom is not recommended.<sup>1</sup> A widow is allowed to marry again, but is forbidden to marry any of her deceased husband's brothers; she may, however, marry one of his cousins. In no case may she marry a man of her father's clan.<sup>2</sup>

The  
Levirate  
forbidden.

The  
Bestha and  
their  
exogamous  
clans.

The Bestha caste is composed of fishermen, lime-burners, palanquin bearers, and cultivators. At the last census (1901) they numbered about 153,000 persons and were scattered all over the State of Mysore. They profess the Hindoo religion and worship the ordinary Hindoo gods.<sup>3</sup> They are divided into exogamous clans or septs (*kula*), some of which bear the following names:—Gold (*chinna*), Silver (*belli*), Sun (*surya*), Moon (*chendra*), Goddess (*devi*), Charioteer (*suta*), Cloud (*mugilu*), Marriage chaplet (*Bhashinga*), Pearl (*muttu*), Precious Stone (*ratna*), Musk (*kasturi*), Coral Bead (*havalala*), and Jessamine (*mallige*). It is said that members of the Silver clan do not wear silver ornaments except at marriage.<sup>4</sup> No man may marry a woman of his own clan or sept (*kula*). Polyandry is unknown, but polygamy is freely practised. The same man may not marry two sisters simultaneously, but the first wife's sister is generally preferred as a second wife. Two brothers may marry two sisters, the elder brother marrying the elder sister and the younger brother marrying the younger sister. A farmer does not give his daughter in marriage to a fisherman; nor does a fisherman give his daughter in marriage to a farmer; and neither a farmer nor a fisherman will contract a marriage with a daughter of a palanquin-bearer. The price of a bride is twelve rupees; for a second marriage she is to be had at half-price. A

Marriage

widow is allowed to marry her late husband's elder brother, The  
but such marriages are rare.<sup>1</sup> Levirate.

The Komatis, whom we have already met with in the Exogamous  
Madras Presidency,<sup>2</sup> are a trading class of Mysore, ranking and  
high in the scale of castes. They are Hindoos by religion totemic  
and almost as strict as Brahmans in observing rules of clans  
of personal cleanliness and restrictions as to eating and among the  
drinking. Their language is Telugu, but in the Kannada Komatis.  
districts of the state they speak Kannada, and some have  
almost forgotten their mother tongue.<sup>3</sup> They are divided  
into a hundred and one exogamous septs or clans (*gotras*),  
some of which are grouped together in exogamous classes  
or phratries. One such group (class or phratry) comprises  
ten clans, another four; seven groups include three clans  
each; and sixteen groups include two clans each. The  
great majority of the clans are named after plants, grains, Totemic  
fruits, or flowers, and members of the clans abstain, or used taboos.  
to abstain, from eating or otherwise using the thing from  
which they derive their name. However, in many families  
no such taboos are observed. Sometimes, when people  
have forgotten what their original taboo was, they regard  
the pandanus flower as the thing which they may not use.<sup>4</sup>  
Among the plants, fruits, and flowers which give names to  
the exogamous clans (*gotras*) are the flower of the tree  
*Bauhinia purpurca*, the fruit of the tree *Emblica myrabolan*,  
lime fruit, pumpkins, green pulse, red lotus, black lotus,  
white lotus, snake-gourd, the gourd *Momordica*, a bitter  
gourd, black gram, Bengal gram, the kitchen herb *Closia*  
*albida*, plantain fruits, a small kind of castor oil seed,  
pigeon peas, a prickly tree with an edible fruit (*Prosopis*  
*spicigera*), the gigantic swallow-wort (*Calotropis gigantea*),  
the long pepper, the pungent fruit *Photos officinalis*, flax  
(*Linum usitatissimum*), mango, pomegranate, bambo seed,  
Panicum grain, wheat, grapes, guava, dates, the Indian  
fig, sugar-cane, the fragrant grass *Cyperus rotundus*, cuscus  
grass, chrysanthemum, asafoetida, jessamine, Holy Basil,

<sup>1</sup> *The Ethnographical Survey of Mysore*, vi. (Bangalore, 1906) pp. 1, 5, 28 sq.

<sup>2</sup> See above, 241 sqq.

<sup>4</sup> *The Ethnographical Survey of*

<sup>3</sup> H. V. Nanjundayya, *The Ethno-Mysore*, vi. 5 sq.

China rose, fragrant oleander, red watercresses, horse radish, red radish, nutmeg, mustard, the fragrant screw pine, sandalwood, tamarind, and civet. Other objects which give names to clans are curds of the sheep, red ochre, alum, camphor, and white silk. Apparently none of the clans are named after animals.<sup>1</sup> A boy is obliged to marry his cousin, the daughter of his mother's brother, however unattractive she may be; and on his side the maternal uncle must give his daughter in marriage to his nephew, the son of his sister, however poor the young man may be. Widows are not allowed to marry again.<sup>2</sup>

Obligation to marry a cousin.

Exogamous and totemic clans among the Bili Magga.

A subdivision of the weaver caste in Mysore is known as Bili Magga ("white loom") from the white muslin and other cloth which they weave. They speak the Kannada language, but their origin is unknown. They are divided into sixty-six exogamous septs or clans (*gotras*), which are distributed into two groups known respectively as the Siva and the Parvati group or as the male and the female group. Each group contains thirty-three clans (*gotras*) with the usual prohibition of marriage between persons bearing the same family name. Most of the clans are named after animals, plants, implements, and so forth; and members of the clans appear to deem it sinful to injure the things whose name they bear. Among the objects which give names to the Bili Magga clans are the buffalo, bull, horse, serpent, squirrel, sparrow, Brahman kite, banni tree, another kind of tree (*Pongamia glabra*), asafoetida, cummin seed, the pandanus flower, jessamine, grass, paddy, broken corn, flour, pepper, butter, milk, saffron, turmeric, sand, field, forest, the sun, white, nest, boulder, cart, pestle, plank, pot, rope, and tank.<sup>3</sup>

Exogamous and totemic clans among the Nayindas.

The Nayindas are a caste in Mysore whose business is that of shaving. But their profession is deemed inauspicious, and people, particularly married women of the upper classes, will not so much as mention the name of the caste. If they must refer to a barber, they call him "one who is not to be thought of," or "one who is not to be named,"

<sup>1</sup> *The Ethnographical Survey of Mysore*, vi. 32-41.

<sup>2</sup> *The Ethnographical Survey of Mysore*, vi. 8, 22. As to the marriage of cousins among the Komatis, see

further above, pp. 225 sq.

<sup>3</sup> H. V. Nanjundayya, *The Ethnographical Survey of Mysore*, viii. (Bangalore, 1907) pp. 1, 8-10 (Preliminary Issue).

especially when they allude to him at night.<sup>1</sup> The caste falls into two main divisions according as the members of it speak the Kannada or the Telugu language. The Telugu-speaking Nayindas are further subdivided into a number of exogamous septs or clans, which are named after animals, plants, flowers, and other objects, with the usual prohibition of killing, cutting, or using them.<sup>2</sup> Thus the *Chitlu* clan is named after a tree, which the members neither cut nor burn. People of the *Gurram* or Horse clan will not ride a horse. The *Jambu* clan takes its name from a kind of reed, which the clanspeople will not cut. The *Kanagula* or *Honge* clan are called after a tree, the *Pongamia glabra*, which they will not cut nor burn nor use the oil of its seed. People of the *Karu* clan will not cut the *karu* tree from which they take their name. Members of the *Mallela* or Jessamine clan and of the *Samanti* or Chrysanthemum clan will not use the jessamine and chrysanthemum flowers respectively. People of the *Navilu* or Peacock clan will not eat peacocks. People of the *Pasupu* or Turmeric clan will not raise crops of turmeric; and people of a clan named *Uttareni* after the *Achryranthes aspera* will neither cut nor touch that plant.<sup>3</sup> In most sections of the caste a widow is allowed to marry again, but she is forbidden to marry her deceased husband's brother, whether younger or elder.<sup>4</sup>

Totemic  
taboos.

The  
Levirate  
forbidden.

### § 5. Totemism in the Bombay Presidency

"In the Bombay Presidency," says Sir Herbert Risley, "the Katkaris of the Konkan will not kill a red-faced monkey, the Vaidus, or herbalists of Poona will not kill a rabbit, and the Vadars whose name is derived from the *Vaa* (*Ficus Indica*), will not fell the Indian fig tree. The totemistic character of the septs which regulate marriage is, however, most pronounced in the Kanara district which borders on the Dravidian tract of the South. The rice-growing caste

Totemic  
taboos  
among the  
Halvakki  
Vakkal.

of Halvakki Vakkal in Kanara have a number of exogamous septs or *bali* (lit. a creeper) which include the tortoise, the sambar, the monkey, the hog-deer, two sorts of fish, saffron, the acacia and several other trees, and the axe used for felling them. As we find them now, these groups are plainly totemistic. Thus the members of the screw-pine *bali* will neither cut the tree nor pluck its flowers, and those of the *Bargal bali* will not kill or eat the *barga* or mouse-deer. The followers of the *Shirin bali*, named after the *shirkal* tree (*Acacia speciosa*), will not sit in the shade of the tree, and refrain from injuring it in any way. But in Kanara, as in Orissa, there is a tendency to disguise or get rid of these compromising designations as the people who own them rise in the social scale. The Halepaik, once freebooters and now peaceful tappers of toddy trees, are divided into two endogamous groups, one dwelling on the coast and taking its name (*Tengina*) from the cocoanut tree, and the other living in the hills and calling itself *Bainu* after the sago-palm. Each of these again contains a number of exogamous *balis*. The *Tengina* have the wolf, the pig, the porcupine, the root of the pepper plant, turmeric, and the river; to which the *Bainu* add the snake, the sambar, and gold. The members of the *Nāgchamṇa* group will not wear the flower of that name in their hair, nor will the *Kadave bali* kill a *sāmbhar*. Two of the *balis* are called after the low castes Mahār and Hole, and it is curious to find that the other groups, though they will take girls from these *balis*, will not give them their own daughters to wife. Among the Halepaiks, unlike most of the Kanara castes, the *bali* descends through the female line, that is to say, the children belong to the *bali* of the mother, not of the father. Similar groups are found among the Suppalig (musicians), the Ager (salt workers and makers of palm-leaf umbrellas), the Ahir (cowherds), and the Mukur (labourers and makers of shell-lime). Several of these have the elephant for a totem and may not wear ornaments of ivory.”<sup>1</sup>

Exogamous

*Devaks* or  
sacred  
family  
symbols  
among the  
Marathas.

Again, the Marathas of the Bombay Presidency, who worship the Brahman gods and keep the Brahman festivals, are divided into families, each of which has its *devak* or

<sup>1</sup> Sir Herbert Risley, *The People of India* (Calcutta, 1908), pp. 98 sq.

sacred symbol. These symbols appear to have been originally totems; for a man may not marry a woman whose *devak*, reckoned on the male side, is the same as his own. Worship is paid to the *devaks* at marriage and at other important ceremonies. The following is a list of the chief *devaks* :—<sup>1</sup>

The *pāñch pallav* or five leaves of the *Ficus Indica*, *Ficus religiosa*, *Cynodon dactylon*, *Bauhinia racemosa*, and *Syzygium jambolanum* or rather *Eugenia jambolana*.

*Kadamb* (*Nauclea cadamba* or *Anthocephalus cadamba*).

*Umbar* (*Ficus glomerata*).

Lotus (*Nelumbium speciosum*).

Conch shell.

Turmeric tubers.

Gold.

*Ketaki* (*Pandanus odoritissimus*).

*Nāgchampā* (*Mesua ferrea*).

*Rui* (*Calotropis gigantea*).

Peacock's feather.

Lamps (*Chirāks*), 360 in number.

Sword.

Mango-leaf (*Mangifera indica*).

*Ficus religiosa* (singly).

*Bhārdwāj*, feather of a crow pheasant.

Bamboo.

Wreath of Onions.

*Rudrāksh* (*Elaeocarpus ganitrus*).

*Surya-Kānt* (crystal).

*Ficus Indica* (singly).

*Shami* (*Prosopis spicigera*).

Eagle's feathers.

*Garud vel* (?)

*Nirgud* (*Vitex negundo* or *trifoliata*).

*Marvel* (*Andropogon scandens*).

*Aghādā* (*Achyranthes aspera*).

With regard to the worship of these *devaks* or sacred symbols at marriage we are told that after the boy-bridegroom has been rubbed with turmeric and bathed, "next comes the marriage guardian or *devak* worship. A day or two before the marriage a man at the house of the boy and of the girl bathes, and with music and a band of friends

Worship  
of the  
*devaks* at  
marriage.

<sup>1</sup> *Census of India, 1901*, vol. i. *India, Ethnographic Appendices* (Calcutta, 1903), pp. 94, 99 (from the *Bombay Gazetteer*, by Sir James Campbell).

The correction *Eugenia jambolana* for *Syzygium jambolanum* is due to Mr. Edgar Thurston.

goes to the tree, which is the family guardian, offers sandal, flowers, burnt frankincense, and sweetmeats to it, cuts a branch, lays it in a winnowing fan, and brings it home with music. He takes it to his god-room and worships it alone with his family gods, which are represented by betel nuts in a winnowing fan. Meanwhile five unwidowed girls wash a grindstone or *jātè* and lay sandal, flowers, and sweetmeats before it, and a family washerman worships the stone slab or *pātā*, and a feast to married women and a few friends and relations completes the guardian or *devak* worship.”<sup>1</sup>

### § 6. Totemism in North-West India

Exogamous  
and  
totemic  
clans  
among the  
Agariyas.

In North-West India the Agariyas are a small Dravidian tribe inhabiting the hilly parts of Mirzapur south of the Son. They profess the Hindoo religion and occupy themselves with the smelting and forging of iron, a laborious business which may partly account for their gaunt and worn appearance.<sup>2</sup> The tribe is divided into seven exogamous and totemic clans or septs (*kuris*). Thus the Markam clan take their name from the tortoise, which the members of the clan will neither kill nor eat. The Goirar clan is called after a tree of the same name, which members of the clan will not cut. The Paraswan clan derive their name from the *palasa* tree (*Butea frondosa*), and members of the clan will neither cut the tree nor eat out of platters made from its leaves. The Sanwan clan say that they are called after *san* or hemp, which they will not sow nor use. The Baragwar clan are named after the *bar* tree (*Ficus Indica*); they will not cut or climb the tree, nor will they eat out of its leaves. Banjhakwar, the name of another clan, is said to be a corruption of Bengachwar, from *beng* “a frog,” which the members of the clan will not kill or eat. Members of the Gidhle clan will not kill or even throw stones at a vulture (*gidh*). The only rule of exogamy observed by the Agariyas is that no person may marry within his or her

<sup>1</sup> *Census of India, 1901*, vol. i. *India, Ethnographic Appendices*, p. 96 (from the *Bombay Gazetteer*, by Sir James Campbell).

clan (*kuri*).<sup>1</sup> When a man dies, his younger, but not his elder, brother has a right to marry the widow; it is only when he has renounced his claim, that she is free to marry another.<sup>2</sup> The Levirate.

The Baiswar are a tribe of doubtful but probably non-Aryan origin in the hill country of Mirzapur. They rank as respectable high caste Hindoos, and are either landholders or tenants with rights of occupancy. The tribe is divided into clans or septs, which are exogamous in theory though apparently not always in practice. Some of the clans are totemic. Thus the Khandit clan takes its name from the sword (*khandā*), which the members hold in great respect. The Bansit clan revere the bamboo (*bans*) and allege that the ancestor of the clan was produced out of it. These are said to be the two original clans, from which the other five are derived.<sup>3</sup> Exogamous and totemic clans among the Baiswar.

The Bhangi are a sweeper tribe or caste of India. At Benares some of them are divided into several exogamous clans (*gotras*), which appear to be totemic. Thus the Kharaha or Hare clan will not eat hares, and the Pattharaha or Stone clan will not take their food out of stone vessels. The Chuhan clan derive their name from the rat (*chuhā*), and the Pathrauta clan from a vegetable called *pathre-ka-sag*.<sup>4</sup> Exogamous clans among the Bhangi.

The Dhangars are a Dravidian tribe allied to the Oraons of Chota Nagpur. They are found in Gorakhpur and the south of Mirzapur, as well as in the Central Provinces. Though nominally Hindoos, they worship none of the regular Hindoo deities.<sup>5</sup> The tribe is divided into at least eight exogamous clans, most or all of which are totemic. Thus Ilha is said to mean a kind of fish, which the members of this clan will not eat; Kajur is the name of a jungle herb, which people of the clan do not use; Tirik is the name of a clan which may be identical with *Tirki*, the name of the Bull clan among the Oraons; in Chota Nagpur members of this clan will not touch any cattle after their eyes are open. The Lakara clan in Mirzapur Exogamous clans among the Dhangars.

<sup>3</sup> W. Crooke, *op. cit.* i. 126, 130.

<sup>4</sup> W. Crooke, *op. cit.* i. 272 sq.

<sup>5</sup> W. Crooke, *op. cit.* ii. 263 sq., 269. As to the totems of the Dhangars in the Central Provinces, see above, p. 230.

takes its name from the hyaena (*lakar bagha*), which members of the clan will not hunt nor kill. The Bara clan in Mirzapur will not cut the *bar* tree (*Ficus Indica*). The Ekka clan say that their name means "leopard," and accordingly they will not kill leopards. The Tiga clan profess to derive their name from a jungle root, which they will not eat. Lastly, the Khaha clan say that their name means "crow," a bird which they respect and will not injure.<sup>1</sup> The Dhangars observe the custom of the levirate; for when a man dies his younger brother has a right to marry the widow. Only when he gives up his claim to her may she marry another. The property of the first husband passes to the levir, that is, to the brother who has married the widow, but the sons of the levir are not by a legal fiction fathered on his deceased elder brother.<sup>2</sup>

The  
Levirate.

Exogamous  
clans  
among the  
Ghasiyas.

Traditions  
as to the  
origin of  
the totemic  
clans.

The Ghasiyas, a Dravidian tribe in the hill country of Mirzapur, are divided into seven exogamous clans. Khatangiya, the name of one clan, is said to mean "a man who fires a gun"; and members of the clan worship the matchlock. The Sunwan or Sonwan clan, which ranks highest, is said to take its name from gold (*sona*). When any Ghasiya becomes ceremonially impure, one of the Sunwan clan purifies him by sprinkling him with water in which a little bit of gold has been placed. The Janta clan is alleged to take its name from the quern or flour-mill (*janta*); they say they got this name because a woman of the clan was delivered of a child while she sat at the quern. The Bhainsa clan claim descent from a godling called Bhainsasur, whom they worship with the sacrifice of a young pig on the second of the light half of the month Karttik. Simarlokwa, the name of another clan, is said to mean "the people of the cotton tree"; and to explain it they say that once a great cotton tree fell on the clan and crushed them all except one pregnant woman, who escaped and so preserved the clan from extinction. The Khoiya

<sup>1</sup> W. Crooke, *Tribes and Castes of the North-Western Provinces and Oudh*, ii. 265; *id.*, *The Popular Religion and Folk-lore of Northern India* (Westminster, 1896), ii. 150 sq. As to the

<sup>2</sup> W. Crooke, *op. cit.* ii. 267.

clan derive their name from a wild dog (*koiya*, *Cuon rutilans*), because a member of the clan is said to have been persuaded by a Rajah to eat one of these animals, which the Rajah had killed in hunting. Lastly, the Markam clan take their name from the tortoise, which they worship because a tortoise once carried a member of the clan across a river in flood.<sup>1</sup> Among the Ghasiyas the custom of the levirate prevails with the usual restriction that it is only a younger brother who has the right to marry the widow of his deceased elder brother. There is no pretence of fathering the sons of the levir on his dead brother.<sup>2</sup>

The  
Levirate.

The Kharwars are a tribe of landholders and cultivators in South Mirzapur. Their origin appears to be Dravidian. A portion of the tribe is found in Bengal, where they have preserved their totemic organisation more perfectly than in Mirzapur.<sup>3</sup> North of the River Son in Mirzapur the tribe is divided into four exogamous clans and one endogamous clan. The four exogamous clans are as follows. The Surajbansi claim descent from the sun (*suraj*). The Dualbandhi say that their name comes from *dual*, "a leather belt," because they were once soldiers. The Patbandhi aver that they are so called because they once were very rich and wore silk (*pat*). Lastly, the Benbansi give two explanations of their name. Some of them say it comes from *ben*, "a bamboo," because the clan is descended from a bamboo, and some of its members will not cut bamboos. Others derive the name from a haughty Rajah of the name of Ben. The endogamous clan of the Kharwars bears the name of Khairaha, which they are said to take from the *khair* tree (*Acacia catechu*), because they extract catechu from it. The occupation is deemed disreputable; hence the members of the clan may not marry into the other four clans and are therefore forced to marry among themselves.<sup>4</sup> In regard to the marriage of widows and the levirate the tribe is at present in a state of transi-

tion. The more Hindooised Kharwars forbid both, but the more primitive portion of the tribe permits them.<sup>1</sup>

Exogamous  
and  
totemic  
clans  
among the  
Nats.

The Nats are a so-called gypsy tribe of dancers, acrobats, and strumpets, who are found scattered all over the North-Western Provinces of India. The problem of their origin and affinities is very perplexing and its solution very uncertain. Perhaps the term Nat designates an occupation rather than a race, and includes members of different stocks, who have been grouped together only because they pursue the same vagrant life, ministering to the pleasure of idlers by rope-dancing, tumbling, and in other less reputable ways.<sup>2</sup> The Bajaniya Nats of Mirzapur are divided into seven exogamous and totemic clans. The Makriyana take their name from *makri*, "a spider," and no member of the clan will kill the insect. The Gauharna clan derive their name from *goh*, the alligator or lizard of the Ganges, and none of them will harm the reptile. Another clan bears the more ambitious title of Deodinaik or "leader given by God," and the members of this clan are generally the headmen of the tribe. The Bahunaina clan take their name from the fly, which members of the clan will not injure. Members of the Sanpaneriya clan will not kill the snake (*sanp*), from which they derive their name; and members of the Suganaik clan in like manner refuse to harm parrots (*suga*) after which they are called. One clan, the Gagoliya, cannot give any explanation of their name. The rule not to take a wife within the clan is the only prohibition on intermarriage, and it is notorious that the Nats marry very near blood-relations.<sup>3</sup>

Totemic  
taboos.

Marriage  
with blood-  
relations.

It is doubt-  
ful whether  
totemism  
exists in  
the Punjab.

It is not easy to say definitely whether totemism exists in the Punjab. The custom of exogamy is indeed almost universal among the Hindoos there as elsewhere, but there seems to be little or no clear evidence that the exogamous clans or septs (*gots*) are totemic, that is, that they observe certain taboos with regard to plants, animals, or other objects which they deem sacred. On this subject a good

<sup>1</sup> W. Crooke, *Tribes and Castes of the North-Western Provinces and Oudh*, iii. 242.

<sup>2</sup> W. Crooke, *op. cit.* iv. 56 sq.

<sup>3</sup> W. Crooke, *op. cit.* pp. 61 sq.

authority, Mr. H. A. Rose, observes: "A few instances have apparently survived among the Aroras, and there are possibly stray cases among the Jats of the south-eastern plains, the Gujars, Rajputs, and other castes, even the Khattris, but the evidence is not conclusive, for little but the names remain, the instances of respect paid to the totem itself being few and uncertain. Amongst the Kanets of the Simla hills there are a few *khels* which have originated in some manifestation of divine favour by a tree, which is subsequently worshipped as an ancestor, its name being also adopted as the *khel* name." Examples of such Kanet clans (*khels*) are the Palashi, named after the *palash* tree; the Pajaik clan named after the *paja* tree; and the Kanesh clan named after the *kanash* tree.<sup>1</sup> Other instances of totemic clans in the Punjab are perhaps to be found in the Agarwal group of Banias, who are divided into fourteen exogamous clans (*gots*). Of these clans the Kansal takes its name from a grass (*kans*), and the Bansal takes its name from the bamboo (*bans*), and neither clan may cut or injure the plant after which it is called.<sup>2</sup>

On the subject of exogamy in the Punjab I will quote the observations of a high authority, the late Sir Denzil C. J. Ibbetson: "The tribe as a whole is strictly endogamous; that is to say, no Jat can, in the first instance, marry a Gujar or Ror, or any one but a Jat; and so on. But every tribe is divided into gentes or *gots*; and these gentes are strictly exogamous. The gens is supposed to include all descendants of some common ancestor, wherever they live. . . . Traces of phratries, as Mr. Morgan calls them, are not uncommon. Thus the Mandhar, Kandhar, Bargujar, Sankarwal, and Panihar gentes of Rajputs sprang originally from a common ancestor Lao, and cannot intermarry. So the Deswal, Man, Dalal, and Siwal gentes of Jats, and again the Mual, Sual, and Rekwil gentes of Rajputs, are of common descent, and cannot intermarry.

<sup>1</sup> H. A. Rose, *Census of India*, 1901, vol. xvii. *Punjab, its Feudatories, and the North-West Frontier Province*, Part I. (Simla, 1902), p. 332. As to exogamy, without totemism, in the Punjab, see Mr. H. A. Rose, *op. cit.*

p. 331. Compare (Sir) Denzil C. J. Ibbetson, *Report on the Revision of Settlement of the Panipat Tahsil and Karnal Parganah of the Karnal District* (Allahabad, 1883), pp. 77-79.

<sup>2</sup> H. A. Rose, *op. cit.* p. 327.

Mr. H. A. Rose on traces of totemism in the Punjab.

Sir Denzil Ibbetson on exogamy in the Punjab.

The fact that many of the gentes bear the same name in different tribes is explained by the people on the ground that a Bachhas Rajput, for instance, married a Gujar woman, and her offspring were called Gujars, but their descendants formed the Bachhas gens of Gujars. This sort of tradition is found over and over again all over the country; and in view of the almost conclusive proof we possess (too long to detail here) that descent through females was once the rule in India, as it has been probably all over the world, I think it is rash to attribute all such traditions merely to a desire to claim descent from a Rajput ancestor."<sup>1</sup>

### § 7. Totemism in Bengal

Natural  
features of  
Chota  
Nagpur.

In Bengal the district of Chota Nagpur has for ages formed a secure asylum for those aboriginal tribes who have been driven from the lowlands by the tides of invasion that have swept over the plains of the Ganges. It is a high tableland guarded on all sides by precipitous jungle-clad hills and pierced here and there by rugged paths which a handful of resolute men could hold against an army. The first settlers who forced their way up through the dense thickets and steep declivities to the summit must have rejoiced to find themselves at last not so much on the crest of a mountain range as on the edge of a far-spreading land of rolling wooded hills, diversified by fertilising streams and broken here and there by fantastic pinnacles of rock, which in places resemble the vast domes of temples buried in the earth. Here in a genial climate, safe from pursuit, the refugees could draw breath and look down tranquilly on the bustle and tumult of life far off in the plains below. Here, therefore, the rude children of nature could maintain their freedom and preserve their simple habits with but little change from generation to generation.<sup>2</sup> It is accordingly

<sup>1</sup> (Sir) Denzil C. J. Ibbetson, *Report on the Revision of Settlement of the Panipat Tahsil and Karnal Parganah of the Karnal District* (Allahabad, 1883), p. 77.

<sup>2</sup> Lieut.-Col. E. T. Dalton, "The Kols of Chota-Nagpur," *Transactions*

*of the Ethnological Society of London*, New Series, vi. (1868) pp. 1 sq.; F. B. Bradley-Birt, *Chota Nagpore, a little-known Province of the Empire* (London, 1903), pp. 1 sqq.; W. Crooke, *Natives of Northern India* (London, 1907), pp. 7 sq.

among the aboriginal tribes of Chota Nagpur that we find preserved, perhaps more perfectly than elsewhere in India, the ancient systems of totemism and exogamy.

Of these tribes the Oraons, whose name is probably derived from the Dravidian *horo*, "man," appear to be the earliest settlers in the plateau. They are pure-blooded Dravidians, of the darkest brown complexion, approaching to black, with coarse, jet-black hair, which inclines to be frizzly, projecting jaws, thick lips, broad flat noses, and bright full eyes. Their language is Dravidian. They cultivate the soil; indeed, they claim to have introduced the use of the plough into Chota Nagpur instead of the old barbarous mode of tillage, which consists in burning the jungle and sowing a crop of pulse or Indian-corn in the ashes.<sup>1</sup> Their country is the northern and western parts of Chota Nagpur. In these days it presents to view a vast stretch of terraced rice-fields, divided by swelling uplands, some well wooded with groves of mango, tamarind, and various useful or ornamental trees, others still crowned with relics of the primaeval forests, which are preserved with religious care to serve as haunts for the woodland spirits. Huge piles or soaring pinnacles of granite rock add an element of strangeness and romance to the scene. Far off the fair landscape is generally bounded by blue hills.<sup>2</sup>

The Oraons  
and their  
country.

Yet the dwellings of the savages who claim to be the original lords of this fair domain assort but ill with the grandeur of the scenery. Their mud-built huts, incapable of affording decent accommodation to a family, are huddled together in a fashion little conducive to health, convenience, or decorum. Groups of such houses are built in rows of three or four facing each other and forming a small enclosed courtyard, which is seldom properly drained or cleaned. In these hovels human beings and cattle herd together. Only the swine have sties of their own. When the huts are built of the red laterite soil of which the uplands are generally composed, they are as durable as if constructed of

Houses of  
the Oraons.

<sup>1</sup> (Sir) H. H. Risley, *Tribes and Castes of Bengal, Ethnographic Glossary* (Calcutta, 1891-1892), ii. 138 sq., 148; W. Crooke, *Natives of Northern India*,

villages.

brick and mortar; indeed such walls last indefinitely, provided that they are protected from the drip of the rain by roofs or merely by a slight coping of leaves or straw. In all the older Oraon villages, which adhere to the ancient customs, there is a bachelors' house called a *dhumkuria*, where all the unmarried men and boys must sleep under penalty of a fine. The young unmarried women also sleep apart from the houses of their parents; but where they pass the night is somewhat of a mystery. Colonel Dalton was told that in some villages a separate dormitory, like the dormitory of the bachelors, is provided for them, where they consort together under the charge of an elderly duenna; but he believed the more common practice to be to distribute them among the houses of the widows, and this is what the girls themselves assert, if they answer at all when the question is put to them; but they are reticent on the subject. But however billeted, it is well known that they often find their way to the bachelors' hall, and in some villages actually sleep there. "I not long ago," says Colonel Dalton, "saw a *dhumkuria* in a Sirguja village in which boys and girls all slept every night. They themselves admitted the fact, the elders of the village confirmed it, and appeared to think that there was no impropriety in the arrangement. That it leads to promiscuous intercourse is most indignantly denied, and it may be there is safety in the multitude; but it must sadly blunt all innate feelings of delicacy. Yet the young Oraon girls are modest in demeanour, their manner gentle, language entirely free from obscenity, and whilst hardly ever failing to present their husbands with a pledge of love in due course *after* marriage, instances of illegitimate births are rare, though they often remain unmarried for some years after reaching maturity. Long and strong attachments between young couples are common."<sup>1</sup>

Loose  
relations  
of the sexes  
among the  
Oraons  
before  
marriage.

However, the charitable view which the gallant colonel took of the relations between Oraon maids and bachelors is not shared by other experienced authorities on the Indian people. Thus Sir Herbert Risley observes that among the Oraons "sexual intercourse before marriage is tacitly recognised, and is so generally practised that in the opinion

<sup>1</sup> E. T. Dalton, *Descriptive Ethnology of Bengal*, pp. 246-248.

of the best observers no Oraon girl is a virgin at the time of her marriage. To call this state of things immoral is to apply a modern conception to primitive habits of life. Within the tribe indeed the idea of sexual morality seems hardly to exist, and the unmarried Oraons are not far removed from the condition of modified promiscuity which prevails among many of the Australian tribes. Provided that the exogamous circle defined by the totem is respected, an unmarried woman may bestow her favours on whom she will. If, however, she becomes pregnant, arrangements are made to get her married without delay, and she is then expected to lead a virtuous life. Prostitution is unknown. Intrigues beyond the limits of the tribe are uncommon, and are punished by summary expulsion."<sup>1</sup>

The Oraons are divided into a great many exogamous and totemic clans. At least, seventy-one such clans are known to exist. They are named after their totems, which are sacred or tabooed to members of their respective clans. The totems are mostly animals or plants, which the clans-people are forbidden to eat. Iron and salt are totems of two clans. The following is the list of totemic clans given by Sir Herbert Risley :—<sup>2</sup>

Exogamous  
and  
totemic  
clans of  
the Oraons.

<sup>1</sup> (Sir) H. H. Risley, *Tribes and Castes of Bengal*, ii. 141. Sir Herbert Risley's view is accepted by Mr. W. Crooke, who writes of the Oraons: "The youths, like those of the Nagas, are supposed to sleep in a bachelors' hall; but the intercourse of the sexes is practically unrestricted, ante-nuptial connections are the rule rather than the exception, and marriage, as they understand the term, is equivalent to cohabitation" (*Natives of Northern India*, p. 77). On this subject Mr.

E. A. Gait, of the Indian Census, writes to me: "Risley is certainly right about premarital communism amongst the Oraons. I have been told that if an Oraon girl is thought unduly coy all the youths of the village combine against her and get her deflowered by one or more of their number."

<sup>2</sup> (Sir) H. H. Risley, *Tribes and Castes of Bengal*, ii. Appendix, pp. 113 sq.

## ORAON TOTEMS

(Sir Herbert Risley)

Clan.	Totem.	Clan.	Totem.
<i>Amri</i>	rice soup	<i>Khalkhoa</i>	cannot eat fish caught

<i>Kerketa</i>	a bird which makes a	<i>Topoar</i>	a bird with a long tail,
	noise like <i>ket ket</i>		and body mottled
			black and white

A list of twenty-seven Oraon totems is given by the Rev. F. Hahn. It differs in some points from the one given by Sir Herbert Risley, the differences being probably

due to local variations in the totemic system or nomenclature of the tribe. Mr. Hahn's list is as follows:—<sup>1</sup>

### ORAON TOTEMS

(Rev. F. Hahn)

Clans.	Totems.
1. <i>Lakra</i> . . .	tiger ; nothing of a tiger is eaten by the members of this clan (sept).
2. <i>Chigalo</i> . . .	jackal ; nothing of a jackal is eaten by the members of this clan.
3. <i>Kispota</i> . . .	the intestines or stomach of a pig are not eaten by this clan.
4. <i>Kaya</i> . . .	the wild dog ; nothing of him is eaten.
5. <i>Kartu</i> . . .	the black <i>hanuman</i> ape ; not eaten.
6. <i>Tiga</i> . . .	the field mouse ; not eaten.
7. <i>Tirki</i> . . .	young mouse ; not eaten.
8. <i>Orgora</i> . . .	hawk ; not eaten.
9. <i>Gidhi</i> . . .	vulture ; not eaten.
10. <i>Khakha</i> . . .	crow ; not eaten.
11. <i>Chelek Cheta</i>	swallow ; not eaten.
12. <i>Toppo</i> . . .	woodpecker ; not eaten.
13. <i>Kerketta</i> . . .	quail ; not eaten.
14. <i>Dhicua</i> . . .	swallow-tailed bird ; not eaten.
15. <i>Ekka</i> . . .	tortoise ; not eaten.
16. <i>Minj</i> . . .	eel ; not eaten.
17. <i>Kindo</i> . . .	carp fish ; not eaten.
18. <i>Khalkho</i> . . .	shad fish ; not eaten.
19. <i>Kujur</i> . . .	a creeper, from the fruit of which an oil is obtained, which is not used by the Kujur people.
20. <i>Bara</i> . . .	the <i>Ficus Indica</i> ; the fruit is not eaten.
21. <i>Chitkha</i> . . .	the <i>Ficus religiosa</i> ; the fruit is not eaten.
22. <i>Bakhla</i> . . .	tank weed ; the roots may not be eaten by this clan.
23. <i>Khess</i> . . .	paddy. The <i>conjy</i> [?] is not used by this clan unless it is diluted.
24. <i>Madge</i> . . .	mahua ; the flower may not be eaten.
25. <i>Kisskhocol</i> . . .	a thorny tree ; the fruit is forbidden to this clan.
26. <i>Panna</i> . . .	iron ; may never be touched with the tongue or the lips.
27. <i>Bek</i> . . .	salt ; may not be eaten on the tip of the finger.

<sup>1</sup> Rev. F. Hahn, "Some Notes on the Religion and Superstitions of the Orāḍs," *Journal of the Asiatic Society*

of Bengal, lxxii. Part III. (Calcutta, 1904) pp. 18 sq.

Respect  
shown to  
the totems.

From a comparison of the lists we may infer that the *kerketa* and the *topoar* of Sir Herbert Risley's list are the quail and the woodpecker respectively. In regard to the totems generally, Mr. Hahn tells us that they "are held sacred in some way or other," and that the respect shewn to them is regarded as homage paid to ancestors.<sup>1</sup> Hence it would seem that the Oraons, like many other totemic peoples, conceive themselves to be descended from their totems.

Dalton on  
the Oraon  
clans and  
totems.

A few of the Oraon clans and their totems were first recorded by Colonel E. T. Dalton. He tells us that "the *Tirki* have an objection to animals whose eyes are not yet open, and their own offspring are never shewn till they are wide awake. The *Ekhar* will not touch the head of a tortoise. The *Katchoor* object to water in which an elephant has been bathed. The *Amdiar* will not eat the foam of the river. The *Kujrar* will not eat the oil of the *Kujri* tree, or sit in its shade. The *Tiga* will not eat the monkey."<sup>2</sup> In general he observes that "the family or tribal names are usually those of animals or plants, and when this is the case, the flesh of some part of the animal or fruit of the tree is tabooed to the tribe called after it."<sup>3</sup>

The rule of exogamy observed by the Oraons is the

<sup>1</sup> Rev. F. Hahn, "Some Notes on the Religion and Superstitions of the Oraons," *Journal of the Asiatic Society of Bengal*, lxxii. Part III. (Calcutta, 1904), p. 18.

Kols of Chota-Nagpore," *Transactions of the Ethnological Society of London*, N.S. vi. (1868) p. 36. In his later work, *Descriptive Ethnology of Bengal*, p. 254, Colonel Dalton gives the following list of Oraon clans (or tribes, as he calls them) with their taboos:—

<sup>2</sup> Lieut.-Col. E. T. Dalton, "The

Clans.	Taboos.
<i>Tirki</i>	may not eat <i>tirki</i> , young mice
<i>Ekhar</i>	may not eat head of tortoise
<i>Kirpotas</i>	do not eat the stomach of the pig
<i>Lakrar</i>	may not eat tiger's flesh
<i>Kujrar</i>	may not eat oil from this tree or sit in its shade
<i>Gedhiar</i>	may not eat kite
<i>Khakhar</i>	„ „ crow
<i>Minjar</i>	„ „ eel
<i>Kerketar</i>	„ „ the bird so named
<i>Barar</i>	may not eat from the leaves of the <i>Ficus Indica</i>

<sup>3</sup> E. T. Dalton, *Descriptive Ethnology of Bengal*, p. 254.

simple one that a man may not marry a woman of his own clan. There is no objection to a man's marrying a woman of his mother's clan. Children belong to the clan of their father. In addition to the rule of exogamy there seems to be a system of prohibited degrees, though no one can state it clearly. Still every Oraon admits that he may not marry his mother's sister nor his first cousin on the mother's side, though he will probably not be able to say how far these prohibitions extend in the descending line. Again, no man may marry the widow of his younger brother nor his deceased wife's elder sister; but he may marry the widow of his elder brother and his deceased wife's younger sister.<sup>1</sup>

Marriage customs of the Oraons.

The Levirate and marriage with a deceased wife's sister.

Another large Dravidian tribe of Chota Nagpur who retain totemism and exogamy are the Mundas. Physically they are among the finest of the aboriginal tribes of the plateau. The men are about five feet six in height, their bodies lithe and muscular, their skin of the darkest brown or almost black, their features coarse, with broad flat noses, low foreheads, and thick lips.<sup>2</sup> Thus from the physical point of view the Mundas are pure Dravidians. Yet curiously enough they speak a language which differs radically from the true Dravidian. Together with the languages of the Kherwaris, Kurkus, Kharias, Juangs, Savaras, and Gadabas it forms a separate family of speech, to which the name of Kolarian used to be applied; but modern philologists prefer to name it Munda after its best known representative, the language of the Mundas. This interesting family of language is now known to be akin to the Mon-Khmer languages of Further India as well as to the Nicobarese and the dialects of certain wild tribes of Malacca. It is perhaps the language which has been longest spoken in India, and may well have been universally diffused over the whole of that country as well as over Further India and Malacca before the tide of invasion swept it away from vast areas and left it outstanding only in a few places like islands or solitary towers rising from an ocean of alien tongues.<sup>3</sup> The Mundas are

Exogamous  
and  
totemic  
clans of the  
Mundas.

divided into many exogamous clans (*kilis*), of which no less than three hundred and thirty-nine are enumerated by Sir Herbert Risley. The great majority of them appear to be totemic, deriving their names from animals or plants which the members of the clan are forbidden to eat. Children belong to the clan of their father.<sup>1</sup> Among the totemic animals of the Munda clans are the tiger, leopard, elephant, wolf, jackal, crocodile, a kind of snake, river-snake, cobra, stag, deer, wild cow, horse, monkey, hog, dog, wild dog, cat, rat, mouse, tree-mouse, porcupine, rabbit, squirrel, tortoise, hawk, kite, vulture, quail, parrot, peacock, swan, crow, king-crow, pigeon, cock, fowl, and many other birds, black bee or hornet, fly, red tree-ant, black tree-ant, red flying ant, rice weevil, earth worm, a red worm, leech, eel, water-snake, and fish of various sorts. Among the totemic plants of the clans are rice, fried rice, paddy, yam, plantain, potato, sweet potato, a curry vegetable, areca nut, lotus, various fruits, fig, fig-tree root, *Ficus Indica*, tamarind, kussum-tree, mango, a kind of grass, mushroom, and moss. Among the miscellaneous totems are salt, red earth, ashes, a kind of mud, vermilion, copper, cocoon, horn, bone, clarified butter, honey, new rice soup, full moon, moonlight, rainbow, the month of June, Wednesday, brass bracelet, verandah, umbrella, basket-maker, torch-bearer, and the Rautia caste. The totemic taboos of three clans are respectively not to eat beef, not to wear gold, and not to touch a sword. Members of the clan which has paddy (unhusked rice) for its totem are forbidden to eat rice and rice soup; they eat millet instead. Members of the clan which takes its name from the *udbarn* tree do not use the oil which is extracted from the tree.<sup>2</sup> The Mundas cultivate rice and celebrate festivals at harvest.<sup>3</sup>

Totemic  
taboos.

The Hos  
or Larka  
Kols.

Another large non-Aryan tribe which is divided into exogamous clans are the Hos or Larka Kols. As they are

<sup>1</sup> E. T. Dalton, "The Kols of Chota-Nagpore," *Transactions of the Ethnological Society of London*, N.S. vi. (1868) pp. 26, 36; *id.*, *Descriptive Ethnology of Bengal*, p. 189; (Sir) H. H. Risley, *Tribes and Castes of Bengal*, ii. 101 *sq.*, and Appendix,

pp. 102-109.

<sup>2</sup> (Sir) H. H. Risley, *Tribes and Castes of Bengal*, ii. Appendix, pp. 102-109.

<sup>3</sup> (Sir) H. H. Risley, *Tribes and Castes of Bengal*, ii. 104.

closely akin to the Mundas, they may be noticed here, though Singbhum, the district which they inhabit, does not form part of Chota Nagpur proper, but lies to the south-east of it. The most fertile and highly-cultivated part of this region surrounds the station of Chaibasa, and here are massed about two-thirds of the Hos or Kols. To the south-west, bordering on Chota Nagpur, is a mountainous tract of vast extent sparsely peopled by the wildest of the Kols, whose poor villages nestle in the deep valleys of these rugged highlands. Like their kinsmen the Mundas, the Hos or Kols are classed on linguistic grounds as Kolarians.<sup>1</sup> They are a purely agricultural people, and all their festivals are connected with the cultivation of the ground. They raise three crops of rice in the year, and they also cultivate maize, millet, tobacco, and cotton. Their agricultural implements, which they make themselves, are a wooden plough tipped with iron, a harrow, a large hoe, a sickle, and a battle-axe, which serves more peaceful purposes than the name implies. They plough with cows as well as oxen, but prefer buffaloes to bullocks. The cattle are used only for ploughing ; for the Hos, like many other hill tribes of India, never touch milk.<sup>2</sup> In the most fruitful part of the land the villages are often prettily situated on a hillside looking away over the flat-terraced rice-fields and the rolling uplands. Ancient and noble tamarind trees overshadow the roomy, substantially built houses with their thatched roofs and neat verandahs. The outhouses are so placed as to form with the farm-house itself a square courtyard with a large pigeon house in the middle. Not far off, in the shade of the solemn tamarind trees, are the graves covered with great slabs of stone, on which in the cool of the evening, when their work is done, the elders love to sit and smoke their pipes, gossiping of village affairs and no doubt often recalling the days of their youth and the memory of the rude forefathers who sleep their long sleep under these ponderous stones.<sup>3</sup>

Agriculture  
of the Hos.

Villages of  
the Hos.

<sup>1</sup> E. T. Dalton, *Descriptive Ethnology of Bengal*, pp. 177 sq. ; (Sir H. H. Risley, *Tribes and Castes of Bengal*, i. 319. As to the Hos and their country, see further F. B. Bradley-Birt, *Chota Nagpore, a little-*

<sup>2</sup> E. T. Dalton, *Descriptive Ethnology of Bengal*, pp. 195, 196 sqq.

<sup>3</sup> E. T. Dalton, *op. cit.* p. 189.

High places and sacred groves of the Hos.

Every village has its high place and its sacred grove, where the gods, unseen by mortal eyes and unrepresented by images, receive the offerings of their worshippers. The high place is some mighty mass of virgin rock, to which man has added nothing and from which he has taken nothing away. The sacred grove is a fragment of the primæval forest left standing when the rest of it was felled, lest the sylvan deities, rendered houseless by the woodman's axe, should forsake the land for ever. For ages these venerable trees have been carefully protected, and even now if one of them is destroyed, the gods manifest their displeasure by withholding the rains in their due season. It is to these woodland deities that the husbandman looks for a bounteous harvest; it is to them that he pays his devotions at all the great festivals of the agricultural year.<sup>1</sup>

Exogamous clans of the Hos.

The Hos or Larka Kols are divided into at least forty-six clans or septs, which strictly observe the rule of exogamy, no man being on any account allowed to marry a woman of his own clan. "With this exception" says Sir Herbert Risley, "their views on the subject of prohibited degrees appear to be lax, and I understand that marriages with near relatives on the mother's side are tolerated provided that a man does not marry his aunt, his first cousin, or his niece." The clans of the Hos, like those of the Mundas, are called *kilis*. Among the names of the clans Colonel Dalton found only one which is that of an animal; however, according to Sir Herbert Risley, many of the names appear to be totemic. Six of the clans are identical in name with six clans of the Santals, who are themselves akin to the Hos.<sup>2</sup>

Totemism and exogamy among the Bedias and other tribes of Chota Nagpur.

Another totemic people in Chota Nagpur are the Bedias, a small agricultural tribe of the Dravidian stock. They are divided into nineteen exogamous and totemic clans or septs, and the clan totems include the squirrel, cobra, tortoise, owl, pigeon, and other birds, various kinds of fish, the banyan tree, the *Bassia latifolia*, and the mahua flower.<sup>3</sup> The Bhars, a

<sup>1</sup> E. T. Dalton, *Descriptive Ethnology of Bengal*, pp. 185-188.

<sup>2</sup> E. T. Dalton, *Descriptive Ethnology of Bengal*, p. 189; (Sir) H. H. Risley, *Tribes and Castes of Bengal*,

i. 320, ii. Appendix, p. 60.

<sup>3</sup> (Sir) H. H. Risley, *Tribes and Castes of Bengal*, i. 83, ii. Appendix, p. 8. That the septs or (as I call them) clans of the Bedias are exogamous

small Dravidian caste of Chota Nagpur and Western Bengal, The Bhars. are for the most part cultivators of the soil. They are divided into seven exogamous clans or septs, of which four have for their totems the tortoise, the peacock, the bamboo, and the *bel* fruit. The other three clans (Agni, Brahmarishi, and Rishi) are eponymous, that is, they derive their names from real or mythical ancestors, not from totems.<sup>1</sup> In Chota The Goalas. Nagpur the Goalas, the great pastoral caste of India, are divided into thirty-one exogamous and totemic clans or septs of the type common in that part of the country. Among their clan totems are the tiger, deer, calf, cobra, rat, field-rat, red tree-ant, eel, swan, mango, *Ficus Indica*, *pakar* fruit, lotus, a kind of grain, a grass, and an arrow. One clan, (the Sona) is forbidden to wear gold; another (the Tirki) to touch cattle after their eyes are open.<sup>2</sup> The Kharias, The Kharias. a Dravidian tribe of cultivators in Chota Nagpur, are divided into at least thirty-four exogamous and totemic clans or septs. Among the clan totems are the tiger, elephant, tortoise, cobra, red ant, eel, several kinds of birds and fish, the *Ficus Indica*, paddy, salt, and a rock. The exogamous rule is regularly observed, no man being allowed to marry a woman of his own clan. On the other hand, it is said that the totemic rule to regard the totem as sacred or taboo is not now very generally observed; it must, however, have been at one time in force, for a clan of wild Kharias, whom Mr. Ball met with on the Dalma range in Manbhum, had the sheep for their totem and were not allowed to eat mutton or even to use a woollen rug.<sup>3</sup> The Kharwars, The Kharwars. a Dravidian

is not expressly mentioned by Sir Herbert Risley, but I assume that they and all the other septs enumerated by him in his *Tribes and Castes of Bengal, Ethnographic Glossary*, vol. ii. Appendix I., are in fact exogamous. That they are so appears to be clearly implied by Sir Herbert Risley in his general account of exogamy. See his essay "Primitive Marriage in Bengal," *Asiatic Quarterly Review*, July 1886, pp. 75 sqq.; *The People of India*, pp. 154 sq.

<sup>1</sup> (Sir) H. H. Risley, *Tribes and Castes of Bengal*, i. 95, ii. Appendix, p. 9. As to eponymous septs or clans,

<sup>2</sup> (Sir) H. H. Risley, *Tribes and Castes of Bengal*, i. 282, 288, ii. Appendix, pp. 51 sq.

<sup>3</sup> (Sir) H. H. Risley, *Tribes and Castes of Bengal*, i. 466, ii. Appendix, pp. 77 sq. As to the taboo on the sheep and its products, see V. Ball, *Jungle Life in India* (London, 1880), p. 89, "The Keriaks do not eat the flesh of sheep, and may not even use a woollen rug"; E. T. Dalton, *Descriptive Ethnology of Bengal*, p. 161.

tribe of cultivators and landholders in Chota Nagpur and Southern Behar, are divided into more than seventy exogamous clans or septs, of which many are totemic. Among the totems of their clans are the tiger, elephant, cobra, cow, tortoise, rat, squirrel, red tree-ant, eel, hawk, swan, duck, hen, a water-fowl and other kinds of birds, *Ficus Indica*, plum, pineapple, various other fruits and grasses, salt, lime, coral, gold, copper, a top-knot, a neck ornament, an arrow, and goldsmith.<sup>1</sup>

The Koras.

The Koras are a Dravidian caste of earth-workers and cultivators in Chota Nagpur, and Western and Central Bengal. Probably they are an offshoot from the Munda tribe. Amongst them, wherever the exogamous clans have been preserved, the rule is that a man may not marry a woman of his own totem, but the mother's totem is not taken into account. Amongst their totems are the bull, pig, tortoise, heron, wild goose and a fish (*sal* or *saula*).<sup>2</sup>

The Koshtas.

The Koshtas are a caste of weavers and cultivators in Chota Nagpur. Some at least of their exogamous clans are totemic, such as the *Baghal* (tiger), *Bhat* (rice), *Chaur* (yak's tail), *Khanda* (sword), *Kurm* (tortoise), *Manik* (gem), and *Nag* (snake). But there is no evidence that the members of the clans pay any respect to the totems whose names they bear. Among the Koshtas a widow is expected to marry her deceased husband's younger brother, if one survives him.<sup>3</sup>

The Kurmis.

The Kurmis are a very large caste of cultivators in Chota Nagpur, Upper India, Behar, and Orissa. Their origin is obscure. In Chota Nagpur and Orissa their exogamous clans number sixty and are purely totemic. The clan totems include the tiger, crocodile, tortoise, buffalo, jackal, snake, rat, cat, spider, kite, wild goose, bamboo, betel palm, fig, *kesar* grass, gold, net, pierced ears, and hunter. One clan (Bansriar) will not play the *bansi* or bamboo flute. Another will not wear silk, and another will not wear shell ornaments.<sup>4</sup>

The Lohars are the blacksmith caste of Chota Nagpur, Behar, and Western Bengal, comprising a large and hetero-

<sup>1</sup> (Sir) H. H. Risley, *Tribes and Castes of Bengal*, i. 472, 474, ii. Appendix, pp. 78 sq.

<sup>2</sup> (Sir) H. H. Risley, *op. cit.* i. 506, 507, ii. Appendix, p. 83.

<sup>3</sup> (Sir) H. H. Risley, *op. cit.* i. 513, ii. Appendix, p. 84.

<sup>4</sup> (Sir) H. H. Risley, *op. cit.* i. 528 sqq., ii. Appendix, pp. 87 sq.

geneous aggregate of members of different tribes and castes. In Chota Nagpur the caste is divided into sixty-eight exogamous clans or septs, of which many, if not all, are totemic. Among their clan totems are the tiger, elephant, cobra, snake, tortoise, cow, bullock, wild cat, fox, red tree-ant, eel, hawk, kingcrow, crow, heron, birds of other sorts, bamboo, fig, sweet potato, lotus, grass (*kons*), turmeric, and net. The Tirki clan may not touch any animals after their eyes are open.<sup>1</sup> The Mahili are a caste of labourers, palanquin-bearers, and workers in bamboo, who are found in Chota Nagpur and Western Bengal. They are divided into about thirty exogamous and totemic clans. Some of the totems are the bull, nilgau (a species of antelope), eel, caterpillar, wild goose and other birds, jack-fruit tree, wild fig, and *turu* grass. One clan has ears for its totem, and members of it are forbidden to eat the ear of any animal.<sup>2</sup> The Nagesar are a small Dravidian tribe of cultivators in Chota Nagpur, short, very dark, and ugly. The exogamous clans into which they are divided bear totemic names which occur among the Mundas and many other Dravidian tribes. Among their totems are the bull, the cobra, two kinds of eels, the mango, and the *Ficus Indica*. One of their clans (the Sonwani) is forbidden to wear gold.<sup>3</sup>

Totemism and exogamy among the Lohars, Mahili, and Nagesar of Chota Nagpur.

The Pans are a low caste of weavers, basket-makers, and menials scattered under various names (Chik, Ganda, Pab, Panika, Panwa, Tanti, etc.) throughout the north of Orissa and the southern and western parts of Chota Nagpur. It has been conjectured on very slender grounds that the Pans are descendants of Aryan colonists, who settled of old in Chota Nagpur and were subdued by the Dravidian races of that country. But the numerous totemic clans into which they are divided seem to furnish strong evidence of their Dravidian origin.<sup>4</sup> On this subject Sir Herbert Risley observes: "The caste has a very numerous set of totems,

Totemism and exogamy among the Pans of Orissa and Chota Nagpur.

<sup>1</sup> (Sir) H. H. Risley, *Tribes and Castes of Bengal*, ii. 22, and Appendix, pp. 94 sq.

<sup>2</sup> (Sir) H. H. Risley, *op. cit.* ii. 40, and Appendix, pp. 96 sq.; *id.*, *The People of India*, p. 95.

<sup>3</sup> E. T. Dalton, *Descriptive Ethnology*

of Bengal, pp. 131-133; (Sir) H. H. Risley, *Tribes and Castes of Bengal*, ii. 122, and Appendix, p. 111.

<sup>4</sup> (Sir) H. H. Risley, *Tribes and Castes of Bengal*, ii. 155 sq., and Appendix, pp. 36 sq., 115-117; E. T. Dalton, *Descriptive Ethnology of Bengal*, p. 325.

comprising the tiger, the buffalo, the monkey, the tortoise, the cobra, the mongoose, the owl, the kingcrow, the peacock, the centipede, various kinds of deer, the wild fig, the wild plum, and a host of others which I am unable to identify. They have in fact substantially the same set of totems as the other Dravidian tribes of that part of the country, and make use of these totems for regulating marriage in precisely the same way. The totem follows the line of male descent. A man may not marry a woman who has the same totem as himself, but the totems of the bride's ancestors are not taken into account, as is the case in the more advanced forms of exogamy. In addition to the prohibition of marrying among totem kin, we find a beginning of the supplementary system of reckoning prohibited degrees. The formula, however, is curiously incomplete. Instead of mentioning both sets of uncles and aunts and barring seven generations, as is usual, the Pans mention only the paternal uncle and exclude only one generation. They are therefore only a stage removed from the primitive state of things when matrimonial relations are regulated by the simple rule of exogamy, and kinship by both parents has not yet come to be recognized."<sup>1</sup> To the Pan or Chik totems enumerated above by Sir Herbert Risley may be added the cat and a small wild cat, the frog, the cow, the rat, the wood-louse, the crab, a red tree-ant, the flying bug, a water-snake, the hawk, the swan, the paddy-bird, the *Ficus Indica*, the tomato, curry vegetable, fork of a tree, *kansi* grass, *Bassia latifolia*, horn, bull's horn, a yak's tail, iron, the moon, and a ship. The members of one clan (*Balbandhiya*) are bound to tie up their hair. The members of another clan (*Dip*) may not eat after lights are lit. The members of another (*Mahabaar*) may not kill or chase the wild boar; and the members of another (*Rikhiasan*) are forbidden to eat beef or pork.<sup>2</sup>

Totemic  
taboos.

Totemism  
and  
exogamy  
among the  
Rautias of  
Chota  
Nagpur.

The Rautias are a caste of landholders and cultivators in Chota Nagpur, who are probably Dravidian by origin, but have been refined in features and complexion by a large infusion of Aryan blood. They are divided into many

<sup>1</sup> (Sir) H. H. Risley, *Tribes and Castes of Bengal*, ii. 156.

ii. Appendix, pp. 36 sq., 115-117.

<sup>2</sup> (Sir) H. H. Risley, *op. cit.*

exogamous clans (*paris* or *gots*), of which some are totemic. Such are the clans which take their names respectively from the eel, the tortoise, the snake, the cat, the wild dog, the squirrel, the vulture, the *kasi* grass, the sword, and the axe. The rule that the totem is tabooed to members of the clan appears in the case of the Rautias to apply only to the animal-totems, which may be named, but may not be killed or eaten. On the other hand members of the Sword clan and of the Axe clan are not forbidden to use these weapons, nor is a man of the *kasi* Grass clan prohibited from touching the grass from which his clan is supposed to be descended. The clan, with its totem, is inherited by children from their father. While a man is forbidden to marry a woman of his own totemic clan, he is free to marry a woman of his mother's clan. The simple rule of clan exogamy is accordingly supplemented by a table of prohibited degrees made up, like our own, by enumerating the individual relatives whom a man is forbidden to marry, and not, as is more usual, by prohibiting intermarriage with certain large classes of relations or with the descendants, within certain degrees, of particular relations. It is considered right that a widow should marry her late husband's younger brother. Under no circumstances may she marry his elder brother. Any children she may have by the younger brother are deemed his and not his deceased brother's.<sup>1</sup>

The  
Levirate.

The last totemic people of Chota Nagpur whom we shall notice are the Turis, a non-Aryan caste of cultivators, workers in bamboo, and basket-makers, whose physical type, language, and religion prove that they are a Hindooised offshoot of the Mundas. Their exogamous clans are for the most part totemic and correspond closely to those of the Mundas. They include *Bar* (*Ficus Indica*), *Charhad* (tiger), *Hansda* (wild goose), *Hastadda* (eel), *Induar* (a kind of eel), *Jariar* (lizard), *Kachhua* (tortoise), *Kerketa* (a kind of bird), *Samp* (snake), *Saur* (fish), *Sumat* (deer), *Suren* (a kind of fish), *Tirki* (mouse), and *Toppo* (bird).<sup>2</sup>

Totemism  
and  
exogamy  
among the

<sup>2</sup> (Sir) H. H. Risley, *op. cit.* ii. 333

The  
Santals.

But while the secure tableland of Chota Nagpur is the home of many aboriginal tribes which have retained the ancient social system of totemism and exogamy, it is by no means the only part of Bengal in which totemic peoples are found. Amongst these the best known are the Santals, a large Dravidian tribe of cultivators, who have their nucleus in the Santal Parganas or Santalia, but are also found scattered at intervals over a strip of Bengal which stretches for about three hundred and fifty miles from the Ganges to the Baitarni and is bisected by the meridian of Bhagalpur or 87° East longitude. So far as physical appearance goes, the Santals may be regarded as typical examples of the pure Dravidian stock. Their complexion varies from very dark brown to almost charcoal-like black; the proportions of the nose approach those of the negro; the mouth is large, the lips thick and protruding, the hair coarse, black, and sometimes curly. On the ground of their language, however, the Santals are classed as Kolarians or Mundas.<sup>1</sup> Though they till the soil, their habits are migratory; they do not care to settle for long in one place, but clear fresh patches for cultivation in the woods and so move on. A country denuded of the forest which furnishes them with the hunting grounds they love and the virgin soil they prefer has little attraction for them. When by their own labour the trees have been felled, the jungle cleared, and the land brought under cultivation, they quit it and retire into the backwoods, where their harmonious flutes sound sweeter, their drums find deeper echoes, and their bows and arrows may be used again.<sup>2</sup>

Migratory  
agriculture  
of the  
Santals.

The social  
system of  
the Santals,  
their  
exogamous  
clans and  
subclans.

The social structure of the Santal tribe is very elaborate. It is divided into twelve clans or septs and at least seventy-six subclans or subsepts. Both clans and subclans are exogamous and both appear to be totemic. No man may marry into his own clan (*pari*) or subclan (*khunt*), but he may marry into any other clan, including his mother's; on

<sup>1</sup> E. T. Dalton, *Descriptive Ethnology of Bengal*, p. 207; (Sir) H. H. Risley, *Tribes and Castes of Bengal*, ii. 224 sq.; *The Imperial Gazetteer of India, The Indian Empire*, vol. i. (Oxford, 1909), p. 383. The work of the late

Sir W. W. Hunter, *Annals of Rural Bengal*<sup>6</sup> (London, 1872), is in great part devoted to a detailed and sympathetic account of the Santals.

<sup>2</sup> E. T. Dalton, *Descriptive Ethnology of Bengal*, pp. 208 sq.

the other hand he is not allowed to marry into his mother's subclan. Children belong to their father's clan. The twelve exogamous clans are: 1. *Hasdak* (wild goose); 2. *Murmu* (the nilgau or nilgao, a species of antelope, *Portax pictus*); 3. *Kisku*; 4. *Hembrom* (betel palm); 5. *Marndi* (grass); 6. *Saren* (the constellation Pleiades); 7. *Tudu*; 8. *Baske*; 9. *Besra* (hawk); 10. *Pauria* (pigeon); 11. *Chore* (lizard), and 12. *Bedea* or *Bediya* (sheep?). The *Pauria* (pigeon) and the *Chore* (lizard) clans are said to have been so called because on a famous hunting party conducted by the tribe members of these clans failed to kill anything but pigeons and lizards respectively. Members of the *Murmu* (antelope) clan may not kill the species of antelope (*Portax pictus*) from which they take their name nor may they touch its flesh.<sup>1</sup> Among the subclans or subsepts (*khunts*) into which the Santal clans (*paris*) are divided we may note *Kahu* (crow), *Kara* (buffalo), *Chilbinda* (eagle-slayer), *Roh-Lutur* (ear-pierced), *Dantela* (so called from breeding pigs with very large tusks for sacrifice), *Gua* (areca nut), *Kachua* (tortoise), *Nag* (cobra), *Somal* (deer), *Kekra* (crab), *Roht* (*panjaun* tree), *Boar* (a fish), *Handi* (earthen vessel), *Sikiya* (a chain), *Barchi* (spearmen), *Sankh* (conch shell), *Sidup* or *Siduk* (a bundle of straw), *Agaria* (charcoal-burners), and *Lat* (bake meat in a leaf-platter).<sup>2</sup> Many of the subclans observe certain

Traditional usages of the Santal subclans.

Traditional usages of the Santal subclans.

festival and go round asking alms of rice. With the rice they get they make little cakes which they offer to the gods. Members of the *Saren* clan and the *Manjhi-Khil* subclan are so called because their ancestor was a *manjhi* or village headman. Like the *Sada-Saren*, they are forbidden to attend when the priest offers up his own blood. Members of the *Saren* clan and the *Naiki-Khil* subclan claim descent from a *naiki* or village priest and may not enter a house of which the inmates are ceremonially unclean. They have a sacred grove (*jadhirthan*) of their own apart from the common sacred grove of the village, and they dispense with the services of the priest who serves the rest of the village. Members of the *Saren* clan and of the *Ok* subclan sacrifice a goat or a pig in their houses, and during the ceremony they shut the doors tight and allow no smoke to escape. The word *ok*, which is the name of the subclan, means to suffocate or stifle with smoke. Members of the *Saren* clan and the *Mundu* or *Badar* (dense jungle) subclan offer their sacrifices in the jungle, and allow only males to eat of the flesh of the animals which have been slain. Members of the *Saren* clan and the *Mal* subclan may not utter the word *mal* when they are engaged in a religious ceremony or sitting to determine tribal questions. Men of the *Saren* clan and the *Jihu* subclan may not kill or eat the *jihu* or babbler bird after which they are called, nor may they wear a particular sort of necklace known as *jihu mala* from the resemblance which it bears to the babbler bird's eggs. The babbler bird is said to have guided the ancestor of the clan to water when he was dying of thirst in the forest. Members of the *Saren* clan and the *Sankh* (conch shell) subclan may not wear shell necklaces or ornaments. Members of the *Saren* clan and the *Barchir* (spearman) subclan plant a spear in the ground when they are engaged in religious or ceremonial observances.<sup>1</sup>

The Levirate among the Santals.

The Santals think it the right thing for a widow to marry her deceased husband's younger brother, if one survives him, but under no circumstances may she marry his elder brother.<sup>2</sup> An eldest son is always named after his grandfather.<sup>3</sup>

<sup>1</sup> (Sir) H. H. Risley, *Tribes and Castes of Bengal*, ii. 228.

<sup>2</sup> (Sir) H. H. Risley, *op. cit.* ii.

231.

<sup>3</sup> E. T. Dalton, *Descriptive Ethnology of Bengal*, p. 214.

The principal festival of the Santals is the *sohrai* or harvest festival celebrated in the month of Posh (November-December), after the chief rice crop of the year has been got in. Public sacrifices of fowls are offered by the priest in the sacred grove; pigs, goats and fowls are sacrificed by private families, and a general saturnalia of drunkenness and debauchery prevails. Chastity is in abeyance for the time, and all unmarried persons may indulge in promiscuous intercourse. This licence, however, does not extend to adultery, nor does it cover intercourse between persons of the same clan, though even that offence committed during the harvest festival is punished less severely than at other times.<sup>1</sup> It is possible that this period of licence may be a temporary revival of old communal rights over women.

Another well-known Dravidian tribe of Bengal among whom totemism combined with exogamy has been discovered are the Khonds, Kondhs, or Kandhs, who inhabit a hilly tract called Kandhmals in Boad, one of the tributary states of Orissa in the extreme south of Bengal. A portion of the tribe is also found in Gumsur, formerly a tributary state, which now forms part of the Ganjam District in Madras. The Khonds of Orissa call themselves Maliah, to distinguish themselves from the Khonds of Gumsur.<sup>2</sup> Their country is wild and mountainous, consisting of a labyrinth of ranges covered with dense forests of *sal* trees. They are a shy and timid folk, who love their wild mountain gorges and the stillness of jungle life, but eschew contact with the lowlanders and flee to the most inaccessible recesses of their rugged highlands at the least alarm. They subsist by hunting and a primitive sort of agriculture, clearing patches of land for cultivation in the forest during the cold weather and firing it in the heat of summer. The seed is sown among the ashes of the burnt forest when the first rains have damped it. After the second year these rude tillers of the soil abandon the land and make a fresh clearing in the woods.<sup>3</sup> The cruel human sacrifices which they used

to offer to the Earth Goddess in order to ensure the fertility of their fields have earned for the Khonds an unenviable notoriety among the hill tribes of India. These sacrifices were at last put down by the efforts of British officers.<sup>1</sup>

Exogamous clans (*gochis*) of the Khonds.

The Khonds of Orissa are divided into fifty exogamous septs or clans called *gochis*, each of which bears the name of a village (*muta*) and believes its members to be all descended from a common ancestor. As a rule the clanspeople live together in the village or group of villages from which they take their name. Each clan is further split up into subclans called *klambus*. No man may marry a woman of his own clan even though she may belong to another subclan. Both clan and subclan are inherited by children from their father; no traces of female kinship have been detected among the Khonds, unless the rule which forbids a man to take a wife from his mother's subclan may be regarded as such.<sup>2</sup> The statements of some older writers further point to the practice of totemism among the Khonds. Thus one of them says that many Khond chieftains "lay claim to a fabulous descent, and point to their coat of arms as indicating the animal or object from which their ancestors sprung. The Rajah of Goomsur, for example, had a peacock, another prince a snake, and a third a bamboo tree; and these cognizances are no small source of pride."<sup>3</sup> Again, another writer tells us that "Khond names seem to be universally taken from natural objects, never expressing qualities. Thus, there is the *Meeninga*, or Fish tribe; the *Janinga*, or Crab tribe; the *Pochangia*, or Owl; the *Syalinga*, or Spotted Deer tribe; the *Grango*, or Nilgae";<sup>4</sup> and he further informs us that "marriage can take place only betwixt members of different tribes, and not even with strangers who have been long adopted into or domesticated with a tribe; and a state of war or peace appears to make

Traces of totemism among the Khonds.

little difference as to the practice of intermarriage betwixt tribes. The people of Baramootah and of Burra Des in Goomsur have been at war time out of mind, and annually engage in fierce conflicts, but they intermarry every day.”<sup>1</sup>

In recent years these indications of totemism among the Khonds have been confirmed by the researches of Mr. J. E. Friend-Pereira, whose enquiries were prosecuted mainly in the northern section of the tribe, particularly among the group of clans who inhabit the tributary state of Boad or Bod, a part of the tributary state of Daspalla, and the former tributary state of Gumsur, which now belongs to the Ganjam district of Madras. The western part of the country investigated by Mr. Friend-Pereira is a high plateau intersected by the many ramifications of the Ghaut Mountains. Eastward the land opens out into broader and more fertile valleys, till the plateau begins to merge into the plains of Ganjam. On reaching Boad we have passed into the lowlands, though even here hills rise like islands from the alluvial flats. As the country changes, so do its inhabitants. For the Khonds of the western highlands are wilder and more primitive than their brethren of the plains; as a rule they speak no language but their native tongue, they still eat pork and drink strong drink, and their women go about with nothing but a loin-cloth to hide their nakedness. On the other hand the Khonds of the low countries speak the Uriya tongue, have more or less eschewed pork, and in the plains of Boad and Gumsur are hardly distinguishable from the Uriyas in features, language, and mode of life.<sup>2</sup> These two sections of the Khond tribe, the more and the less civilised, are known respectively as the Uriya Khonds and the Mulua or Mal Khonds. The Malua or Mal Khonds, the wilder inhabitants of the highlands, already refuse to intermarry with the Uriya Khonds of the plains, whom they despise as degenerate for having abandoned many of their old native customs and assimilated themselves to Hindoos. It seems probable that in time a complete

separation will take place between the two branches of the tribe.<sup>1</sup>

The Chota Paju commune of the Khonds with its totems.

Among the Malua or Mal Khonds there exist certain communes or confederacies of clans, of which the largest and most influential is known as the Chota Paju or Chota Padki. It comprises six clans or rather subclans and occupies the centre of the eastern half of the Mal country.<sup>2</sup> The following is Mr. Friend-Pereira's account of the totemic system of the confederacy: "The constitution of Chōtā Pāju confederacy is peculiar. *Chōtā Pāju* or *Chōtā Pādki* means the six *pādu* or countries. There are six territorial areas called *Muthā* (a handful) as follows: Biḍumēḍi and Bākāmēḍi, Gūmālmēḍi and Grāṇḍimēḍi, Saṇḍumēḍi and Dutimēḍi; and each of the pairs forms a sub-commune. In each of the six *muthās* are found families of various stocks with different totems:—as for instance, a dominant stock called *gajēsvar* whose totem is the elephant and whose title is *māliko*; a stock bearing the title of *kunāro* and possessing as their totem *ḍūrā* (a cudgel or heavy stick); a stock styled *bisoi* whose totem I have not been able to discover; a stock surnamed *podān* who are admittedly descended from a *pāno* and who will not touch the *mohri* (clarionet)—an instrument on which *pāno* musicians play at marriage celebrations and other festivities of the Khonds; a stock styled *nāiko* who worship the *pānji* (almanac) as a tutelary deity and who have as their totem *betā* (cane); a stock called *bāgo* or *chita krāṇḍi* (chameleon) who take their title from their totem, the *bāgo*; another *māliko* stock who are supposed to be descended from a *kumhār* (potter) and will not touch the *piṭnā* (potter's hammer) which is their totem; a stock surnamed *behrā* who are also supposed to be descended from another class of *kumhār*—the *khond-kumhār*—whose totem I could not discover; a third stock with the title *māliko* whose tutelary deity is *āti gosāni* (Uriya: *hāthi gosāin*) but whose totem is not very clear; and lastly the servile *Rōpārmēḍi* Khonds who have both the titles *māliko*

<sup>1</sup> (Sir) H. H. Risley, *Tribes and Castes of Bengal*, i. 398. The form Malua is used by Sir H. H. Risley, the form Mal by Mr. J. E. Friend-Pereira, "Totemism among the

Khonds," *Journal of the Asiatic Society of Bengal*, lxxiii. Part III. (Calcutta, 1905) pp. 40 sq.

<sup>2</sup> J. E. Friend-Pereira, *op. cit.* p. 41.

and *kunāro* and possess as their totem the *ṭimkurī*—a small kettle-drum on an earthenware body which was used in former days to summon clansmen to a gathering. All the members of these various stocks cannot intermarry within the six confederated *nuthās*, and they form an exogamous group in themselves, being considered, by a fiction of course, members of one great brotherhood. This exogamous group of various totem stocks is the *gochi* of Mr. Risley, who was misled into believing that all the members of a *gochi* were of the same blood.”<sup>1</sup> If a member of the Chameleon (*chīṭa krāṇḍī*) clan meets his totemic animal on a journey, he will at once turn back and tell his relations in an awed whisper, “I have seen our god” (*Māi penu meh’lē*). Thereupon the priest of the clan will be sent for to offer a propitiatory sacrifice and to find out why the deity has deigned to appear to the clansman.<sup>2</sup>

Another Khond commune or confederacy bears the name of Tin Pari or Borgocha. The name *Tin Pari* means “the three septs or clans,” though in fact the confederacy comprises three distinct communes, in each of which are found different family stocks. The three dominant septs or clans are the Dela Pari, the Kalea Pari, and the Sidu Pari. In the Khond language *delā* means a twig, and the totem of the Dela Pari clan is the twig of any tree. Hence the members of the clan will never use twigs in constructing a house of wattle and daub, and they will never stay in one of the temporary huts of branches and leaves (*kūriā*) which the people generally set up in the fields for the purpose of watching the crops; for the Dela Pari think that if they slept in such a hut by night they would be carried off by tigers.<sup>3</sup> The Sidu Pari clan takes its name from *sidu*, which in the Khond language means “they are not.” Legend says that the clan formerly dwelt in caves. When strangers approached, the clanspeople disappeared into their caves like rabbits in a warren; hence their name of *sidu*, “they are not.” Be that as it may, the Sidu Pari clan will not enter

The Tin Pari commune of the Khonds with its totems.

to the *gochi*, see above, p. 304.

<sup>2</sup> J. E. Friend-Pereira, *op. cit.* p. 54.

<sup>3</sup> J. E. Friend-Pereira, *op. cit.* p. 44.

a cave nor dig a hole such as a well or a tank. But they perform a religious rite, in which a structure like a dolmen figures. Two slabs of stone are planted perpendicularly in the ground, a third rests on the top of them, and the whole represents a cave (*gumpa*), within which the priest offers a sacrifice.<sup>1</sup> The totem of the Kalea Pari clan has not been ascertained, but they have a legend which appears to be a degenerate form of the Swan Maiden or Cupid and Psyche type of story, which elsewhere is associated with totemism. They say that a youth hunting in the forest came on a group of girls bathing in a mountain stream, and that smitten with love of one or more of them he caught up their clothes and disappeared with them into the jungle. The girls belonged to his own exogamous group and therefore could not be his wives. Knowing that the penalty for such an incestuous union was death, he dared not return to his village, so he became a fugitive and a wanderer till at last he made his way to the Tin Pari country, where he founded the Kalea Pari or thief clan. At an annual festival of the clan the priest makes a rude flag by tying a piece of cloth to a pole, which he carries with great solemnity from village to village. All the young men and women of the clan follow in procession, chanting lewd songs as part of the ritual. The flag is then ceremoniously buried in the ground. Yet unchastity or incontinence is said to be strictly tabooed to both men and women of the Kalea Pari clan, who regard it as a sacrilege that would provoke the unappeasable wrath of the deity. Hence the women of the clan enjoy a reputation for immaculate virtue.<sup>2</sup>

Other  
Khond  
communes  
with their  
totems.

In another Khond commune or confederacy called Bengrikiya a dominant stock or clan is the Bheti, who take their name from their totem *bheti*, a rope of twisted straw, which on being lit smoulders long and furnishes fire in the absence of lucifer matches. The use of such ropes is forbidden to members of the clan.<sup>3</sup> Two other communes

<sup>1</sup> J. E. Friend-Pereira, "Totemism among the Khonds," *Journal of the Asiatic Society of Bengal*, lxxiii. Part III. (Calcutta, 1905) p. 46.

<sup>2</sup> J. E. Friend-Pereira, *op. cit.* p. 45. As to the Swan Maiden or Cupid and

Psyche tale in connection with totemism, see above, pp. 205 *sq.* We shall meet with such tales again in West Africa.

<sup>3</sup> J. E. Friend-Pereira, *op. cit.* pp. 46, 47.

or confederacies bear each the name of Ath Kombo, and each is divided into four sub-communes, of which each in turn contains many totem clans. Of these clans a large one takes its name from its totem, the *hānsāri* or mallard duck, and is said to have sprung from an egg of that bird.<sup>1</sup> Another confederacy, which bears the name of Tin Kombo, includes totemic clans which have for their respective totems, among other things, the lac insect, the she-bear, the fruit of the *sal* tree (*Shorea robusta*), the tender shoots of bamboos, the tree (*Butea frondosa*) on which lac is generally cultivated, the horn of an animal, and a woman's loin-cloth.<sup>2</sup> As specimens of the totems found among the wilder Khonds of the west and in Gumsur are recorded *pānā* (frog), *srāsu* (snake), *tīteri* (button quail), *gūnderi* (lesser florican), *dāāk* (crow pheasant), *irpi* (mohul: *Bassia latifolia*), and *sōlā* (grass).<sup>3</sup>

"In the matter of marriage prohibitions," says Mr. Friend-Pereira, "the Khonds appear to have a series of exogamic circles that beginning with the smallest unit—the *gochi* or commune—goes on expanding until it reaches a circumference of truly stupendous magnitude in the totem. The circle of actual prohibition is the commune, for a man may on no account marry within its limits even though it consist of widely different totem stocks. He must always seek for a wife outside the commune, but subject to certain restrictions." Thus he may not marry a woman of another totem stock if she belongs to a commune which is in alliance with his own; he may not marry a woman of another commune, whatever her totem may be, if she is known or supposed to be of the same blood as himself; and lastly he may not marry a woman of any commune, though she may be a perfect stranger to him, if her totem is the same as his. This prohibition of marriage with a woman of the same totem is the most comprehensive of the rules of exogamy among the Khonds.<sup>4</sup>

The Asuras are a small non-Aryan tribe of Lohardaga

Totemism and exogamy among the Asuras.

(Ranchi) and the eastern portion of Sarguja, who live almost entirely by smelting iron. They are divided into thirteen exogamous and totemic clans, namely *Aind* (an eel), *Baroa* (a wild cat), *Basriar* (bamboo), *Beliar* (*bel* fruit), *Kachua* (a tortoise), *Kaithawar* (*kaitha* or *chichinga* fruit), *Kerketa* (a bird), *Mukruar* (a spider), *Nag* (a snake), *Rote* (frog), *Siar* (jackal), *Tirki* (a bird), and *Topo* (a bird). A man may not marry a woman of his own clan nor may he eat, cut, or injure the plant or animal after which his clan is called.<sup>1</sup>

Respect for the totem.

Totemism and exogamy among the Bagdis.

The Bagdis are a caste of cultivators, fishers, and menials of Central and Western Bengal, who appear from their features and complexion to be of Dravidian descent and closely akin to the tribes commonly classed as aboriginal. In the district of Bankura, where the original structure of the caste seems to have been particularly well preserved, the Bagdis are divided into nine endogamous subcastes, which are in turn subdivided into exogamous clans or septs. Many of these clans or septs are totemic, as *Ardi* (fish), *Baghrishi* (tiger), *Kachchap* (tortoise) *Kasbak* (heron), *Pakbasanta* (bird), *Patrishi* (bean), *Ponkrishi* (jungle cock), *Salrishi* or *Salmachh* (the *sal* fish). The totem is tabooed to members of the clan; for example, members of the Heron clan may not kill or eat a heron; and members of the Bean clan may not touch a bean. A man must marry within his subcaste but outside of his totem clan. For example, a man of the Tentulia subcaste must marry a Tentulia woman, but a Tortoise man may not marry a Tortoise woman. Children belong to their father's clan; for example, the children of a Heron man and a Bean woman would be Herons. A widow may marry her late husband's younger brother, but she is not obliged to do so.<sup>2</sup> The rule of clan exogamy is supplemented, as commonly happens, by a table of prohibited degrees. Marriage with any person descended in a direct line from the same parents is forbidden as long as any relationship can be traced. To

Totemic taboos.

The Levirate.

Table of prohibited degrees and formula for reckoning them.

<sup>1</sup> (Sir) H. H. Risley, *Tribes and Castes of Bengal*, i. 25, ii. Appendix, p. 2. *India, 1901*, vol. i. India, Part i. pp. 181, 182, 184. As to the Asurs compare W. H. P. Driver, "Notes on some Kolarian Tribes," *Journal of the Asiatic Society of Bengal*, lviii. Part i.

<sup>2</sup> (Sir) H. H. Risley, *Tribes and Castes of Bengal*, i. 37, 38, 40, ii. Appendix, p. 5; *id.* in *Census of* (Calcutta, 1889) pp. 7-10.

simplify the calculation of collateral relationship the following formula is in use: "Paternal uncle, maternal uncle, paternal aunt, maternal aunt—these four relationships are to be avoided in marriage." Ordinarily the prohibition only extends to three generations in the descending line, including the person under consideration.<sup>1</sup>

The Bhumij are a non-Aryan tribe of Manbhum, Singbhum, and Western Bengal who on grounds of language have been classed as Kolarian. They are without doubt closely allied to, if not identical with the Mundas. Indeed they are apparently nothing but a branch of the Mundas, who have spread eastward, mingled with the Hindoos, and thus for the most part severed their connexion with the parent tribe. The Bhumij of Western Manbhum are certainly pure Mundas. They inhabit a country which is bounded on the west by the edge of the Chota Nagpur plateau and is thickly studded by Mundari graveyards; the present inhabitants call themselves Mundas or, as the name is usually pronounced in Manbhum, Muras; they speak the Mundari language, and they observe all the customs practised by their brethren on the tableland of Chota Nagpur. For example, like the Kolarians generally, they build no temples, but worship the deity in the form of a stone smeared with vermilion in a sacred grove (*sarna*) near the village. The sacred grove always consists of purely jungle trees, such as the *sal*, and can therefore be recognised with certainty as a fragment of the primaeval forest left standing, when the rest was felled, to serve as a last refuge for the old sylvan deities from the woodman's axe. Again, like the Mundas of the tableland, the Bhumij burn their dead and bury the charred bones and ashes under grave-stones, of which some are of enormous size. On certain feast days the simple folk lay small offerings of food under these big stones to regale the dead; and early next morning the victuals are consumed by prowling Hindoos of the baser sort. But to the east of the Ajodhya range all this

The Bhumij, a tribe akin to the Mundas.

Their sacred groves.

Their burial customs.

<sup>1</sup> (Sir) H. H. Risley, *Tribes and Castes of Bengal*, i. 38. The same formula, "Paternal uncl, maternal uncl," etc., is in use for the same purpose throughout Behar. In the

original it runs *Chachera, mamera, phuphera, masera, ye char nata bachake shadi hota hai*. See Sir Herbert Risley, *The People of India*, p. 156.

East of the

assimilated  
to the  
Hindoos.

is changed. Both the Mundari language and the title of Munda have dropped out of use; the aboriginal inhabitants of this eastern tract call themselves Bhumij or Sardar and speak Bengalee. Yet the physical features of the race remain the same; and although they have adopted Hindoo customs and are fast becoming Hindoos, there can be no doubt that they are descendants of the Mundas who settled in the country and received the name of Bhumij from Hindoo immigrants.<sup>1</sup> They now worship the Hindoo gods in addition to their old aboriginal deities; but the tendency now is to keep the latter in the background and to relegate the less formidable of them to the women and children to be worshipped in a hole-and-corner way with the help of a tribal hedge-priest (*Laya*), who is supposed to be specially familiar with their divine tastes and habits. Some of the leading men of the tribe, who call themselves Bhuinhars and possess large landed estates on terms of police service, have set up as Rajputs and keep a low class of Brahmans as their family priests; but they cannot conform with the Rajput rules of intermarriage and they marry within a narrow circle of pseudo-Rajputs like themselves. The rest of the tribe, which at the last census numbered over three hundred and seventy thousand souls, are still divided into a number of exogamous and totemic clans, thus presenting an interesting example of an old non-Aryan tribe which, in the very act of blossoming out into a regular caste in the Brahmanical system, nevertheless preserves the ancient savage institutions of totemism and exogamy. Among the totemic clans of the Bhumij are *Badda Kurkutia* (a kind of worm), *Bhuiya* (a fish), *Gulgu* (another fish), *Hansda* (wild goose), *Hemrong* (betel palm), *Jaru* (a bird), *Kasyab* (tortoise), *Leng* (mushroom), *Nag* (snake), *Obarsari* (a bird), *Salrishi* (*sal* fish), *Sandilya* (a bird), *Tesa* (another bird), *Tumarung* (a pumpkin), and *Tuti* (a sort of vegetable).<sup>2</sup> A man may not marry a woman of his own clan nor a woman who

Totemism

comes within the standard formula for reckoning prohibited degrees, calculated as a rule to the third generation in the descending line, though sometimes it is extended to five. The Bhumij deem it right for a widow to marry her late husband's younger brother or cousin, when that is possible.<sup>1</sup>

Prohibited degrees.

The Levirate.

The Binjhias are a tribe of cultivators and landholders in the south of the Lohardaga (Ranchi) district, in Palamau, and in the tributary states of Gangpur and Sarguja in Bengal, and in Patna of the Central Provinces. The Southern Binjhias speak Uriya among themselves, but use for ordinary purposes the Hindoo jargon current in Chota Nagpur. They are a quiet, unwarlike people with flat faces and black complexions, allied perhaps to the Asuras or Agariyas. They are divided into exogamous and totemic clans which take their names, for example, from the squirrel, the rat, the bull-frog, the tortoise, the crocodile, the serpent, various kinds of fish, the hen, the paddy-bird, the *kasi* grass (*Saccharum spontaneum*), and vermilion (*sindur*). The clan name descends in the male line. The Vermilion clan (*Sinduria*) use vermilion at marriage, but the Bamboo clan (*Bansetti*) will not touch bamboos at a wedding. A man may marry two sisters, provided he marries the elder of the two first, but not otherwise. It is considered right for a widow to marry her late husband's younger brother.<sup>2</sup>

Totemism and exogamy among the Binjhias.

Marriage with two sisters.

The Levirate.

The Doms are a Dravidian caste of menials in Bengal, Behar, and the North-Western Provinces. It has been held that they are the surviving representatives of an older, ruder, and blacker race who preceded the Dravidians in India, some of them being driven by the invaders to take refuge in mountain fastnesses and pestilential jungles, while others, such as the Doms of Kumaon, were reduced to perpetual servitude. They are divided into very many exogamous clans. In Behar these clans seem to be territorial or titular, but in Bankura their names are totemic, and the members of a clan abstain from injuring the animal after which they are named. Among their clan totems are the tortoise, the cobra, the rat, the bull, a fish (*saur*), the *kerketa* bird,

Totemism and exogamy among the Doms.

and a tree (*mahua*) from the flower of which a wine is made.<sup>1</sup>

Totemism and exogamy among the Gonds, Goraitis, and Juangs.

The Gonds, who have already met us in Central India,<sup>2</sup> are also to be found in Bengal, where they occur in the Tributary States of Chota Nagpur, in the south of Lohardaga (Ranchi), and in Singbhum. Here also they are divided into exogamous and totemic clans which take their names from the tiger, the snake, the tortoise, the buffalo, the horse, the hawk, the goose, several kinds of fish, the sea, iron, a bead, etc.<sup>3</sup> The Goraitis or Koraitis are a non-Aryan caste of musicians, comb-makers, and cotton-carders in the south-west of the Lohardaga (Ranchi) district. They are divided into exogamous and totemic clans, which include, among others, the *Bagh* (tiger), the *Bar* (*Ficus Indica*), *Induar* (a kind of eel), *Khalkho* (a fish), *Kujri* (a fruit from which oil is made), *Sandh* (bullock), *Sontirki* (gold), and *Topoar* (a kind of bird). Members of the *Tirki* clan "cannot eat birds born blind, nor deep-setting eggs."<sup>4</sup> The Juangs are a non-Aryan tribe of Keunjhar and Dhenkanal in Orissa, who on grounds of language have been classed as Kolarian and have been thought to be closely related to the Mundas. They are a primitive folk, who had no knowledge of metals till foreigners came amongst them. Their language contains no word for iron or any other metal. They neither spin nor weave, nor have they ever attained to the art of making the simplest pottery. In their habits they are still seminomadic, for they often shift the sites of their villages and occupy isolated huts in the midst of their patches of cultivation, whilst the crops are on the ground. The agriculture which they practise is of the rudest kind. They destroy the forest trees by fire and sow a little rice, pulse, pumpkins, sweet potatoes, and so forth in the ashes. Their huts are tiny, measuring about six feet by eight, and very low, "with doors so small as to preclude the idea of a corpulent householder." But for the boys there is a separate dormitory at

Primitive habits of the Juangs: their shifting cultivation of the ground.

the entrance of the village. This is a building of some pretensions, built on a raised plinth of earth and containing two apartments, an inner and an outer. The boys sleep and the musical instruments of the village are kept in the inner apartment. Guests and travellers are lodged in this building. The tribe is divided into a number of exogamous and totemic clans, which take their names from the tigress, elephant, buffalo, bear, boar, fox, dog, dove, bee, mosquito, paddy, pumpkins, the tobacco flower, various sorts of mushrooms, a palm, the *jari* tree, the *mahua* tree, hailstones, etc. As usual, no man may marry a woman of his own totemic clan. A widow is expected, but not compelled, to marry her deceased husband's younger brother.<sup>1</sup>

Separate dormitories for boys.

The Levirate.

Another primitive and still pagan folk who retain totemism are the Korwas, a Dravidian tribe of Sarguja, Jashpur, and Palamau. They claim to be the aborigines of the country they occupy, which is a land of hill and dale, well-cultivated plains and forest-clad mountains, well suited to the mixed population that inhabits it. The Korwas, a short, dark, hirsute, but strong and active people, exceedingly wild and uncouth in appearance, cling to the highlands, where they lead a savage and almost nomadic life. They live in detached hamlets or solitary huts, sometimes perched on the ledge of mountain precipices in spots which, seen from below, might appear accessible only to birds. The men hunt and the women dig for roots. But they also practise a primitive form of agriculture, clearing away the jungle and tilling the virgin soil for two or three years, then deserting the place as the land becomes exhausted and moving their homesteads further into the depths of the forest. Their principal crop is a kind of pulse called *arhar* (*Cajanus Indicus*). It is reaped in December, and the savages then celebrate their harvest home with extravagant revelry, drunken dances, and unbridled debauchery. They also sow summer rice, vetches, millet, pumpkins, sweet potatoes, yams, and chillis. The hoar frosts, which in the cold weather lie thick and white on the ground almost every morning, forbid the

Korwas.

growth of winter rice on these high uplands. The claim of the Korwas to be the aboriginal inhabitants of the country is supported by the circumstance that the priests whose duty it is to propitiate the old local deities are always chosen from their tribe.<sup>1</sup> The Korwas are divided into a number of exogamous and totemic clans. Among the totems of the clans are the tiger, the snake, the parrot, the wild goose, the *kerketa* bird, two kinds of eel, a fish, the mango, a jungle fruit, myrabolam, unhusked rice, ploughs, and pestles for pounding grain. To what extent the totems are tabooed to members of their respective clans is uncertain. The general tendency is for such prohibitions to fall into disuse, and the only rule which really holds its ground is the one which forbids marriage between persons whose clan-name is the same.<sup>2</sup>

Totemism  
and  
exogamy  
among the  
Kumhars.

The Kumhars are the potter caste of Bengal, Behar, and Orissa. There is a wide difference of opinion among our authorities as to their traditional parentage. As regards exogamy the practice of Kumhars differs greatly in different parts of the country; for example, in Eastern Bengal, where the Mohammedan influence is strong, only one or two clans are known to the caste and marriage within the clan is permitted. On the other hand the Jagannathi Kumhars of Orissa, who hold a fairly high social position in that province, are subdivided into the following exogamous clans:—*Kaundinya* (tiger), *Sarpa* (snake), *Neul* (weazel), *Goru* (cow), *Mudir* (frog), *Bhad-bhadria* (sparrow), and *Kurma* (tortoise). The members of each clan shew their respect for their totemic animal, whose name they bear, by not killing or injuring it and by bowing when they meet it. Moreover, the whole caste abstains from eating, and even goes so far as to worship, the *sal* fish, because the rings on its scales resemble the potter's wheel, the symbol of their craft. The Khatya Kumhars in Orissa have only one clan and are therefore really endogamous, having no other clan to marry into. Their single clan bears the name of the Vedic Rishi *Kasyapa*, and they venerate the tortoise (*kachhap*). This

Respect  
for the  
totem.

<sup>1</sup> E. T. Dalton, *Descriptive Ethnology of Bengal*, pp. 221 sqq.; (Sir H. H. Risley, *Tribes and Castes of*

Bengal, i. 511-513.

<sup>2</sup> (Sir) H. H. Risley, *op. cit.* i. 512, ii. Appendix, p. 83.

lends weight to the plausible conjecture that many of the lower castes in Bengal who are beginning to set up as pure Hindoos have taken advantage of the resemblance in sound between *kachhap* and *kasyap* (*chh* and *s* both becoming *sh* in colloquial Bengalee) to convert a totemic title into an eponymous one, while they went on to appropriate as many of the exogamous Brahmanical clans (*gotras*) as they thought fit.<sup>1</sup> In Lohardaga some of the exogamous Kumhar clans take their names from the elephant, a river-fish, the *Ficus Indica*, and *kansi* grass.<sup>2</sup>

The Mals are a Dravidian caste of cultivators in Western and Central Bengal. Many of them are employed as village watchmen. They profess the Hindoo religion and no vestiges of an older faith can now be traced among them. The most primitive members of the caste are to be found in Bankura, where they are divided into five exogamous clans named after the tortoise, the snake, and various birds. In Midnapur and Manbhum the Mal clans take their names from two sorts of fish and a bird. Among the Mals of Western and Central Bengal the primitive rule of exogamy is in full force, and no man may marry a woman of the same totemic clan as himself. Prohibited degrees are reckoned by the standard formula calculated in the descending line to five generations on the father's and to three on the mother's side.<sup>3</sup> The Mauliks are a Dravidian caste of Manbhum and Western Bengal. They are divided into at least four exogamous clans, all of which are totemic. The totem of one clan is a tree-rat, of a second a rock-snake, of a third another kind of snake, and of the fourth a small red bird with a long tail. No man may marry a woman of his own totemic clan, nor a woman who falls within the usual formula for reckoning prohibited degrees.<sup>4</sup> The Parhaiyas are a small Dravidian tribe of Palamau, divided into nine exogamous and totemic clans with the tiger, the cobra, the vulture, the crow, the grasshopper, the bloodsucker, etc., for their totems.<sup>5</sup> Their features are

Turanian, but they speak the Hindoo language and affect Hindoo customs, though they retain practices which genuine Hindoos regard with disgust and abhorrence.<sup>1</sup>

Maternal descent of totem not found in Bengal.

In concluding this survey of totemism and exogamy in Bengal it deserves to be stated expressly that within that province no single case has yet been found of a totemic clan which is inherited in the maternal line. All the totemic peoples of Bengal observe paternal, not maternal, descent of their clans and totems.<sup>2</sup>

### § 8. Totemism and Exogamy in Assam

The Khasis of Assam.

Among the hill tribes of Assam, who have retained many primitive customs and beliefs, the Khasis or Khasias appear to have preserved a totemic system or something closely resembling it.<sup>3</sup> They inhabit the Khasi and Jaintia hills.<sup>4</sup> The origin and affinities of the Khasis are still uncertain, but it has been proved that their language is closely akin to the Mon-Khmer, Palaung, and Wa languages in Burma and the Malay Peninsula. This raises a presumption that the Khasis are of the same stock as the tribes who speak these tongues.<sup>5</sup> They have strongly marked Mongolian features, namely oblique eyes, a broad bridgeless nose, high cheek bones, a short head, and little or no beard. In person they are short and stumpy, but sturdily built, especially about the calves of the legs. Even the women can carry heavy loads which natives of the plains could hardly lift. Their disposition is cheerful, and their habits

Their language.

Their Mongolian features.

<sup>2</sup> (Sir) H. H. Risley, "Primitive Marriage in Bengal," *The Asiatic Quarterly Review*, July 1886, p. 94.

<sup>3</sup> Above (vol. i. pp. 67 *sq.*) I noted what seemed to me at the time when I wrote the passage (1887) a discrepancy between the evidence of Colonel E. T. Dalton and (Sir) H. H. Risley as to the Khasis or Kasias. The apparent discrepancy is explained very simply, as my friend Sir Herbert Risley courteously informed me in a letter (3rd October 1890), by the fact that,

when Col. Dalton wrote, the province of Assam still formed part of Bengal, whereas when Sir Herbert Risley wrote, it had ceased to do so, having been severed in the year 1874 from the Lieutenant-Governorship of Bengal and formed into a separate Chief-Commissionership. See (Sir) W. W. Hunter, *A Statistical Account of Assam* (London, 1879), i. 1.

industrious.<sup>1</sup> They subsist chiefly by agriculture and live in villages, the sites of which are seldom changed. They are industrious tillers of the soil and well know the uses of manure. Among the crops which they raise are rice, maize, millet, yams, potatoes, plantains, lemons and oranges.<sup>2</sup> With regard to their social organisation Mr. E. A. Gait writes as follows:—

“The Khasis are subdivided into an immense number of exogamous clans or septs. The theory is that these clans are composed of persons descended from the same female ancestor, and intermarriage between persons of the same clan is strictly forbidden. The meaning of the names used to denote these septs is not always known, but so far as I have been able to get translations, they may be divided into four main classes:—

Mr. E. A. Gait on the exogamous clans of the Khasis.

“(a) *Totemistic*, such as the pumpkin clan, the crab clan, the monkey clan, etc. In these cases it is supposed that the ancestor of the clan came from a pumpkin, crab, or a monkey, and I am informed that the *totem* was formerly *taboo* to the persons designated by it. Nowadays, however, the old traditions are losing their hold upon the people, and the *taboo* is no longer strictly enforced.

Clan names derived from totems.

“(b) *Names indicative of origin*, such as Khar Shilot (people of Sylhet), Khar Akor (‘polite Bengali’), etc. In former days, before the British occupation, raids were constantly being made on the people of the plains, and their women were carried off as slaves. The offspring of these slave women, who were also looked upon as slaves, were known by the name of their mother, which thus became a new clan name. Clans with names denoting this origin are very common throughout the hills, and this no doubt accounts for the deviations from the general Mongolian type of face which are occasionally to be noticed.

Clan names indicative of origin.

“(c) *Nicknames applied to the original ancestor*, such as Balit (white), Dukli (selfish), Klim (adultery), Khrawjli (great abomination), etc.

Nicknames of ancestors.

“(d) *Occupational*, as, for instance, the blacksmith clan, the Bania clan, and a few others.

Names derived from occupations.

The clans  
divided  
into sub-  
clans.

“Each clan comprises on an average from 100 to 1000 members, the larger ones being again divided into subclans. I have not been able to make out the utility or object of the latter, as the rule of exogamy is invariably applied to the larger or main clan. I may note, however, that the same tendency of the old exogamous groups, to subdivide themselves into new ones, is noticeable amongst many other tribes, *e.g.* the Mikirs, Garos, Lalungs, etc.”<sup>1</sup>

Mother-kin  
among the  
Khasis.

A remarkable feature of the Khasi social system is the prevalence of mother-kin instead of father-kin, which obtains almost universally elsewhere in India. Among the Khasis a woman is always head of the family. So long as a man remains in his mother's house, whether he be married or single, he is earning for her family (*kur*), and his property goes at his death to her or, failing her, to his grandmother. Should both his mother and grandmother be dead, his sisters inherit his property, and next to them his sister's children. Thus in practice, as usually happens under the system of mother-kin, a man is more nearly connected with his sister's children than with his own. His brother's children can never be his heirs, since they belong to a different clan. When a Khasi has left his mother's house and gone to live with his wife in her mother's house, as is the usual custom, then his property descends to his wife and her children, with the exception of his personal ornaments and clothing, which go to his own brothers and sisters. All relationship is reckoned through the woman, not through the man. Children belong to their mother's clan, and even the chief or king (*Siem*) is succeeded by his mother's or his sister's child, not by his own. His own offspring belong to their mother's clan, inherit her property, and bear her family name. There is nothing to shew that among the Khasis this system of mother-kin is derived from polyandry; for polyandry neither exists among them at present nor survives in their traditions.<sup>2</sup>

A man's  
heirs are  
his sister's  
children.

A married  
man lives  
in the  
house of  
his wife's  
mother.

<sup>1</sup> *Census of India, 1891, Assam*, by E. A. Gait, vol. i. (Shillong, 1892) pp. 258 sq.; *Census of India, 1901*, vol. i. *India, Ethnographic Appendices*, pp. 198 sq.

<sup>2</sup> *Census of India, 1891, Assam*, by

E. A. Gait, vol. i. p. 259; *Census of India, 1901*, vol. i. *India, Ethnographic Appendices*, p. 199. As to mother-kin among the Khasis, see fuller details in Major P. R. T. Gurdon's book, *The Khasis*, pp. 62 sqq., 76 sqq., 82 sqq.

The principle of the exogamy of the clan is very strictly observed by the Khasis. "As the clans are strictly exogamous, a Khasi cannot take a wife from his own clan; to do this would entail the most disastrous religious, as well as social consequences. For to marry within the clan is the greatest sin a Khasi can commit, and would cause excommunication by his kinsfolk and the refusal of funeral ceremonies at death, and his bones would not be allowed a resting-place in the sepulchre of the clan."<sup>1</sup> The crime of marrying within the clan (*kur*) is called *kaba shong sang*; it admits of no expiation.<sup>2</sup>

Exogamy among the Khasis.

To marry within the clan is an inexpiable sin.

With regard to the question whether the Khasi clans are totemic, Major Gurdon observes that some of them bear the names of animals or of trees, such as the *Shrieh* or Monkey clan, the *Tham* or Crab clan, and the *Diengdoh* clan. This last clan takes its name from the *diengdoh* tree, because their first ancestress is said to have kept a huge drove of pigs, which she fed in a large trough hollowed out of a *diengdoh* tree.<sup>3</sup> We also hear of an Oak clan among the Khasis;<sup>4</sup> nor is this unnatural, for there are beautiful oak forests in part of the Khasi country, indeed the oak and the rhododendron are the principal trees in the woods.<sup>5</sup> However, "the members of these clans," says Major Gurdon, "do not apparently regard the animals or natural objects, from which they derive their names, as totems, inasmuch as they do not abstain from killing, eating or utilizing them. The names of these objects are connected generally with some story, concerning the history of the clan, but there is no evidence to show that the clans-folk ever regarded the

Traces of totemism among the Khasis.

Compare (Sir) W. W. Hunter, *A Statistical Account of Assam* (London, 1879), ii. 217 sq., 219 sq.

<sup>1</sup> Major P. R. T. Gurdon, *The Khasis*, p. 77.

<sup>2</sup> Major P. R. T. Gurdon, *op. cit.* p. 158.

<sup>3</sup> Major P. R. T. Gurdon, *op. cit.* pp. 63-65.

<sup>4</sup> See (Sir) W. W. Hunter, *A Statistical Account of Assam* (London, 1879), ii. 218: "The Khasias believe in metempsychosis, or the transmigra-

tion of souls. After death, human beings are transformed into monkeys, crabs, tortoises, frogs, etc. . . . There is no caste system, but each clan is called after some object of nature, as the Oak clan, the Crab clan, etc. etc., and these names entail certain restrictions beyond which intermarriage is forbidden." This passage suggests that among the Khasis the souls of the dead are supposed to transmigrate into their totems.

<sup>5</sup> Major P. R. T. Gurdon, *The Khasis*, pp. 7, 8.

above animals or objects as their tribal totems."<sup>1</sup> Nevertheless, some of the Khasi clans still observe taboos which may be relics of totemism. Thus the Nongthiang clan may not eat lemons; the Khar-umniud clan must abstain from pork; the royal (*Siem*) family of Cherra may not eat dried fish, and the royal (*Siem*) family of Myllem taboo pumpkins.<sup>2</sup> A further trace of totemism may perhaps be detected in the superstitious objection entertained by some Khasi individuals and families to different kinds of food, which they will not allow to be brought into their houses.<sup>3</sup>

The Garos of Assam.

A tribe of Assam who resemble the Khasis in their combination of exogamy with mother-kin are the Garos. They occupy the extreme north-west portion of the mountainous tract which extends from Cape Negrais to the Brahmaputra. Their ethnical affinities are uncertain. They have no traditions of a migration, and the only peoples with whom they claim kinship are the Bûts and the English.<sup>4</sup> The Garos subsist by a rude form of agriculture, raising crops of maize, rice, cotton, and millet.<sup>5</sup> They are divided into a number of exogamous clans called *maharis*, which Dalton says may be translated "motherhoods." The descent of the Garo, as of the Khasi, clans is in the female line, children belonging to the clan of their mother, not to that of their father. A man may not marry a woman of his own clan (*mahari*), but must take his wife from one of the clans with which his family have from time immemorial exclusively allied themselves. Some of the noblest families have only one clan with which, as a rule, they may intermarry.<sup>6</sup> With the Garos, as with the Khasis, the wife is the head of the family and through her all the family property descends. "Among Garo families," says Sir W. W. Hunter, "women enjoy a power and position quite unknown among more civilised tribes

Exogamous clans (*maharis*) with maternal descent among the Garos.

Among the Garos the wife is the head of the family, and all property descends through her.

and peoples." "However the contract is entered upon," says Mr. E. A. Gait, "it is agreed that the woman occupies the superior position. The husband enters her mother's family, and the children belong to her clan, and not to that of the father. All property goes through the woman, and males are incapable of inheriting in their own right." A remarkable custom observed by them is that a man who marries the favourite or, according to another account, the youngest daughter of a household has to marry his mother-in-law in the event of the death of his father-in-law, and through her he succeeds to all the property, which thus descends in the female line. It is consequently not uncommon to see a young Garo introducing as his wife a woman who is old enough to be his mother, and who is in point of fact his mother-in-law and sometimes his aunt to boot. Sons inherit nothing from their parents, and have to look to the family into which they marry for their establishment in life. A young husband takes up his abode with his wife in the house of her parents. "It would certainly appear," says Colonel Dalton, "from the social customs of the Garos that their great lawgiver must have been a female. The men do much of the heavy work and all the fighting, and are so far not deprived of their natural obligations as the stronger animal, but in other respects they are dependent on the females."<sup>1</sup> As a consequence, perhaps, of the social superiority of women among the Garos it is regularly the girl, not the young man, who makes the proposal of marriage. Indeed it is her duty as well as her privilege to do so. Any infraction of this rule is summarily and severely punished. If it transpires that a youth has so far forgotten the modest reserve natural to his sex as to ask a maiden to marry him, the whole of her clan resents it as a blot on their scutcheon which can only be washed out by pig's blood and copious libations of beer to be paid for by the clan of the abandoned culprit.<sup>2</sup>

Marriage with a mother-in-law.

A man lives with his wife's parents.

It is the woman, not the man, who proposes marriage.

The information at Mr. Gait's disposal did not enable him

Indications  
of totemism  
among the  
Garos.

to say whether the exogamous clans (*maharis*) of the Garos are totemic or not,<sup>1</sup> but that they are in fact totemic is rendered probable by the following statement of Sir Herbert Risley, which summarises the evidence for the existence of totemism in Assam. He says: "In Assam the Garos have monkeys, horses, bears, mice, lizards, frogs, crows, pumpkins, and a number of trees among their totems; the Kacharis recognize as totems the tree snail, the *muga* insect, the sesamum plant, the *kumru* or giant gourd, and the tiger. Members of the tiger sept have to throw away their earthenware utensils by way of atonement when a tiger is killed. The louse and the buffalo are the only animal totems on record among the Khasi; the Kuki have the dog; the Lalung eggs, fish, and pumpkins; the Mikir totems appear to be mainly vegetable. Our information, however, on totemism in Assam is extremely scanty, and the subject requires further investigation."<sup>2</sup>

Exogamy  
and  
traces of  
totemism  
among the  
Lalungs.

The Lalungs are a tribe of Assam whose members are found chiefly in Nowgong and the two adjacent districts, the Khasi and Jaintia Hills and Kamrup. In regard to their social organisation Mr. E. A. Gait tells us that "the Lalungs are divided into a large number of exogamous groups or *phoids*, which again are subdivided into smaller groups. It is difficult to get at the meaning and origin of the terms used to designate these groups. Amongst those recognised I find the 'bamboo,' the 'hill peak,' and 'salt' in use as clan names. The explanation given in these cases, which is probably merely a guess, is that the founder was born on a hill, in a salt-box, etc. The only undoubted case of totemism which I have found is that of the *khara sali* or white pumpkin clan, who will neither eat, grow, nor even touch the gourd after which they are named. Another clan is named after the *mali* fish, and another is said to be descended from two girls who had offended Mahadeo, and were in punishment converted into Lalungs.

The White  
Pumpkin  
clan.

"The usual custom in regard to marriage is for the parents of the girl to find a husband for her and take him to

<sup>1</sup> E. A. Gait, *l.c.*

<sup>2</sup> Sir Herbert Risley, *The People of India*, p. 101.

their house as a member of their family. The offspring of such a marriage enter the clan of the mother. Sometimes, however, girls are enticed away ; and when this is the case, they enter their husband's clan, together with any children that may be born to them. The husband either pays a sum of money to the girl's parents as compensation for the girl, or else makes over to them the first female child that is born of the marriage. In Kamrup it is reported that children in all cases enter the father's clan, and in the dual practice in vogue amongst the Lalungs of Nowgong it is possible that we witness the process of change from the maternal to the paternal method of reckoning relationship which has already been completed amongst the Lalungs of Kamrup and the Kacharis of the whole of the Brahmaputra Valley but which has not yet commenced amongst the Garos.

Marriage customs of the Lalungs ; apparent transition from maternal to paternal descent.

"In the Khasi and Jaintia Hills and the more remote portions of the Nowgong district, the unmarried male Lalungs reside in a common house, or bachelor's *chang*, similar to that found in Garo and Naga villages. In this respect, also, the Lalungs appear to be in an interesting state of transition, as the practice is no longer in vogue in Kamrup and the more accessible portions of Nowgong."<sup>1</sup>

Common houses for unmarried men.

The Native State of Manipur is situated in the eastern portion of Assam, bordering on Upper Burma. It embraces an immense variety of climate and scenery, ranging from lofty mountain peaks to hot swampy valleys. Tea is indigenous to the hills ; india-rubber grows in profusion ; about twenty different species of oak have been observed, and forests of huge teak trees form a natural source of wealth. The lakes and hills abound with wild-fowl and game. The natives call themselves Meitheis. They are a people with Mongoloid features, and speak a language allied to the Tibeto-Burman family of speech. Their affinity with the wild hill tribes such as the Nagas and Kukis seems to be well ascertained, though they have advanced considerably beyond these savages in mental refinement and material

The Meitheis Manipur. Their country.

Their language and ethnical affinities.

religion  
and live by  
agriculture.

civilisation. Having adopted the Hindoo religion in the eighteenth century, they now claim to be Hindoos by descent. They subsist chiefly by agriculture; rice is at once their principal crop and their staple article of food. The countless streams which gush from the foot of the mountain ranges fertilise the soil and produce abundant harvests even when in the more open parts of the valleys, away from the hills, the land is parched with drought.<sup>1</sup>

Exogamous  
clans  
among the  
Meitheis.

The Meitheis are divided into seven exogamous clans, which bear the names of Ningthaja, Kumul, Luang, Angom, Moirang, Khabananba, and Chenglei. The vernacular name for such a clan is *salei*. Each clan includes a number of subordinate groups or subclans called *yumnaks*, the number varying from a hundred and fifteen in the Ningthaja or Royal clan to seventeen in the Khabananba. Tradition runs that there were formerly ten clans, but that two or three have become extinct. Each clan has its head (*piba*), who is sometimes called its king (*ningthou*). The general rule that no man may marry a woman of his own clan is supplemented by another which forbids him to take a wife from his mother's clan. Further, certain of the clans are or were formerly forbidden to intermarry. Thus Angoms might not marry Khabananbas, Moirangs, or Luangs; the Luangs might not take their wives from among the Kumuls; and the Moirangs were forbidden to marry both into the Khabananba clan and into one or two families of the Chenglei clan. The family of Moirang Laipham seems to have been prohibited to the Ningthaja clan, but the case is obscure, and the prohibition, if it existed, is the only one which affected the Ningthajas. A widow may remarry, but not with her deceased husband's brother.<sup>2</sup> Children belong to the clan of their father.<sup>3</sup>

Rules of  
inter-  
marriage  
between  
the clans.

The  
Levirate  
forbidden.

Each  
exogamous  
clan has its  
tabooed  
object,  
perhaps a  
totem.

Each exogamous clan of the Meitheis has an object which is tabooed (*namungba*) to it; and the members believe that if they were inadvertently to touch one of these objects,

1 sq., 10 sq., 22, 39 sq., 43 sq.

<sup>2</sup> T. C. Hodson, *The Meitheis*, pp. 73-77.

<sup>3</sup> So Mr. T. C. Hodson informs me. The statement is not, I think, made in his book *The Meitheis*.

they would die a mysterious death or suffer from some incurable, incomprehensible disease, pine away, and die. Such tabooed objects may provisionally be called totems. The totem of the Ningthaja clan is a reed ; that of the Moirangs, a buffalo ; that of the Kumuls, a fish.<sup>1</sup> The totems of the four other clans are not recorded. Further, special taboos may be created according to circumstances. Thus, if a man falls from a tree, the elders of his clan may gather round the tree and solemnly declare that it and even all trees of the same sort shall henceforth be taboo (*namungba*) to the clanspeople. This is known, for example, to have happened to a particular mango tree, from which a man fell and was killed. Again, near Imphal, the capital, are two fine peepul trees, between which no man of the Moirang clan would dare to walk, because the bones of Moirang men who perished in a great battle long ago are said to lie beneath them.<sup>2</sup> Further, each clan as a rule worships its eponymous ancestor. For example, the Luang clan worships Luang pokpa, and the Khuman clan worships Khuman pokba. However, the worshipful ancestors of two clans, the Ningthaja and the Angom, appear not to be eponymous ; for the Angom clan worships Purairomba, and the Ningthaja clan worships Pakhangba, otherwise called Nongpok Ningthou, "the King (*ningthou*) of the East." This last worshipful ancestor is believed to appear from time to time to men in the form of a snake.<sup>3</sup> These facts seem to shew that the Meitheis to some extent combine totemism with the worship of ancestors.

Each clan worships its eponymous ancestor.

These are all the indications of totemism combined with exogamy which I have noted in Assam. But on the other hand the custom of exogamy is practised in that country by tribes which do not, or at all events which are not reported, to have totemism besides. Nearly all the hill tribes of Assam, indeed, are divided into exogamous clans. Each clan traces its descent from a common ancestor, and

Exogamy without totemism practised by some tribes of Assam.

<sup>3</sup> T. C. Hodson, *The Meitheis*, pp. 99 sq.

marriage within the clan is forbidden. In most tribes descent is counted in the paternal line, the children belonging to their father's clan ; but to this rule, as we have seen, there are two notable exceptions in the Garos and Khasis, who practise the system of mother-kin as opposed to father-kin.<sup>1</sup> Among the tribes who are divided into exogamous clans with descent in the paternal line are the Mikirs,<sup>2</sup> the Daflas, who inhabit the hills north of Darrang and Lakhimpur ; the Deori Chutiyas ; and the Naga tribes, such as the Angamis, the Aos, and the Semas.<sup>3</sup> Among the Angamis each village is inhabited by many exogamous clans, between which great rivalry exists. In the old days blood feuds and fights were common between the clans of the same village ; indeed it is said that they were far bitterer than the feuds between the villages. In the village of Kohima, which contains seven clans, each dwelling in its own quarter, a party from another village has been known to massacre all the members they could find of a particular clan, while the members of the other clans stood looking on without making the least effort to stop the slaughter.<sup>4</sup> The institution of large common houses in which the unmarried men pass the night exists among the Naga tribes, for example, among the Aos and the Semas. Such houses are called *morangs* ; they are adorned with the trophies of war and of the chase, particularly with human skulls ; for the Nagas, like the Dyaks of Borneo, used to be passionately addicted to head-hunting. Most of these ghastly trophies they obtained not in fair fight but by treachery, often lurking about a hostile village to decapitate defenceless women and children when they went out to draw water ; for the skulls of these poor wretches entitled their cowardly murderers to all the honours of war.<sup>5</sup>

Feuds between the exogamous clans of the Angamis, a Naga tribe.

### § 9. *The Classificatory System of Relationship in India*

From the foregoing survey of totemism in India we gather that this remarkable institution, combined as usual with exogamy, is widespread among the swarthy, almost black aboriginal race called Dravidian, with their squat figures, dark eyes, and broad negro-like noses, who represent the most primitive type of man in India and occupy the oldest geological formation in the country, to wit, the medley of forest-clad ranges, terraced plateaux, and undulating plains which stretches from the Vindhya mountains on the north to Cape Comorin on the south.<sup>1</sup> Indeed the evidence seems to justify us in inferring that at one time or another totemism and exogamy have been practised by all the branches of this numerous and ancient people. Though some of the branches now speak languages, namely the Munda or Kolarian and the Dravidian proper, which differ fundamentally from each other,<sup>2</sup> yet tribes of both branches are found to be totemic and exogamous; in other words, the customs of totemism and exogamy cross the linguistic boundaries which divide the Dravidian stock and unite the members of that great family by the bond of common institutions. The Dravidian speech proper includes, amongst others, three great languages, the Tamil, the Telugu, and the Canarese, and from the preceding survey it would seem to follow that totemism at the present day is more prevalent among the Telugu-speaking than among the Tamil-speaking and Canarese-speaking branches of the Dravidian family.<sup>3</sup> It appears doubtful

Totemism and exogamy appear to be, or to have been in former times, universally diffused among the Dravidians, the aboriginal inhabitants of India.

W. H. Furness, "The Ethnography of the Nagas of Eastern Assam," *Journal of the Anthropological Institute*, xxxii. (1902) pp. 451 sqq. As to the Naga tribes in general, see Lieut. - Colonel R. G. Woodthorpe, "Notes on the Wild Tribes inhabiting the so-called Naga Hills," *Journal of the Anthropological Institute*, xi. (1882) pp. 56 sqq., 196 sqq.; Miss Gertrude M. Godden, "Naga and other Frontier Tribes of North-East India," *Journal of the Anthropological Institute*, xxvi. (1897) pp. 161 sqq., xxvii. (1898) pp. 2 sqq.; W. Crooke, *Natives of Northern*

<sup>3</sup> On Tamil, Telugu, and Canarese as branches of the Dravidian family of speech, see *Census of India, 1901*, vol. i. *India, Part I.* (Calcutta, 1903) pp. 284 sqq.; *The Imperial Gazetteer of India, The Indian Empire*, i. (Oxford, 1909) pp. 378 sqq.

It is doubtful whether true totemism exists among any Indian race except the Dravidian.

whether totemism proper is practised by any race of India except the Dravidian. We have indeed found some resemblances to it in combination with exogamy among the Mongoloid peoples of Assam,<sup>1</sup> but it is not certain that these resemblances are proof of the actual existence of the institution. Exogamy, but not totemism, is practised by the Aryan race in India; for the Brahmans, Rajputs, and other high castes among the Hindoos are regularly divided into exogamous clans or septs (*gotras* or *gots*), and the rule that no man may marry a woman of his own clan (*gotra* or *got*) is strictly observed.<sup>2</sup> So far as I am aware, no other Aryan people besides the Hindoos is certainly known to have regulated marriage by a rule of exogamy. Can it be that the ancestors of the Hindoos borrowed the institution from the aborigines with whom they came into contact when they settled in India?

The Dravidians combine, as usual, totemism and exogamy with the classificatory system of relationship.

Having found totemism and exogamy firmly established among the Dravidian peoples of India, we may expect to find these institutions accompanied by the classificatory system of relationship; for, so far as we can see at present, it may be laid down as a general rule, that every people who practise totemism and exogamy count their relationships according to the classificatory system. To this rule the Dravidians are no exception; for the family systems of the Tamil-speaking, the Telugu-speaking, and the Canarese-speaking branches of the Dravidian stock have been accurately recorded, and all three are classificatory, agreeing with each other not only in general character but in minute particulars, though the actual terms of relationship for the most part differ dialectically in the three languages. Further, the Dravidian family system, as it exists amongst the Tamils, the Telugus, and the Canarese, is substantially identical with the family system of the Seneca-Iroquois Indians of North America,<sup>3</sup> which will be described in a later part of this

The Dravidian family system agrees closely with that of the

<sup>3</sup> As to the Tamil, Telugu, and Canarese systems of relationship, and their relation to the Seneca-Iroquois system, see L. H. Morgan, *Systems of*

book.<sup>1</sup> No two peoples on earth are more widely separated from each other than the Dravidians of Central and Southern India and the Iroquois of North-Eastern America. Their agreement in the principles and most of the details of a complex family system has been justly described by its discoverer, L. H. Morgan, as "one of the most extraordinary applications of the natural logic of the human mind to the facts of the social system preserved in the experience of mankind."<sup>2</sup>

Coming to details, we may take the Tamil system as typical of the Dravidian family. As commonly happens under the classificatory system of relationship, there is in Tamil no term for brother or sister in the abstract. These relationships are conceived in the twofold form of elder and younger, and there are separate terms for each. To all of my brothers and sisters who are older than myself I apply the respective terms for elder brother and elder sister; to those who are younger than myself I apply the respective terms for younger brother and younger sister. There are two synonyms for elder brother, namely *tāmaiyaṅ* and *annān*; two synonyms for elder sister, namely *akkārl* and *tāmākay*; two synonyms for younger sister, namely *tangaichchi* and *tangay*; but there is only one term for younger brother, namely *tambi*. Perhaps one set of these synonyms was originally used by the males and the other by the females; but be that as it may, the two sets are now employed indiscriminately.<sup>3</sup>

In the generation above his own a Tamil man applies the same term *tākkāppān*, "father," to his father, to his father's brothers, and to the husbands of his mother's sisters, distinguishing them however as "great (*pēriyā*) father" or "little (*sēriyā*) father" according as they are older or younger than his father. But, as usually happens under the classificatory system of relationship, he applies a different term *māmān*, "uncle," to his mother's brothers. He applies

*Consanguinity and Affinity of the Human Family* (Washington, 1871), pp. 386-398, with the Tables, pp. 511 sqq., 523 sqq. (*Smithsonian Contributions to Knowledge*, vol. xvii.); *id.*, *Ancient Society* (London, 1877), pp. 435-452.

<sup>1</sup> See vol. iii. pp. 19 sqq.

<sup>2</sup> L. H. Morgan, *Ancient Society*, p. 441.

<sup>3</sup> L. H. Morgan, *Systems of Consanguinity and Affinity of the Human Family*, p. 389.

the same term *tay*, "mother," to his mother, to his mother's sisters, and to the wives of his father's brothers, distinguishing his mother's sisters from his mother as "great (*pēriyā*) mother" or "little (*sēriyā*) mother" according as they are older or younger than his mother. But, as usually happens under the classificatory system of relationship, he applies a different term *attai*, "aunt," to his father's sisters. In his own generation he applies the same terms *tāmaiyan*, "elder brother," *akkārl*, "elder sister," *tambi*, "younger brother," and *tangay*, "younger sister," to his own brothers and sisters, elder or younger, and to his first cousins, the sons and daughters, elder or younger, of his father's brothers or of his mother's sisters. But, as usually happens under the classificatory system he applies quite different terms to his other first cousins, the sons and daughters either of his father's sisters or of his mother's brothers; these he calls his *māittūnān*, "male cousin," and his *maitunni*, "female cousin." In the generation below his own he applies the same term *mākān*, "son," and *mākāl*, "daughter," to his own sons and daughters and to the sons and daughters of his brothers. But, as usually happens under the classificatory system of relationship, he applies different terms *mārumākān*, "nephew," and *mārumākāl*, "niece," to the sons and daughters of his sisters. Again, in the generation below his own he calls the son and daughter of his male first cousin (the son either of his father's brother or of his mother's sister) "my son" and "my daughter"; but the son and daughter of his female first cousin (the daughter either of his father's brother or of his mother's sister) he calls "my nephew" and "my niece." So far, all is regular in the Tamil system, but now we come upon an anomaly.

Anomalous  
feature in  
the Tamil  
system.

In the generation below his own, a man calls the son and daughter of his male first cousin (the son either of his father's sister or of his mother's brother) not, as we should expect, "my son" and "my daughter," but "my nephew" and "my niece"; and contrariwise he calls the children of his female first cousin (the daughter either of his father's sister or of his mother's brother) not, as we should expect, "my nephew" and "my niece," but "my son" and "my daughter." This variation from the normal pattern of the classificatory system

is difficult to explain. It is the only important particular in which the Tamil system of India differs from the Seneca-Iroquois system of North America, which in this respect has remained truer to the logical principles of the classificatory system.<sup>1</sup>

Lastly, it may be noted as very remarkable that the Singhalese of Ceylon, though they speak an Aryan language,<sup>2</sup> nevertheless possess the classificatory system of relationship. Thus in the generation above his own a man applies the same term *appâ* "father" to his father, to his father's brothers, and to the husbands of his mother's sisters; and he distinguishes his father's brothers and the husbands of his mother's sisters as "great (*loka*) father," or "intermediate (*madduma*) father," or "little (*punchi, kudâ, or bâla*) father" according as they are older or younger than his father. But, as usually happens in the classificatory system of relationship, he applies a different term *mâmâ* "uncle" to his mother's brothers and to the husbands of his father's sisters. He applies the same term *ammâ* "mother" to his mother, to his mother's sisters, and to the wives of his father's brothers; and he distinguishes his mother's sisters and the wives of his father's brothers as "great mother," "intermediate mother," or "little mother" according as they are older or younger than his mother. But, as usually happens in the classificatory system of relationship, he applies a different term *nendâ* "aunt" to his father's sisters and to the wives of his mother's brothers. In his own generation he applies the same terms *sahôdarayâ* "brother" and *sahôdari* "sister" to his brothers and sisters and to his first cousins, the children either of his father's brothers or of his mother's sisters. But, as usually happens in the classificatory system of relationship, he applies different terms *massinâ* "male cousin" and *neinâ* "female cousin" to the sons and daughters of his mother's brothers and of his father's sisters. In the generation below his own he applies

Classificatory system of relationship among the Singhalese of Ceylon.

<sup>1</sup> L. H. Morgan, *Systems of Consanguinity and Affinity of the Human Family*, pp. 389-391, with the Tables, pp. 523 sqq.; *id.*, *Ancient Society*, pp. 436-452.

<sup>2</sup> A. H. Sayce, *Introduction to the*

the same terms *pūtā* "son" and *duva* "daughter" to his sons and daughters and to the sons and daughters of his brothers. But, as usually happens in the classificatory system of relationship, he applies different terms *bēna* "nephew" and *lēlī* "niece" to the sons and daughters of his sisters. Similarly a woman applies the same terms *pūtā* "son" and *duva* "daughter" to her sons and daughters and to the sons and daughters of her sisters. But, as usually happens in the classificatory system of relationship, she applies different terms *bēna* "nephew" and *lēlī* "niece" to the sons and daughters of her brothers.<sup>1</sup> As the Singhalese apply the same term *māmā* "uncle" to the husband of a father's sister and to a father-in-law; and as they apply the same term *nendā* "aunt" to the wife of the mother's brother and to a mother-in-law, we may infer by analogy that a man's proper wife is his cousin, the daughter either of his father's sister or of his mother's brother.<sup>2</sup>

The Singhalese seem to be the only Aryan-speaking people who have the classificatory system of relationship. They may be a non-Aryan people who have adopted an Aryan language but retained their old native system of relationship.

So far as I know, the Singhalese are the only Aryan-speaking people who possess the classificatory system of relationship. This remarkable exception to the rule that the Aryan-speaking peoples use the descriptive, not the classificatory, system of relationship points to the conclusion that the Singhalese, though they are Aryans by speech, are not Aryans by blood, but have at some time abandoned their native aboriginal tongue for an Aryan language, retaining nevertheless the classificatory relationships, though they designate these by words which may or may not be Aryan. This conclusion is in turn strongly confirmed by the physical type of the Singhalese, which is not that of a pure Aryan breed. On this subject I will quote the observations of Sir John B. Phear. He says: "The Singhalese people themselves generally have the appearance of being the result of at least an intermixture of an Aryan with some other, yellow-tinted, coarsely-built, ethnic element. It is remarkable that they are broad-shouldered, deep-chested, and muscular, with a

<sup>1</sup> A. A. Perera, "Glimpses of Singhalese Social Life; Relationship and Rights of Property," *The Indian Antiquary*, xxxiii. (1904) p. 143.

<sup>2</sup> A. A. Perera, *op. cit.* p. 143.

pronounced calf to the leg, like all Mongolian peoples, and unlike the Aryans of India. But their most striking peculiarity, perhaps, is the excessive hairiness of both male and female. The chest of the man often resembles a door-mat, and the hair of his head reaches low down his back, a feature which attracted the notice of the earliest Greek geographers. The lower part of the abdomen also, both in male and female, is profusely hairy. This extraordinary capillary development is certainly the reverse of what we see in those Mongolian peoples with whom we are best acquainted. It seems, however, that the Ainos, a Turanian race on the extreme east of Asia, possess it even to a greater extent than the Singhalese, and that they at an early historical period were widely spread over the islands and tracts of country now covered by the Japanese, Chinese, and Malays. Can it be that the Singhalese are, by blood, in a large measure traceable to an Aino or a cognate origin, and that they owe little more than their language, literature, and religion to the invasion of Aryans from Upper Bengal, of which history tells us?"<sup>1</sup>

This hypothesis is confirmed by the physical type of the Singhalese, which is not that of a pure Aryan breed.

The geographical position of the Singhalese people certainly favours the hypothesis that they are an aboriginal race who have been driven into their last entrenchments by the pressure of alien invaders; for they are pent up in the southern portion of Ceylon<sup>2</sup> while the northern portion of the island is occupied by a Dravidian population speaking the Tamil language.<sup>3</sup> Clearly if the Singhalese retreated into their present home before the advance of the Dravidians from the north, they had no other spot of ground to which to turn: the next step would have carried them into the sea. They must turn to bay or perish.

The geographical position of the Singhalese favours the view that they are an aboriginal race pent up in their last refuge.

## CHAPTER XI

### TRACES OF TOTEMISM IN THE REST OF ASIA

No clear evidence for the existence of totemism in Asia outside of India.

WHILE totemism combined with exogamy is widely spread among the aboriginal tribes of India, it is remarkable that no single indubitable case of it has been recorded, so far as I know, in all the rest of the vast continent of Asia. In the preceding chapters we have traced this curious system of society and superstition from Australia through the islands of Torres Straits, New Guinea, Melanesia, Polynesia, Indonesia, and India. On the eastern frontier of India totemism stops abruptly, and in our totemic survey of the world we shall not meet with any clear evidence of it again till we pass to Africa or America. If we leave India out of account, Asia, like Europe, is practically a blank in a totemic map of the world. Whether this absence of evidence is due to the absence of the institution, to the negligence and supineness of observers, or merely to the ignorance of the present writer, is a question which future research may perhaps decide. Here I shall confine myself to noting either the slight hints of totemism in Asia which I have met with or the positive statements of good authorities as to the absence of the system in the regions known to them.

Totemism not yet found in any tribe of Burma.

In the first place, then, though totemism, or something very like it, occurs in Manipur, on the eastern frontier of India,<sup>1</sup> it has not yet been discovered in any tribe of Burma. On this subject our principal authority on the ethnology of Upper Burma, Sir J. George Scott, observes: "So far as is yet known there is no tribe which habitually takes its family

<sup>1</sup> See above, pp. 326 *sq.*

name, or has crests and badges taken from some natural object, plant, or animal.”<sup>1</sup> It is true that a rule of exogamy attaching to family names is observed by the Kachins or Chingpaw, who inhabit the country on the north, north-east, and north-west of Upper Burma. Among these people there are at least ninety-seven different names of families, and all persons bearing the same family name regard themselves as of one blood and will not marry each other, even though they may belong to different tribes; but the origin of these family names has not been ascertained.<sup>2</sup> Further, the Chins are divided into forty or more exogamous clans, called *a'so* or *'kun*; no man may marry a woman of his own clan, but “after the marriage ceremonies are over, the wife is initiated into her husband's clan, and has her wrists wrapped round with a cotton-yarn as a witness to all evil spirits that she is under the guardianship of the *'kun* of her husband. So, too, all children, four or five days after birth, are admitted in like manner into the *'kun*.”<sup>3</sup> But exogamy alone is no proof of totemism. Again, many Indo-Chinese races of Burma trace their descent from animals, eggs, or other natural objects; but such legends are not of themselves evidence that the tribes who relate them are totemic, even when the legend is associated with a taboo, as happens, for example, with the Southern Chins of Burma, who are forbidden to kill or eat the king-crow which they regard as their parent, because it hatched the original Chin egg.<sup>4</sup>

Exogamy among the Kachins of Burma.

Exogamy among the Chins of Burma.

Legends of descent from animals, etc., in Burma.

<sup>1</sup> *Gazetteer of Upper Burma and the Shan States*, by (Sir) J. George Scott, assisted by J. P. Hardiman, part i. vol. ii. (Rangoon, 1900), pp. 39 *sq.* Sir J. G. Scott finds traces of totemism “in the prescribed form of names for Shan and Kachin children and in the changing or concealing of personal names,” as well as in “the limiting of marriages between the inhabitants of certain villages only, practised both by tribes of Karens and Kachins.” But these things have no necessary connection with totemism.

<sup>2</sup> *Ibid.* part i. vol. i. (Rangoon, 1900) pp. 402 *sq.*

<sup>3</sup> Rev. G. Whitehead, “Notes on

the Chins of Burma,” *The Indian Antiquary*, xxxvi. (1907) p. 206. The word *'kun* signifies the common ancestry of the clan as well as the clan itself.

<sup>4</sup> *Census of India, 1901*, vol. xii. *Burma*, Part I. (Rangoon, 1902) by C. C. Lewis, p. 133. Mr. Lewis here adduces other similar traditions current among the races of Burma. The Was say that their primaeval ancestors were tadpoles; the Palaungs trace their origin to a Naga princess, who laid three eggs; the Kachins believe that they are descended from a man who was made out of a pumpkin, but this belief does not deter them from eating pumpkins.

Professor de Groot on the absence of evidence for totemism in Eastern Asia.

Chinese tribes with animal names.

When we pass from Burma to the vast empire of China which borders it on the north, positive evidence for the existence of totemism is still to seek. On this subject our best authority on the religions of China, Professor J. J. M. de Groot of Leyden, writes as follows: "A strong belief in animal progenitors of men, families, and tribes may, in any country where the worship of ancestors is prevalent, readily lead to methodic veneration of such beasts. Considering, however, that, so far as we can learn from books, a descent from beasts has never been positively claimed by the inhabitants of what we may call ancient China proper, the existence of ancestor worship in such a garb must be dismissed at once for the provinces north of the Yangtze. If we peruse the long list of Chinese tribal names, we find half a dozen names of animals, viz. Bear, Dragon, Horse, Cow, Crow, and Swallow; but, to judge from the researches of native authors, they do not point to any alleged descent of the tribes they denote, from an animal ancestor. The two first, which are very rare, are stated to have been at the outset individual names, adopted as family names by the descendants of the bearers. The Horse tribe, which has a much larger number of members, derives this name from the first letter of the cognomen of one of its ancestors. Cow, likewise a rare surname, marks descent from an individual whose cognomen it was; while Crow or Raven denoted the office or office-badge of some ancestor. And Swallow is only apparently an animal name, representing in reality the name of an ancient country in the present Pehchihli. Words denoting wolves or dogs were never in China actual tribal names. And South-China, the old country of the Man, whose mythic pedigree has its root in the dog Dishgourd? Never have our studies of books brought us across anything intimating that the dog is there more especially an object of worship than other animals, or a respected *do-daim* whose flesh does not appear in the popular bill-of-fare. Zoolatry, as we shall show afterwards, is a prominent feature of China's religion. But the statement must here be made that, as yet, we have found no trace in China of animals being worshipped in their capacity of tribal progenitors, so that we entertain serious doubts whether

any so-called totemism exists in East Asia as a religious phenomenon."<sup>1</sup>

It is true that in China, as among the Kachins of Burma, a rule of exogamy attaching to family names is observed; since no Chinaman is allowed to marry a Chinese woman who bears his own family or clan name;<sup>2</sup> but exogamy, as I have said, in itself furnishes no proof of totemism. There are estimated to be about four hundred different family names in China, and among these names are words denoting animals, plants, and other natural objects, such as Horse, Sheep, Ox, Fish, Bird, Plum, Flower, Leaf, Rice, Forest, River, Hill, Water, Cloud, Gold, Hide, Bristles, and so on. "Custom and law alike prohibit intermarriage on the part of people having the same family surname. The children are of the father's family, that is, they take his family surname."<sup>3</sup> Amongst the Y-kia, an aboriginal race of Southern China, the same custom is observed. Children take their patronymic name (*sin*) from their father, and with certain exceptions no persons who bear the same patronymic are allowed to marry each other.<sup>4</sup> Again, the people of Corea are divided into exogamous clans, each of which traces its descent by primogeniture from a single male ancestor. The prohibition of marriage between persons who bear the same clan name "is more than a law with penalty for infraction; it is a traditional custom of which the negative is inconceivable." Some of the clan names are those of natural objects, such as Horse, Fish, Mule, Plum, Pear-tree, Willow-tree, Dwarf Nettle (*Cectis sinensis*), Gold, and Stone; but we are told that no totemic devices are used by members of the clans.<sup>5</sup>

In recent years a social system which bears some resemblance to totemism has been reported to exist among the Lolos, an aboriginal race of Southern China. These people are found in all parts of the province of Yunnan and

<sup>1</sup> J. J. M. de Groot, *The Religious System of China*, iv. (Leyden, 1901) p. 271.

Exogamous clans in Corea.

Reported totemism among the Lolos, an aboriginal race of Southern China.

in a few districts of Kweichow ; but the home of their race is Szechwan, where in the fastnesses of the great Taliang Mountains they still retain their independence in a country as large as Wales. European travellers have skirted that country, but as yet none have entered it, so that our knowledge of the pure Lolos is very slight. Mr. A. Henry, stationed at Szemao, a Customs post in the south of Yunnan, has studied the Lolos of that neighbourhood,<sup>1</sup> and it is to him that we owe a notice of their social system which contains at least some hints of totemism. He writes: "It is interesting then to know that Lolo surnames always signify the name of a tree or animal or both tree and animal, and that these are considered as the ancestors of the family bearing the name. This name is often archaic. Thus the surname Bu-luh-beh is explained as follows:— Bu-luh is said to be an ancient name for the citron, which is now known as *sa-lu*. The common way of asking a person what his surname is, is to inquire 'What is it you don't touch?' and a person of the surname just mentioned would reply, 'We do not touch the *sa-lu* or citron.' People cannot eat or touch in any way the plant or animal, or both, which enters into their surname. The plant or animal is not, however, worshipped in any way. People of the same surname may marry if there is no obvious relationship. There are, however, groups of two or three surnames, amongst whom intermarriage is forbidden, and no explanation of this is given. There are also groups of two or three surnames who are called comrades, and intermarriage amongst them is favoured. Marriage is brought about by the father of the boy selecting a wife for his son. She is brought home by the groom and a friend, and is accompanied by her brothers and a number of attendant girl friends. The feast occurs in the father-in-law's house. The remarkable peculiarity amongst the Lolos is that invariably, some days after marriage, the bride escapes and runs home to her father's house." The husband sends presents to her father to induce her to return, and if these do not soften her heart he may go and persuade her with a

Lolo surnames are derived from animals or plants, and people may not eat or touch the animal or plant from which their surname is derived.

<sup>1</sup> A. Henry, "The Lolos and other Tribes of Western China," *Journal of the Anthropological Institute*, xxxiii (1903) pp. 96, 98 sq.

stick.<sup>1</sup> In this account the prohibition to eat or touch the object from which the family takes its name is strongly suggestive of totemism ; but on the other hand the absence of the exogamous rule, which forbids a man to marry a woman of his own family or clan, seems to prove that, if totemism exists among the Lolos, it is not totemism of the common type.

Again, some hints of totemism have been reported as to the little-known aborigines of Formosa. Those of them who inhabit the mountains and forests in the interior of the northern part of the island are said to be divided into tribes, each tribe with its own village, its own name, and almost its own language. Further, each tribe or village possesses an animal, under whose special protection the inhabitants believe themselves to dwell, and accordingly they keep and feed it in a cage. Some will thus keep a serpent, others a leopard, and so on. It is possible that these guardian animals are totems. The people live in settled villages, which they sometimes fortify. The men hunt and fish, using nets and hooks ; the women till the fields, spin, weave, and make excellent mats. Among the crops which they raise are rice, millet, hemp, and tobacco. All unmarried men and lads sleep together in a common building raised on posts several feet above the ground. Here the heads which they took in war from their enemies, especially the Chinese, used to be hung, and here festivals are held. Sometimes the inhabitants of a village observe a fast and a species of taboo (*hiang*), during which no one may enter the village.<sup>2</sup>

Traces of totemism among the aborigines of Formosa.

Each village keeps its guardian animal in a cage.

Common dormitories for unmarried men.

When we pass from the vast empire of China to the vast empire of Russia in Asia, the indications of totemism which meet us are still very few and slight among the many heterogeneous races who profess allegiance to the Czar. Such indications are reported of the Yukuts, a race of Turkish stock in Siberia, who inhabit the district of Yakutsk

Indications of totemism in Siberia.

der Eingebornen der Inseln Formosa und Ceram," *Verhandlungen der Berliner Gesellschaft für Anthropologie, Ethnologie und Urgeschichte*, 1882, pp. (56) sq., (60), (61), (62) (appended to the *Zeitschrift für Ethnologie*, xiv.).

<sup>2</sup> W. Joest, "Beiträge zur Kenntniss

Sacred animals of the Yakut tribes.

and the valley of the Lena.<sup>1</sup> Von Strahlenberg, a Swedish writer of the early part of the eighteenth century, who has given us a description of Siberia, says of the Yakuts that "each tribe of these people looks upon some particular creature as sacred, e.g. a swan, goose, raven, etc., and such is not eaten by that tribe, though the others may eat it."<sup>2</sup>

Exogamous divisions among the Yakuts.

The Yakuts are certainly divided into exogamous sections called *aga-ussa* or "father-kin," from *aga*, "father," and *ussa*, "kin." A wife must always be taken from another *aga-ussa*; indeed well-to-do men will not even marry a wife of their own *nasleg*, which is another and usually larger division comprising within it from one to five *aga-ussas*.<sup>3</sup> But the nature of these divisions is not defined, and there is nothing to shew whether either the *aga-ussa* or the *nasleg* is identical with the "tribe" spoken of by von Strahlenberg. If either identity could be made out, it would go far to prove the existence, present or past, of totemism among the Yakuts. Further, it would seem that the Yakuts have the classificatory system of relationship. For they have no general word either for brother in general or for sister in general; but they have special terms for elder brother and younger brother, for elder sister and younger sister; further, they apply "the term 'child' or 'my child' not only to their own proper children, but also to the children of brothers, or of sisters, or even to brothers and sisters themselves, if they are very much younger."<sup>4</sup> Among the

<sup>2</sup> *An Historico-Geographical Description of the North and Eastern Parts of Europe and Asia, but more particularly of Russia, Siberia, and Great Tartary, written originally in High German by Mr. Philip John von Strahlenberg, A Swedish Officer, thirteen years Captive in those Parts, now faithfully translated into English* (London, 1738), p. 383. The number of Yakut tribes, according to Von Strahlenberg, is ten (*op. cit.* p. 380).

<sup>3</sup> W. G. Sumner, "The Yakuts, abridged from the Russian of Sieroshevski," *Journal of the Anthropological Institute*, xxxi, (1901) pp. 73 sq., 87. "When a Jakut (Siberia) wishes to

marry, he must, says Middendorf, choose a girl from another clan. No one is permitted to marry a woman from his own" (Sir John Lubbock, *The Origin of Civilisation*, Fourth Edition (London, 1882), p. 135). In support of these statements Sir John Lubbock (Lord Avebury) refers to Middendorf, *Sibirische Reise*, p. 72, and Müller's *Description de toutes les Races de l'Emp. de Russie*, Pt. II. p. 58. I accept the truth of the writer's statements, though I have not been able to verify his references.

<sup>4</sup> W. G. Sumner, "The Yakuts," *Journal of the Anthropological Institute*, xxxi, (1901) p. 90. The account here reproduced from the Russian is so vague, and the facts so mixed with

Yakuts, further, the mutual avoidance of a woman and her husband's relations, and of brothers and sisters appears to be practised to a certain extent. In regard to the latter we are told that "boys ten or twelve years of age do not eat with their sisters; they do not lie down to sleep with them on the same bed. The boy is given a separate bed, which involves a special expense. They do it apparently not from modesty, but in obedience to an ancient prohibition in the nature of a taboo. These very sisters, however, may go completely naked, entirely untroubled by the presence of their grown brothers."<sup>1</sup>

Avoidance of brothers and sisters among the Yakuts.

Among the Samoyeds we are told that a man may not marry a woman of his father's clan, but must marry a woman of his mother's clan, however near the relationship between bride and bridegroom may be.<sup>2</sup> If this statement, which appears to be well authenticated, is correct, it proves the existence of exogamy, though not of totemism, among the Samoyeds. Further, it may be noted that some of the tribes of the Kara Kirghiz or Black Kirghiz, inhabiting the northern spurs of the Thian Shan range and the high mountains from Kashgar on the east to Khokan on the west, are divided into tribes, some of which bear the names of animals. The whole people falls, first, into two divisions, namely the *Ong* or the Right and the *Sol* or the Left. The *Ong* or Right division includes six tribes, of which three are

Exogamous clans among the Samoyeds.

Tribes named after animals among the Black Kirghiz.

speculation, that no precise information can be extracted from it. It is not even quite clear whether the *nasleg* and *aga-ussa* (which the translator regularly represents by *sib*) are kinship or local divisions, but apparently they are the former.

<sup>1</sup> W. G. Sumner, "The Yakuts," *Journal of the Anthropological Institute*, xxxi. (1901) p. 90. As to traces of avoidance between a woman and her husband's relations, see *ibid.* p. 93.

<sup>2</sup> "Ueber den religiösen Glauben und die Ceremonien der heidnischen Samojeden im Kreise Mesen, nach dem Russischen," *Zeitschrift für allgemeine Erdkunde*, N.F. viii. (1860) p. 55. The original article here extracted and translated into German was written by the Archimandrite Benjamin of Archangel and published in the fourteenth

volume of the *Wjästnik* of the Imperial Russian Geographical Society. Though the writer deals specially with the Samoyeds of Mesen in the Government of Archangel, he says that exactly the same marriage law is observed by the Samoyeds of Siberia. Similarly, Pallas says that when a Samoyed wishes to marry, he chooses a woman of another family or clan (*in einem andern Geschlecht*). See P. S. Pallas, *Reise durch verschiedene Provinzen des Russischen Reichs*, iii. (St. Petersburg, 1776) p. 76. Similarly, J. G. Georgi says of the Samoyeds: "From disinclination to marry among relations, they all seek brides in other families or clans (*in andern Geschlechtern*)." See J. G. Georgi, *Beschreibung aller Nationen des Russischen Reichs* (St. Petersburg, 1776), p. 282.

named after the stag, the yellow eland, and the great eland respectively.<sup>1</sup> But I know of no evidence that these tribes are either exogamous or totemic.

Marriage  
customs  
of the  
Gilyaks of  
the Amoor  
River.

Among the Gilyaks of the island of Saghalien certain marriage customs are observed which may appropriately be noticed in this book. Brothers appear to hold their wives to a certain extent in common ; for when an elder brother is away on a journey, his younger brother enjoys marital rights over his elder brother's wife ; but the converse does not hold good, an elder brother never has any rights over his younger

Avoidance  
of brothers  
and sisters.

brother's wife.<sup>2</sup> Further, the mutual avoidance of brothers and sisters is in vogue among the Gilyaks. Boys and girls live and play with each other, but when they have reached the age of puberty brothers and sisters may no longer speak to one other, or if they do speak it must be with averted eyes.<sup>3</sup> Further, it appears that the Gilyaks have the classifi-

Classi-  
ficatory  
system of  
relation-  
ship among  
the Gilyaks.

catory system of relationship ; for we read that "the villages are in general inhabited by members of one and the same family ; every Gilyak comes into the world with so many fathers and so many mothers that it is somewhat difficult to understand their system of relationships. He always calls by the name of *ytk*, that is, 'father,' not only his father but the brothers and male cousins german of his father ; and he calls by the name of *ymk*, that is, 'mother,' the sisters and the female cousins german of his mother. All the children of brothers and cousins german are considered as brothers and sisters, and are distinguished by the name of *rouer*, a sort of collective name like the word *Geschwister* in German. The family forms a very sharply limited clan, but marriage between relations is not allowed ; the father has a great authority over his sons, and the oldest brother over his younger brothers. The families are grouped in tribes and boast of descending from the same father, and every Gilyak always knows the name of his tribe. When a child is born into the world, he receives a name ; there is a cycle of names in each tribe, and in the tribe two persons may not bear the same

name ; if a child receives a name which is already borne by a man still living, the man or the child will die within the year. When a man dies, it is forbidden to pronounce his name ; but when the festival of the bear comes round, at which they sacrifice the beast and send him as a messenger to the divinity, in order to obtain game and fish in abundance, they beat the bear's skin crying out the name of the deceased, and from that day the name may be pronounced by all and will be given to a child subsequently born. The names of boys are chosen by the father, who consults with the old men of the family on the subject ; they often signify 'strength,' 'courage,' 'bravery,' 'intelligence,' etc. The names of women are not necessarily taken from the cycle of the tribe."<sup>1</sup>

From this account of Gilyak personal names we may infer that these people assume an intimate connection between a person's name and his life or soul ; and further, perhaps, that they believe in the reincarnation of the dead, a deceased person coming to life again in the child who bears his name. If that is so, the Gilyaks in this respect resemble not only the Central Australian aborigines but also the Indians of North America, among whom, as we shall see later on, a dead person is supposed to come to life again or " to be raised up," as they sometimes express it, in the person of his namesake.

The inference that the Gilyaks believe the dead to be reborn in the persons who bear their names is confirmed by the observation that a precisely similar belief is held by another people of North-Eastern Asia, the Koryaks, whose customs and beliefs have lately been investigated with great care by Mr. Waldemar Jochelson. The Koryaks think that before a child is born, the Supreme Being, a benevolent but rather inert old man who lives up in the sky with his wife and children, sends into the mother's womb the soul of a deceased relative of the child to be born again. He keeps a supply of souls suspended by straps from the cross-beams of his house ; and as is the length of a soul's strap, so will the length of that soul's life be when it is reborn into the world. A long strap, a long life, and a

The Gilyaks seem to believe in the reincarnation of the dead.

Belief of the Koryaks in the reincarnation of the dead.

Children are named after the deceased relatives whose souls have been reborn in them.

short strap, a short life ; that is the idea. Accordingly as soon as a child is born, it is given the name of the deceased relative whose soul has been reborn in it. There are various ways of identifying him or her. Sometimes the father uses for this purpose a divining stone called the Little-Grandmother. This he ties by a string to a stick and swings it backwards and forwards, enumerating the names of the dead kinsfolk both on his own and on his wife's side of the house. When he mentions the name of the one whose soul has entered into the baby, the stone swings faster. Or he may observe the behaviour of the child while the names are being mentioned. If the infant squalls at any name, that cannot be the name of the person reborn in it. But if the child stops squalling or smiles at the mention of any name, then they know that to be its real name, the name of the kinsman or kinswoman who has come to life again in it. Then the father takes up the baby in his arms and carrying it from the sleeping-tent to the house tells the people, "A relative has come." If any mistake is made in identifying the soul which has entered into the new-born child, something will certainly ail that child ; but the mistake may be corrected and the name changed by means of another appeal to the Little-Grandmother or other mode of divination.<sup>1</sup>

Exogamy among the Golds of the Amoor.

Lastly, strict exogamy of the clan is practised by the Goldi or Golds, a tribe settled in the middle course of the great Amoor River ; and from the following account it seems to follow that the organisation of society in exogamous clans is common, if not universal, among the peoples of Siberia. The tribes of this region were investigated for the Jesup North Pacific Expedition by Mr. Berthold Laufer in the years 1898 and 1899, and he reports upon the exogamy of the Golds as follows :—

Exogamous clans (*xala*) of the Golds.

"The social organization of the Gold is very simple, and resembles that of all other Siberian peoples. The whole tribe is grouped into clans called *rody* by the Russians, and *xala* by the Gold. The members of such clans constitute patronymic societies. All the families of a clan bear the

<sup>1</sup> Waldemar Jochelson, *The Koryak, Religion and Myths* (Leyden and New York, 1905), p. 100 (*The Jesup North*

*Pacific Expedition*, vol. vi. part i.). As to the Supreme Being, his wife, and family, see *ibid.* pp. 23 sq.

same name. For example, in Sendaka, the region between Chabarovsk and Vyatskoye, the following names occur most frequently: Posaxara, Ojal, Xader, Perminka, Axtanka, Oninka, Donka, Yukkami, Udinka, Pozar. The members of such clans are scattered over the whole territory occupied by the tribe. Some clans have a double name. Thus the clan Axtanka is also styled Beldi. The names of a great many of their clans are met with among the Mangun and Amoor-Gilyak; for example, the name Posaxara occurs among both these tribes. From this fact may be traced the race mixture of early times. Marriage is strictly exogamic. A man belonging to the clan Perminka is never allowed to take a wife of the same family name."<sup>1</sup>

A Gold buys his wife from her father, and he may have as many wives as he can buy and keep. When he dies, his brother may marry the widow on condition that she consents to have him.<sup>2</sup> "A peculiar feature of the Goldian language is that the terms of relationship are divided into two classes. The names of relatives on the paternal side are different from those on the maternal side. Moreover, each of these classes is again subdivided, distinguishing terms used for relatives older from words for those younger than father or mother. The elder brother of the father is called *fafá*; his younger brother, *achá*; the father's elder sister, *dadá*, his younger sister *ghughú*; the mother's elder sister *dadá*, her younger sister, *oukd*."<sup>3</sup> This distinction between elder and younger brothers and sisters points to the existence of the classificatory system among the Golds. We may surmise that the system is widespread among the tribes of Northern Asia, though observers have paid but little attention to it.

Polygamy.  
The  
levirate.  
Terms  
of relation-  
ship  
among the  
Golds.

Such are the few slight indications or hints of totemism and exogamy which I have been able to glean in Asia outside the limits of India.<sup>4</sup>

<sup>1</sup> B. Laufer, "Preliminary Notes on Explorations among the Amoor Tribes," *American Anthropologist*, New Series, ii. (1900) p. 318.

<sup>2</sup> B. Laufer, *op. cit.* pp. 319 sq., 322.

<sup>3</sup> B. Laufer, *op. cit.* p. 321.

<sup>4</sup> The late German traveller Vaughan-Stevens alleged that he had discovered

something which he took for totemism among the Sakai, an aboriginal tribe of the Malay Peninsula. But no reliance can be placed on his evidence, and I prefer not to repeat his confused statements on the subject. See W. W. Skeat and C. O. Blagden, *Pagan Races of the Malay Peninsula* (London, 1906), ii. 62-64, 258 sq. The barbarous

Absence of  
totemism  
and  
exogamy  
among the  
Chukchees  
and the  
Koryaks  
of North-  
eastern  
Asia.

In view of the now prevalent theory which connects the American Indians with the peoples of Northern Asia, it is of some interest to observe that the two tribes, the Chukchees and the Koryaks, who inhabit the part of Asia nearest to America, appear to be entirely without both totemism and exogamy, the two great institutions so characteristic of the North American Indians.<sup>1</sup> The striking discrepancy thus revealed between the social organisation of these neighbouring peoples in the two continents does not favour the theory of their racial affinity.

Group-  
marriage  
among the  
Chukchees.

But while neither the Chukchees nor the Koryaks have totemism and exogamy, it deserves to be noticed that the Chukchees, who occupy the north-eastern extremity of Asia, possess a system which has been called group-marriage. It will be best to describe the system in the words of Mr. Waldemar Bogaras, who has lived among the people and made a careful study of their institutions. His account applies particularly to the marriage customs of the Reindeer Chukchees; with those of the Maritime Chukchees he is less familiar. He says:

*“Group-Marriage.*—Marriage among the Chukchee does not deal with one couple only, but extends over an entire group. The Chukchee group-marriage includes sometimes up to ten married couples. The men belonging to such a marriage-

tribes in the mountains of Northern Tonquin abstain from eating the flesh of dogs, and they say that one of their people lost an eye through looking at some Annamites, who were engaged in eating dog's flesh. But this is not of itself a trace of totemism, though it has been adduced as such. See E. Lunet de Lajonquière, *Ethnographie du Tonkin Septentrional* (Paris, 1906), p. 240. The Rev. J. Batchelor believes that he has found totemism among the Ainos, an aboriginal race of Japan; but his ideas of totemism appear to be vague, and the evidence which he adduces is quite insufficient. See the Rev. John Batchelor, *The Ainu and their Folk-lore* (London, 1901), pp. 8-10, 83 *sqq.*, 156-164, 206. The respect which the Ainos and some tribes of the Amoor River (the Gilyaks, Golds, and Orotchis) pay to bears, which they

keep in captivity for a time and then sacrifice, is not to be confused with totemism. See *The Golden Bough*, Second Edition (London, 1900), ii. 374 *sqq.*

<sup>1</sup> The social organisation and the religious beliefs of the Chukchees and the Koryaks have been carefully investigated in recent years by members of the Jesup North Pacific Expedition, the prime object of which was to ascertain the ethnical relations between the aboriginal races of America and Asia. See W. Jochelson, *The Koryak* (Leyden and New York, 1908); W. Bogaras, *The Chukchee* (Leyden and New York, 1904-1909). These works form volumes vi. and vii. of the publications of the Jesup North Pacific Expedition, and are issued as memoirs by the American Museum of Natural History, New York.

union are called 'companions in wives' (*n̄ew-tu'mgit*). Each 'companion' has a right to all the wives of his 'companion,' but takes advantage of his right comparatively seldom, namely, only when he visits for some reason the camp of one of the 'companions.' Then the host cedes him his place in the sleeping-room. If possible, he leaves the house for the night; goes to his herd, for instance. After such a call, the companion visited generally looks for an occasion to return the visit, in order, in his turn, to exercise his rights.

"The union, in group-marriages, is mostly formed between persons who are well acquainted . . . , especially between neighbors and relatives. Second and third cousins are almost invariably united by ties of group-marriage; brothers, however, do not enter into such unions. In ancient times this form of marriage was obviously a union between the members of a related group. In course of time, other friendly persons began to be included in the union. The rite accompanying the formation of group-marriages reflects such an origin, for it is intended to give the union the character of a tie between relatives. The persons concerned make sacrifices and anoint themselves with blood, first in one camp, and then in the other. After that they are considered as belonging to one fireside, as do the relatives in the male line. According to tradition, group-marriages with persons of high standing were much sought after by younger people. They would send their relatives as match-makers, and would even serve in a strange herd in order to enter such a union, precisely as is the custom in individual marriages.

Group-marriages mostly formed between acquaintances and relations, especially cousins.

"The older people, however, were reluctant to enter the group-union with young people, especially if the latter were single. The mixing of ages in the group-marriage is not approved of. If a married man, on the other hand, has no children, but desires to have some, he is anxious to make a union with a strong single man. The aversion to including bachelors in the marriage-group is primarily based on the absence of reciprocity. The bachelor gains from entering the union, but gives nothing in return.

As a rule, partners in group-marriages are of about the same age.

"The inmates of one and the same camp are seldom willing to enter into a group-marriage, the reason obviously

Partners in group-marriage generally live in different camps.

being that the reciprocal use of wives, which in group-marriage is practised very seldom, is liable to degenerate into complete promiscuity if the members of the group live too close together. However, many exceptions occur to both rules. . . . I have been told that poor people, on entering the group-union, are sometimes so friendly that they live in one tent, and even in the same sleeping-room. . . .

Practically all Chukchee families are united in group-marriage.

"At the present time the unions through group-marriage embrace practically all Chukchee families. Not to be connected with such a union, means to have no friends and good-wishers, and no protectors in case of need; for the members of a marriage-group stand nearer to one another than even relations in the male line. As pointed out above, however, these two ties often coincide.

"In some cases five or six persons enter into a group-marriage, and all enjoy equal marital rights. In other cases a man may have several companions in group-marriage who do not stand in a similar relation to one another. . . .

Group-marriage considered equal to a blood-tie.

"Union through group-marriage is considered equal to a blood tie. The children born in the families of a marriage-union are regarded as cousins, or even as brothers and sisters. They cannot marry each other, which is natural, for they might easily have a common father."<sup>1</sup>

The Chukchee group-marriage is not promiscuity. The members of such groups are usually blood-relations, real or fictitious.

From this account we gather that practically the whole of the Chukchee tribe or nation lives in a state of group-marriage, which is regulated by custom and does not approach to sexual promiscuity. The members of such groups are commonly blood relations, especially second or third cousins, of about the same age; though persons of very unequal ages sometimes live together in a marriage-group.<sup>2</sup> That the partners in these connubial unions are theoretically deemed to be blood relations, even when they are not so in fact, is plainly indicated by the ceremony of smearing themselves with the blood of sacrificial victims in the camps of both the partners; for this is nothing but a form of the widespread blood-covenant whereby two persons are supposed to unite

<sup>1</sup> Waldemar Bogaras, *The Chukchee* (Leyden and New York, 1904-1909), pp. 602-605 (forming vol. vii. of *The Jesup North Pacific Expedition*).

<sup>2</sup> Mr. W. Bogaras writes: "In

another camp I saw two neighbors of very unequal ages, whose tents stood side by side, and who were united by a group-marriage" (*op. cit.* p. 603).

themselves artificially by a tie of consanguinity ; and we are expressly told that "union through group-marriage is considered equal to a blood tie." Hence among this people consanguinity is not of itself a bar to marriage, but rather the contrary. "The Chukchee," we are told, "have several methods of securing brides and concluding marriages. One of these is through marriage between relatives, if possible in the same family, or at least in the same camp, or in the neighboring camp, where families of the same blood reside. Most frequent are marriages between cousins." However, marriage between brother and sister or between uncle and niece is considered incestuous.<sup>1</sup> The intention of these group-marriages appears to be mutual protection ; persons who do not belong to any such social union are deemed friendless and unprotected.

Consanguineous marriages among the Chukchees.

The tie of affinity between men who are married to sisters is deemed very strong ; indeed in the olden times it was considered to be even stronger than brotherhood, and there was a proverb that in battle two such men should fight and fall side by side. There is a special name for this relationship ; two men married to two sisters call each other *takalhin*, which means properly "brace-companion."<sup>2</sup>

Close tie between men married to sisters.

It is somewhat remarkable that though Chukchee brothers do not unite in a marriage-group, nevertheless the younger brother regularly marries the widow of his elder brother according to the custom of the levirate. If the deceased left no brothers, the widow passes to one of his cousins. But, in accordance with a rule of which we have met with instances in Australia, Indonesia, and India,<sup>3</sup> it is only a younger brother or a younger cousin who may thus succeed to the place of his dead kinsman ; an elder brother or an elder cousin has no right over the widow of his younger brother or younger cousin.<sup>4</sup>

The levirate among the Chukchees.

As might be anticipated from their marriage system, in

<sup>1</sup> W. Bogaras, *The Chukchee*, p. 576. Mr. Bogaras knows of two cases of incestuous intercourse between father and daughter.

<sup>2</sup> W. Bogaras, *op. cit.* p. 540.

<sup>3</sup> See above, pp. 191, 222, 234,

236, 279, 280, 281, 291, 302, 310, 313, 315. Much more rarely it is the elder brother who marries the widow of his deceased younger brother. See above, pp. 249 *sq.*, 272 *sq.*

<sup>4</sup> W. Bogaras, *The Chukchee*, pp. 607 *sq.*

The Chukchees have not the classificatory system of relationship.

which exogamy plays no part, the Chukchees do not possess the classificatory system of relationship. A man applies the same term (*endiw*) to his father's brother and to his mother's brother ; but he applies quite a different term to his father (*elihin*). He applies the same term (*echchai*) to his father's sister and to his mother's sister ; but he applies quite a different term (*ela*) to his mother. He applies the same terms to all his cousins, whether on the paternal or on the maternal side ; but he applies quite different terms to his brothers and sisters.<sup>1</sup>

Amongst the Koryaks there is neither totemism nor exogamy, and marriage is regulated only by degrees of consanguinity or affinity.

The Koryaks who inhabit the country immediately to the south-west of the Chukchees, at the head of the Sea of Okhotsk, are equally without the institutions of totemism and exogamy. Amongst them marriage is regulated, not by an organisation of the community in exogamous clans, but purely by the degrees of relationship or affinity which exist between individuals. A man is forbidden to marry his mother and her sisters, his father's sisters, his own sisters, his cousins, and his nieces, the daughters either of his brother or of his sister. Between all other blood-relations marriages are permitted. Amongst the relations by marriage whom a man is forbidden to take to wife are his stepmother, the sisters of his living wife, the elder sisters of his dead wife, the sisters of his brother's wife, and the widow of his younger brother.<sup>2</sup> On the other hand, while he may not marry the sister of his living wife, he is obliged to marry his deceased wife's younger sister, though he is forbidden to marry her elder sister. Similarly a widow is bound to marry her deceased husband's younger brother, but is forbidden to marry his elder brother. Thus among the Koryaks the common custom of the levirate, which obliges a widow to marry her deceased husband's brother, has its counterpart in a custom which obliges a widower to marry his deceased wife's sister ; but in both cases the custom is subject to the condition that the brother or sister who marries the widow or the widower must be younger than the deceased husband or wife.<sup>3</sup>

Marriage with a deceased wife's younger sister.

The levirate.

<sup>1</sup> W. Bogaras, *The Chukchee*, pp. 538 sq.

<sup>2</sup> W. Jochelson, *The Koryak* (Leyden and New York, 1908), pp. 736 sq.,

750, 761 (*The Jesup North Pacific Expedition*, vol. vi.).

<sup>3</sup> W. Jochelson, *op. cit.* pp. 737, 748 sqq.

The relations between the sexes among the Koryaks are much stricter and, judged by our standard, more moral than among the Chukchees and other neighbouring tribes. Girls are expected to remain chaste before marriage, and the custom is on the whole observed. It is deemed shameful if a girl is found with child before marriage. Young men will not serve for such a frail one. She is sent away into the wilderness to bring forth in pain and sorrow the fruit of her sin; and she kills the poor babe and buries it in the earth or in the snow. In the olden time her family would sometimes make war on the family of her seducer.<sup>1</sup>

Strictness of the relations between the sexes among the Koryaks.

Like the Chukchees, the Koryaks do not employ the classificatory system of relationship. There is one word (*enniw*) for father's brother and mother's brother, but quite a different word (*apa*) for father. There is one word (*itchei*) for father's sister and mother's sister, but quite a different word (*ella*) for mother. There is one word for cousins, whether paternal or maternal, but quite different words for brothers and sisters.<sup>2</sup>

The Koryaks have not got the classificatory system of relationship.

<sup>1</sup> W. Jochelson, *The Koryak*, pp. 733-735.

pronunciation of the Koryak words. They convey little meaning to an English reader. My spelling must therefore be understood to represent the sounds only approximately. The same observation applies to my spelling of the Chukchee terms of relationship.

<sup>2</sup> W. Jochelson, *op. cit.* pp. 759 *sq.* I have not reproduced the typographical subtleties by which Mr. Jochelson attempts to mark the exact

## CHAPTER XII

### TOTEMISM IN SOUTH AFRICA

#### § 1. *Totemism among the Herero*

Totemism widely diffused in Africa.

WHEN we pass from Asia to Africa the evidence for the existence of totemism and exogamy again becomes comparatively copious ; for the system is found in vogue among Bantu tribes both of Southern and of Central Africa as well as among some of the pure negroes of the West Coast. We begin with the Herero, Ovaherero, or Damaras as they used to be called, who inhabit German South-West Africa.

The Herero, a Bantu tribe of nomadic herdsmen.

The Herero are a tall finely-built race of nomadic herdsmen belonging to the Bantu stock, who seem to have migrated into their present country from the north and east some hundred and fifty or two hundred years ago.<sup>1</sup> The desert character of the country and its seclusion from the world long combined to preserve the primitive manners of the inhabitants. A scanty and precarious rainfall compels them to shift their dwellings from place to place in order to find pasture for their cattle ; and an arid, absolutely rainless coast of dreary sandhills affords no allurements to the passing mariner to land on the inhospitable shore. From the sea the land rises to the high mountains of the interior in a series of tablelands, separated from each other by great sandstone cliffs. In the hot season the burning tropical

The land of the Herero.

<sup>1</sup> J. Irlé, *Die Herero* (Gütersloh, 1906), pp. 49 *sqq.*, 53 *sqq.* The time when the Herero migrated into their present country has been variously estimated at from one hundred to three hundred years ago. In such a matter certainty is unattainable. Compare

Josaphat Hahn, "Die Ovaherero," *Zeitschrift der Gesellschaft für Erdkunde zu Berlin*, iv. (1869), pp. 227 *sqq.*; H. Schinz, *Deutsch-Südwest-Afrika* (Oldenburg and Leipsic, n.d.), pp. 142 *sq.*; E. Dannert, *Zum Rechte der Herero* (Berlin, 1906), pp. 1 *sqq.*

sun converts these vast plains into a parched wilderness, where springs of water are few and far between, and the scorched grass, crumbling into dust at the touch, affords no nourishment to the languishing cattle. But when the first rains, accompanied by thunderstorms of tremendous violence, have fallen, the whole scene changes as by magic. The wastes are converted into meadows of living green, gay with a profusion of beautiful flowers and fragrant with a wealth of aromatic grasses and herbs; the trees, too, burst into blossom and perfume the air with their sweet scent. Now is the time when the cattle roam at large on the limitless prairies, and beasts of all kinds descend from their summer haunts in the mountains, bringing life and animation where the silence and solitude of death had reigned before. But when the rainy season is over, the colours quickly fade, and the sun-baked plains soon wear again their former hue of melancholy grey. Only the deep glens which intersect the tablelands then afford coolness and shade, and form the best highroads into the interior. The jaded and thirsty traveller who suddenly descends from the desolation and furnace-like heat of the tableland into one of these ravines, where the river murmurs over a pebbly bed between banks of tall reeds, skirting flowery meadows and verdant groves, may well fancy himself transported into an enchanted land.<sup>1</sup>

In their native state the Herero are a purely pastoral people, though round about the mission stations some of them have learned to till the ground. They possess, or used to possess, immense herds of cattle and flocks of sheep and goats. These are the pride and joy of their hearts, almost their idols. Their riches are measured by their cattle; he who has none is of no account in the tribe. Men of the highest standing count it an honour to tend the kine; the sons of the most powerful chiefs are obliged to lead for a time the life of simple herdsmen. They subsist chiefly on the milk of their herds, which they commonly drink sour. From a motive of superstition they never wash the milk vessels, believing firmly that if they did so the cows would yield no

The flocks  
and herds  
of the  
Herero.

<sup>1</sup> Josaphat Hahn, "Das Land der Herero," *Zeitschrift der Gesellschaft für Erdkunde zu Berlin*, iii. (1868),

pp. 195 *sqq.*; J. Irle, *Die Herero* (Gütersloh, 1906), pp. 9 *sqq.*

more milk. Of the flesh they make but little use, for they seldom kill any of their cattle, and never a cow, a calf, or a lamb. Even oxen and wethers are only slaughtered on solemn and festal occasions, such as visits, burials, and the like. Such slaughter is a great event in a village, and young and old flock from far and near to partake of the meat.<sup>1</sup>

The circular huts and villages of the Herero.

Their huts are of a round beehive shape, about ten feet in diameter. The framework consists of stout branches, of which the lower ends are rammed into the ground, while the upper ends are bent together and tied with bark. The intervals between the ribs are stopped with brushwood or long grass, and the whole is coated on the outside with a mixture of cow-dung, blood, and clay. A hole large enough to let a man creep through on all fours serves as a door, and a smaller hole higher up allows the smoke to escape. On the approach of the rainy season the huts are covered with raw hides, which are weighted with great stones to prevent them from being blown away by the wind. A village is composed of a number of these round huts arranged in a circle about the calves' pen as a centre and surrounded by an artificial hedge of thorn-bushes.<sup>2</sup> At night the cattle are driven in through the hedge and take up their quarters in the open space round the calves' pen.<sup>3</sup>

Totemism among the Herero.

A special interest attaches to the Herero because they are the first people we have met with in our survey who undoubtedly combine totemism with a purely pastoral life; hitherto the totemic tribes whom we have encountered have been for the most part either hunters or husbandmen. As

<sup>1</sup> C. J. Andersson, *Lake Ngami*<sup>2</sup> (London, 1856), p. 230; J. Chapman, *Travels in the Interior of South Africa* (London, 1868), i. 325; J. Hahn, "Die Ovaherero," *Zeitschrift der Gesellschaft für Erdkunde zu Berlin* iv. (1869) pp. 244-247; C. G. Büttner, *Das Hinterland von Wal-fischbai und Angra Pequena* (Heidelberg, 1884), pp. 228 sq.; H. Schinz, *Deutsch-Südwest-Afrika* (Oldenburg and Leipsic, n.d.), pp. 158-161; J. Irlé, *Die Herero*, pp. 32 sq., 113.

<sup>2</sup> Francis Galton, *Narrative of an Explorer in Tropical South Africa*<sup>3</sup>

(London, 1890), p. 116; J. Hahn, *op. cit.* iv. (1869) p. 247; H. Schinz, *op. cit.* pp. 155 sqq.; J. Irlé, *Die Herero*, pp. 111 sq. Similarly a Zulu village consists of a number of round beehive huts arranged in a circle about the cattle pen as centre, and sometimes surrounded with a palisade to keep out wild beasts (Dudley Kidd, *The Essential Kafir* (London, 1904), pp. 12 sq., with plates 4 and 7). This was, perhaps, the original type of the Bantu village.

<sup>3</sup> H. Schinz, *Deutsch-Südwest-Afrika*, p. 159.

might have been anticipated, the totemism of the Herero is coloured by the main occupation of their life, the care of the cattle, and it presents besides certain peculiar features. The people are divided into a number of clans arranged on a curious double system, so that every person belongs at once to two different clans, one of which, called an *eanda* (plural *omaanda*), he inherits from his mother, and the other, called an *oruzo* (plural *otuzo*), he inherits from his father. Hence, while the legends which relate the origin of the paternal clans (*otuzo*) refer only to men, the legends which relate the origin of the maternal clans (*omaanda*) relate only to women, each of these maternal clans tracing its descent from a clan-mother. According to some writers the distinction between the two sets of clans is that the maternal clans are social communities and the paternal clans religious communities; but it seems doubtful whether this distinction holds good. Both sets of clans appear to be totemic; at all events, this is suggested not only by their names, but also by the rules and prohibitions, peculiar to itself, which each clan has to observe, especially in regard to diet and costume.<sup>1</sup>

Double system of maternal clans (*omaanda*) and paternal clans (*otuzo*) among the Herero.

There are at present, according to most authorities, eight

<sup>1</sup> My account of the clan system of the Herero has been pieced together from the following sources: C. J. Andersson, *Lake Ngami*,<sup>2</sup> pp. 221 sq., 222 sq.; Francis Galton, *Narrative of an Explorer in Tropical South Africa*,<sup>3</sup> p. 115; Josaphat Hahn, "Die Ovaherero," *Zeitschrift der Gesellschaft für Erdkunde zu Berlin*, iv. (1869) pp. 501 sq.; G. Viehe, "Some Customs of the Ovaherero," (*South African Folk-lore Journal*, vol. i. part iii. (Cape Town, 1879) pp. 40 note, 48; H. Brincker, *Wörterbuch und kurzgefasste Grammatik des Otji-Herero* (Leipsc, 1886), s.vv. 'eanda' and 'oruzo,' pp. 7, 195 sq.; H. von François, *Nama und Damara, Deutsch-Südwest-Afrika* (Magdeburg, n.d.), pp. 171 sqq.; Dannert, "Soziale Verhältnisse der Ovaherero," *Mittheilungen der Geographischen Gesellschaft zu Jena*, vi. (1888) p. 117; H. Schinz, *Deutsch-Südwest-Afrika*, pp. 162-165; J. Kohler, "Das Recht der Herero,"

*Zeitschrift für vergleichende Rechtswissenschaft*, xiv. (1900) pp. 295-298; P. H. Brincker, "Charakter, Sitten und Gebräuche speciell der Bantu Deutsch-Südwestafrikas," *Mittheilungen des Seminars für orientalische Sprachen zu Berlin*, iii. (1900) Dritte Abteilung, pp. 72 sq.; G. Viehe, "Die Omaanda and Otuzo der Ovaherero," *Mittheilungen des Seminars für orientalische Sprachen zu Berlin*, v. (1902) Dritte Abteilung, pp. 109-117; J. Irle, *Die Herero*, pp. 87-93; Eduard Dannert, *Zum Rechte der Herero* (Berlin, 1906), pp. 11-19. The fullest accounts are those of Brincker, Schinz, Kohler, Viehe (Berlin, 1902), Irle, and Dannert. Andersson and Hahn make no mention of *otuzo*; Bensen, quoted by Prof. Kohler, says nothing of *omaanda*. Some of these writers perhaps confused the two kinds of clans. Being unable to sift their evidence I content myself with reproducing it.

The  
maternal  
clans  
(*omaanda*).

principal maternal clans (*omaanda*, plural of *eanda*), most of them with their subdivisions or septs. According to the latest authority, however, Mr. E. Dannert, there are only six principal *omaanda*. The members of each of these clans have their own traditions and their own special laws as to food and other matters. For example, they are forbidden to eat cattle or sheep of certain sorts, the sorts being determined by the form, colour, shape of the horns, and so on, of the animal.<sup>1</sup> Thus the people of one clan (*eanda*) will perhaps not eat of the flesh of oxen which are marked with black, white, or red spots; those of another refuse to partake of a hornless sheep; those of a third would not touch the meat of draught oxen. Before a Herero accepts meat which is offered to him, he carefully inquires as to the colour of the animal, whether it had horns, and so forth; and should it prove to be of the forbidden kind, he will probably abstain from it, even though he may be dying of hunger. Some carry their scruples so far as to avoid touching vessels in which such meat has been cooked; even the smoke of the fire by which it was prepared is considered injurious.<sup>2</sup> These clans do not live each by itself; on the contrary, men of all clans are found dwelling together in the different tribes. Yet the members of any one clan, though they may reside in different tribes, form among themselves a social community which plays a great part in matters of inheritance; for property, especially property in cattle, must remain in the same maternal clan (*eanda*).<sup>3</sup>

The names  
of the  
maternal  
clans  
(*omaanda*).

The names of the maternal clans (*omaanda*) are compounded of a prefix *e* (the initial letter of *eanda*), the syllable *kue* (the root of *omukue*, "father-in-law," "son-in-law," "mother-in-law," "daughter-in-law," etc.), and finally a word of various signification, such as *ejuva*, "sun," *ombura*, "rain," and so on. Thus the name of the clan as a whole

<sup>1</sup> C. J. Andersson, *Lake Ngami*, p. 221; J. Hahn, "Die Ovaherero," *Zeitschrift der Gesellschaft für Erdkunde zu Berlin*, iv. (1869) p. 502; H. Brincker, *Wörterbuch und kuragefasste Grammatik des Otji-Herero* (Leipsic, 1886), s.v. 'eanda,' p. 7.

<sup>2</sup> C. J. Andersson, *Lake Ngami*, pp.

222 sq.

<sup>3</sup> G. Viehe, "Die Omaanda und Otuzo der Ovaherero," *Mitteilungen des Seminars für orientalische Sprachen zu Berlin*, v. (1902) Dritte Abteilung, pp. 109 sq., 112; J. Irle, *Die Herero*, p. 89; E. Dannert, *Zum Rechte der Herero*, p. 13.

signifies that the members of it are related by marriage to the object after which they are named. Thus *Ekuejuva* is "the clan which is related by marriage to the sun"; *Ekuenombura*, "the clan which is related by marriage to the rain." When we speak of a person or persons of a clan, we substitute the prefix *omu* (singular) or *ova* (plural) for the prefix *e*, thus:—*Omukuejuva*, "a member of the Sun clan"; *Ovakuejuva*, "members of the Sun clan."<sup>1</sup>

The principal maternal clans (*omaanda*) of the Herero are as follows:—<sup>2</sup>

1. The *Ekuejuva* or Sun (*ujuva*) clan, the name signifying properly "the clan which is related by marriage to the sun."<sup>3</sup> The members of the clan eat no black and white speckled sheep. The clan is divided into four septs, which take their special names from an arrow, scratching, the *omutati* tree, and the pheasant.

2. The *Ekuenombura* or Rain (*ombura*) clan. It is not divided into septs.

3. The *Ekuendjata* clan. Their name is derived by Mr. G. Viehe from *ondata*, "a spring of water." The clan includes two septs called "the Great Heap" and "the Little Heap" respectively.

4. The *Ekuauti* or Shrub (*outi*) clan.

5. The *Ekuatjiti* or Tree (*otjiti*) clan. According to Mr. E. Dannert this is a sept of the preceding clan and takes its name from a strongly aromatic shrub called *okuatjiti*, which the Herero use for rubbing their bodies.

6. The *Ekuahere*, the Marmot or Rock rabbit<sup>4</sup> (*ehere*)

<sup>1</sup> G. Viehe, "Die Omaanda und Otuzo der Ovaherero," *Mitteilungen des Seminars für orientalische Sprachen zu Berlin*, v. (1902) Dritte Abteilung, p. 112. As to the prefixes *omu* and *ova* see H. Brincker, *Wörterbuch und kurzgefasste Grammatik des Otji-Herero*, pp. 136 sq.

<sup>2</sup> C. J. Andersson, *Lake Ngami*, p. 221; J. Hahn, "Die Ovaherero," *Zeitschrift der Gesellschaft für Erdkunde zu Berlin*, iv. (1869) pp. 501 sq.; J. Brincker, *Wörterbuch und kurzgefasste Grammatik des Otji-Herero*, p. 7; H. Schinz, *Deutsch-Südwest-Afrika*,

p. 163; G. Viehe, "Omaanda und Otuzo der Herero," *op. cit.* pp. 111 sq.; J. Irlé, *Die Herero*, pp. 89 sq.; E. Dannert, *Zum Rechte der Herero*, pp. 17 sq.

<sup>3</sup> According to Mr. E. Dannert (*Zum Rechte der Herero*, p. 17), the name is derived from a word meaning "heap," not "sun." But the weight or at least the majority of the authorities, including that of the lexicographer Dr. H. Brincker, is against him.

<sup>4</sup> Various described in German as "eine Art Murmeltier" and "Felsenkaninchen."

List of the principal maternal clans (*omaanda*) of the Herero.

clan. According to Mr. E. Dannert, this is a sept of the following clan.

7. The *Ekuendjandje* or Liberal (*ondjandje*) clan. It includes two or three septs which are called after sunset, darkness, and perhaps the rock rabbit.

8. The *Ekuatjivi* clan. Their name, according to Dr. Brincker, is derived from a word meaning "wicked" or "evil"; according to Mr. E. Dannert, it comes from a word meaning "tree." The clan falls into two divisions, one of which takes its special name from a bush (*omungambu*) and the other from the morning (*omuhuka*).

Other maternal clans (*omaanda*) enumerated by Dr. Brincker in his dictionary of the Herero language are:—

9. The *Ekuaorongongo* or Koodoo (*ohorongongo*) clan.

10. The *Ekuesembi* or Chameleon (*esembi*) clan. And we hear of another called *Ekuenanjimi*, said to be so named from an ornament of iron wire (*onguanjimi*) which members of the clan wear.<sup>1</sup>

Several of these maternal clans (*omaanda*) derive their names from the same objects after which some of the paternal clans (*otuzo*) are named; for we shall see immediately that among the paternal clans are some which call themselves after the sun, the koodoo, the chameleon, and liberality. It is possible that some writers have confused the maternal clans (*omaanda*) with the paternal clans (*otuzo*); and indeed C. J. Andersson and Josaphat Hahn speak only of *omaanda* without appearing to know of the existence of the *otuzo*. One of the latest and best authorities on the Herero, Mr. Eduard Dannert, definitely affirms that several writers have confounded the two distinct sets of clans.<sup>2</sup> He himself denies that the maternal clans (*omaanda*) are totemic in character, with definite rules as to wearing the hair, keeping various sorts of cattle, and abstaining from various kinds of food. Such customs, according to him, are characteristic of the paternal clans (*otuzo*), not of the maternal clans (*omaanda*).<sup>3</sup> If he is right, the double system of paternal and maternal clans among the Herero

Some writers have perhaps confused the maternal clans (*omaanda*) with the paternal clans (*otuzo*).

<sup>1</sup> C. J. Büttner, in H. Brincker's *Wörterbuch und kurzgefasste Grammatik des Otji-Herero*, p. 7.

<sup>2</sup> E. Dannert, *Zum Rechte der Herero*, p. 16.

<sup>3</sup> E. Dannert, *op. cit.* pp. 13 sqq.

is not so complex and confusing as at first sight it appears to be.

The Herero profess to account for the origin of their maternal clans (*omaanda*) by tales which seem to shed but little light on the subject. Most of these stories turn on two or three sisters who went to the obsequies of their uncle, and of whom the younger was always the more sage and fortunate. For example, the origin of the Sun clan and the Rain clan is set forth in the following anecdote. Once upon a time there were two sisters, whose uncle was dead; and they thought they would go to the funeral. The one said, "It is very hot; let us wait for the rain." But the other had no fear of the heat, and away she went to the funeral. So the one who waited for the rain was called "She who is related by marriage to the rain" (*omukuen-ombura*), and the one who did not fear the noon-day heat was called "She who is related by marriage to the Sun" (*omukuejuva*). That was the origin of the Rain and the Sun clans.<sup>1</sup>

Legends told by the Herero to account for the origin of their maternal clans (*omaanda*).

Again, the origin of the Spring of Water clan (*Ekuendjata*) is explained by the following legend. Once upon a time there were some women and they all went on a journey. And it came to pass that they found a spring of water and sat down by it to drink. But the water did not suffice for them all. So some of them said, "Let us go on." But others said, "Let us dig for water to drink." So some went on, and some stopped behind, and those who stopped behind at the spring (*ondjata*, now pronounced *ondata*) were called *Ovakuendjata*. That is the origin of the Spring of Water clan (*Ekuendjata*).<sup>2</sup>

A tale told to account for the origin of the Shrub or Twig clan and the Tree clan runs thus. There were two sisters, an elder and a younger, and they went to the funeral of their uncle. On the way the younger sister found a sweetly smelling shrub called *okakuatjiti* and plucked its fragrant twigs (*outi*); so she was called Omukuauti. Then the elder sister came and plucked the wood or thick branches (*oviti*,

singular *otjiti*) of the shrub; so she was called Omukatjiti. That is the origin of the Shrub or Twig clan (*Ekuauti*) and of the Tree clan (*Ekuatjiti*).<sup>1</sup>

The paternal clans (*otuzo*) of the Herero.

The paternal clans (*otuzo*, plural of *oruzo*) are much more numerous than the maternal clans (*omaanda*). More than twenty of them have been recorded, but the list is probably incomplete. The etymology of the word *oruzo* and the meaning of most of the names of these paternal clans are alike obscure. These names regularly begin with *oru* or *oro*, which is the genitive prefix of *oruzo*; for example, *Oroesembi* is the Chameleon clan, the name being compounded of *oro* and *esembi*, "chameleon." When we wish to express the members of a clan we prefix *ovo*, the usual sign of the personal plural; for example, *Ovosembi*, "they of the chameleon." Among these paternal clans are the clans of the sun, the chameleon, the koodoo (a species of antelope), rag, liberality, and a girdle or necklace made out of pieces of the shells of ostrich eggs. The members of each clan (*oruzo*) are bound to observe certain customs in regard to food, the wearing of their hair, and so on. Some may not keep hornless cattle; others may not keep oxen with white backs; others keep neither gray cattle nor gray dogs; some are forbidden to eat tongues, others to eat the leg of an ox, others to eat the small stomach of cattle, others to eat gray oxen, others to eat hornless oxen, others to eat draught oxen, others to eat the shins, shoulder-blades, and blood of cattle, others to eat hares, others to eat the steinbock; some may not drink the milk of cows of certain colours or characterised by horns of a certain shape. When animals of a sort which the custom of his clan forbids him to keep are born in a herd, the owner has to give them away or sell them, sometimes for an old song. The members of one clan will not touch clothes, skins, or anything else that has been put off by other people. Members of the Chameleon clan (*Oro-esembi*) take their name from the chameleon (*esembi*), which they regard as sacred: they call the creature "old grandfather"

Each clan (*oruzo*) observes certain rules as to food, the wearing of their hair, and the kinds of cattle and sheep which they may keep.

The Chameleon clan.

and will not kill it. If they find a chameleon, they take it to the sacred hearth (*okuruo*) of the kraal and let it run about there for good luck. They prefer to keep brown and brindled cattle; they keep no grayish sheep and no dun-coloured cattle, nor will they eat the flesh of such animals. Members of the Rag clan (*Oruomakoti*, from *ekoti*, "rag") throw away the tripe of slaughtered cattle; they keep yellow and dun-coloured kine, but no hornless or earless sheep, nor may they eat the flesh of such animals. Members of the Sun clan may only eat and drink while the sun is visible; they keep hornless cattle, and eat none that is of a bluish tinge. The Koodoo clan (*Orojaharongo*, from *ohorongo*, "koodoo") may not eat the koodoo; but they sacrifice the beast and make magic with it, and the horns of the koodoo decorate their graves: they keep no hornless beasts, no beasts with crumpled horns, and no beasts without ears. The Liberals, as we may call the members of the Liberal clan (*Oruanguendjandje*, from *ondjandje*, "liberal"), sacrifice and make magic with wethers that have a growth behind the ear; they neither keep nor eat gray cattle, and the flesh of tongues is also forbidden to them. Members of the Girdle or Necklace (*ombongora*) clan do not eat the blood of sheep nor flesh from the lower part of the animal's front legs; and women of this clan may not eat a sheep's breast. Each paternal clan (*oruzo*) has its badge or scutcheon, which the male members wear on the nape of the neck. It may be, for example, a boar's tusk or a sea-shell.<sup>1</sup>

Irle, *Die Herero* (Gütersloh, 1906), pp. 87-89; E. Dannert, *Zum Rechte der Herero* (Berlin, 1906), pp. 11-16. Our two principal authorities on the subject are Messrs. G. Viehe and E. Dannert. Mr. Irle's account agrees closely with that of Mr. G. Viehe and is perhaps dependent on it.

Rules as to  
marriage in  
the Herero  
clans.

We have unfortunately very little information as to the rules which regulate marriage in the Herero clans, both maternal and paternal. From a passing utterance of one of our authorities we gather that the maternal clans (*omaanda*) are exogamous; husband and wife always belong to different *omaanda*.<sup>1</sup> As to the paternal clans (*otuzo*) one of our authorities definitely affirms that exogamy does not exist, and another says that marriage commonly takes place within the clan.<sup>2</sup> Yet we may doubt whether on this point they are not mistaken. From the statement that a wife at marriage passes into her husband's paternal clan (*oruzo*)<sup>3</sup> we may perhaps surmise that the two always belong to different paternal clans, in other words, that the paternal clans (*otuzo*) like the maternal (*omaanda*) are exogamous. Some writers say that at marriage a wife quits her maternal clan (*eanda*) also for the maternal clan of her husband, though her children belong to her original maternal clan (*eanda*), not to his.<sup>4</sup> But the statement perhaps rests on a confusion with the paternal clan (*oruzo*); for it is positively affirmed by good authorities that no person may quit the maternal clan (*eanda*) which he or she has inherited at birth from the mother.<sup>5</sup> Another hint of the exogamy of the paternal clans (*otuzo*) may possibly be elicited from the following utterance: "A young man who wishes to choose a wife for himself has, in most cases, not a very ample field for his choice, as he is bound by many social circumstances and regulations which it would take too much space to explain here." This tantalising statement of a well-informed missionary, the Rev. G. Viehe, is curtly elucidated by his editor with the remark "*eanda* and perhaps *oruzo*."<sup>6</sup>

<sup>6</sup> G. Viehe, "Some Customs of the Ovaherero" (*South African Folk-lore Journal*, i. (1879) p. 48. Yet in his own treatise on the Herero clans, to

In the absence of definite information it is impossible to do more than hazard a conjecture as to the origin of this double system of clans. We might suppose that it had arisen through the union of two totemic tribes, one of which had maternal descent of the totem and the other paternal. But, so far as I am aware, there is nothing in the customs of the Herero to confirm this hypothesis, nor do I remember to have met with any instance of such an amalgamation elsewhere. We might also suppose that the twofold system marks an attempt, not fully carried through, to substitute paternal for maternal descent. We have seen that maternal descent appears to have preceded paternal descent among the Western Islanders of Torres Straits.<sup>1</sup> Hence it is not impossible that the Herero are in a state of transition between the two.

Conjecture as to the origin of the double system of clans among the Herero.

Like many other exogamous and totemic peoples, the Herero favour the marriage of cousins, the children of a brother and of a sister respectively; while at the same time they forbid and even regard with horror as incest the marriage of cousins, the children of two brothers or of two sisters. On this subject Mr. Dannert tells us that "marriages between relations are so much preferred that marriages between persons who are not related to each other are a rarity. Again, among relations marriages between cousins are especially preferred, but only between children of a brother and a sister, not between the children of two brothers or of two sisters, because the Herero assert that children of such cousins are weak and die. . . . Indeed such a marriage is not only improper, but is actually regarded as a horror, because the children of two brothers or of two sisters are themselves brothers and sisters according to Herero law, and sexual intercourse between them is viewed as incest and even subjects the culprits to the consequences of the blood-feud."<sup>2</sup> However, Mr. Dannert adds that the custom which directs a man to marry his cousin, the daughter either of his mother's

Cousin marriages among the Herero.

which I have so often referred ("Die Omaanda und Otuzo der Herero"), Mr. Viehe does not vouchsafe a word as to the restrictions on marriage, with which he seems to be well acquainted.

<sup>1</sup> See above, p. 15.

<sup>2</sup> E. Dannert, *Zum Rechte der Herero*, p. 33 sq. Compare Bensen, quoted by Prof. J. Kohler, "Das Rechte der Herero," *Zeitschrift für vergleichende Rechtswissenschaft*, xiv. (1900) pp. 300 sq.

brother or of his father's sister, is often broken through, but that even then the wife is still looked for among the kinsfolk of her husband.<sup>1</sup>

Group-  
marriage  
among the  
Herero.

The Herero sometimes practise a form of group-marriage, for which the native name is *oupanga*. According to the missionary and lexicographer Dr. Brincker this institution "is a custom of the heathen Herero, consisting in a community of women and property, though the community of property exists only in so far as the *oma-panga* (the members of such a community) may not refuse each other anything. Originally *oupanga* is the right word for 'friendship,' but through the custom of the community of women, which exercises a very corrupting influence on the people, it has acquired a very evil flavour, so that we should be shy of using it in that sense."<sup>2</sup> Elsewhere the same writer tells us that "two men who are each *epanga* to the other bind themselves by mutual presents of cattle and other things to an intimate friendship which makes accessible to every *epanga* the wives of his *epanga*, and on the other hand confers the right to take anything from his herd at pleasure. This evil custom has had as a consequence that the heathen Herero women bear comparatively few children."<sup>3</sup> Again, Mr. Bensen, District Superintendent of Omaruru, informs us that "three men unite together and hold their wives and cattle in common, that is, they use their wives mutually and slaughter their cattle among each other. This they call *oupanga*. The children remain with the father who married the woman who bore the child, even when it can be proved that one of the two other men is its real father."<sup>4</sup>

Mr. E.  
Dannert's  
investiga-  
tion of  
group-  
marriage  
among the  
Herero.

The subject of these group-marriages has lately been studied with care by Mr. E. Dannert. From him we learn that they are concluded by a verbal agreement without any religious or other formalities, and that they may be dissolved

<sup>1</sup> E. Dannert, *Zum Rechte der Herero*, p. 37.

<sup>4</sup> Bensen, quoted by Prof. J. Kohler, "Das Recht der Herero," *Zeitschrift für vergleichende Rechtswissenschaft*, xiv. (1900) p. 298. Compare H. von François, *Nama und Damara, Deutsch-Südwest-Afrika*, pp. 198 sq.

at any time, which commonly happens through a dispute bred by one of the women concerned. But it is remarkable that among these Herero of South-West Africa, just as among the Chukchees of North-Eastern Asia,<sup>1</sup> brothers do not form an *oupanga* or group-marriage; indeed it is strictly forbidden (*ku zera*) for them to do so. More than that, the male partners in a group-marriage should not be related to each other by blood at all. But on the other hand, provided the husbands are no relations to each other, the wives in such a marriage may be sisters. Further, the children of a group-marriage are not considered to be brothers and sisters to each other. Moreover, according to Mr. E. Dannert, the community of wives does not carry with it a community of goods. The partners may not even ask anything directly of each other; if they wish to do so they must send the request through a messenger, who delivers his message in veiled language and roundabout phrases. However, at a festival it is a point of honour with the host to give his connubial partner the choicest morsel of flesh, and to supply him with the best wether as provision for a journey. If the partnership should afterwards be dissolved, each partner must restore or make good to the other what he has received from him during the continuance of the group-marriage.<sup>2</sup>

Although brothers may not share their wives in their lifetime, surviving brothers inherit them at the death of their relatives; in other words, the Herero observe the custom of the levirate. In this again their practice resembles that of the Chukchees.<sup>3</sup> Among the Herero it is usually the younger brother who inherits the widow of his deceased elder brother, and the intention of the custom, according to Mr. E. Dannert, is to keep the property in the family. For the same reason it is customary for the heir to marry not only the widow but her growing daughters by her first husband, in order to secure to himself the heiresses and with them the enjoyment of their substance.<sup>4</sup>

Lastly, it may be noted that the widespread practice of mutual avoidance between persons related by marriage is

<sup>1</sup> See above, pp. 349, 351.

<sup>2</sup> E. Dannert, *Zum Rechte der Herero*, pp. 39-42.

<sup>4</sup> E. Dannert, *Zum Rechte der Herero*, pp. 38 sq.

Avoidance  
between a  
man and his  
betrothed  
wife's  
parents.

observed by the Herero. As soon as a man is betrothed, he and the parents of his future wife must shun each other's company; till the marriage takes place they may neither see nor speak to one another. The bride also is not allowed to shew her face to the bridegroom. If she does so, or if the man openly goes up to her parents, it is regarded on both sides as equivalent to breaking off the match.<sup>1</sup> And after marriage a man and his wife's mother are said to be *omu-henendu*, that is, strangers or unapproachable to each other. They may not eat together, and what the one has the other may not have.<sup>2</sup>

Maternal  
clans  
(*omaanda*)  
among the  
Ovambo.

To the north of Hereroland dwell the Ovambo, who unlike their nomadic kinsmen and herdsmen the Herero lead a settled agricultural life.<sup>3</sup> They are said to be divided into maternal clans (*omaanda*) like the Herero, but apparently no details of their social organisation have been published. "The institution of the *omaanda*," says Mr. Schinz, "is found not only among the Ovaherero, but also among all the Ambo tribes, the Uumbangala and probably also among all other Bantu peoples; it is therefore hardly open to doubt that the origin of this grouping is to be traced back to the time when the Bantu peoples, now scattered over the whole of equatorial Africa, formed a single homogeneous tribe."<sup>4</sup> Unfortunately our knowledge of the social organisation of the Bantu tribes is far too imperfect to allow us to affirm that they are all divided into exogamous totemic clans, whether with maternal or paternal descent. Nevertheless the number of Bantu tribes in which totemism and exogamy are known to coexist suffices to render it probable that these institutions either are or have been at one time universal throughout the peoples of the Bantu stock.

## § 2. Totemism among the Bechuanas

Another Bantu people who retain the totemic organisation are the numerous and well-known Bechuanas. They form a large nation scattered over an immense area, which stretches from the Orange River on the south to the Zambesi on the north, while it is bounded on the west by the great Kalahari desert, and on the east by the Drakenberg Mountains, which divide the Bechuanas from the Zulus and Swazies.<sup>1</sup> The nation is divided into many tribes, each occupying its own territory, but they all speak the same language with certain minor differences of dialect and cherish substantially the same superstitions and customs. They speak of themselves only by their tribal names and have no one native name for the whole nation, country, or language, though they have adopted the European practice of calling the nation Bechuana and the language Sechuana.<sup>2</sup> The Bechuanas, of whom the Basutos form the eastern branch, are on the whole a peaceable people. The men devote themselves to the chase and to tending the cattle, the women to house-building, the cultivation of the fields, and preparing the food. They raise crops of Caffre corn (*Sorghum caffrum*), maize, sugar-cane, pumpkins, beans, and tobacco. Their huts are circular, but in general do not conform to the common beehive pattern, since they consist of walls built of wattle and clay with conical thatched roofs. However, the huts of the Basutos are of the ordinary beehive shape.<sup>3</sup>

The Bechuanas a pastoral and agricultural people.

<sup>1</sup> G. Fritsche, *Die Eingeborenen Süd-Afrika's* (Breslau, 1872), p. 151.

<sup>2</sup> Rev. W. C. Willoughby, "Notes on Totemism of the Becwana," *Journal of the Anthropological Institute*, xxxv. (1905) p. 295. Mr. Willoughby calls the people Becwana and their language Secwana. I prefer to adhere to the traditional and well-established spelling of the names. For lists of the Bechuana tribes with their territories, see G. Fritsche, *Die Eingeborenen Süd-Afrika's*, pp. 151 *sqq.*; F. Frédoux, "Quelques mots sur les Béchuanas," *Bulletin de la Société de Géographie* (Paris), IV<sup>m</sup> Série, xiv. (1857) pp. 372-375.

<sup>3</sup> G. Fritsche, *Die Eingeborenen Süd-Afrika's*, pp. 176 *sq.*, 183, 187 *sq.*; J. Mackenzie, *Ten Years North of the Orange River* (Edinburgh, 1871), p. 500; E. Casalis, *The Basutos* (London, 1861), pp. 125 *sqq.*, 153 *sqq.*, 159 *sqq.* As to the share of the sexes in agriculture Casalis writes: "Among the Basutos, the Bapelis, and the Zulus or Matabeles of Natal, agriculture is looked upon in the most honourable light, and more generally pursued, both sexes devoting themselves to it with equal ardour. The other tribes still leave to the women the task of clearing and sowing the fields" (*The Basutos*, p. 159).

The Bechuana tribes are named after animals, plants, or other things, which members of the tribe regard as sacred.

The Bechuana tribes are commonly named after animals, plants, or other objects, which the members of each tribe hold sacred, regarding them with a high degree of superstitious reverence and fear. These sacred animals or other objects they call their *seboko* (*siboko*) or *seloko*, which means their "glory," or their *sereto*, or their *seano*. We may call them their tribal totems. The majority of the tribes appear to be named after animals, and in such cases no tribesman dares to eat the flesh or to clothe himself in the skin of the creature whose name he bears. They will not even look upon their sacred animals, if they can help it, for fear of some evil befalling them. If the beast is hurtful, as the lion, it may not be killed without great apologies being made to it and its pardon being asked. Purification is necessary after the commission of such a sacrilege. Each tribe is said to dance (*bina* or *lina*) or sing in honour of its totem; hence when you wish to ascertain to what tribe a man belongs, you ask him, "What do you dance?" The tribesmen swear by their totem, and among all the tribes it is a universal custom to apply the name of the totem animal to the chief as a term of respect. For example, when the Bakwena or Crocodile tribe had assembled in council to meet Sir Charles Warren, the assembly shouted "O crocodile man" at each point of their chief's speech. But "up to the present time," says the latest enquirer, the Rev. W. C. Willoughby, "I have failed to find the slightest trace in philology, customs, or folklore, of any sacrificial rite connected with the totem-animals of these tribes." Nor could Mr. Willoughby discover any evidence that the Bechuans believe the totem animal to be their ancestor.<sup>1</sup>

The following is a list of some of the Bechuana tribes with their totems:—<sup>1</sup>

List of  
Bechuana  
tribes with  
their  
totems.

*Ba-kuena*, "those of the crocodile."

*Ba-tlapi*, "those of the fish."

*Ba-chueneng*, "those of the monkey."

*Ba-nare*, "those of the buffalo."

*Ba-tlou*, "those of the elephant."

*Ba-taung*, "those of the lion."

*Ba-tauana*, "those of the young lions."

*Ba-phiring*, "those of the wolf."

*Ba-nuku*, "those of the porcupine."

*Ba-morara*, "those of the wild vine."

*Bal-letsatsi*, "those of the sun."

*Ba-kuabi*, "those of the wild cat."

*Ba-noga*, "those of the serpent."

*Ba-puti*, "those of the duyker or bluebuck" (a kind of antelope, *Cephalolophus mergens*).

*Ba-mangwato*, totem the duyker or bluebuck.

*Ba-hurutsi*, "those of the baboon."

*Ba-khatli*, "those of the ape."

*Ba-tlokoa*, "those of the ant-eater."

*Ba-rolong*, totem sometimes said to be iron (*tsipi*) and sometimes the hammer (*noto*).

*Ba-tsetse*, "those of the tsetse fly."

*Ba-mogoma*, "those of the garden hoe."

*Ba-hurutshe*, original totems the eland and hartebeest.

*Ba-pedi*, totem the mountain-hare.

*Ba-pula*, "those of the rain."

*Ba-pulana*, "those of the showers."

*Ba-fukeng*, "those of the dew, or mist."

*Ba-tlaru*, "those of the python."

*Ba-piri*, "those of the hyæna."

*Ba-kubuon*, "those of the hippopotamus."

*Ba-haole*, "those of the rhinoceros."

*Ba-kuru*, "those of the corn-cleaners, or corn-shellors."

1887) p. 98; Father Porte, "Une Mission au Bechuanaland," *Missions Catholiques*, xxvi. (Lyons, 1894) p. 165; *id.* "Les reminiscences d'un Missionnaire du Basutoland," *Missions Catholiques*, xxviii. (Lyons, 1896) p. 283; G. McCall Theal, *Records of South-Eastern Africa*, vii. (1901) pp. 404 sq.; G. W. Stow, *The Native Races of South Africa*, edited by George McCall Theal (London, 1905), pp. 408 sqq.; Rev. W. C. Willoughby, "Notes on the Totemism of the Becwana," *Journal of the Anthropological Institute*, xxxv. (1905) pp. 295

sqq. The Bechuana name for a tribal totem is *seboko* according to Arbousset and Daumas, *siboko* according to Dr. Theal, *seloko* according to Father Porte, and *sereto* or *seano* according to the Rev. W. C. Willoughby. Probably *seboko*, *seloko*, and *sereto* are only different ways of representing the same sounds.

<sup>1</sup> For the authorities, see the writers cited in the preceding note. The chief lists are those of Arbousset and Daumas, Frédoux, Casalis, Fritsche, Stow, and Willoughby.

The  
Crocodile  
tribe.

Men of the *Ba-kuena* or Crocodile tribe say that the crocodile is one of themselves, their master, their father, and they make an incision in the ears of their cattle to imitate the mouth of a crocodile. They revere the animal, they sing of it, and they swear by it.<sup>1</sup> Yet if they happen to go near a crocodile, they spit on the ground and indicate its presence by saying *Boleo ki bo*, "There is sin." They imagine that the mere sight of it causes inflammation of the eyes. And if a man of the Crocodile tribe has the misfortune to be bitten by a crocodile or even to have been splashed with water by the reptile's tail, he is banished the tribe. Livingstone met with one of these exiles living in another tribe. The man would not tell him the cause of his exile, lest the explorer should regard him with the same disgust which his fellow-tribesmen felt for him.<sup>2</sup> However, the crocodile is revered by all the Bechuana tribes, whether it is their totem or not. They commonly believe that if a man wounds a crocodile, he will suffer so long as the reptile suffers, and that if it dies he will die also. They will not even look upon the reptile if they can help it, for fear of some evil befalling them.<sup>3</sup>

The  
Porcupine  
tribe.

Men of the *Ba-nuku* (*Ba-nokou*) or Porcupine tribe are distressed if any one has hurt a porcupine. If the animal has been killed, they religiously collect its quills, spit on them, and rub their eyebrows with them, saying, "They have killed our brother, our master, one of ourselves, him whom we sing." They would fear to die if they touched its flesh; yet they deem it wholesome for an infant to insert into its joints certain portions of the stomach of a porcupine, mingled with the juices of plants which are believed to possess some occult virtue. The rest of the medicine is given by the mother to her child to drink.<sup>4</sup>

Members of the *Bataung* or Lion tribe are very loth

to kill a lion, fearing to lose their sight were they to look at the dead beast. If they do kill a lion, they are careful to rub their eyes with its skin in order to prevent the imaginary danger. They would not eat its flesh, as do the members of other tribes; for how could they eat their grandfather (*mogolu*)? And whereas in other tribes powerful chiefs are wont to flaunt lion-skins on their shoulders as a royal mantle, no man of the Lion tribe would dare to wear a lion's skin.<sup>1</sup>

The Lion  
tribe.

Members of the *Ba-nare* or Buffalo tribe not only will not themselves kill the buffalo or eat its flesh or make use of any part of the animal; they will not even lend their spears to other people to cut its flesh or their needles to sew its hide.<sup>2</sup>

The  
Buffalo  
tribe.

People who have the hare for their totem bore the ears of their children, both boys and girls, at the age of twelve years. But if a mother has lost several children in infancy, she will be afraid to wait so long and will pierce the new baby's ears before she takes it outside of the house.<sup>3</sup>

The Hare  
tribe.

When the sun rises in a clouded sky, members of the *Ba-letsatsi* or Sun tribe say that he is afflicting their heart. All the food of the previous day is then given to matrons or old women, who alone may touch it or give of it to the young children whom they nurse. The people go down in a body to the river to wash their bodies. Every one throws into the water a stone taken from his hearth, which he replaces by one picked up in the bed of the stream. On returning to the village after this ablution the chief kindles a fire in his hut, and his subjects come and get fire for themselves from his. Then follows a general dance, accompanied by a monotonous chant, on the public place of the village. In this dance he who has lost his father lifts his left hand towards the sky; he who has lost his mother lifts his right hand; and orphans who have lost both their parents, raise neither their right nor their left hand, but cross both on their

The Sun  
tribe.

breast.<sup>1</sup> The meaning of this ceremony is not quite clear, but perhaps it is intended to disperse the clouds which hide the sun, the fire in the hut of the Sun chief being somehow supposed to renew the fire of his celestial brother.

The Iron  
tribe and  
the  
Garden-  
hoe tribe.

Members of a tribe which has iron for its totem will not work the metal.<sup>2</sup> Members of the *Ba-mogoma* or Garden-hoe tribe are allowed to employ the hoe in cultivating their gardens, but they would deem it profanation to use it for any other purpose, and it would be a very serious matter were they to strike a dog with it.<sup>3</sup>

The  
duyker or  
bluebuck  
tribe.

An old man of the *Ba-mangwato* tribe, who have the duyker or bluebuck (a kind of antelope) for their totem, told Mr. Willoughby that many years ago, in a time of famine, the tribesmen ate some duykers which they found in their game pits, but that they were careful to protect themselves from harm by rubbing the meat with certain medicines. In those days, if a man of the duyker totem happened to kill a duyker in his game trap, he would slip a noose over its neck at the end of a long stick and drag the beast home to be eaten by people of another totem; but he would not himself eat or even touch it. Another man of the duyker totem told Mr. Willoughby that when his son was a baby they took him to the home of his maternal grandfather, who venerated another totem. The grandmother one cold day thoughtlessly wrapped the child in a duyker skin, and the consequence was that the child's head was covered with sores, which they could not heal till a medicine-man applied the fur of a duyker to them.<sup>4</sup> Thus the totem supplies a homœopathic remedy: it can heal the injury which it inflicts.<sup>5</sup> Though the duyker or bluebuck (*puti*) is the sacred animal of the *Ba-mangwato*, yet to look upon it was a calamity to the hunter or to women going to the gardens. And members of the tribe may not tread on the skin of the animal. A *Ba-mangwato*

chief has been seen performing most undignified antics, springing from side to side in order to avoid treading on the skin of a duyker in a missionary's house.<sup>1</sup>

Some of the Bechuana tribes have a subsidiary totem in addition to their principal totem. Thus the *Ba-hurutshe*, who appear to be a stock embracing several tribes, had originally two totems, the eland and the hartebeest. They would not touch the hartebeest, but the only part of the eland which they held sacred was the *leshilo*, which they described as the fat around the heart, and one section of the tribe, while retaining the old totems, thought it right to eat even this. They distinguished between the two totems by saying, *Pino ke kyama sereto ke phofhu*, that is, "The dance is to the hartebeest; the veneration is for the eland." A small section of the tribe, called the *Bomakgane* section, venerate the wild boar as a subsidiary totem, without neglecting the old tribal totems, the eland and the hartebeest. They say that once, when their chief was childless, a medicine-man whose totem was the wild boar gave the chief some medicine, assuring him that a son would be born to him and ordering that the son and all his descendants should venerate the wild boar. Hence the section of the tribe adopted the wild boar as a subsidiary totem.<sup>2</sup> Another section of the same *Ba-hurutshe* tribe has abandoned its old totems the eland and the hartebeest and has adopted the baboon instead. They say that a chief of the tribe once captured a young baboon and tamed it, but his son, in playing with the animal, allowed it to escape. The father was angry and beat his son, who retaliated by seceding with a section of the tribe; and the seceders adopted the baboon as their totem.<sup>3</sup> According to Mr. Willoughby, the *Ba-kuena* or Crocodile tribe is also an offshoot of the *Ba-hurutshe*, and have in their turn given rise to the *Ba-mangwato* tribe, whose totem is the duyker or bluebuck. To explain why they venerate the duyker, the *Ba-mangwato* say that their original ancestor, hard pressed by his foes, took refuge in a thicket, and that

<sup>1</sup> J. Mackenzie, *Ten Years North of the Orange River* (Edinburgh, 1871), pp. 391 sq.

<sup>3</sup> W. C. Willoughby, *op. cit.* pp. 299, 300 sq.

The subsidiary totems seem to have arisen through subdivision of a tribe.

The Bechuanas all hate the chameleon and the lizard, because they associate them with the origin of death.

a duyster saved him by springing from the thicket and so diverting the attention of his enemies.<sup>1</sup> The *Ba-tlaru* or Python tribe is sometimes called the *Ba-mothlo-a-re*, "the men of the Wild Olive," because their great ancestor Mo-tlaru ("he of the python") and his followers erected their huts under spreading olive trees.<sup>2</sup> These facts point to the conclusion that subsidiary totems sometimes arise through the subdivision of a tribe; a new community so formed may either adopt an entirely new totem or, retaining its old one, may add a subsidiary totem to distinguish it from other branches of the same totemic stock.

While each Bechuana tribe as a rule reveres one or more species of animal, all of them are at one in regarding two harmless reptiles, the chameleon and the lizard, with a violent antipathy, because in their opinion these creatures brought death into the world and all our woe. The way in which they did so was this. In the beginning God made up his mind that when men died they should come to life again, and he sent the chameleon to convey the glad tidings to the first Bechuanas. But while the reptile was crawling to deliver its message, God changed his mind and sent the lizard post haste after the chameleon to say that now he had thought better of it men were to die outright and be done with it. The bearer of this gloomy intelligence out-

<sup>1</sup> W. C. Willoughby, in *Journal of the Anthropological Institute*, xxxv. (1905) pp. 295, 299, 300. As to the relation of the Ba-hurutse, the Bakuena, and the Ba-mangwato, see also J. Mackenzie, *Ten Years North of the Orange River*, pp. 356 sq.: "The precedence as to rank among the tribes in North Bechuana-land is taken by the Bahurutse. The first-fruits of a new harvest must be first partaken of by Moilwe, the present chief of that tribe. For another chief to *loma*, without waiting to hear that his superior had done so, would be a public insult and a cause for war. But in recent times such transgressions have been numerous, for the Bahurutse are not now a powerful tribe. The Bangwaketse, the Bakwena, and the Bamangwato were originally one people.

Tradition retains a glimmering of the circumstances of their separation. The Bakwena included the Bamangwato when they separated from the Bangwaketse; but afterwards a subdivision took place, the Bamangwato being the younger or minor party. We have already seen that afterwards the Bamangwato again divided, the minor party being now the Batowana, at present residing at Lake Ngami." This successive subdivision of the tribes, with the consequent rise of new totems, is instructive. On the history of the Bahurutse, Bakuena, and Bamangwato tribes, see G. W. Stow, *The Native Races of South Africa*, pp. 518 sqq.

<sup>2</sup> G. W. Stow, *The Native Tribes of South Africa*, p. 528.

stripped the laggard chameleon ; so that when the gospel messenger at last came panting in with tidings of a joyful resurrection, nobody would believe him, and both reptiles were knocked on the head out of hand, the lizard for coming in first with bad news and the chameleon for coming in second with good. That is why all the Bechuanas hate both these reptiles to this very day.<sup>1</sup>

The Bawenda are a Bantu people who inhabit the rugged but fertile mountain country between the Levuvu and Limpopo rivers in the northern part of the Transvaal. They keep cattle and practise agriculture, raising crops of sweet potatoes and maize ; in the old days they smelted iron and fashioned the metal into all the tools and weapons they needed. To secure them against attack their villages are hidden away in thick underwood or perched in places difficult of access on the steep sides of the mountains. Narrow slippery footpaths lead with many turns and windings up hill and down dale, through high grass and dense brushwood, to a collection of round huts with thatched roofs encircled by rich vegetation and shaded by tall trees, among the boughs of which a noisy troop of monkeys may be jabbering and disporting themselves.<sup>2</sup> Each district has its special god, and the gods of some districts are animals. For example, one district reveres a large snake, and another the mountain-monkey. Where the mountain-monkeys are the gods, they are not molested and so become very tame, often indeed coming down from their mountains and paying visits to people in the village.<sup>3</sup> These district deities in animal shape are probably totems.

The Makalakas inhabit a high, healthy and fruitful region, which forms the watershed between the valleys of the Zambesi and Limpopo rivers. They are reported to be the most skilful cultivators of the soil in the whole of Bechuana-land.<sup>4</sup> From the following account it would seem that they share the totemic system of the Bechuanas : "The Makalakas have the same prejudices with regard to the

flesh of certain animals that other tribes have. One man starved himself for a whole day because it was his *motupo*, as they call it, not to eat the water-buck; another, because he worshipped sheep, and could not eat the flesh. The Makalakas generally *biena* (a superstitious reverence) the *ewhobo* (meerkat). The Mashapatani *biena* the *shoko* or baboon; others worship the crocodile, and other animals and reptiles, which they will not defile themselves by touching."<sup>1</sup>

Thus the Bechuana tribes are totemic, but it does not appear that they are exogamous.

The foregoing evidence suffices to prove that the Bechuana tribes are totemic; for the *seboka* of each tribe is clearly its totem. Whether the tribes are also exogamous is not stated by the authorities I have consulted. From their silence it is natural to infer that the tribes do not observe the rule of exogamy, in other words, that a man is free to marry a woman of his own tribe. Such an inference, however, is at the best precarious, and it becomes doubly precarious when we consider how many other branches of the Bantu stock combine totemism with exogamy. Yet if the Bechuana tribes are, as they appear to be, communities each inhabiting its own territory to the exclusion of other tribes, it is probable enough that the rule of exogamy does not apply to them; since the exogamous system generally rests on a basis of septs or clans interfused with each other in the same territory, rather than on tribes which occupy each a country of its own. However, in the absence of positive evidence the question of the exogamy of the Bechuana tribes must remain in suspense.

Bechuana regard for consanguinity.

With regard to the marriage of near kin, we are told that "the Bechuanas and the Caffres acknowledge and respect the same degrees of consanguinity as we do. They do not reckon relationship beyond the degree of second cousin. Marriages between brothers and sisters, uncles and nieces, nephews and aunts, are disapproved of. Those between cousins frequently take place, but there are some tribes that condemn them as incestuous."<sup>2</sup> The writer unfortunately does not discriminate between the different cousins who may or may not marry each other. If we may

Cousin marriages.

<sup>2</sup> E. Casalis, *The Basutos*, p. 191.

judge by analogy, it is probable that the children of a brother and a sister are allowed, while the children of two brothers or two sisters are forbidden, to marry each other.

On the question whether, if the parents are of different tribes, the children belong to the tribe of the father or to that of the mother, our authorities are again silent; but from their silence we may in this case infer with more confidence that the children belong to the tribe of the father and not to that of the mother. For in the descent of property the rule of primogeniture is strictly observed by the Bechuanas; a man's heir is his eldest son, who inherits everything and gives to his brothers and sisters only what he chooses to leave to them. Women inherit nothing. Even in his father's lifetime the eldest son enjoys many advantages. He bears the title of "son-lord," while his younger brothers are called "son-servants," and his father dares to do nothing of any importance without consulting him and asking his consent.<sup>1</sup> All this is patriarchal; yet a possible trace of mother-kin survives in the rights which in some Bechuana tribes the maternal uncle has over his nephews and nieces. Thus among the Basutos the maternal uncle is understood to replace the mother, whose sex keeps her in a state of dependence. This is a counterbalance to the authority of the father and of the eldest son, especially in polygamous families, where rivalry is generally keen. It is the special duty of the maternal uncle to protect his sister's child and to purify it by means of sacrifices. When the rite of circumcision is performed, he presents his nephew with a javelin and a heifer; and he also defrays in part the expenses of the young man's marriage. In return he is entitled to a share of the spoil taken by his nephews in war, of the game they kill, and of the cattle that come into the family at the marriage settlement of his nieces. It often happens that the maternal uncle fills the office of prime minister and regent at the chief's court.<sup>2</sup>

Wives are bought from their parents with a price which varies according to the tribe from five to twenty-five or thirty head of cattle.<sup>3</sup> The death of her husband does not

Children probably belong to the tribe of their father.

release the widow from the rights which his family have acquired over her by purchase. She falls by law to one of his brothers or to the next of kin. The children of this second union bear the name of her first husband and are understood to belong to him, and to inherit his possessions; they have very small claim to the succession of their real father. But the obligation on the widow to remain in the family even although she has already-borne children to the deceased seems to shew that the purchase of which she was the object is the chief obstacle to her liberation.<sup>1</sup> Here as elsewhere the brother of the deceased inherits the widow, not in virtue of a former system of polyandry, but because she has been bought and paid for by her husband's family and passes to his heir with the rest of the inheritance.

### § 3. Totemism among the Ama-Xosa and Ama-Zulu

Little evidence of totemism in the eastern branch of the Bantu family in South Africa, the Ama-Xosa and the Ama-Zulu.

While the evidence for totemism, if not for exogamy, is ample among the western and the central branches of the Bantu family in South Africa, namely, the Herero and the Bechuanas, it is very scanty for the eastern branch of the family, the Ama-Xosa and Ama-Zulu, who inhabit the south-eastern coasts of Africa from Cape Colony to Delagoa Bay.<sup>2</sup> Indeed so meagre is the evidence that we may even doubt whether these Eastern Bantus have totemism at all. However, the following passages at least suggest that the Zulus, like many other branches of the Bantu stock, are or have at one time been divided into totemic clans. The Englishman Farewell, who resided for some time among the Zulus in the early part of the nineteenth century, is the authority for the statement that among them "it is prohibited in many families to eat certain animals' flesh, such as in some beef, in others elephant's, in others hippo-

<sup>1</sup> E. Casalis, *The Basutos*, p. 190.

<sup>2</sup> The Ama-Xosa occupy the southern part of this territory as far north as the Bashee River. Beyond that river northward extend the tribes who may be grouped together under the general name of Ama-Zulu. Properly speaking the Zulus were a comparatively unimportant tribe till the despot Chaka, in

the early part of the nineteenth century, raised them to a position of power and made them the terror of all the tribes from the Am-Xosa to Delagoa Bay. See J. Shooter, *The Kafirs of Natal and the Zulu Country* (London, 1857), pp. iii. sq.; G. Fritsche, *Die Eingeborenen Süd-Afrika's*, pp. 6 sqq., 119 sqq.

potamus'. It is said, that provided any family transgress this rule, and eat the forbidden flesh, their teeth will drop out, which is termed *motupo*. The forbidden flesh to all the royal family is the hearts of animals. All children must follow the *motupo* of their father, which causes much difference in families."<sup>1</sup> Here it should be observed that the Zulu word *motupo*, which expresses the family prohibition, is identical with the Makalaka word which designates the totemic taboo.<sup>2</sup> Further, the Scotchman David Leslie, who lived among the Zulus later on in the nineteenth century, tells us that "the whole Zulu nation, as at present constituted, is broken up into little tribes, the remnants of those conquered by Chaka. Each tribe has its *Esebongo* or name of thanks; for instance, one tribe is called Emtetwa, or scolders; another Niaow, or foot; another Zungu, or weariness; and when a chief makes a present of anything to one of his people, they will say, 'Yes, father; yes, Zungu'; or 'Yes, Emtetwa,' as the case may be. Each of these tribes has its peculiar habits and customs; for instance, one, Mat-e-enja (dog's spittle) will not eat goat-flesh, because they always leave a goat on the grave of their dead. When any one dies they bury him, and over his grave they spread out his mat, blankets, etc., and on the latter they place a goat, then go away and leave it. They say the goat never deserts the spot, but grazes about, and on the fourth day dies. If they eat any part of a goat unawares, they are seized with epilepsy and die. Even the young children in the kraal, who are too young to know anything of this, when a piece of goat-flesh is given to them, will not eat it, but carry it in their hands for a little, and then throw it away; and, be it remembered, that meat is their greatest dainty."<sup>3</sup> Again, with regard particularly to the Ama-Xosa we read that "the superstitious prejudices against eating certain foods are most widely spread, yet these also will be observed by one tribe, while another will disregard them, without it being possible to discover any

The *motupo* or totemic taboo.

Abhorrence  
of fish.

reason for the different practice. As a general rule it may be assumed that all the Bantu peoples of South Africa abhor the use of fish as food; they call fish 'water-serpents' and are careful not even to touch them. Many also reject pork as an article of diet, though this abstinence is neither so universal nor so fanatic as the rejection of fish; further, the particular tribes display peculiar prejudices in regard to many other animals, whether in refusing to eat or even to kill them."<sup>1</sup>

Rule of  
exogamy  
among the  
Zulus and  
other  
Eastern  
Bantus : no  
man may  
marry a  
woman  
who bears  
the same  
family  
name as  
himself.

Further, the Zulus and other Eastern Bantus observe a rule of exogamy, for no man may marry a woman who bears the same family name (*isibongo*) as himself, even though no blood relationship can be traced between them.<sup>2</sup> For example, Amanywabe is a family name among the Zulus, the Pondos, the Tembus and many other tribes. The people who bear this family name in the different tribes cannot trace any relationship with each other, yet no marriage between them is permitted. Moreover, they have ceremonies peculiar to themselves. Thus, for example, the customs observed at the birth of a child are exactly the same in every part of the country among people of the same family title, though they may never have heard of each other, while neighbours of the same clan, but of different family titles, practise customs altogether dissimilar. In addition to the exogamy of the family name it is a rule with the Eastern Bantus that no man may marry a woman related to him by blood on the father's side, however remote the relationship may be. Some tribes, as the Pondos, Tembus, and Xosas, extend the same prohibition to all women related by blood on the mother's side also. Children take the family title of their father, and are thus free to marry persons of the same family title as their mother, provided that no blood relationship can be traced between them.<sup>3</sup>

<sup>1</sup> G. Fritsche, *Die Eingeborenen Süd-Afrika's*, p. 106.

<sup>2</sup> F. Speckmann, *Die Hermannsburg Mission in Afrika* (Hermannsburg, 1876), pp. 134; G. McCall Theal, *Records of South-Eastern Africa*, vii. (1901) pp. 430 sq. The family or praise name, *isibongo* or *isibonga*, is to be distinguished from

the *i-gama* or individual name bestowed on a person soon after birth. The latter (the *i-gama*) is the more sacred of the two. See J. Shooter, *The Kafirs of Natal and the Zulu Country*, pp. 219-222.

<sup>3</sup> G. McCall Theal, *Records of South-Eastern Africa*, vii. 430 sq. Compare J. Shooter, *The Kafirs of*

Similarly, among the Matabele, who are an offshoot of the Zulus, persons who have the same family name may not marry each other ; but this relationship is reckoned only in the male line.<sup>1</sup>

"Every man of a coast tribe regarded himself as the protector of those females whom we call his cousins, second cousins, third cousins, and so forth, on the father's side ; while some had a similar feeling towards the same relatives on the mother's side as well, and classified them all as sisters. Immorality with one of them would have been considered incestuous, something horrible, something unutterably disgraceful. Of old it was punished by the death of the male, and even now a heavy fine is inflicted upon him, while the guilt of the female must be atoned by a sacrifice performed with due ceremony by the tribal priest, or it is believed a curse will rest upon her and her issue. . . . In contrast to this prohibition the native of the interior almost as a rule married the daughter of his father's brother, in order, as he said, to keep property from being lost to his family. This custom more than anything else created a disgust and contempt for them by the people of the coast, who term such intermarriages the union of dogs, and attribute to them the insanity and idiocy which in recent times has become prevalent among the inland tribes."<sup>2</sup> Speaking of unions which the Bantu regard as incestuous, another writer observes that they "are not punishable by

Difference of custom in regard to the marriage of cousins between the tribes of the coast and the tribes of the interior.

*Natal and the Zulu Country*, pp. 45 sq. ; F. Speckmann, *Die Hermannsburger Mission in Afrika*, pp. 134 sq.

<sup>1</sup> L. Declé, *Three Years in Savage Africa* (London, 1898), p. 158. As to the descent of the Matabele from the Zulus, see L. Declé, *op. cit.* pp. 150 sqq.

<sup>2</sup> G. McCall Theal, *Records of South-Eastern Africa*, vii. 431, 432. In a note Dr. Theal tells us that among the Hlubis and others, commonly called Fingos, a man may marry the daughter of his mother's brother and other relatives on that side, but not on his father's side. The expression, a cousin "on the father's side," is ambiguous, because it includes the chil-

dren of a father's sister as well as the children of a father's brother, and these two sets of cousins in the estimation of many peoples stand on quite a different footing from each other. By cousins on the father's side Dr. McCall Theal seems to mean the children of a father's brother. The expression, a cousin "on the mother's side," which Dr. McCall Theal employs, is equally ambiguous, because it includes the children of a mother's brother as well as of a mother's sister, and these two sets of cousins in the estimation of many peoples stand on quite a different footing. By cousins on the mother's side Dr. McCall Theal perhaps means especially the children of a mother's sister.

Dread of consanguineous marriages.

Kafir law ; but they have a far more powerful preventative in their superstitious fears, which teach them to dread that some supernatural evil will befall the parties committing such acts ; they lose caste, as it were, and are considered in the light of sorcerers : hence such crimes are seldom committed. Consanguineous marriages are prohibited by custom rather than by law ; and if the parties are not too nearly related, and resolutely persist in their determination to marry, and if the man is prepared to pay pretty dearly for his wife, they generally succeed in gaining their point. Such cases are, however, very unfrequent. Relationship by *affinity* merely, and not by *blood*, presents no obstacle to marriage, and a man may even marry two sisters at the same time.”<sup>1</sup> Indeed such marriages with two sisters at the same time are common among the Zulus<sup>2</sup> as they are among many other peoples. “Incestuous marriages,” says another writer, “are dissolved, and a heavy penalty inflicted on the man. Any relationship which may be traced to whatever distance is considered as coming within the bounds of consanguinity ; and intercourse is punished, whether it be by marriage, or by carnal connection without marriage. To marry two sisters is not considered incestuous ; but to marry the descendants of a man’s ancestors is considered incest.”<sup>3</sup>

Marriage with two sisters simultaneously.

The levirate.

The Zulus, Swazies, and Pondos practise the custom of the levirate ; that is, the widow is married by the brother of her deceased husband, and the children she has by him are reckoned not to their real father but to his dead brother. Among the Fingoes it is the younger brother who weds his elder brother’s widow. The custom of the levirate is not observed by the Tembus and Gaikas.<sup>4</sup>

Macdonald, “Manners, Customs, Superstitions, and Religions of South African Tribes,” *Journal of the Anthropological Institute*, xix. (1890), p. 272 ; Dudley Kidd, *The Essential Kafir* (London, 1904), pp. 226 sq.

Among the Eastern Bantu the same ceremonial avoidance of relations by marriage, and especially of a mother-in-law, is practised which we have already met with among many other exogamous and totemic peoples. Custom requires that a man should "be ashamed of" his wife's mother, that is to say, he must studiously shun her society. He may not enter the same hut with her, and if by chance they meet on a path, one or other turns aside, she perhaps hiding behind a bush, while he screens his face with a shield. If they cannot thus avoid each other, and the mother-in-law has nothing else to cover herself with, she will tie a wisp of grass round her head as a token of ceremonial avoidance. All correspondence between the two has to be carried on either through a third party or by shouting to each other at a distance with some barrier, such as the kraal fence, interposed between them. They may not even pronounce each other's proper name (*i-gama*).<sup>1</sup> Similarly, a woman is cut off from all social intercourse with her husband's father and all his male relations in the ascending line. She may not enjoy their company nor be in the same hut with them; she is supposed not even to look at them. Further, she is debarred from pronouncing their names even mentally. Nay, more than that, she may not pronounce the emphatic syllable of their names even when it occurs in other words; in such cases she is bound either to substitute a different syllable or to employ an entirely different word. Hence this custom has given rise to an almost distinct language among the women. The tabooed syllable is the one which immediately follows the prefix of the proper name.<sup>2</sup>

Rules of avoidance between a man and his wife's mother and between a woman and her husband's father.

The ceremonial avoidance of the names of relations is called *hlonipa*. It applies to the personal name (*i-gama*), but not to the family or praise name (*isibongo* or *isibonga*). See J. Shooter, *The Kafirs of Natal and the Zulu Country*, pp. 221 sq.; and for more details *The Golden Bough*,<sup>2</sup> i. 413 sq.

The classificatory system of relationship among the Ama-Zulus.

The Ama-Zulus possess the classificatory system of relationship. Thus in the generation above his own a man applies the same term *u-ma-ma*, "my mother," to his mother, to his mother's sisters, and to the wives of his father's brothers. He applies the same term *u-ba-ba*, "my father," to his father, to the husbands of his mother's sisters, and, curiously enough, to his father's sisters. A man calls his first cousin, the son of his father's brother, *unfo natu*, "my (own) brother." He calls his brother's wife his wife, and she calls her husband's brothers her husbands. But the form of the system seems to present many anomalies or deviations from the primitive pattern.<sup>1</sup>

The classificatory system of relationship among the Barongo of Delagoa Bay.

Another Bantu people of South Africa who possess the classificatory system of relationship are the Barongo of Delagoa Bay. Their customs and beliefs have been recorded with praiseworthy diligence by the Swiss missionary Mr. H. A. Junod.<sup>2</sup> From his account it does not appear that the Barongo now practise either totemism or exogamy, but their classificatory system of relationship raises a presumption that at one time or other they must have been divided into exogamous classes. In the generation above his own a man applies the same term *tatana*, "father," to his father, to his father's brothers, to the husbands of his mother's sisters, and to the brothers of the husbands of his mother's sisters. Further—and this is one of the peculiarities of the Barongo system—a man applies the term *tatana*, "father," to certain of his first cousins, namely, to the sons of his father's sisters. Hence it often happens that a Barongo "father" is younger than his own son. Yet the Barongo are not so mad as to think that the father begat his son before he (the father) was born; they merely use the term "father" in a sense which does not at all imply the physical act of procreation; and unless we in like manner can rid our minds of that implication, it is in vain for us to wrestle with the complexities of the classificatory system. Again, in the generation above his own a man

<sup>1</sup> See L. H. Morgan, *Systems of Consanguinity and Affinity of the Human Family*, pp. 463 *sqq.*, with the Tables, pp. 523 *sqq.* (*Smithsonian Contributions to Knowledge*, vol. xvii.,

Washington, 1871).

<sup>2</sup> Henri A. Junod, *Les Ba-Ronga, Étude ethnographique sur les indigènes de la Baie de Delagoa* (Neuchâtel, 1898).

applies the same term *mamana*, "mother," to his mother, to all his father's other wives (for the Barongo, like other Bantu peoples, are polygamous), and to his mother's sisters. But while he calls his father's brother his father, and his mother's sister his mother, he by no means regards his mother's brother as his father nor his mother's brother's wife as his mother. Far from it, the relation in which he stands to his mother's brother (*maloumé*) is a very free and easy one, reminding us of the high and mighty manner in which in Fiji a sister's son (*vasu*) comports himself towards his unfortunate maternal uncle. In fact, he may do what he likes to his mother's brother, who on his side stands in terror of his nephew, being bound to humour him in all his whims and caprices. Nor is this all. The relation in which the nephew (*moupsyana*) stands to his uncle's wife is, if possible, still more free and easy. He calls her his wife (*nsati*), and she calls him her husband (*nouna*), and the two are at liberty to act accordingly. When the nephew honours his maternal uncle with a visit, he regularly repairs to the hut of that one of his uncle's wives who most takes his fancy, and there deposits a mat in the hut. The reason, according to Mr. Junod, why the nephew is free to treat his maternal uncle's wives so cavalierly is simply that when the uncle dies, he (the nephew) steps into the dead man's shoes by marrying the widows in a batch; so that he only anticipates his rights by the familiarities which he takes with them in his uncle's lifetime.

Privileges of a man in respect of his maternal uncle and his maternal uncle's wife.

In his own generation a man applies the term *bamakwabo* (plural of *makwabo*), "brothers and sisters," to his brothers and sisters and also to all his cousins german even to the fifth and sixth generation. In the generation below his own a man applies the same term *nouana*, "son" or "daughter," to his sons and daughters and to his nephews and nieces, the sons and daughters of his brothers. And similarly in the generation below her own a woman applies the same term *nouana*, "son" or "daughter," to her sons and daughters and to her nephews and nieces, the sons and daughters of her sisters. Further, as usually happens under the classificatory system of relationship, grand-uncles and grand-aunts are called grandfathers and grandmothers (*kokouana*), and grand-

Cousins confounded with brothers and sisters; nephews and nieces confounded with sons and daughters.

nephews and grand-nieces are called grandsons and granddaughters (*ntoukoulou*).<sup>1</sup>

Marriage  
of cousins  
forbidden.

The marriage of cousins, even in the fourth, sixth, eighth and tenth degrees, is prohibited among the Barongo; indeed two persons are forbidden to marry each other if it can be shewn that they have a single common ancestor, however remote. The prohibition is particularly stringent when the relationship is traced through males; it is sometimes relaxed after four generations when the relationship is traced through women. In such cases the husband has to pay a sum in addition to the customary bride-price for the purpose, as they say, of "killing the scruples" (*dlaya chilongo*), after which the tie of consanguinity is supposed to be severed. Yet the rule which thus bars the marriage of cousins among common people is totally disregarded in the marriage of chiefs.<sup>2</sup>

Rules of  
avoidance  
between  
relations by  
marriage  
among the  
Barongo.

Amongst the Barongo we find the custom of ceremonial avoidance observed between persons who are related by marriage. Such persons are called *bakonouana* to each other, and they cannot even pronounce the word without a feeling of discomfort, almost of fear. Yet curiously enough among them the woman whom a man is bound to shun most strictly is not his wife's mother but his sister-in-law, the wife of his wife's brother. If a man meets the wife of his wife's brother on a path, he must at once make way for her. He dare not eat out of the same dish with her. He speaks to her with embarrassment, and if he approaches her hut, he will not enter but will crouch at the door, and greet his formidable sister-in-law in a trembling voice.<sup>3</sup>

#### § 4. *A Theory of Bantu Totemism*

According  
to Dr.  
Theal the  
reverence  
of the  
Bantus for

Before leaving this part of our subject, it is proper to call attention to an explanation which has been given of Bantu totemism by Dr. Theal, the eminent historian of South Africa. According to him the reverence of the

<sup>1</sup> H. A. Junod, *Les Ba-Ronga, Étude ethnographique sur les indigènes de la Baie de Delagoa* (Neuchatel, 1898), pp. 72-83.

<sup>2</sup> H. A. Junod, *Les Ba-Ronga*, pp. 84-86.

<sup>3</sup> H. A. Junod, *op. cit.* pp. 73, 79-81.

Bantus for their totemic animals rests on a belief that the souls of their dead are lodged in the creatures; in other words, totemism with them is only one form of the worship of ancestors. He says: "The Bantu believed that the spirits of the dead visited their friends and descendants in the form of animals. Each tribe regarded some particular animal as the one selected by the ghosts of its kindred, and therefore looked upon it as sacred. The lion was thus held in veneration by one tribe, the crocodile by another, the python by a third, the bluebuck by a fourth, and so on. When a division of a tribe took place, each section retained the same ancestral animal, and thus a simple method is afforded of ascertaining the wide dispersion of various communities of former times. For instance, at the present day a species of snake is held by people as far south as the mouth of the Fish river and by others near the Zambesi to be the form in which their dead appear. This belief caused even such destructive animals as the lion and the crocodile to be protected from harm in certain parts of the country. It was not indeed believed that every lion or every crocodile was a disguised spirit, but then any one might be, and so none were molested unless under peculiar circumstances, when it was clearly apparent that the animal was an aggressor and therefore not related to the tribe. Even then, if it could be driven away it was not killed. A Xosa of the present time will leave his hut if an ancestral snake enters it, permitting the reptile to keep possession, and will shudder at the thought of any one hurting it. The animal thus respected by one tribe was, however, disregarded and killed without scruple by all others. The great majority of the people of the interior have now lost the ancient belief, but they still hold in veneration the animal that their ancestors regarded as a possible embodied spirit. Most of them take their tribal titles from it, thus the Bakwena are the crocodiles, the Bataung the lions, the Baphuti the little blue antelopes. Each terms the animal whose name it bears its *siboko*, and not only will not kill it or eat its flesh, but will not touch its skin or come in contact with it in any way if that can be avoided." <sup>1</sup>

their sacred  
or totemic  
animals  
rests on a  
belief that  
the souls  
of their  
dead trans-  
migrate  
into these  
creatures.

<sup>1</sup> G. McCall Theal, *Records of South-Eastern Africa*, vii. 404 sq.

It is true that the Zulus and other Caffre tribes believe the dead to be reincarnated in serpents, but this is not in itself a proof of totemism.

On this it is to be observed that while it is true the Zulus and other Caffre tribes believe the dead to be reincarnated in serpents,<sup>1</sup> there is no evidence that the revered serpents are their totems. The belief in the transmigration of human souls at death into the bodies of snakes is too widespread to be accepted as of itself a proof of totemism. And Dr. Theal admits that the Bantus of the interior, by whom he appears to mean the Bechuanas, have lost the belief that their dead ancestors are in their totemic animals. But what evidence is there that they ever had such a belief? I do not remember to have met with any. The title of "father" or "grandfather" or "brother" bestowed on a totemic animal is not a proof that the soul of a dead kinsman is believed to be in the beast, since such titles are bestowed on totemic animals by people who entertain no such belief.<sup>2</sup> On the whole, then, Dr. Theal's explanation of Bantu totemism, though he does not use the term, appears to be an inference of his own from the facts rather than to rest on definite statements of the Bantu themselves. The inference is, indeed, a perfectly legitimate one, but it is not conclusive so long as it lacks positive native testimony.

Other Bantu tribes believe that the souls of the dead transmigrate into lions, hippopotamuses, and other kinds of animals.

At the same time in favour of Dr. Theal's view it deserves to be remembered that some Bantu peoples believe in the transmigration of their dead into other animals than serpents. Thus the Banyai on the lower Zambesi think that the souls of their dead chiefs enter into lions and hyænas, and therefore they never kill these creatures, so that the country swarms with them. When they meet a lion or hyæna, they salute it in their customary fashion by clapping their hands.<sup>3</sup> Similarly, the Makanga in the angle between the Shire and Zambesi rivers refrain from killing lions, because they believe that the spirits of deceased chiefs are lodged in them.<sup>4</sup> The Barotse, a people akin to the Zulus<sup>5</sup> in the upper valley of the Zambesi, imagine that the souls

<sup>1</sup> See especially Callaway, *Religious System of the Amazulu*, part ii. pp. 140-144, 196-200, 208-212; and for more evidence of this belief in Africa and elsewhere, see my *Adonis, Attis, Osiris*, Second Edition (London, 1907), pp. 73 sqq.

<sup>4</sup> A. Werner, *The Natives of British Central Africa* (London, 1906), p. 64.

<sup>5</sup> J. Deniker, *The Races of Man*, p. 466.

of chiefs transmigrate into hippopotamuses.<sup>1</sup> Some tribes on the upper Zambesi suppose that every man transmigrates at death into an animal, and that he can choose in his lifetime the particular creature into which his soul shall pass when it has shuffled off the human frame. In order to partake of the animal's nature he swallows maggots bred in its putrid carcase and imitates the voice and movements of the living brute, whether it be a lion, a panther, a jackal, a crocodile, a hippopotamus, a boa-constrictor, or what not.<sup>2</sup>

Of certain Caffres, apparently also on the upper Zambesi, we are told that they judge of the sort of animal into which a man will transmigrate at death by the likeness which he bore to it in his life. Thus the soul of a big burly man with prominent teeth will pass into an elephant; a strong man with a big head and a long beard will be a lion; an ugly fellow with thick lips and a large mouth will be a hyæna; a long lanky man with bright eyes will be a *nhiaco*, serpent. All these animals accordingly they deem sacred and inviolable.<sup>3</sup> Another tribe of Caffres at the foot of

Theory that the souls of the dead transmigrate into the animals which they resembled in their life.

Mount Caroeira, in the upper valley of the Zambesi, think that the souls of the departed come back in the guinea-fowl that perch on the thick-foliaged trees under whose shadow their kinsfolk lie buried.<sup>4</sup> The Ababua in the upper valley of the Congo fancy that after death their spirits will dwell in the bodies of leopards or gorillas or hippopotamuses; every man chooses one or other of these beasts for his future abode, and the creature of his choice he henceforth deems sacred and will not eat its flesh.<sup>5</sup> Some of the Congo peoples who hold this faith conform to the habits of their chosen animal in their lifetime; and when the chosen animal is a leopard or a crocodile, the practices of the leopard-men or the crocodile-men are horrible. Many tribes in the northern parts of the Congo basin hold that the souls of great chiefs always transmigrate into the bodies of

Some tribes of the Congo think that people can choose the animals into which their souls will transmigrate at death.

Amongst the Bahima the belief in transmigration exists along with totemism, but is quite independent of it.

There seems to be no sufficient ground for connecting the totemism of the Bantu with their belief in metempsychosis.

gazelles, hippopotamuses, or leopards.<sup>1</sup> The Bahima, a pastoral people of Ankole, between Uganda and the Congo Free State, believe that their dead kings turn into lions, their queens into leopards, and their princes and princesses into snakes. There are three belts of forests where the bodies of kings, queens, and princes and princesses are deposited, and where the wonderful transformation into the appropriate animals is supposed to take place. In each of these forests there is a temple with priests, who attend to the worship of the sacred animals, be they lions, leopards, or snakes. The ghosts of commoners have no special abode but wander about near the villages.<sup>2</sup> This last case is particularly instructive because, as we shall see, the Bahima have totemism; yet their belief in the transmigration of kings, queens, and princes into wild beasts seems to have no relation to their totemic system, since none of the animals into which the royal and noble dead transmigrate are found in the list of their totems.<sup>3</sup> Similarly in regard to the southern Bantu tribes, with whom we are concerned in this chapter, there appears to be no sufficient ground for connecting their totemism with their belief in metempsychosis.

### § 5. *Hints of Totemism among the Bushmen and Hottentots*

No clear evidence that the Bushmen and Hottentots had totemism and exogamy.

With respect to the two other native races of South Africa, the Bushmen and the Hottentots, who probably occupied the whole of the continent from the fifteenth degree of south latitude to the Cape of Good Hope till they were gradually reduced in numbers and circumscribed in territory by the tide of Bantu invasion from the north,<sup>4</sup> there is no clear proof or even indication that either of them was organised on a basis of totemism and exogamy. Of the Bushmen whom he met with on the Zouga River Livingstone tells us that "the animal they refrain from

<sup>3</sup> See below, p. 536.

<sup>4</sup> J. Deniker, *The Races of Man*, p. 467.

eating is the goat, which fact, taken in connection with the superstitious dread which exists in every tribe towards a particular animal, is significant of their feelings to the only animals they could have domesticated in their desert home.”<sup>1</sup> Similarly Mackenzie writes that “the Madenassana Bushmen *bina* the common goat; that is to say, it is their sacred animal, as the *kwena* or alligator is to the Bakwena. Now just as it would be hateful and unlucky to the Bakwena to meet or gaze upon the alligator, so the common goat is the object of ‘religious’ aversion to these Bushmen; and to look upon it would be to render the man for the time impure, as well as to cause him undefined uneasiness.”<sup>2</sup> But this only proves that the Bushmen revered or dreaded, for the two sentiments are near akin in the minds of many savages, the common goat; and such a feeling for a single species of animal does not constitute totemism. If it could be shewn that other tribes of Bushmen entertained a like reverence or dread for other species of animals, this would certainly raise a presumption of totemism; but apparently Livingstone did not mean to affirm this; the other tribes he speaks of may have been the Bechuanas, with whose tribal totemism he was acquainted.

Superstitious respect of the Bushmen for the goat.

As to the Hottentots we learn that on the banks of the Kei-Garib River some hordes of Koranas, a branch of the Hottentot race, bore the names of Right Hands, Left Hands, Sorcerers, Springbucks, Scorpions, Asses, Hippopotamuses, and Tall Ones; and that further to the west, on the middle course of the Orange River, were tribes of Koranas, who rejoiced in the titles of Bush Folk, Cats, Narrow Cheeks, Tailors, and Tanners.<sup>3</sup> But such tribal names are not in themselves any proof of totemism.

Hordes of Koranas named after animals, etc.

## CHAPTER XIII

### TOTEMISM IN EAST AND CENTRAL AFRICA

#### § 1. *Totemism in Central Angoniland*

Scenery of  
British  
Central  
Africa  
or the  
Nyasaland  
Protectorate.

BRITISH CENTRAL AFRICA or the Nyasaland Protectorate comprises that vast region of Central Africa which lies embedded among the great lakes, bounded on the east by Lake Nyasa and extending to the southern end of Lake Tanganyika on the north. The country consists in large measure of high plateaux reached by toilsome and precipitous ascents of several thousand feet, from the sharp edge of which you look back and down on a yawning gulf, where the far-spreading landscape stretches away, league upon league, into the dim distance or the deep indigo-blue waters of the lake shimmer in the sun. The surface of these plateaux is a rolling grass land variegated by swelling downs and granite mountains and watered by small streams and lakes. There is but little of those sweltering jungles and matted luxuriant forests which a European mind naturally associates with the scenery of the tropics. Indeed the air of these high uplands is cool and bracing; in clear weather the sky is of a beautiful pale blue; and the wild flowers, such as the violets, the buttercups, the forget-me-nots, and the anemones, which bespangle the short grass might almost beguile an Englishman into imagining himself at home.<sup>1</sup>

The population of the Nyasaland Protectorate includes

<sup>1</sup> Sir H. H. Johnston, *British Natives of British Central Africa* (London, 1897), pp. 4 *sqq.*, 35 *sq.*; A. Werner, *The* (London, 1906), pp. 8 *sqq.*

many tribes belonging to different stocks and speaking different languages, but they are all members of the great Bantu family. Of the various stocks the Nyanja-speaking peoples are the most numerous and important. They include many tribes, amongst whom are the Amananja, the Ambo, the Anyanja, and the Achewa. The Angoni, who give their name to Central Angoniland, a district of the Protectorate lying at the south-west end of Lake Nyasa, are a Zulu people, who having rebelled against the despot Chaka were defeated by him and fled northward, crossing the Zambesi in 1825 and settling in the country to the west of Lake Nyasa. They have intermarried with other tribes, particularly with the Achewa, so that they are now a mixed race; but the northern Angoni still speak the Zulu language, though with some dialectical modifications. At present the Angoni are not so much a separate people as a ruling caste dwelling in the midst of British Central African tribes whom their ancestors conquered.<sup>1</sup> The natives of British Central Africa live chiefly by agriculture. The chase is a subsidiary pursuit, and except among the Wankonde, at the north end of Lake Nyasa, the keeping of cattle is an accident or an appanage of chieftainship. Among the principal crops raised by the natives are maize, millet, rice, beans, sweet potatoes, yams, pumpkins, and tobacco. The arts of weaving, pottery, and basketry are practised by the people, and they are acquainted with the working of iron and copper. Their houses are for the most part circular in shape with walls of wattle and daub and thatched roofs.<sup>2</sup>

The native population belongs to the Bantu family.

The Angoni, a people of Zulu descent.

Arts and industries of the natives.

The Nyanja-speaking natives of Central Angoniland are divided into exogamous and totemic clans, some with descent in the male and others in the female line. Generally children take their clan from their father, but in some cases from their mother. The name of the clan

Exogamous and totemic clans among the natives of Central Angoniland.

<sup>1</sup> Sir H. H. Johnston, *British Central Africa* (London, 1897), pp. 389-392; A. Werner, *The Natives of British Central Africa* (London, 1906), pp. 24 sqq., 208 sqq., 278 sqq.; R. Sutherland Rattray, *Some Folk-lore Stories and Songs in Chinyanja*

(London, 1907), p. viii.

<sup>2</sup> Sir H. H. Johnston, *British Central Africa*, pp. 424 sqq., 430 sqq., 435 sq., 453 sqq., 457 sqq.; A. Werner, *The Natives of British Central Africa*, pp. 176 sqq.

is nearly always that of an animal, but sometimes it is that of a plant or other thing.<sup>1</sup> The following are some of the animal names of clans :—<sup>2</sup>

*Ngaluwe*, bush-pig.  
*Ngondo*, hartebeest.  
*Nsamba*, fish.  
*Mabvu*, wasp.  
*Nkoma*, coney.  
*Duwe*, zebra.  
*Pofu*, eland.  
*Nyati*, buffalo.  
*Nyuchi*, bee.  
*Soko*, baboon.

Among the names of clans derived from plants or inanimate things are the following :—<sup>3</sup>

*Gumbo*, water-melon.  
*Manda*, mushroom.  
*Manzi*, water.  
*Mvulu*, rain.  
*Minga*, thorn.  
*Churu*, ant-hill.

Obsolete  
 words  
 among the  
 clan names.

Among the clan names are many old words, which are no longer used in common speech to designate the objects they formerly denoted. For instance, the old word for a zebra was *duwe*, which is still the name of the Zebra clan, but the modern word for a zebra is *mbidzi*. The old word for an eland was *pofu*, which is still the name of the Eland clan, but the modern word for an eland is *nchefu*. Again, the old word for a baboon was *soko*, which is still the name of the Baboon clan, but the modern word for a baboon is *nyani*.<sup>4</sup> It is possible that in these and similar cases the old names may have been disused and new ones substituted out of respect to the sacred animals; and a like cause may perhaps explain seeming discrepancies in other totemic tribes, among whom the clan not unfrequently bears a different name from that of its totem.

<sup>1</sup> R. Sutherland Rattray, *Some Folk-lore Stories and Songs in Chinyanja*, p. 174.

<sup>2</sup> R. Sutherland Rattray, *op. cit.* p. 176.

<sup>3</sup> R. Sutherland Rattray, *op. cit.* p. 177.

<sup>4</sup> R. Sutherland Rattray, *op. cit.* p. 176.

The natives of Central Angoniland generally shew a regard for the animal, plant, or thing which gives its name to their clan ; in short, they respect their totems. A person may not kill, eat, or destroy his totem ; and if it is an animal, he may not wear its skin. For example, a man of the Elephant clan was not supposed to benefit, even indirectly, by the barter of an elephant's tusks, though he might give the calico, beads, or whatever he got for them to his wives and friends. The taboo on eating the flesh of the totem animal is called *kusala*. If a person violates the taboo by eating, whether knowingly or not, of the meat, it is believed that his body will break out in spots, which is called *kuwenga*. The remedy for this eruption of the skin is to bathe the body in a decoction made from a bone of the animal, the eating of which caused the malady.<sup>1</sup> Thus here again the totem furnishes a homœopathic remedy by healing the harm it did.<sup>2</sup>

Respect shown by the natives of Angoniland for their totems.

Some of the tabooed objects or totems are not whole animals but only parts of them. Thus there is a clan called *Moyo* which means "life" or "heart"; and its tabooed object or totem is the heart of a goat. Again, there is another clan called *Mpumulo*, which means "nose," and the members of it may not eat the face and nose of an ox or cow.<sup>3</sup> Such totems I have called split totems.<sup>4</sup>

Split totems.

It is polite to address a person by his or her clan name ; indeed in addressing a woman it is the clan name which is always used. But certain clan names of chiefs might not be spoken after dusk ; any one who wished to address a chief in the dark had to use some other and common name, such as *Piri*, the clan of the Hills. Among some of the clan names borne by chiefs are the following :—

Clan names of chiefs with their tabooed objects or totems.

*Maseko* (a Zulu word). This was the clan name of the Angoni chiefs who settled in what is now Dedza district. *Maseko* in Chingoni (the Angoni language) means a pebble, also a kind of bird ; but the tabooed

<sup>4</sup> See above, vol. i. p. 10.

objects, in other words the totems, of the clan are fish and elephant's flesh, fowls, and rhinoceros' flesh.

*Jere* (a Zulu word, meaning a bangle). The tabooed object or totem of the clan is fish.

*Njobvu*, the elephant, the name of the Elephant clan. The tabooed object is elephant's flesh.

*Piri* (a word of Achewa origin), the Hill clan. The tabooed object or totem of the clan is the baboon. The Achewa have a legend that all their people formerly bore this clan name of *Piri*, till their chieftainess Nyangu called them all together and, in order to prevent the evils of close interbreeding, gave each family a new name, which was to descend to the children and children's children. In this tribe (the Achewa) children belong to the clan of their mother, not of their father. The reason alleged for the practice is that in the far past the chiefs were women, and so their children took their clan names from their mothers to mark their royal descent. This legend of the origin of totem clans is interesting, because, like similar Australian traditions, it points to the deliberate institution of exogamy as a means to prevent the marriage of near kin.<sup>1</sup>

Achewa legend that exogamy was instituted to prevent close interbreeding.

Belief of the Angoni and Achewa in the transmigration of souls.

Both the Angoni and the Achewa believe in reincarnation. Some say that after death they turn into the thing from which they take their name, that is, into their totem, as their fathers and kinsfolk did before them; others affirm that they turn into other animals, not into their totems.<sup>2</sup> Thus their theory partly confirms and partly disagrees with Dr. Theal's view that Bantu totemism rests on a belief in the transmigration of the souls of the dead into their totem animals.<sup>3</sup> Connected with this belief in metempsychosis is a certain dance called *Zinyau*, which is danced to songs with a weird cadence all over the Angoniland plateau. It is always danced after a funeral on a moonless night or before the moon is up. The dancers are members of a secret society disguised as various animals. Women are allowed to be present at it. The intention of the spectacle seems to be to make the people think that the dancers

Dance of men disguised as animals.

<sup>2</sup> R. Sutherland Rattray, *op. cit.* p. 178.

<sup>3</sup> See above, pp. 388 sqq.

are real animals, and that one of them is the dead man risen from the grave and reincarnated in animal shape. The secret society which furnishes the performers for this dance has a cryptic language and a password with a countersign. Candidates for admission to it in old days had to undergo a variety of ordeals, some of them revolting, some of them cruel, which sometimes ended fatally. Amongst other things the novice was set up on very high stilts. Intruders on the society were instantly killed.<sup>1</sup>

No man may marry a woman who bears his own clan name, though she may be of another race and live in a distant country, for all members of the same clan are in the relation of brother and sister. In other words, the totem clans are strictly exogamous. The rule of exogamy appears to hold good among all the tribes, whether they trace descent in the male or in the female line. On the other hand, the rule of taboo as applied to the totem is seemingly unknown or ignored among others.<sup>2</sup> Among the Achewa, as we have seen, children take their clan from their mother, not from their father; and the same rule of exogamy with maternal descent is observed by the Yaos, another tribe of British Central Africa.<sup>3</sup> In this tribe the chieftainship as well as the clan descends in the female line; a chief is succeeded, not by his son, but by his sister's son.<sup>4</sup> On the other hand, the Angoni apparently trace descent and transmit the chieftainship in the male line, following in these respects the Zulu custom.<sup>5</sup> First cousins may marry each other provided that they are the children respectively of a brother and a sister, because in that case their totems will be different. For example, a man of the Zebra clan has a son and daughter who are both necessarily Zebras. The Zebra son marries a woman of another clan, but his children will be Zebras like himself, since among the Angoni the clan descends in the male line. But the children of his Zebra

Rule of exogamy.

<sup>1</sup> R. Sutherland Rattray, *Some Folk-lore Stories and Songs in Chinyanja*, pp. 178 sq.

<sup>2</sup> R. Sutherland Rattray, *op. cit.* pp. 177, 202.

<sup>3</sup> A. Werner, *The Natives of British Central Africa*, p. 252.

<sup>4</sup> Sir H. H. Johnston, *British Central Africa*, p. 471; A. Werner, *The Natives of British Central Africa*, p. 254.

<sup>5</sup> A. Werner, *op. cit.* pp. 253, 258; R. Sutherland Rattray, *Some Folk-lore Stories and Songs in Chinyanja*, pp. 188 sq.

sister will not be Zebras, since she must marry a man of another clan, say the Eland clan, and her children will take their father's clan, not hers; if the father is an Eland, the children will be Elands too. Thus the Zebra brother and sister will have respectively Zebra and Eland children, and these first cousins will be free to marry each other, since they belong to two different totem clans. But first cousins who are children of two brothers may not marry each other, because they are necessarily of the same totem clan. For example, two Zebra brothers have a son and daughter respectively, but these first cousins may not marry each other because they are both Zebras like their fathers. First cousins who are children of two sisters may marry each other provided that their mothers married men of different clans, for in that case the two cousins will have different totems. For example, if two Zebra sisters marry two Eland men, their children, who are first cousins, will all be Elands and therefore cannot marry each other, since they have all the same totem. But if one Zebra sister marries an Eland man, and the other Zebra sister marries an Elephant man, then the children of the two sisters will be Elands and Elephants respectively, and these first cousins may marry each other, since their totems are different. On the other hand, in tribes with exogamy and female descent, first cousins, the children of two sisters, may never marry each other because they must always be of the same totem; but first cousins, the children of two brothers, may marry each other provided that their fathers married women of different clans, for in that case the two cousins will have different totems. First cousins, the children of a brother and a sister respectively, are as free to marry under a system of exogamy with female descent as under a system of exogamy with male descent, because in both cases the cousins have necessarily different totems.<sup>1</sup>

A man's social position with regard to his wife's mother changes immediately after his marriage. The two avoid each other on every occasion, and should they meet by

Mutual avoidance of a man and his wife's mother.

*Natives of British Central Africa*, pp. 252 sq.

chance they cover their faces and run away from each other. "All this," we are told, "is from some sense of shame and modesty which hardly finds a counterpart among civilized nations, and has, of course, nothing to do with the fact that the son-in-law has to perform various menial acts of service for his wife's mother and relations."<sup>1</sup> Among the Anyanja and Yaos it is the universal custom for a man at marriage to go and build a house at his bride's home. The practice no doubt is connected with the rule that in these tribes the children belong to their mother's kin, not to their father's. "One of the new husband's first duties is to hoe a garden for his mother-in-law, though he is bound by the rules of propriety to avoid her to a certain extent. He must not eat in her presence nor see her eat, and there are various other restrictions, all of which come to an end when he has brought her the first grandchild, with a present. The same rules apply also to the father-in-law, and to the maternal uncles of both; while the wife has to observe them with regard to her husband's parents, and *their* uncles."<sup>2</sup>

These tribes appear to possess the classificatory system of relationship; for we are told that a man applies the name of father not only to his real father but to all his father's brothers; and that similarly he applies the name of mother not only to his real mother but to all his mother's sisters. Further, there is no single word for "brother" or "sister" in general, but there are distinct words for "elder brother" and "younger brother," and similarly for "elder sister" and "younger sister." There is a word which means "sister" when used by a brother, and "brother" when used by a sister, but which is never applied to a person of the same sex as the speaker.<sup>3</sup> All these are marks of the classificatory system of relationship.

Traces of the classificatory system of relationship.

<sup>1</sup> R. Sutherland Rattray, *Some Folklore Stories and Songs in Chinyanja*, p. 204. The Wankonde in British Central Africa "have that curious custom by which a man is practically forbidden to speak to or even look at his mother-in-law. This also obtains amongst the A-nyanja to some extent; yet here the

son-in-law has to hoe his mother-in-law's garden and assist her in many other ways" (Sir H. H. Johnston, *British Central Africa*, p. 415).

§ 2. Totemism among the Wagogo, Wahehe, and Waheia of German East Africa

The Wagogo and their totemic clans.

The Wagogo are a Bantu-speaking people of mixed blood who inhabit the Iramba tableland in German East Africa to the south of Kilima Njaro.<sup>1</sup> They both till the ground and keep cattle.<sup>2</sup> They are divided into totemic clans. The following is a list of their clans with their totems (*muziro*), which they may not eat or use.<sup>3</sup>

Clans.	Totems ( <i>muziro</i> ).
1. Wanyagowe	<i>Muhanga</i> , an animal about as large as a hog, which lives chiefly on white ants. It sleeps in a hole underground in the daytime.
2. Wanyang'anga	<i>Mbala</i> , bush buck.
3. Wanyacipegu .	<i>Fumbu</i> , a certain part of the stomach.
4. Wanyagatwa .	<i>Ng'hanu</i> , civet cat, and <i>mbala</i> .
5. Wasewando .	<i>Mbala</i> .
6. Wamunyanzoka .	Things killed by snakes.
7. Wambuga .	Sheep with short tail.
8. Wasenhyina .	<i>Cisunha</i> , a very tiny red bird, and <i>Nhyenesi</i> , a bird said to warn of danger.
9. Watemekwira	<i>Muhanga</i> .
10. Wakando .	<i>Fumbu</i> .
11. Wamusukuma .	<i>Mbata</i> , roan antelope.
12. Waseng'ongo .	To carry a spear which is concave on both sides.
13. Wanyang'hwalo .	<i>Ng'hwahe</i> , a kind of wild vegetable.
14. Wamunyambwa .	Red clothes.
15. Wamunyatoma .	" "
16. Wasembuce .	<i>Muhanga</i> .
17. Wegongo	<i>Nhongolo</i> , eland.
18. Wamunyiranga .	<i>Cisira</i> , a kind of squirrel.
19. Wamunyanguluwe .	<i>Mbala</i> , or a spotted animal of any kind.
20. Wamunyang'hali .	<i>Wamusitakwendwa</i> , a tree which they do not use for building or firewood.
21. Wamunyangduli .	<i>Nhongolo</i> .
22. Wanyeguruwi	<i>Ngubi</i> , pig.

<sup>1</sup> J. Deniker, *The Races of Man*, p. 464; F. Stuhlmann, *Mit Emin Pascha ins Herz von Afrika* (Berlin, 1894), pp. 49 sq., 767 sq.

<sup>2</sup> Rev. H. Cole, "Notes on the

Wagogo of German East Africa," *Journal of the Anthropological Institute*, xxxii. (1902) pp. 336 sqq.

<sup>3</sup> Rev. H. Cole, *op. cit.* pp. 305 sq.

Clans.	Totems ( <i>muziro</i> ).
23. Wanyagundu .	Red clothes.
24. Wanyelangali .	<i>Nziriri</i> , an animal something like a badger.
25. Wasigani .	Premature calf.
26. Wang'halunga .	<i>Ng'halu</i> , a small bulb resembling an onion.
27. Wamusitakwendwa .	Tree of this name which they do not use for building or firewood (see above, No. 20).
28. Wamunyachuma .	Red copper wire.
29. Wanyamhumbwa .	<i>Machikwang'hala</i> , a bird which makes a peculiar noise in flying.
30. Wabalagudi .	<i>Naagulagu</i> , a bulb which is used in anointing and for stomach-ache.
31. Waseyingwe .	<i>Cituwa</i> , entrails of an animal.
32. Wamunyaciri .	<i>Itoga</i> , liver.
33. Wasehaba .	<i>Cipehema</i> , end of breast-bone.

The Wagogo think that if a person kills or eats the animal which is the totem of his clan, he thereby endangers his relations, but not himself. Thus, when they see a child suffering from scabs on its head, they say at once that the child's father has eaten his totem (*muziro*) and that is why his child has scabs (*mapere*).<sup>1</sup>

We are not informed whether the Wagogo clans are exogamous, nor whether they are inherited in the paternal or the maternal line. A widow usually marries a brother or other relation of her deceased husband. She may indeed refuse to do so, but such refusals are rare. A man may not look at his mother-in-law, but he may speak to her at a distance. The same restrictions apply to a woman in respect to her father-in-law.<sup>2</sup>

"At time of circumcision," says Mr. Cole, "abusive language is very much indulged in, and the women especially lose all sense of modesty, and the country becomes a mighty bedlam."<sup>3</sup> This brief statement seems to indicate that a period of sexual licence, if not of promiscuity, accompanies the operation of circumcision among the Wagogo, just as it used to do among the Fijians.<sup>4</sup>

<sup>1</sup> Rev. H. Cole, "Notes on the Wagogo of German East Africa," *Journal of the Anthropological Institute*, xxxii. (1902) p. 307.

<sup>2</sup> Rev. H. Cole, *op. cit.* p. 312.

<sup>3</sup> Rev. H. Cole, *op. cit.* p. 338.

<sup>4</sup> See above, pp. 145 *sqq.*

Two sets of totems, the *muziro* and the *mulongo*.

As a Wagogo clan has its *muziro* (forbidden thing), so each Wagogo family has its *mulongo* (forbidden thing), which is transmitted from the father to his children. The wife may have a different *mulongo* from that of her husband, but her children do not inherit it. The *mulongo* is apparently forbidden only after marriage. To eat the *mulongo* involves the loss of hair and teeth; to eat the *muziro* is said to cause the skin to fall off.<sup>1</sup> From this account it would seem that the Wagogo have, like the Herero, a double set of totems, one set (*muziro*) being appropriated to the clans and the other set (*mulongo*) to the families. The latter are hereditary in the male line. But details of the system are wanting.

The Wahehe of German East Africa.

The Wahehe inhabit the district of Iringa in German East Africa, to the south of the Ruaha River. They are a tall, slim, well-built people; the features of the men are regular and expressive, the faces of the women are comely. Their country is a beautiful mountain land, with a cool, often cold climate, where the cutting winds oblige the natives to go warmly clad. Though they raise crops of maize, sweet potatoes, and beans, the country is not well adapted to agriculture. On the other hand, it lends itself admirably to pasture; for the rugged mountains abound in clear, cold, rushing streams and fine waterfalls, which keep the grass on their banks lush and green throughout the year. Hence the Wahehe are above all a tribe of herdsmen; all their pride and ambition are in their herds. No man will willingly part with a single head of cattle, and even in time of famine he will rather go with an empty stomach than diminish the number of his beloved herds by slaughter. The houses of the Wahehe are built of stakes coated with clay. They are square in shape with perpendicular walls and flat roofs. As a rule each family occupies its own house.<sup>2</sup>

The totems of the Wahehe are always animals or parts of animals.

The Wahehe have totems which descend in the male line, the children taking their totem from their father. But their totemism is not combined with exogamy; a man is free

<sup>1</sup> Rev. H. Cole, "Notes on the Wagogo of German East Africa," *Journal of the Anthropological In-*

*stitute*, xxxii. (1902) p. 317.

<sup>2</sup> E. Nigmann, *Die Wahehe* (Berlin, 1908), pp. v. 1, 3.

to marry a woman of the same totem as himself. If a wife's totem differs from that of her husband, she retains it after her marriage. At present a whole district will often have, with insignificant exceptions, the same totem. A totem is called *msiro* or *mundzilo*, though the commoner expression for it is *muiko*. It always consists in, or carries with it, the prohibition to eat a certain food, and this prohibition is strictly observed. The forbidden food is always an animal, very often only a particular part of an animal. The punishment for eating the tabooed flesh is supposed to be a lingering and painful sickness inflicted on the delinquent by the ancestral spirits. Scab and other skin diseases are often attributed by the sufferer himself to some unwitting violation of the totemic taboo. In such a case he hastens to consult the medicine-man or magician (*mlagussi*) and to offer an expiatory sacrifice. Even children observe the totemic taboo from their earliest years. Yet, though a man may not eat, he may freely hunt and kill his totem animal. Among the tabooed foods or totems of the Wahehe are the guinea-fowl, an unborn calf, sheep's head, the heart and kidneys of all animals, and two species of gazelle (*mato* and *funo*). The heart and kidneys of all animals are a very common totem. Sometimes a family has two totems, and if one of them is very inconvenient, they may rid themselves of it by an appropriate ceremony. For example, there was a rich cattle-owner who had for his totems a species of gazelle (*funo*) and an unborn calf. The latter proving inconvenient, he swallowed a certain medicine, seasoned an unborn calf with the same, and ate it. As he survived the ordeal, his family renounced the unborn calf as a totem, but kept the gazelle.<sup>1</sup>

Ill effects of eating the totemic animal.

A family may have two totems, but may rid itself of one.

Amongst the Wahehe the marriage of cousins who are the children of two brothers or two sisters is not allowed; but there is no objection to the marriage of two cousins who are the children of a brother and a sister respectively.<sup>2</sup> The Wahehe practise polygamy. Even the poorest man, we are told, has at least two wives, while the rich have twenty or even fifty. Such customs seem to point to a large numerical

Cousin marriages among the Wahehe.

Polygamy.

<sup>1</sup> E. Nigmann, *Die Wahehe* (Berlin, 1908), pp. 42 sq.

<sup>2</sup> E. Nigmann, *op. cit.* p. 60.

majority of women over men. Wives are purchased from their fathers, the price of a bride varying from two hoes to four head of cattle according to the rank of the family.<sup>1</sup> On a man's death the bulk of his property goes to his eldest son. Wives with no children or with children under age are inherited by the grown son or, if there is none, by the brother of the deceased. But a man never thus takes to wife his own mother or her sisters. The principal wife is regularly inherited by the full brother or, if there is no full brother, by the half brother of the deceased.<sup>2</sup>

The  
levirate.

Totemism  
among the  
Waheia.

Another totemic tribe of German East Africa are the Waheia, a Bantu people who inhabit Bukoba, on the western side of the great Victoria Nyanza Lake. They are divided into exogamous clans called *kabila*, each with a particular kind of animal for its totem. One clan has for its totem the lizard, another the long-tailed monkey. No man may marry a woman of his own clan, and he may not kill or eat any part of his totem animal. If he kills or eats the animal, he is supposed to suffer from an eruption of the skin.<sup>3</sup> Thus the totemism of the Waheia appears, so far as we can judge from the brief report of it, to be of the normal pattern.

Exoga-  
mous clans  
among  
the Yao,  
Makua,  
and  
Makonde.

Lastly, it may be noted that several Bantu tribes of German East Africa, such as the Yao, the Makua, and the Makonde, are known to be divided into exogamous clans with descent in the maternal line, though they appear not to practise totemism. Among the Yao the system is decadent, but among the Makua and Makonde it is still in full bloom, and in these two tribes some of the clans are named after animals or plants on which the members of the clan are said to have especially subsisted. Among the Makonde the clans are very numerous; the names of fifty-two of them have been recorded. The name for an exogamous clan in the language of the Yao is *lukosyo* (plural *makosyo*), in the language of the Makua it is

<sup>1</sup> E. Nigmann, *Die Wahehe* (Berlin, 1908), p. 59.

*nihimmu*, in the language of the Makonde it is *litaua*.<sup>1</sup> All these tribes live chiefly by agriculture, though they do not neglect the chase.<sup>2</sup>

### § 3. *Exogamy and the Classificatory System of Relationship among the Masai*

Among the savages of eastern equatorial Africa the redoubted Masai are probably the most famous, their remarkable military organisation and fighting propensities having long rendered them the terror of their neighbours, and secured their predominance in the wide, often bare and arid plains over which these warlike herdsmen roam with their flocks and herds, once enormous in number but now sadly thinned by the cattle plague. Their present country extends from about one degree north of the equator to six degrees south of it both in British and German territory. Neither in language nor in appearance do the Masai belong to the Bantu family. They are tall slender, lithe men, with features which have not much of the negro in them and which sometimes approach to the European type. It is believed that the race has been formed by a cross between the Nilotic negroes and the Hamitic peoples of the Galla and Somali family, who blended with each other long ago and dwelt apart somewhere in the mountains or tablelands which stretch eastward from the White Nile to the Karamojo country. From this cradleland of their race some cause unknown, whether the pressure of tribes from the north, or intertribal warfare, or famine consequent on drought, seems to have driven the Masai eastward and southward to the country between the great extinct volcano of Mount Elgon and the shores of Lake Rudolph. Here a division took place within the tribe. One branch betook themselves to agriculture; the other and more powerful branch continued, or reverted to, a purely pastoral life, and raiding their neighbours in all directions not only acquired vast

The Masai and their country.

They seem to be a blend of Nilotic negroes with the Galla-Somali stock.

herds of cattle but pushed southward and made themselves lords of equatorial Africa from Ugogo and the Unyamwezi country eastward to within a hundred miles of the Indian Ocean.<sup>1</sup>

Exogamy and the classificatory system among the Masai.

Though the Masai apparently are not a totemic people, they practise exogamy and possess the classificatory system of relationship. A brief notice of these institutions will therefore not be out of place in this work.

Clans and exogamous subclans among the Masai.

The Masai are divided into four clans named *Il-Aiser*, *Il-Meñgana*, *Il-Mokesen*, and *Il-Molelyan*. These clans are not exogamous, but they are divided into subclans which are exogamous. For example, the *Il-Aiser* clan contains, among others, the subclans *In-gidoñgi* and *Il-Parkeneti*. A man of the *In-gidoñgi* subclan may not marry a daughter of an *In-gidoñgi* man; but he may marry the daughter of an *Il-Parkeneti* man; that is, he may not marry a woman of his own subclan, but he is free to marry a woman of his own clan provided that she belongs to a different subclan. Further, he is at liberty to marry a woman of any clan other than his own; for instance, an *Il-Aiser* man may marry the daughter of a man of the *Il-Meñgana* clan, or of the *Il-Mokesen* clan, or of the *Il-Molelyan* clan. Members of the various subclans are usually to be found in all the districts and subdistricts into which the territory of the Masai is divided. Marriages are not affected by geographical considerations. In all the subdistricts a man enjoys the same marital rights which he has in his own subdistrict.<sup>2</sup>

From the foregoing statement it will be seen that among

<sup>1</sup> Sir Harry Johnston, *The Uganda Protectorate*, Second Edition (London, 1904), ii. 796 *sqq.*; A. C. Hollis, *The Masai, their Language and Folklore* (Oxford, 1905), pp. iii., xi. *sqq.* The other principal authorities on the Masai are Joseph Thomson, *Through Masai Land* (London, 1895), pp. 403 *sqq.*; Oscar Baumann, *Durch Massailand zur Nilquelle* (Berlin, 1894), pp. 156 *sqq.*; S. L. Hinde and H. Hinde, *The Last of the Masai* (London, 1901); M. Merker, *Die Masai* (Berlin, 1904).

<sup>2</sup> For this information I am indebted

to the courtesy of Mr. A. C. Hollis, who has very kindly placed at my disposal the results of his careful enquiries into the Masai system of relationship. These results will soon, I hope, be published entire in the *Journal of the Royal Anthropological Institute*. Meantime for some of the facts mentioned in the text I may refer readers to Mr. Hollis's book *The Masai* (Oxford, 1905), pp. 260 *sq.*, 303. As to the clans and subclans of the Masai with their rule of exogamy see also M. Merker, *Die Masai* (Berlin, 1904), pp. 16 *sqq.*

the Masai descent is reckoned in the male line; children belong to the clan of their father. Thus the Masai have the system of father-kin. Yet a trace of the system of mother-kin seems to survive in the remarkable rights which a man enjoys over his sister's children, who under a system of mother-kin would be his natural heirs. "A maternal uncle (*ol-apu*) exercises great influence over his nephews, as it is believed that if he were to curse them they would die. He can at any time stop a fight in which one of his nephews is engaged by merely calling on his nephew to desist, as the nephew would be afraid of his right arm withering if he were to disobey. This power is to a certain extent reciprocal, and if a man were to start beating his wife he would have to stop if his maternal nephew ordered him to do so. . . . If the uncle desires anything that is the property of his nephew's father, the nephew must buy it from his father, who will at once give it up when he knows for whom it is required. This power of taking property is reciprocal and in fact applies to all persons who address one another as *ol-apu* and *ol-le-'ng-apu*, etc. A nephew, for instance, can go to his maternal uncle's kraal, and if his uncle is absent, he can slaughter a goat or drink his uncle's milk, and nothing would be said. He cannot, however, drive off a cow without his uncle's sanction, but permission would not be refused." <sup>1</sup>

Traces of mother-kin among the Masai.

Reciprocal rights of the maternal uncle and his sister's sons over each other.

While the sexual relations of the Masai, judged by our standard, are very loose in some respects, they are exceedingly strict in others. "First cousins and second cousins may not marry, but there is no objection to third cousins marrying if the relationship is no nearer than *ol-le-'sõtwa* (or *en-e-'sõtwa*). Thus, a man's son's son's son may not marry the man's brother's son's son's daughter, nor may a man's son's son's son marry the sister's son's son's daughter, but there would be no objection to a man's son's son's son marrying the brother's daughter's daughter's daughter or the sister's daughter's daughter's daughter. Likewise, though a man's son's son may not marry the man's maternal uncle's son's son's daughter, he may marry the maternal uncle's son's daughter's daughter. These unions are always con-

First and second cousins forbidden to marry each other; of third cousins some are allowed and others forbidden to marry each other.

<sup>1</sup> From Mr. A. C. Hollis's unpublished papers.

tingent on the two parties not belonging to the same subclan. The rules of consanguinity and affinity which regulate marriage also apply to the sexual intercourse of warriors with immature girls before marriage and to the rights of hospitality after marriage. No warrior may select as his sweetheart (*e-sanja*) a girl of the same subclan as himself, or one who is more nearly related to him than third cousin, and only then if the terms of address used are *ol-le'sõtwa* and *en-e'sõtwa*; and no traveller may cohabit with the wife of a member of his own age-group<sup>1</sup> if that man is married to one of his near relations, or to a daughter of his subclan.

Punish-  
ments for  
incest  
among the  
Masai.

"If a man is knowingly guilty of incest, or has sexual intercourse with a daughter of his own subclan, he is punished by his relations, who flog him and slaughter some of his cattle. If he fornicates or commits adultery with a daughter of a member of his own age-group, he is punished by the members of his age-group. His kraal is destroyed, he is severely beaten, and a number of his oxen are slaughtered. If a warrior or boy commits adultery with a wife of a man belonging to his father's age-group, he is solemnly cursed by the members of that age-group. Unless he pays the elders two oxen, one for them to eat and the other to enable them to buy honey-wine, and prays them to remove the curse, it is supposed he will die. If a man unintentionally commits incest—and it is quite conceivable that a man might not know his fourth or fifth cousin, for instance, should the two live in different districts—he has to present a cow to the girl's relations in order to 'kill the relationship' (*a-ar eng-anyit*)."<sup>2</sup>

Continen-  
ce observed  
by the  
Masai in  
making  
poison and  
brewing  
honey-  
wine.

Like many other savages the Masai on certain occasions observe strict continence from purely superstitious motives. One of these occasions is the making of poison. During the eight days that a man is making poison he is treated almost as an outcast. He must leave his house at 4 A.M. and not return till 7 P.M., when he must rub clay on his body; he may not eat when the sun is above the horizon; he may only relieve nature far away from the kraal; and he

<sup>1</sup> As to the age-groups of the Masai see below, pp. 412 *sqq.* As to the relationship denoted by *ol-le'sõtwa* and

*en-e'sõtwa*, see below, pp. 416 *sq.*

<sup>2</sup> From Mr. A. C. Hollis's unpublished papers.

must sleep alone. Perhaps some civilised reader may jump to the conclusion that this isolation of the poison-maker is a sage precaution, a sort of quarantine, designed to obviate the risk of his inadvertently infecting some of his friends with the venom. If any of my readers has made that jump, I must beg him to retrace his step. Such an inference, like most attempts to rationalise superstition, only betrays an incapacity in the civilised mind to place itself at the point of view of the savage. The motive which induces the Masai poison-maker to keep aloof from his fellows is not any regard for them ; far from it, what he fears is not that the poison would hurt them, but that they would hurt the poison ; he believes that were he to break any of these rules the poison would have no effect. This is not a matter of inference ; it is the avowed belief of the Masai. In like manner strict continence must be observed by the persons who are brewing honey-wine ; and in this case there can be no question of infection. A man and a woman are chosen to brew the honey-wine, and it is considered essential that both of them should be chaste for two days before they begin to brew and for the whole of the six days that the brewing lasts. A hut is set apart for them and they occupy it till the wine is ready for drinking ; but they are strictly forbidden to sleep together. When the wine is made, they are paid and go their ways. The Masai think that if the couple were to break the rule of continence while the wine is brewing, not only would the wine be undrinkable but the bees which made the honey would fly away.<sup>1</sup> We shall in vain attempt to understand the marriage customs of savages if we do not allow for the element of superstition in them. The savage attributes to the relations of the sexes with each other a certain mysterious influence, a magical virtue, which the civilised man has long ceased to associate with such processes and which he finds it hard even in imagination to comprehend. Yet some of these superstitions, incomprehensible though they may be to us, probably lie at the root of many customs which we still strictly observe without being able to assign any valid reason for doing so.

The savage attributes a certain mysterious influence or magical virtue to sexual relations.

<sup>1</sup> From Mr. A. C. Hollis's unpublished papers.

Mutual  
avoidance  
of a man  
and his  
wife's  
mother.

Among the Masai, as among so many savages, a man and his wife's mother must mutually avoid each other. If a son-in-law enters his mother-in-law's hut, she must retire into the inner compartment and sit on the bed, while he remains in the outer compartment. Thus separated they may converse with each other. Own brothers-in-law and sisters-in-law (*o-sindani le-anyit* and *e-sindani e-anyit*) must also avoid one another, though this rule does not apply to half brothers-in-law and sisters-in-law (*o-sindani* and *e-sindani*). When a man dies, his full brother may not marry the widow, but she may be taken to wife by his half-brother, the son of the same father but not of the same mother. Indeed the only person who is allowed to marry a widow is one of her deceased husband's half-brothers or paternal cousins. However, it often happens that widows never marry again but dwell with their children in the kraal of the eldest living brother of their late husband, who becomes the guardian of his nephews and nieces.<sup>1</sup>

The  
levirate.

Age-groups  
or age-  
grades  
among the  
Masai.

Reference has been made to the age-groups or age-grades, as they are now commonly called, into which the Masai are divided. These are determined by the times at which boys and girls are circumcised. The account which the people themselves give of the custom runs thus:—"The Masai have what they call ages (*l-porori*, singular *ol poror* or *ol boror*). Children are not all circumcised together; they are divided up into ages, for they are not all alike in point of years. First of all the big ones are circumcised, and the small ones wait until they grow up (*i.e.* until they reach the age of puberty). Now, those who are circumcised first belong to what is called the right-hand circumcision, and that is one age. The younger ones wait and are circumcised later. They also become members of this age. When the next circumcision festivals are held, those circumcised belong to what is called the left-hand circumcision, and that is the next age. The younger ones wait as before, and when they are circumcised they likewise join this age. Now, two ages are considered equivalent to one generation. Each age has three divisions, first, those known as 'The big ostrich feathers,'

<sup>1</sup> From Mr. A. C. Hollis's unpublished papers.

secondly, those called 'The helpers,' and thirdly, those known as 'Our fleet runners.'"<sup>1</sup>

To make this account more explicit it should be said that when leave is granted by the medicine-man (*ol oiboni*) to hold the circumcision festivals, one feast is held in every subdistrict every year for four years in succession, and all those circumcised during these four years belong to the right-hand circumcision. An interval of about three and a half years then intervenes before another festival is held. All youths circumcised during the next four years belong to the left-hand circumcision. Boys as a rule are circumcised between the ages of thirteen and seventeen. Orphans and the children of poor parents often wait until they are twenty.<sup>2</sup>

Thus four circumcision ceremonies are performed in every seven and a half years, and all persons circumcised at any time during such a period constitute an age-group or age-grade (*ol poror* or *ol boror*); hence the period which constitutes an age-grade is seven and a half years. Further, two successive age-grades are known respectively as "the right-hand circumcision" and "the left-hand circumcision" and together form a generation. Each of these two age-grades has to observe certain rules, which forbid the pronunciation of certain words and the eating of certain foods. Thus persons of "the right-hand circumcision" may eat neither the heads nor the tails of slaughtered cattle; they may not call a fold for goats *eng an en dare*, they must call it *e merata en dare*; they may not call a head *ol okuṅgu*, they must call it *ol ogunja*; they may not call a tail *ol gorom*, they must call it *en aisuba*. Persons of "the left-hand circumcision" may not eat pumpkins and cucumbers; and they may not call arrow-poison *e sajét*, they must call it *en duerai*. To do or say anything in the presence of one who is forbidden by custom to say or do it is an insult which often provokes retaliation on the spot.<sup>3</sup>

<sup>1</sup> A. C. Hollis, *The Masai, their Language and Folklore* (Oxford, 1895), pp. 261 sq. Compare M. Merker, *Die Masai* (Berlin, 1904), pp. 70 sq., who gives *ol borör* as the Masai expression for an age-group or age-grade.

*Ol poror* is the form given by Mr. A. C. Hollis.

<sup>2</sup> A. C. Hollis, *The Masai, their Language and Folklore*, p. 262 note<sup>1</sup>; M. Merker, *Die Masai*, pp. 60 sq.

<sup>3</sup> M. Merker, *op. cit.* p. 71.

The military organisation of the Masai rests on the division of the males into age-grades.

Cohabitation of the warriors with unmarried girls.

Diet of the warriors.

They may not eat milk and flesh on the same day for fear of injuring the cows.

On this institution of age-grades rests the military organisation of the Masai. At circumcision a youth enters the army as a recruit (*ol barnoti*, plural *il barnot*); after passing into the next age-grade he becomes a full warrior (*ol murani* or *ol morani*, plural *il muran* or *il moran*). All the men who have been circumcised about the same time, and who therefore belong to the same age-grade, are known by a distinctive name, such as "the White Swords" or "the Invincibles." If a man was circumcised at the age of fifteen, he will have completed his terms of service as a recruit and as a warrior at the age of thirty, since two age-grades together make up a period of fifteen years. In former days a man might not marry until he had served his time as a soldier, that is, until he was about thirty years of age; but meanwhile he was free to cohabit, and did habitually cohabit, with young unmarried girls in a separate kraal, where the warriors and the girls lived together. After circumcision warriors plait their hair and subsist entirely on the flesh, blood, and milk of their cattle, varied with honey and sugar-cane. Game and all kinds of corn are forbidden to them; they may not smoke nor touch intoxicants. Moreover, they will not eat milk and flesh on the same day. Their custom is to eat nothing but milk for some days and then nothing but flesh and blood for some days more. But before they pass from one diet to the other, they take a strong purgative to make sure that no trace of the former food remains in their stomach; so scrupulous are they not to bring milk into contact with flesh and blood. This custom they observe from a superstitious fear that such a contact would injure the udders of the cows from which the milk was drawn and would diminish their supply of milk. At marriage a man is freed from all restrictions on his diet; he may now eat vegetable food, drink honey-wine, and snuff tobacco. He becomes an elder (*ol moruo*, plural *il moruak*), retires from the standing army, and passes into the reserve.<sup>1</sup>

<sup>1</sup> A. C. Hollis, *The Masai, their Language and Folklore*, pp. xvi. 302; M. Merker, *Die Masai*, pp. 66 sq., 73 sqq., 82 sqq.; Oscar Baumann, *Durch Massailand zur Nilquelle* (Berlin, 1894), pp. 161 sq.; Joseph Thomson,

*Through Masai Land* (London, 1885), pp. 426 sqq.; S. L. Hinde and H. Hinde, *The Last of the Masai* (London, 1901), pp. 55, 56 sqq., 66 sqq., 72 sqq. As to the diet of the warriors and elders, see J. Thomson, *Through Masai Land*,

Further, membership of an age-grade carries with it certain rights of hospitality, which any member is entitled to claim from his fellows in other villages. Thus we are told, in the words of the Masai themselves, that "when a Masai goes to other kraals to pay a visit, he does not on his arrival enter a hut unless he knows the owner, for if he belongs, for instance, to the Aimer age, he must not enter the hut of one of the Kishumu age, as he does not belong to this age. He will ask where the huts of the members of the Aimer age are, and when he has been shown them, he will enter one. When he has entered, the owner of the hut leaves him and goes to search for a place to sleep in elsewhere, the stranger remaining with his wife. Or if the owner of the hut has several wives, he goes to sleep with one of these, leaving the stranger in the hut he entered. A Masai cannot refuse hospitality to a stranger (of his own age) for he is afraid that the other members of his age will curse him, and he will die."<sup>1</sup>

Rights of hospitality which members of an age-grade are entitled to claim from their fellows.

From this native account we gather, first, that in a village or kraal the huts of people of the same age-grade are grouped together; and, second, that men of the same age-grade have a right to share each other's wives, in fact that something like sexual communism prevails between men and women of the same age-group. This latter inference is confirmed by what we learn both of the sexual privileges and of the sexual disabilities which an age-grade entails upon its members. On the one hand we have seen that a man is severely punished by members of his own age-grade if he has sexual intercourse with any of their daughters; and that he is fined or solemnly cursed by members of his father's age-grade if he commits adultery with one of their wives.<sup>2</sup> On the other hand, men are free to cohabit with women, married or unmarried, of their own age-grade. On

Sexual privileges and disabilities attaching to the age-grades.

pp. 429-431, 443; P. Reichard, *Deutsch-Ostafrika* (Leipzig, 1892), pp. 287 sq.; O. Baumann, *l.c.*; M. Merker, *Die Masai*, pp. 32 sq.; A. C. Hollis, *The Masai, their Language and Folklore*, p. xvi. Of these writers Captain Merker is the only one who explains why the Masai will not bring milk and flesh into contact with each

other. On this subject see further my paper "Folklore in the Old Testament," in *Anthropological Essays presented to E. B. Tylor* (Oxford, 1907), pp. 151 sqq.

<sup>1</sup> A. C. Hollis, *The Masai, their Language and Folklore*, pp. 287 sq.

<sup>2</sup> See above, p. 410.

this subject the Masai themselves say :—" No warrior or boy may commit adultery with a woman of his father's age. If he does so, and it becomes known, he is cursed. Should he be cursed, he pays two oxen (one in lieu of honey-wine), and he prays the elders to remove the curse. The elders eat the ox when they drink their honey-wine. But this is not the case if a man commits adultery or fornication with a woman or girl of his own age. This is not an offence."<sup>1</sup> "From this it will be seen," says Mr. Hollis, "that the Masai are polyandrous as well as polygamous. A man may marry as many wives as he can afford to purchase, and a woman may cohabit with any man belonging to her husband's age."<sup>2</sup> This seems equivalent to saying that sexual communism, or something very like it, prevails between all the men of one age-grade and all the women of the corresponding age-grade, subject no doubt to the rule of exogamy which forbids a man to marry or have sexual intercourse with a woman of his own subclan. In other words, the Masai appear to live in a state of group-marriage based on the organisation of the whole community in age-grades and restricted by the exogamy of the subclans.

The Masai seem to live in a state of group-marriage regulated by the age-groups and the exogamy of the subclans.

The classificatory system of relationship among the Masai.

With such a social organisation the Masai naturally possess the classificatory system of relationship. Their terms of relationship differ accordingly as the relative is spoken of indirectly or addressed directly. For example, "my father" referred to indirectly is *menye*, but addressed directly he is *papa*. "My mother" referred to indirectly is *ngoto*, but addressed directly she is *yeiyo*. In the generation above his own a man applies the same term "my father" (*menye* or *papa*) to his father and to his father's brothers; and he applies the same term "my mother" (*ngoto* or *yeiyo*) to his mother, to his mother's sisters, and to the wives of his mother's brothers. In his own generation he applies the same terms *ol-alashe*, "brother," and *eng-anashe*, "sister," indirectly to his brothers and sisters and to his cousins, the sons and daughters of his father's brothers. On the other hand, he does not, as by analogy we should expect, apply the terms "brother" and "sister" to his first cousins, the sons

<sup>1</sup> A. C. Hollis, *The Masai, their Language and Folklore*, p. 312.

<sup>2</sup> A. C. Hollis, *op. cit.* p. 312, note<sup>1</sup>.

and daughters of his mother's sisters ; he calls them indirectly *ol-le-'sōtwa* or *en-e-'sōtwa* according as they are male or female ; and he has different terms again, as we might have anticipated, for his other first cousins, the children either of his father's sisters or of his mother's brothers. A husband applies different terms to his wife and to his wife's sisters ; and a wife applies different terms to her husband and to her husband's brothers. In the generation below his own a man applies the same terms *ol-ayōni*, *en-gerai* indirectly to his sons and to his brothers' sons ; and he applies the same terms *en-dito*, *en-gerai* indirectly to his daughters and to his brothers' daughters.<sup>1</sup>

#### § 4. Totemism among the Taveta

The Taveta or Wa-taveta are a mixed race of Hamitic and Bantu stock, who number between three and four thousand souls, and inhabit the rich and fertile district of Taveta at the foot of the great snow-clad Kilima Njaro, the highest mountain in Africa. Through the country winds the Lumi River, its banks covered with luxuriant forests of gigantic trees festooned with creepers, while in the glades of the forest appear a few picturesque huts surrounded by a grove of bananas or by a field of corn and sweet potatoes.<sup>2</sup> All land in the Taveta forests belongs to the inhabitants, each member of a family owning a portion. No stranger may cultivate a patch of ground without the owner's leave. The plains are considered no man's land. Dread of the Masai formerly prevented the Taveta from settling there.<sup>3</sup>

The Taveta and their country.

All the Taveta respect the ground-hornbill (*mudide*, in Kiswahili *ndite*), a large black bird with red gills and white markings on its wings. It is believed that anybody who kills one of these birds will be struck down by a mysterious disease which will carry him off in a few days.<sup>4</sup> But being revered

The Taveta respect the ground-hornbill.

<sup>1</sup> From Mr. Hollis's unpublished papers, which he has very kindly placed at my disposal.

<sup>2</sup> A. C. Hollis, "Notes on the History and Customs of the People of Taveta, East Africa," *Journal of the African Society*, No. I. (October 1901) p. 98.

<sup>3</sup> A. C. Hollis, in *Journal of the African Society*, No. I. p. 118.

<sup>4</sup> A. C. Hollis, *op. cit.* pp. 103 sq. Mr. Hollis writes to me (27th May 1908) that the sacred bird is the ground-hornbill, not the turkey-buzzard as he stated in the paper referred to. With regard to the

Totemic families of the Taveta.

by the whole people the ground-hornbill cannot properly be described as a totem. However, the Taveta are divided into four clans, each of which is subdivided into a number of totemic families. The following is a list of the families with their sacred objects, which we may call their totems:—<sup>1</sup>

Family.	Totem.
Muinjari-wa-Kakuku	None.
Shomi	Grant's gazelle ( <i>Gazella granti</i> ; native Kitaveta name <i>datari</i> ).
Moserengi	
Muinjari-wa-Mesera	Impala antelope ( <i>Aepyceros melampus</i> ; native name <i>sarigha</i> ).
Ndighiri-wa-Mbele	
Ndighiri-wa-Mkamati	Vegetable called in Kitaveta <i>mnabu</i> , in Kiswahili <i>mnavu</i> .
Suiya	
Chokawa	Spleen of any animal.
Mborio	
Mrambeni	
Ngumba	
Kwisu-wa-Ugweno	
Kwisu-wa-Uru	A small kind of pigeon called in Kitaveta <i>kihunguru</i> .
Dakama	
Manyi	Portion of the stomach of any animal (in Kitaveta <i>kita-shira</i> ).
Mbale	
Somandzi-wa-Reta	
Muru	
Somandzi-wa-Kahe	
Somandzi-wa-Kiruvani	Mushroom.
Somandzi-wa-Umba	
	A monkey ( <i>Cercopithecus-viridis-griseo</i> ; in Kitaveta <i>ngima</i> , in Kiswahili <i>kima</i> ).
	A tree called <i>mringaringa</i> much employed for the purpose of making beehives or honey-barrels.

The sub-families or subclans of the Taveta are exogamous.

In regard to rules of marriage Mr. A. C. Hollis informs me<sup>2</sup> that the totemic families or clans, as he would now call them, of the Taveta are not exogamous, but that the

ground-hornbills of Africa we are told that since the days of Bruce there are few African travellers who have not met with and described these birds, whose large size and fearless habits render them conspicuous as they walk or run on the ground or perch on trees when they are disturbed. The

genus is found from Abyssinia to Natal. See Alfred Newton, *Dictionary of Birds* (London, 1893-1896), pp. 433 sq.

<sup>1</sup> A. C. Hollis, in *Journal of the African Society*, No. I. pp. 98, 104.

<sup>2</sup> In a letter dated Nairobi, East Africa Protectorate, June 15th, 1909.

subfamilies or subclans are so ; that is, a man may marry a woman of his own totemic family or clan, provided that she does not belong to the same subfamily or subclan as himself. Thus, for example, a Taveta man of the Somandzi-wa-Kahe family or clan may marry a woman of that clan, provided that they do not both belong, say, to the Mnene-wa-Somandzi subfamily or subclan. Again, a man and woman of the Kwisu-wa-Ugweno family or clan may marry each other, provided that they do not both belong to the same subdivision of it. In these respects the marriage rules of the Taveta agree with those of the Masai.<sup>1</sup>

When a man dies, his possessions are divided among his sons, the eldest receiving the lion's share, and his wives go to live with his eldest surviving brother, or, if there is no brother, with the eldest surviving cousin (father's brother's son). A woman inherits nothing.<sup>2</sup>

Like the Masai, the Taveta are divided into age-grades. Each "age" (*irika*, in Kiswahili *hirimu*) is a period of fifteen years and has a special name. The government of the country is entrusted for periods of about fifteen years to the men of one of these age-grades, at whose head are four middle-aged chiefs. It is said that the members of a particular age-grade come into power whenever they can kidnap the daughter of one of the ruling chiefs or one of his contemporaries. In this they are aided by the elders of the former age-grade, who went out of power some fifteen years before, when the reigning age-grade came in ; for these deposed elders are glad to treat the rulers for the time being as those rulers once treated them. In olden times the reigning chiefs and their fellows never suffered themselves to be ousted without a battle-royal, and it was with some difficulty and danger that the younger men seized the reins of government. Formerly it was a matter of no small consequence to belong to the reigning age-grade, for two-thirds of the spoils of war and of the duty (*hongo*) leviable on all caravans passing through the country were appropriated by the chiefs and their contemporaries, while the rest went to the witch-doctors and the other old men.<sup>3</sup>

## § 5. Totemism among the A-kamba

Country  
of the  
A-kamba.

The A-kamba or Wakamba are a Bantu tribe in the British East Africa Protectorate. They occupy a triangular stretch of country some ninety miles wide from east to west by a hundred and fifty miles long from north to south. Roughly speaking, their territory is bounded on the west by the Uganda Railway from Mutito Andei to Kiu stations and thence northward by a line running as far as the eastern slopes of Mount Donyo Sapuk; on the north it is bounded by the Tana river and from the junction of the Thika and Tana by a line running east as far as the northern end of the Mumoni range and onward to  $38^{\circ} 30'$  East Longitude; while on the east the boundary runs south along that meridian as far as  $2^{\circ} 30'$  South Latitude.

Mr. C. W.  
Hobley's  
researches  
among the  
A-kamba.

The tribe, which is said to be probably the purest Bantu race in British East Africa, has lately been studied with care by the Administrator, Mr. C. W. Hobley. He has collected a large amount of unpublished information on the tribe, and generously allows me to draw on his manuscript materials. The following account of the social and totemic system of the A-kamba is accordingly based on his researches.<sup>1</sup>

Mode of  
life of the  
A-kamba.

The people call themselves in the plural A-Kamba (singular Mu-Kamba), though they are more generally known as Wakamba (with the Kiswahili prefix Wa—meaning "people"). I shall retain their own form of the name. They are a sturdy race of husbandmen, who raise a large variety of crops, including sorghum, eleusine grain, sugar-cane, sweet potatoes, yams, beans, manioc, pumpkins, and bananas. They also keep cattle, sheep, goats, and bees; they are skilful at working iron and copper wire into bracelets, necklaces, and so forth; and they make pottery without the use of the wheel. Their houses are of the common circular type with walls about four feet high and a conical roof. They kindle fire by twirling a piece of hard wood on a

<sup>1</sup> For an earlier account of the A-kamba or Wakamba, see J. M. Hildebrandt, "Ethnographische Notizen über

Wakamba und ihre Nachbarn," *Zeitschrift für Ethnologie*, x. (1878) pp. 347 sqq.

piece of soft wood, using dry leaves as tinder. In war the only weapons they carry are bows and arrows, swords and clubs; unlike the southern Bantu tribes they do not employ spears and shields. They are very good shots with the bow; nearly all their arrows are envenomed with a poison made from the *muvai* tree and the poison gland of the scorpion.

The A-kamba are divided into a large number of exogamous clans, some at least of which appear to be totemic. Two classes of clans are distinguished, namely the original clans and the subdivisions of them. For example, Mu-tui is an original clan and there are three subdivisions of it, namely Mu-Sii, Mu-Mui, and Mwa-Ithangwa. Originally members of these subdivisions were not allowed to marry each other, though curiously enough they might marry back into the original stock. Thus a Mu-Sii might not marry a Mu-Mui, but either of them might marry a Mu-Tui. But this custom is not rigorously enforced nowadays; for they say that the numbers of each clan are becoming so great that the intermarriages in question are no longer regarded as a serious offence. A man may marry more than one wife from one clan or subdivision of a clan, but he may not marry two sisters. The widespread custom of providing a visitor with a temporary wife prevails among the A-kamba; but the woman thus lent to a guest must not be a member of his own clan. The totemic prohibitions recorded by Mr. Hobley are few in number. Thus, among the clans (*mbai*) of the Kitui district, the Ngutu have the liver of animals for their totem (*uthuku*); another, the Ndewa, is prohibited from killing a species of kite (*mbungu*). Among the clans (*mbai*) of the Mumoni district, the Ba-Nzi are forbidden to eat the lungs and the Ba-Lema to eat the liver of any animal; one half of the Ba-Mutongoi may not eat pig's flesh, and several clans are debarred from eating the flesh of the bush-buck. This bush-buck (called by them *ndoya* or *ndwaya*) is one of the principal totems of the A-kamba. Members of the Eombi clan are particularly strict in observing the taboo. It is said that some hunters once broke out into dreadful sores in consequence of killing a bush-buck; so they tabooed the animal for the future. People who have the bush-buck for their totem may not

Exogamous clans among the A-kamba.

Totemic taboos among the A-kamba.

Prohibition to keep a tame animal of the totemic species.

keep a tame animal of the species in their village; they are forbidden to touch a bush-buck or even to wear pieces of its skin. Members of the Asi clan are very strict observers of their own particular taboo, which is the prohibition to eat liver. Were an Asi man to eat liver, it is believed that his eyes would weep continually afterwards. Women have to observe the totemic taboos equally with the men, and in addition they may never eat the tongue or heart of an animal. A married man is forbidden to eat the totem animal of his wife's clan, and so are his children.

A man may not eat his wife's totem.

Birds and beasts of omen among the A-kamba.

Apart from their totemic animals the A-kamba regard other birds and beasts with superstitious respect or fear and draw omens from their appearance. Thus there is a small kind of woodpecker with a red head called *ngoma komi*, which the A-kamba will not kill. If it calls out on the left side of a traveller, it is a good omen and may lead the lucky man to a dead elephant. If it sings out on the traveller's right side, the omen is not good; but if it calls out ahead of the wayfarer, he may count on being attacked by a lion or a rhinoceros. If a hyæna or jackal crosses your path from left to right, it is auspicious; but if it crosses the path from right to left, it is inauspicious. The ground-hornbill (*ndundu*) is a bird of ill omen. If it perches on a tree near a village so as to overlook the village and utters its deep bass booming note, some one in the village is sure to sicken and die within a few days; so people place broken cooking-pots in the trees near a village to frighten away the birds. These examples shew, what should be obvious without them, that totemic peoples entertain superstitious beliefs in regard to animals other than their totems and draw omens from them; which should be a warning against rashly inferring that a beast or bird of augury must necessarily be a totem. The truth is that totemism is only one of a multitude of forms in which superstitions touching animals and plants have crystallised.

Story of the chameleon, the frog, and the thrush, how the

The A-kamba have also a great wealth of folk-tales, in which birds and beasts play conspicuous parts without having anything to do with totemism. One of them is clearly akin to the Bechuana story of the origin of death.<sup>1</sup> Once on a

<sup>1</sup> See above, pp. 376 *sq.*

time, so say the A-kamba, God (*Engai*) sent out the chameleon, a frog, and a bird called *itoroko*, which is a kind of thrush with a black head and a buff breast (*Cossypha irnolacus*). The three were charged by God to find people who died one day and came to life again the next. So off they set, the chameleon leading the way, for in those days he was a very important person indeed. They came to some people lying like dead; so the chameleon went up to them and said softly *Niwe, niwe, niwe*. That annoyed the thrush, and he asked the chameleon testily what he was making that noise for. The chameleon answered, "I am only calling the people who go forward and then come back." He said that the dead could come back to life, but the thrush derided the idea. Sure enough, however, in response to the call of the chameleon the dead people opened their eyes and listened to him. But here the thrush cut in and told them that dead they were and dead they must remain. Then away he flew, and though the chameleon preached to the corpses, telling them he had come from God to resuscitate them, and that they were not to believe the lies of that shallow sceptic the thrush, nevertheless the corpses obstinately refused to budge. So the chameleon returned to God and reported to him what had happened, and how when he preached the resurrection to the dead corpses the thrush had roared him down, so that the corpses could not hear a word he said. God then cross-questioned the thrush, who said that the chameleon so bungled his message that he felt it his imperative duty to interrupt him. The confiding deity believed the thrush and being very angry with the chameleon he degraded him from his high estate and made him walk so slow, lurching to and fro before every step he takes. But God promoted the thrush to the office of wakening mankind from their slumber every morning, which he does punctually at 2 A.M., two hours before the note of any other bird is heard in the tropical forest.

Every married woman among the A-kamba is thought to have two husbands, the one corporeal and the other spiritual. Her fertility is believed to depend on the attentions of her spiritual husband, who is the spirit of one

chameleon preached the resurrection to some corpses, and they refused to believe him.

Spiritual husbands among the A-kamba.

of her ancestors; and if she does not bear children, a ceremony is performed to propitiate the spiritual spouse.<sup>1</sup>

Mutual avoidance of a man and his wife's mother.

Among the A-kamba, as among so many exogamous peoples, a man has to avoid his mother-in-law. If they meet in the road, they both hide their faces and pass by in the bush on opposite sides of the road. Were a wife to hear that her husband had stopped and spoken to her mother in the road, she would leave him. When a man has business to discuss with his wife's mother, he goes to her hut at night and she will talk to him from behind a partition.<sup>2</sup> However, the A-kamba have a way of ridding themselves of this burdensome restriction. A man who wishes to do so, gives due notice of his intention, and then on a certain day the people of the neighbourhood assemble at the village where his mother-in-law lives. There they dance and feast at his expense, and he also formally presents a blanket both to his father-in-law and to his mother-in-law. After that he may communicate freely with his wife's mother.

Between the age of puberty and her marriage a girl must avoid her own father.

Between the age of puberty and the time of her marriage a girl has in like manner to avoid her own father. If they meet in the road, she hides while he passes; nor may she ever go and sit near him in the village until the day comes when he tells her that she is betrothed to a certain man. After her marriage she does not avoid her father in any way. This prohibition of ordinary social intercourse between a father and his daughter so long as the girl is mature and unmarried can hardly be interpreted otherwise than as a precaution designed to prevent an improper intimacy between the two. The rule therefore confirms the like interpretation of all similar rules of avoidance between relatives of different sexes.<sup>3</sup>

### § 6. *Totemism among the Mweru*<sup>4</sup>

The Mweru are a very large tribe of the British East Africa Protectorate, inhabiting the northern and north-

<sup>1</sup> This interesting information as to spiritual husbands among the A-kamba I derive from a letter of Mr. C. W. Hobley to me. The letter is dated Nairobi, British East Africa, 21st June 1909.

<sup>2</sup> The rule of avoidance of a wife's mother has also been recorded for the A-kamba by Mr. L. Declé (*Three Years in Savage Africa*, p. 490).

<sup>3</sup> See above, pp. 77 sqq., 188 sq.

<sup>4</sup> For the following account of

eastern slopes of Mount Kenia and the Jombeni range. They are not pure A-Kikuyu, but appear to have a strong strain of Masai blood. They are divided into exogamous and totemic clans called *mwiria*. No man may marry a woman of his own clan, but must seek a wife in another. The members of each clan have a distinctive badge or pattern, which they mark on their honey-pots; they have other marks for their cattle, which are made on the ears and flanks of the beasts. Each clan has its totem called *netiri* or "the forbidden thing." When the totem is an edible object, a youth may not eat it until he is adult and has been initiated. His father makes medicine and performs a certain ceremony in which the youth has to take part. The young man can then eat his totem without suffering any ill effects from so doing. The following is a list of Mweru clans with their totems, so far as these are known:—

The Mweru are divided into exogamous and totemic clans (*mwiria*).

A man may eat his totem after initiation.

List of Mweru clans and totems.

Clan ( <i>mwiria</i> ).	Totem ( <i>netiri</i> ).
1. Ntwaita (in the Mweru language <i>ku-ita</i> means "to cut")	The twine with which their <i>vyondo</i> or baskets are made.
2. Athanya . . . . .	
3. Njaru . . . . .	White cattle.
4. Nthia . . . . .	Speckled or mottled cattle.
5. Ntuni . . . . .	Red cattle.
6. Amakui . . . . .	A plant called <i>mukui</i> which has an edible root.
7. Athinga . . . . .	Giraffe.
8. Antuanthama ( <i>antu</i> in the Mweru language means "people")	Mpala.
9. Singamburi . . . . .	Goats.
10. Antwa mwakia ("the greedy people")	Neotragus ( <i>dik-dik</i> ).
11. Angilo . . . . .	Black cattle.
12. Mwianda ( <i>anda</i> is the Mweru word for "louse")	Lice.
13. Amatu ( <i>matu</i> in Mweru means "ears")	Francolin, a kind of partridge (in Swahili, <i>Kiringende</i> ).

Mweru totemism I am indebted to the kindness of Mr. C. W. Hobley, who

has very courteously placed his unpublished materials at my disposal.

Tradition-  
ary origin  
of the  
Ntowitzai  
clan.

The first of these clans, the Ntowitzai, is the dominant one. There is a legend to explain the origin of the name, which is supposed to come from a verb *ku-ita*, "to cut." The clan say that once when they were hard pressed by their enemies, who penned them in on the banks of a river, their medicine-man (*laibon*) by his magic art opened a passage for them through the waters, which, after they had passed over on dry land, closed up again behind them, thus presenting an impassable barrier to their pursuers.

### § 7. Totemism among the Suk, Maragwetta, and Kamasia

The district  
of Baringo  
and its  
people.

The tribes which inhabit the large district of Baringo in the British East Africa Protectorate have recently been investigated by the Hon. K. R. Dundas, and he has discovered the existence of totemism and exogamy in several of them. Through the kindness of Mr. A. C. Hollis I am allowed to extract from Mr. Dundas's unpublished papers the following account of the people and their social system.<sup>1</sup>

The  
pastoral,  
nomadic  
tribes of  
the plains,  
and the  
agricul-  
tural tribes  
of the hills.

The district of Baringo stretches from Lake Rudolph on the north to Lake Hannington on the south, and from the eastern wall of the Great Rift Valley on the east to the Kamasia Hills, the Elgeyo Escarpment, and the Tirkwel River on the west. Little Lake Hannington, which terminates the Baringo district on the south, might appropriately be called the Lake of the Flamingoes, for these beautiful birds haunt the margin of the lake and its submerged banks by countless thousands, seeming in places to tinge its blue-green surface with a flush of rosy pink.<sup>2</sup> The population of the district falls naturally into two classes, the pastoral, nomadic tribes of the plains, and the agricultural tribes of the hills. To the nomad herdsmen of the plains belong the Suk and Turkana; to the husbandmen of the hills belong the Kamasia, Chebleng, Ndo, and Hill Suk. The two branches of the Suk are essentially the

<sup>1</sup> Mr. Dundas's account of the tribes of the Baringo district will probably be published in the *Journal of the Royal Anthropological Institute*.

<sup>2</sup> Sir Harry Johnston, *The Uganda Protectorate*, Second Edition (London, 1904), i. 13 sqq.

same tribe, the Suk of the plains being an overflow from the hills, whence indeed their numbers are being daily recruited. Yet the population of the plains is thin and sparse. For the country is a desert of barren rocks or drifting sands, where lines of palm trees, dotted here and there, mark afar off the courses of the wadies or dry river-beds. In these lowlands the heat during the day is so intense that the natives rarely venture out except in the cool of the morning or of the evening. All the hill tribes build their villages on terraces high up the hillside to escape the swarms of mosquitoes which infest the low country during the rains. The only crops raised by these highlanders are eleusine and millet; the country is subject to long spells of severe drought, and when their crops fail, the natives of the more arid and barren regions in the north are often hard put to it, having to eke out a miserable subsistence for months together on roots, berries, rats, and mice, with an occasional windfall of an elephant to fill their shrunken bellies. Naturally they make the most of such water as they have and are expert in the art of irrigation.

The villages and crops of the hill tribes.

The Suk or Bawgott, as they call themselves, are a tall, well-built people, slim and lithe, light of foot and nimble runners. Like most East African tribes they are a mixed race. They all speak dialects of one language which is closely akin to the Nandi tongue. The pastoral Suk, who number about three thousand all told, seem to have begun to migrate into the Baringo district in the first half of the nineteenth century. The Suk tribe is divided into exogamous and totemic clans (*orten*, singular *oro*) with paternal descent; in other words, each clan has its totem, no man may marry a woman of his own clan, and children take their clan and their totem from their father, not from their mother. The following is an incomplete list of the Suk clans with their totems:—

The Suk are divided into exogamous and totemic clans with paternal descent.

## SUK CLANS AND TOTEMS

Clan.	Totem.	Clan.	Totem.
Kagorondor . .	frog	Chebarsitch . .	lion
Kaborai . . .	"	Araboin . . .	God or rain ( <i>ellat</i> )
Chepbai . . .	"	Kibbesetim . .	" "

Moiyoi . . . .	"	Orror . . . . .	ant-eater
Kachemmergaw .	baboon	Sopan . . . . .	elephant
Kagiserr . . .	sun	Chepbau . . . .	hyrax
Saniak . . . .	kite	Chemam . . . .	{ a tree from which the
Kachigawk . .	"	Terem . . . . .	{ Suk get oil
Chibberwongo .	lion		{ ?

The levirate among the Suk.

Amongst the Suk a widow passes into the possession of a brother of her late husband ; if there is no brother, she belongs to the clan of the deceased.

The Maragwetta and Ndo are divided into totemic clans.

Chebleng is the name given to a number of tribes who occupy the western wall of the Elgeyo Valley, and of these tribes the most northerly are the Maragwetta. Beyond them, still further to the north, are the Ndo, and beyond them again the Hill Suk. The Maragwetta and Ndo resemble the Suk in their manners and customs, and like the Suk they are divided into totemic clans, but we are not told whether the clans are exogamous. Each clan occupies a separate geographical district. The following is a list of Maragwetta clans with their totems and districts :—

## MARAGWETTA CLANS AND TOTEMS

Clan.	Totem.	District.
1. Tallai . . .	<i>kogai</i> , the crow	Beya
2. Oreon . . .		Kaksegai
3. Sirichon . .	<i>seran</i> , the dik-dik, a small antelope	Katut
4. Kamugo . .	<i>kogai</i> , the crow	Kabioso
5. Tallai . . .	<i>kogai</i> , the crow	Bogorror

South of these districts are five more, each with its own totemic clan, but these have not been visited by our informant, the Hon. K. R. Dundas.

The following is a list of Ndo clans with their totems and districts :—

NDO CLANS AND TOTEMS

Clan.	Totem.	District.
1. Saban . . . . .	the elephant	Sibo
2. Tallai or Tulin . . . . .	the crow and jackal	Kapsagat
3. Kapsegom . . . . .	<i>sirere</i> , the kite	Kaksegom
4. Tallai . . . . .	<i>kogai</i> , the crow	Kapsekerr
5. Tallai . . . . .	" "	Kamarein
6. Kapsegom . . . . .	<i>sirere</i> , the kite	Kauwau
7. Tallai and Legen . . . . .	crow and frog	Mareich
8. Chepbogamwoi . . . . .	the buffalo	Kabell

The Maragwetta are very nearly related to the Elgeyo, who are allied to the Nandi. The Ndo appear to be a mixture of Maragwetta and Suk, with perhaps a slight infusion of Masai or Samburu blood. On passing from the Hill Suk to the Maragwetta and Ndo a traveller is at once struck by the higher civilisation of the two latter tribes, whose houses, in contrast to those of the Suk, are exceedingly well built and collected in villages, which are arranged in terraces, one above the other, on the hillside, giving an impression of cleanliness and order. This superiority is probably due in great measure to the more favourable natural conditions under which they live ; for their country is fertile and well watered, so that whereas the Suk hover on the verge of starvation, the Maragwetta and Ndo are comparatively rich ; famine is hardly known among them, and every year they sell the surplus stock of their grain and tobacco to other tribes.

Perhaps the most numerous of all the hill tribes in Baringo are the Kamasia, who occupy the range of hills named after them. They form a very large and powerful tribe, divided into many geographical districts and many totemic clans. Mr. Dundas was unable to obtain a full list

Superiority of the Maragwetta and Ndo to the Suk.

The Kamasia tribe is divided into many totemic clans.

of their totemic clans ; but the following lists contain the clans in two districts, the Kapteberewa and the Nderois :—

## KAMASIA CLANS (KAPTEBEREWA DISTRICT)

Clan.	Totem.	Clan.	Totem.
1. Kapkeruwa	the sun ( <i>sot</i> )	8. Kapsonok	the sun ( <i>sot</i> )
2. Kaptogongo	” ”	9. Kapartaber	” ”
3. Kamengo	” ”	10. Kapkolumon	” ”
4. Kapchessoito	” ”	11. Tallai	the leopard
5. Kapitalangwa	” ”	12. Kawbil	the porcupine ( <i>sabet</i> )
6. Kameiwan	” ”	13. Tungaw	the hyæna ( <i>chesin</i> )
7. Kaperchino	” ”	14. Kirimos	” ”

Marriage rules of the Kamasia clans ; only two clans are exogamous.

In this list the number of clans which have the sun for their totem is remarkable. Mr. Dundas understood from the Kamasia that members of all these Sun clans were free to intermarry with each other and even to marry wives of their own clans ; indeed that the only two exogamous clans in the list are the Kawbil and Tungaw.

## KAMASIA CLANS (NDEROIS DISTRICT)

Clan.	Totem.	Clan.	Totem.
1. Kimoi	the buffalo	4. Sot	the sun
2. Mogeï	the bee	5. Kimwan	the guinea-fowl
3. Tallai	the frog	6. Terriki	the elephant

The Turkana are divided into exogamous clans, which seem not to be totemic.

Another people of the Baringo district investigated by Mr. Dundas are the Turkana. It is commonly supposed that the Suk and Turkana are closely related to each other ; but beyond a superficial resemblance due to tall stature and a common infusion of Samburu blood, Mr. Dundas failed to discover any real similarity between the two. Indeed the differences between them are many and striking. Thus whereas the Suk are very slender, the Turkana are big-limbed and heavily built ; whereas the Suk speak a peculiarly soft

language, a dialect of Nandi, the Turkana speech, which closely resembles the Masai, is deep, hoarse, and guttural; whereas the Suk circumcise both sexes, the Turkana circumcise neither; whereas the Suk are very truthful and honest, the Turkana are very untruthful and dishonest, so that a traveller in their country has to keep a sharp look-out, for they will steal everything they can lay hands on. Lastly, although the Turkana are divided into exogamous clans, these clans, unlike those of the Suk, appear not to be totemic; at least after much questioning Mr. Dundas entirely failed to find any form of totemism among them. Each sex is divided into three age-grades. The first age-grade of the males is that of the young boy (*nidue*); the second is that of the warrior (*egile*); and the third is that of the old man (*kasikou*). The corresponding age-grades of the women are called *apesur*, *aberu*, and *agemat*. The generations of warriors are called *asavanissia*. Each generation, as it attains the warrior's age, is given a distinctive name. Apparently a new age is created about every four or five years.

Age-grades  
among the  
Turkana.

### § 8. Totemism among the Nandi<sup>1</sup>

The Nandi are a tribe of mixed blood, who apparently combine elements of the Bantu, the Nile negro, the Masai, and the pigmies, with perhaps a dash of the Galla. Some of the men are tall with features almost of the so-called Caucasian type; others are dwarfish with protruding cheek-bones and low foreheads. Until 1905 they inhabited the whole of the highlands known as the Nandi plateau in the British East Africa Protectorate, extending from Mount Elgon on the north to the Nyando valley on the south, and being bounded by Kavirondo on the west and the Elgeyo escarpment on the east. The country has an

The Nandi,  
a mixed  
race.

The Nandi  
country.

<sup>1</sup> The Nandi are the subject of a valuable monograph by Mr. A. C. Hollis (*The Nandi, their Language and Folk-lore*, Oxford, 1909), on which I have freely drawn. See also C. W. Hobley, *Eastern Uganda, an Ethnological Survey* (London, 1902),

pp. 10 *sqq.*, 36 *sqq.*; *id.* "Anthropological Studies in Kavirondo and Nandi," *Journal of the Anthropological Institute*, xxxiii. (1903) pp. 325 *sqq.*; Sir Harry Johnston, *The Uganda Protectorate*, Second Edition (London, 1904), ii. 853 *sqq.*

altitude of from six to seven or even ten thousand feet above the sea; the soil is magnificent, but a great part of the land is covered with dense forest, the rainfall is very heavy, and fogs blot out the landscape for days together. The nights, too, at such an elevation are bitterly cold. Yet the scenery has much that reminds an Englishman or Scotchman of his native land. Here are swelling green downs crested with woodland as in Sussex or Surrey, roaring burns of brown water tumbling over grey rocks, forests of gaunt junipers that look at a little distance like the pines and firs of Scotland, meadows full of forget-me-nots and clover, and ferny hollows spangled with buttercups, daisies, and violets. In clear weather you may see far off, from some breezy height or at the end of a forest glade, the silvery gulfs and ghostly mountains of the Victoria Nyanza, dim and faint as dreams.<sup>1</sup>

Habits of  
life of the  
Nandi.

In the year 1905 the Nandi, having made themselves obnoxious by attacks on the Uganda Railway and on peaceful natives, were removed from their native highlands and placed in a reserve somewhat to the north of the escarpment which bears their name.<sup>2</sup> They keep cattle and raise large crops of eleusine grain and millet; they also cultivate beans, pumpkins, sweet potatoes, and tobacco. The men clear the bush for plantations and help to sow the seed and to harvest some of the crops; the rest of the agricultural work is done by the women. Most of the fields are allowed to lie fallow every fourth or fifth year. Cattle-herding is the chief occupation of the men and the big boys. They breed cattle, sheep, and goats. Formerly their herds were enormous.<sup>3</sup> The Nandi do not live in villages. Every man has his own hut or huts near his fields of eleusine grain and millet. The huts are circular, built of wattle and mud, with walls about four feet high and conical roofs of grass.<sup>4</sup> Certain women of the tribe make unglazed, but ornamented, pottery in huts built specially for the purpose.<sup>5</sup> Iron is smelted and forged by Uasin Gishu Masai, who live among the Nandi.<sup>6</sup>

Their  
houses.

<sup>1</sup> A. C. Hollis, *The Nandi* (Oxford, 1908), p. 1; C. W. Hobley, *Eastern Uganda*, p. 12; Sir Harry Johnston, *The Uganda Protectorate*, Second Edition (London, 1904), i. 28 sqq.

<sup>2</sup> A. C. Hollis, *The Nandi*, p. 1.

<sup>3</sup> A. C. Hollis, *op. cit.* pp. 17-20.

<sup>4</sup> A. C. Hollis, *op. cit.* p. 13.

<sup>5</sup> A. C. Hollis, *op. cit.* p. 35.

<sup>6</sup> A. C. Hollis, *op. cit.* p. 36.

The Nandi are divided into totemic clans (*oret*, plural *ortinuek*) which are not, however, exogamous; a man may freely marry a wife of his own clan. Each clan is subdivided into families named after the ancestors who are supposed to have been the first to settle in the Nandi country. For instance, the Kamarapa family of the Kipiegen clan are descended from one Marapa, and the Kapkipkech family of the Sokom clan are descended from one Kipkech. These families, as distinguished from the clans, observe the rule of exogamy; in other words, no man may marry a woman of the same family as himself.<sup>1</sup>

The following is a list of the Nandi clans with their totems:—<sup>2</sup>

Principal Name of Clan ( <i>oret</i> ).	Other Names (used by Women only).	Totem or Sacred Animal ( <i>tiondo</i> ).
1. Kipoiis	Mende Kerus	( <i>Leluot</i> ) jackal ( <i>Solopchot</i> ) cockroach
2. Kipkoiitim	Kâpongen Kiram-gel	( <i>Peliot</i> ) elephant ( <i>Nyiritiet</i> ) chameleon
3. Kipamwi	Ŋgemwiyo Kipketoi	( <i>Cheptirgichet</i> ) duiker
4. Kipkenda	Maiimi Maram-goŋg Ram-dolil Kuchwa Kami-pei	( <i>Segemyat</i> ) bee ( <i>Mororochet</i> ) frog
5. Kipkōkōs	Kâpsegoi	( <i>Chepkōkōsiot</i> ) buzzard
6. Kipiegen	Ingoke Katamwa Kipwalei	( <i>Moset</i> ) baboon ( <i>Muriot</i> ) house rat
7. Talai <sup>3</sup>	Kipya-kut Tule-kut Kimapelameo	( <i>Ŋgetundo</i> ) lion
8. Toiyoi	Moriso	( <i>Pirechet</i> ) soldier ant ( <i>Robta</i> ) rain
9. Kipsirgoi	Pale-kut Kâpil Malet-kam	( <i>Toret</i> ) bush pig
10. Sokom	Kâpyupe	( <i>Chepsiriret</i> ) hawk

<sup>1</sup> A. C. Hollis, *The Nandi*, pp. 4-6. We are not told whether the clans and families descend in the male or the female line.

<sup>2</sup> A. C. Hollis, *op. cit.* p. 5.

<sup>3</sup> The medicine-men, or *Orkoiik* (equivalent to the Masai '*L-oibonok*'), all belong to this clan.

Principal Name of Clan ( <i>oret</i> ).	Other Names (used by Women only).	Totem or Sacred Animal ( <i>tiondo</i> ).
11. Moi	Rarewa Kâparit-kisapony Partatukasôs	( <i>Koñgonyot</i> ) crested crane ( <i>Soet</i> ) buffalo
12. Kiptopke	Tuitokoch	( <i>Chereret</i> ) monkey ( <i>Cercopithecus griseo-viridis</i> )
13. Kâmwaïke	Kipongoi	( <i>Taiyuet</i> ) partridge
14. Tungo	Korapor Pale-pêt	( <i>Kimaketyet</i> ) hyæna
15. Kipaa	Koros	( <i>Erenet</i> ) snake
16. Kipasiso	Kâpcher-Mwamweche Kipkôyo	( <i>Koroiyeyet</i> ) Colobus monkey ( <i>Asista</i> ) sun
17. Chemur	Kâparakok	( <i>Puñguñgwet</i> ) mole ( <i>Kiptuset</i> ) wild cat

Respect  
shewn  
for the  
totemic  
animals.

In former times the killing of the sacred animal, or totem, was strictly forbidden, and any breach of this law was severely punished, the offender being either put to death or driven out of his clan and his cattle confiscated. Nowadays the custom is less rigorously enforced; it is still considered wrong to kill the sacred animal, but if its life is taken, an apology to the creature seems to be thought a sufficient reparation. Thus a man of the Elephant clan told Mr. Hollis that he had shot an elephant, his sacred animal, because it had good tusks; and when the beast lay dead on the ground, he went up to it and said, "So sorry, old fellow, I thought you were a rhinoceros." He sold the tusks to the Swahili, gave the elders a present, and the matter was hushed up. Children, however, are taught to respect the totem of their clan, and if a child were to kill or hurt his totem he would be severely beaten.<sup>1</sup>

Power of  
Bee men  
over bees.

Men of the Bee clan seem able to control bees. Once when Mr. Hollis and his carriers had been put to flight by a swarm of bees, leaving their baggage behind them, a man of the Bee clan, practically naked, went boldly among the angry insects, led them back to their nest, and returned scathless.<sup>2</sup>

Besides respecting their sacred animals, the members of

<sup>1</sup> A. C. Hollis, *The Nandi*, p. 6.

<sup>2</sup> A. C. Hollis, *op. cit.* pp. 6 sq.

the various clans are bound to do or to abstain from doing certain things. The following is a list of the several prohibitions and peculiarities.<sup>1</sup>

Taboos  
observed  
by the  
clans.

*Clan*—Kipoiis. *Totems*—jackal and cockroach

No man of this clan may take as his first wife a woman who has previously conceived; but if he has himself got her with child, then he may take her as a junior wife. The people of this clan may hunt, but may not make traps; they may not build their huts near a road; and they may not wear the skins of any wild animals except the hyrax. They may not intermarry with the Talai clan.

The  
Kipoiis  
clan.

*Clan*—Kipkoitim. *Totems*—elephant and chameleon

The members of this clan do not as a rule hunt, but they may eat all kinds of game; yet they are forbidden to wear garments made from the skins of any wild animal except the hyrax. Under no circumstances may they marry a girl who has already conceived.

The  
Kipkoitim  
clan.

*Clan*—Kipamwi. *Totem*—duiker

The members of this clan are great hunters and live largely by the chase. But they may not eat the flesh of the duiker or of the rhinoceros. None of them may plant millet, or settle in Lumbwa, or have any intercourse whatever with the smiths. They may not even build their huts near those of the smiths, nor buy their weapons directly from them, nor allow their goats to meet the goats of the smiths on the road. They are forbidden to intermarry with the Tungo clan.

The  
Kipamwi  
clan.

*Clan*—Kipkenda. *Totems*—bee and frog

No person of this clan may go to Kavirondo or to Kamasia. They may not hunt, make traps, or dig game pits; but they are free to eat all kinds of meat and wear the skins of any wild animals except the duiker. At a

The  
Kipkenda  
clan.

<sup>1</sup> A. C. Hollis, *The Nandi*, pp. 8-11.

marriage a goat must always be slaughtered when the bride is fetched home. Members of this clan may not intermarry with the Kiptopke clan.

*Clan*—Kipkōkōs. *Totem*—buzzard

The  
Kipkōkōs  
clan.

The members of this clan are forbidden to settle in Nyangori and in Kavirondo; they may not hunt and they may not wear the skins of any wild animals except the hyrax, but they may eat the flesh of all game except the rhinoceros and the zebra. They are forbidden to marry a girl who has already conceived, and they may not intermarry with the Tungo clan.

*Clan*—Kipiegen. *Totems*—baboon and house rat

The  
Kipiegen  
clan.

No member of this clan may settle in Lumbwa, or eat zebra meat, or hunt, or dig pits, or make traps, or wear the skin of any wild animal except the hyrax. They may not bleed oxen or gather honey during the rains, and they may not marry as a first wife a girl who has already conceived. But a man of the clan is allowed to take as a junior wife a girl whom either he or one of his brothers has gotten with child. Members of this clan may not intermarry with either the Kiptopke or the Tungo clan.

*Clan*—Talai. *Totem*—lion

The Talai  
clan.

Members of the Lion clan may not wear a head-dress of lion-skin nor eat the meat of an animal which has been killed by a lion. They may not settle in Nyangori or Kamasia; in battle they may only fight on the right flank; they may strike nobody on the head; and they may only bleed oxen in the morning. All children of this clan wear a necklace made of pieces of gourd, and during the circumcision festival the boys wear a necklace of beads made out of ostrich egg-shells. Members of the clan may not see the bull-roarer or the friction drums which are sounded at circumcision.<sup>1</sup> A man of this clan may not marry a girl

<sup>1</sup> As to the ceremonies observed by the Nandi at circumcision, see A. C. Hollis, *The Nandi*, pp. 52 sqq. As to the bull-roarer and friction drums, see *id.* p. 40.

who has already conceived, nor may he intermarry with the Tungo, Kipois, and Sokom clans.

*Clan*—Toiyoi. *Totems*—soldier ant and rain

If soldier ants enter the house of a member of this clan, they are requested to leave, but they are not driven out; on the contrary, the people themselves vacate the house, if necessary, until the ants have passed on. During a heavy thunderstorm members of the clan seize an axe, rub it in the ashes of the fire, and then throw it outside of the hut, exclaiming, "Thunder, be silent in our town" (*Toiyoi, sis kain-nyo*). The intention of throwing out the axe is probably to wound or at least frighten the spirit of the thunder and so drive him away. Similar means of putting an end to a thunderstorm have been adopted by savages and peasants in Europe and elsewhere both in ancient and modern times. Thus in Upper India it is still a very common practice to throw out axes and knives to scare the thunder demon;<sup>1</sup> and a cook's chopper deposited outside the house with the blade upwards is equally effective to keep off hail.<sup>2</sup> So, too, in a storm South Slavonian peasants carry out sharp-edged tools into the farmyard, in order that the witches may hurt themselves on them and stop the hail.<sup>3</sup> Italian peasants of the Romagna adopt the like means to keep the hail from their crops and vines.<sup>4</sup> During a thunderstorm some savages of New Britain stick a spear with its point upwards at the door of the hut. This, they think, will prevent the lightning from striking the hut, because he, the lightning, will fear to hurt himself on the point of the spear.<sup>5</sup> So, when the Indians of Canada were asked by the Jesuit missionaries why they planted their swords in the ground with the point upwards, they replied that the spirit of thunder was shrewd, and that if he saw the naked blades he

The Toiyoi clan.

Ceremony performed by the Toiyoi clan to stop thunder.

Similar modes of stopping thunderstorms are practised by other peoples.

would not come near the huts.<sup>1</sup> The Esthonians in Russia fasten scythes, edge upward, over the doors of their cottages in order that the demons, fleeing before the thundering god, may cut their feet on them if they try to seek shelter in the house. Sometimes for a like purpose the Esthonians take all the edged tools in the house and throw them out into the yard. It is said that, when the storm is over, gouts of blood are often found on the scythes and knives, showing that the demons have been wounded by them.<sup>2</sup> During a thunderstorm the Sakai of the Malay Peninsula run out of their houses and brandish their poles and weapons to drive away the demons.<sup>3</sup> In antiquity the Thracians used to shoot arrows at thunder and lightning and to threaten the god.<sup>4</sup> But to return to the Nandi.

Taboos  
observed  
by the  
Toiyoi  
clan.

No member of the Toiyoi clan may build in or near a forest, or wear the skin of any wild beast but the hyrax, or settle in Kamasia, Elgeyo, or Lumbwa. They prefer to elope with the girl of their choice rather than to marry her in the usual way; and they are glad if their daughters conceive before marriage, counting it a sign that as wives they will be prolific. But they may not themselves marry a girl who has already conceived. No child of the clan is named till it is six or seven years of age. The women generally wear brass instead of iron-wire ornaments.

*Clan*—Kipsirgoi. *Totem*—bush pig

The  
Kipsirgoi  
clan.

The members of this clan are mainly hunters; but they may not kill a beast which has been wounded by a member of another clan. Also they may not touch a donkey nor allow one to graze near their herds. For his first wife a man of this clan must always choose a girl who has already conceived; and if necessary he must capture her and arrange about the purchase-money with her parents afterwards.

p. 110.

<sup>3</sup> Lieut.-Col. James Low, "The Sakai," *Journal of the Indian Archipelago*, iv. (Singapore, 1850), p. 430.

<sup>4</sup> Herodotus iv. 94.

*Clan*—Sokom. *Totem*—hawk

The members of this clan may not settle in Kavirondo or Lumbwa; they may not eat the flesh or wear the skin of the duiker, but with that exception they may eat any kind of meat and wear the skin of any wild animal: they must always live apart and build their huts away from those of other people; and they must make their own fire by the friction of fire-sticks. They may not intermarry with the Tungo, Kiptopke, and Talai clans.

*Clan*—Moi. *Totem*—crested crane and buffalo

The people of this clan are not allowed to settle in Kamasia or raid in Kavirondo. They may not build in or near a forest, nor take small boys prisoners to adopt them, nor wear a garment made of the skin of a duiker or a bush-buck. Their first wife must be a woman who has never borne a child. When they shift their kraals or break down their huts, they must choose a site to the east of their former abode. Three days before a circumcision festival begins, the members of this clan perform a special ceremony called *kireku leget*. The cattle of this clan are not branded like most Nandi cattle, but ear-marked.

*Clan*—Kiptopke. *Totem*—monkey (*Cercopithecus griseo-viridis*)

This clan may not dig pits for game nor make traps, and their cattle may not pass the night outside of their own kraal. Members of the clan may not intermarry with the Kipkenda and Sokom clans.

*Clan*—Kámwaïke. *Totem*—partridge

No member of this clan may settle in Nyangori or marry a girl who has already conceived. The clan is forbidden to intermarry with the Kipaa and Tungo clans.

*Clan*—Tungo. *Totem*—hyæna

This clan is held in high esteem, and one of their number is chosen as a judge or umpire in all disputes.

It falls to them to close the roads against the attack of an enemy and to form the rear-guard in a retreat. No man of this clan may elope with a girl if her parents refuse their consent, and he may not ask for a bride till the girl has performed a ceremony called *kâpkiyai*. The marriage price for a girl of the clan is less than for the girls of any other clan, being only one ox and five goats. When a hyæna howls at night, the women of the clan do not flick their ox-hide covers till it stops, as do the women of all the other clans; and when the corpse of a man of the clan is thrown out in the usual way for the hyænas and they do not devour it at once, the body may not be turned over on its other side like the bodies of other people.<sup>1</sup> The clan does not intermarry with the Kipamwi, Kipkōkōs, Kipiegen, Talai, Sokom, and Kâmwaïke clans.

*Clan*—Kipaa. *Totems*—snake and Colobus monkey

The Kipaa  
clan.

Members of this clan may not hunt or make traps, and they may wear the skin of no wild animal except the hyrax. They may only bleed their cattle in the morning during the rains, and they may not intermarry with the Kâmwaïke clan. Whenever it is possible, a member of this clan is engaged to plant the *korosiot* sticks, which are planted in a circle near the back entrance of the bridegroom's hut at marriage.<sup>2</sup>

*Clan*—Kipasiso. *Totems*—sun and mole

The  
Kipasiso  
clan.

People of this clan may not catch rain water in vessels or use it for cooking. If a goat sniffs at their grain or walks over it when it is spread out to dry or ripen, they may not use it except for feeding unnamed children. With them the ceremony of naming a child is not performed till the child is six or seven years old. When people of the clan make porridge, they must first of all sprinkle a little spring water on the fire. They may drink milk one day after eating game.

The  
Chemur  
clan.

There is another clan called Chemur, which has the wild

<sup>1</sup> A. C. Hollis, *The Nandi*, pp. 7, 11, 70 sq.

<sup>2</sup> A. C. Hollis, *op. cit.* pp. 11, 62 sq.

cat for its totem ; but its taboos and peculiarities are not known.

All the names of the Nandi clans, as well as the names applied to them by women, have meanings, but the meanings of many of them are obscure.<sup>1</sup> However, some of the names of the clans are clearly derived from their totems. Thus the Kipkōkōs clan takes its name from its totem the buzzard (*chepkōkōs*); the Kipasiso clan takes its name from its totem the sun (*asis*); and the Kipaa clan takes its feminine name Koros from its totem the Colobus monkey (*koroiit*). The name of the Toiyoi clan means "thunder" (*toiyoi*); and we have seen that members of this clan perform a ceremony to stop a thunderstorm.<sup>2</sup> Hence we may conjecture that thunder as well as rain is, or used to be, one of their totems, and that like the Arunta and other tribes of Central Australia they claim the power of controlling their totem by magic. The Kipamwi clan has for its totem the duiker, and the animal is sometimes called by the same name (*kipamwi*). Kami-pei, one of the women's names for the Kipkenda clan, means "those who eat water"; and the name is appropriate, since one of the totems of the clan is the frog. Pali-pet, one of the women's names for the Tungo clan, means "those who go to bed in the morning," and clearly alludes to the nocturnal rambles of the hyæna, which is one of the totems of the clan. The name of the Moi clan means "calf," and doubtless refers to the buffalo, which is one of the totems of the clan. Again, Rarewa is one of the women's names for the same clan, and it means "heifer." With these examples before us we may guess that many of the other names for the Nandi clans are derived from their totems, though their meanings are now obscure.

While one of the Nandi clans has for its totem the hyæna, all the Nandi, like most tribes of East Africa, hold that animal in respect or fear, apparently because it devours corpses and may thus be supposed to be physically akin to the living as well as to the dead, since it has absorbed the flesh and blood of their kinsmen. The Nandi expose

The names of some of the Nandi clans are derived from their totems.

The hyæna is held in respect or fear by all the Nandi, whether it is their totem or not.

<sup>1</sup> For the following remarks on the names of the Nandi clans I am indebted to a letter of Mr. A. C. Hollis (dated 3rd September, 1908).

<sup>2</sup> See above, p. 437.

The Nandi  
expose  
their dead  
to the  
hyænas.

the bodies of their dead near their huts in order that they may be eaten by the hyænas. The relations who lay the corpses on the ground call to the animals to come and eat them ; and if on the second day after the death they find that the body has not been touched by the brutes, they kill a goat and place the flesh on and near the corpse, in the hope of attracting the attention of the hyænas.<sup>1</sup> Hence naturally enough the Nandi imagine that hyænas hold communication with the spirits of the dead and can talk like human beings. When several children in one family have died, the parents place the next newly born babe for a few minutes in a path along which hyænas are known to walk ; for they hope that these brutes will intercede with the spirits of the dead, and that the child may live. They will not molest a hyæna prowling round their houses, though they will not hesitate to kill or wound him on unappropriated land. Nobody dares to imitate the cry of a hyæna under pain of being banished from the tribe or of being refused a husband or wife in marriage. If a child so far forgets itself as to mimic the howl of a hyæna, he may not enter the hut till a goat has been slaughtered and the excrement rubbed on him, no doubt as a form of purification ; after that he is soundly thrashed. While a hyæna howls at night, all Nandi women, except those of the Tungo clan, flick their ox-hide coverlets till the melancholy sound dies away in the darkness. If the droppings of a hyæna are found on a plantation, the corn is deemed unfit for use until the field has been purified by a person from Kamasia, who receives a goat for his pains.<sup>2</sup> These Nandi superstitions about the hyæna are another instance of the respect in which among a totemic people an animal may be held by persons who have not got it for their totem. I call attention to such superstitions for the sake of warning my readers against the common error of hastily concluding that any animal which a savage treats with a superstitious regard must needs be his totem.

Punish-  
ment for  
imitating  
the cry of  
a hyæna.

The same association with the dead probably explains the widespread veneration in which the hyæna is held by the Wanika of East Africa. Thus we are told that "the

<sup>1</sup> A. C. Hollis, *The Nandi*, pp. 70 sq.

<sup>2</sup> A. C. Hollis, *op. cit.* p. 7.

greatest funeral ceremonies held by the Wanika are those which they get up on the death of hyænas. They regard that animal with the most singular superstition. They look upon it as one of their ancestors, or in some way associated with their origin and destiny. The death of the hyæna is the occasion of universal mourning. The *mahanga* (wake) held over a chief is as nothing compared to that over the hyæna. One tribe only laments the former, but all tribes unite to give importance to the obsequies of the latter."<sup>1</sup> It is true that the Wanika do not, like the Nandi, regularly expose their dead to be devoured by hyænas; on the contrary, they bury them in deep, well-dug graves. But the bodies of the friendless, of criminals, and of other exceptional persons, are thrown into the woods or among the rocks to be the prey of prowling hyænas.<sup>2</sup> This custom may have sufficed to ensure to the animal the place which it occupies in the religion of the Wanika. Certainly the universality of the respect in which the foul animal is held by the Wanika nation proves that it cannot be a totem; for a totem is regularly the sacred animal of a section of a people, not of the whole.

The whole Wanika people mourn the death of a hyæna; but the animal is not their totem.

Amongst the Nandi on a man's death his sons inherit his flocks and herds, the bulk of the property going to the eldest son of the principal wife. When an unmarried warrior or a man with no sons dies, his brothers inherit his property. If he has no brothers, his step-brothers are his heirs, and failing them his paternal cousins succeed.<sup>3</sup> Thus the Nandi have father-kin in the matter of inheritance. Yet a trace of mother-kin survives among them in the position of influence and authority which the maternal uncle occupies in the family. An understanding exists between a boy and his mother's brother such as exists between no other relations. When a boy is in disgrace, his mother's brother is asked to intervene on his behalf. The nephew may not be circumcised, or have his teeth extracted, or have the lobes of his ears pierced, without the leave of his maternal uncle. It is always usual for warriors to give their maternal uncle a cow after a raid in

Rules of inheritance among the Nandi.

Trace of mother-kin in the power of the maternal uncle over his sister's son.

<sup>1</sup> Charles New, *Life, Wanderings, and Labours in Eastern Africa* (London, 1873), p. 122.

<sup>2</sup> Charles New, *op. cit.* pp. 121, 122.

<sup>3</sup> A. C. Hollis, *The Nandi*, pp. 72 sq.

return for the kindness he shewed them in childhood. The most terrible thing that can happen to a Nandi is to displease his maternal uncle. If he does so, the uncle formally curses his nephew by scratching his shin till the blood flows, rubbing in ashes, and saying, "The child of our child! May this blood eat thee, for we gave life to thy mother that she might bear thee." It is believed that a nephew so cursed will die in a few days unless by a present of cattle he can persuade his uncle to remove the curse.<sup>1</sup>

The  
levirate.

Among the Nandi a widow nominally becomes the property of either the next elder or next younger brother of her late husband; but often she lives in her old home with one of her sons or goes to reside with her father or a brother.<sup>2</sup>

Unclean-  
ness of the  
manslayer.

A Nandi who has killed a member of his own clan is regarded as unclean for the rest of his life, unless he can kill two other Nandi of a different clan and can pay the fine himself. He may never again enter any cattle-kraal except his own, and whenever he wishes to enter a hut he must strike the earth twice with a rhinoceros-horn club before he crosses the threshold.<sup>3</sup>

The  
classifi-  
catory  
system of  
relation-  
ship among  
the Nandi.

The Nandi possess the classificatory system of relationship. Thus a person of any age or sex applies the same term of address to his or her father, to his or her father's brothers, and to the husbands of his or her mother's sisters. He or she applies the same term of address to his or her mother, to his or her mother's sisters, and to the wives of his or her father's brothers. Referring indirectly to his brothers and sisters, and to his first cousins the children either of his father's brothers or of his mother's sisters, he applies the same term *tupchet* to them all. A man refers to his own sons and daughters by the same term *lakwet* by which he refers to the sons and daughters of his brothers.<sup>4</sup> The terms of relationship differ according as the relation is addressed directly or referred to indirectly; and in some cases the terms of address differ according to the age and sex of the speaker. Thus a father is referred to as *kwanda* or *kwaniŋ*, but addressed as *papa* by a boy, as *apoioyo* by a

<sup>1</sup> A. C. Hollis, *The Nandi*, p. 94.

<sup>2</sup> A. C. Hollis, *op. cit.* p. 73.

<sup>3</sup> A. C. Hollis, *op. cit.* p. 74.

<sup>4</sup> A. C. Hollis, *op. cit.* pp. 92 sq.

man, and as *pakwa* by a girl or woman. A mother is referred to as *kamet* or *kametit*, but addressed as *korket* by a man and as *eiyo* by a boy, girl, or woman.<sup>1</sup>

While the Nandi people are divided genealogically into clans and families, they are also divided socially, like the Masai, the Taveta, and the Turkana, into what are now called age-grades, which are determined, as the name implies, not by the descent but by the age of their members. As such age-grades are common in savage communities and appear to have been instrumental in building up the classificatory system of relationship,<sup>2</sup> which in turn is intimately bound up with exogamy, they deserve to be noticed in this book. Among the Nandi the male sex is divided into boys, warriors, and elders; and the female sex is divided into girls and married women. The first stage for both sexes continues till circumcision, which is performed both on boys and girls. Roughly speaking, the ceremony of circumcision is performed about the age of puberty. It may take place between the ages of ten and twenty, but most commonly it is performed on boys between fifteen and nineteen. A festival of circumcision for boys is celebrated about every seven and a half years and lasts for a couple of years. All boys who are circumcised at the same time are said to belong to the same age or cycle (*ipinda*).<sup>3</sup> There are seven ages in all, which make up a total of about fifty-three years. They always bear one of the following names and succeed each other in the following order:—

Age-grades  
among the  
Nandi.

The seven  
ages.

*Maina* (small children, who will be circumcised about 1915).

*Nyonge* (boys between 10 and 20; their circumcision festival began in 1907).

*Kinnyike* (men between 18 and 28, circumcised about 1900).

*Káplelach* (men between 26 and 36, circumcised about 1892).

*Kipkoiimet* (men between 34 and 44, circumcised about 1885).

*Sowe* (men between 42 and 52, circumcised about 1877).

*Juma* (men between 50 and 60, circumcised about 1870).

In each age or cycle there are three subdivisions called

<sup>1</sup> A. C. Hollis, *The Nandi*, pp. 92 sq.

<sup>2</sup> See above, vol. i. pp. 179 sq.

<sup>3</sup> A. C. Hollis, *The Nandi*, pp.

11 sq., 52 sqq. Since the Nandi were removed to their reserve (see above, p. 432), they have so far altered the custom that boys are now circumcised every year or so, like girls.

fires (*mat*, plural *mostinuek*), probably because the members of each subdivision associate round their own fires, and do not allow the members of the other subdivisions to join them.<sup>1</sup>

Ceremony of transferring the guardianship of the country from the men of one age-grade to another.

About every seven and a half years the guardianship of the country is solemnly transferred from the men of one age, now grown old, to the men of the age immediately succeeding them. The ceremony at which the transference takes place is one of the most important in the Nandi annals. The last was performed about 1904, the next will take place about 1911. All the adult male population, so far as possible, gather at a certain spot; but no married warrior may attend, nor may he or his wife leave their houses while the ceremony is being performed. The Chief Medicine Man (*Orkoiyot*) must be present; and the ceremony opens with the sacrifice of a white bullock, which is purchased by the young warriors for the occasion. After the meat has been eaten by the old men, each of the young men makes a small ring out of the hide, and puts it on one of the fingers of his right hand. A circle is then formed round the Chief Medicine Man, who stands near a stool, about which is heaped cow dung studded with the fruit of the *lapotuet* shrub (*Solanum campylanthum*). All the old men and the members of the age immediately preceding the one in power stand up, whilst the warriors who are going to receive the control of the country sit down. On a sign from the Chief Medicine Man the members of the preceding age strip themselves of their warrior's garments and don the fur robes of old men. The warriors of the age in power, that is, those who were circumcised about four years before, are then solemnly informed that the safety of the country and the welfare of the people are committed to their hands, and they are exhorted to guard the land of their fathers. After that the people disperse to their homes.<sup>2</sup>

### § 9. Totemism in Kavirondo

Kavirondo, the country and the people.

Kavirondo is a district of British East Africa at the north-eastern end of Lake Victoria Nyanza. It is a rolling

<sup>1</sup> A. C. Hollis, *The Nandi*, p. 12

<sup>2</sup> A. C. Hollis, *op. cit.* pp. 12 sq.

As to the fur robes (*karosses*) of the old men, see *id.* pp. 28 sq.

grass country, breezy and healthy, at a height of from four thousand to five or six thousand feet above the sea, but much warmer and sunnier than the bleak highlands of Nandi, which bound it on the east. The contrast, too, is striking between the tiny cultivated plots of the Nandi and the miles and miles of cornland in Kavirondo. Where the land is not in tilth, the prairies are gorgeous with wild flowers, notably with sunflowers, which turn some of the hillsides into a blaze of yellow. The people, who have been described as "ebon statuary," are more flourishing and happy, better fed, and stronger than their eastern neighbours the Nandi. Men and women work naked in the fields. They live in clusters of straw huts which glisten like gold in the sun and are surrounded by an immense floral hedge gay with the pink blossoms of the acanthus and the coral red of the aloes. Their staple food is grain, supplemented by sweet potatoes and bananas.<sup>1</sup>

The population of Kavirondo comprises tribes of several different stocks, which may be distinguished as the Bantu Kavirondo, the Nilotic Kavirondo, the Masai, and the Eldorobo. Under the Bantu Kavirondo are included the Awa-Rimi, the Awa-Ware, and the Awa-Kisii; under the Nilotic Kavirondo are the Ja-Luo and the Elgumi or Wamia; while of the Masai stock the only representatives in the country are the Guasangishu, who have given up their nomadic habits and live in scattered settlements among the Kavirondo. The Eldorobo are an aboriginal tribe of wandering hunters, who roam the forests of the Mau plateau and are very rarely seen by Europeans. They live chiefly on the flesh of the Colobus monkey and other small mammals, which they shoot with poisoned arrows, and they also collect much wild honey.<sup>2</sup>

The natives of Kavirondo, both of the Bantu and of the Nilotic stock, are divided into totemic clans, which, in contrast with those of their neighbours the Nandi, are exogamous. To this difference in the social systems of

Different stocks in the population of Kavirondo.

The natives of Kavirondo, both of the Bantu and of the

<sup>1</sup> C. W. Hobley, *Eastern Uganda, an Ethnological Survey* (London, 1902), p. 13; Sir Harry Johnston, *The Uganda Protectorate*, i. 34, 44 sqq.

pp. 7-11. As to the Kavirondo people, see also Sir Harry Johnston, *The Uganda Protectorate* (London, 1904), ii. 722 sqq.

<sup>2</sup> C. W. Hobley, *Eastern Uganda*,

Nilotic stock, are divided into exogamous and totemic clans.

the Kavirondo and the Nandi a student of these races, Mr. C. W. Hobley, is disposed to attribute in great measure the superior vigour of the Kavirondo. "No Kavirondo," he says, "marries in his own clan, and the degeneracy due to inbreeding is obviated by this salutary custom."<sup>1</sup>

The totemic system both of the Kavirondo and of the Nandi has been investigated by Mr. C. W. Hobley, and it may be well to give the results of his enquiries in his own words, although in what concerns the Nandi his account has to be supplemented by the much fuller information collected by Mr. A. C. Hollis, which has been already laid before the reader.<sup>2</sup> Mr. Hobley writes as follows:—<sup>3</sup>

Mr. Hobley's account of totemism in Kavirondo.

"The natives of the Bantu Kavirondo, Nilotic Kavirondo and Nandi groups all have a belief in the totems or *muziro*, but, apparently, no such thing as totem worship exists, nor do the Bantu and Nilotic Kavirondo believe in their descent from the *muziro* or totem, but a Nandi informed me that many of his tribe did believe in their original descent from a totem.

"Among the Bantu people each clan appears to have its own particular totem, and this may have given rise to their custom of exogamy, but in Nandi each individual is said to have his own totem irrespective of the clan. Practically the whole of the Nilotic group appear to have the same totems, but, in some parts, there are certain variations from what may be called the standard list of forbidden foods. Thus, although the exogamy which exists among the Nilotic Kavirondo may have originally arisen from totemism, the present survival of the belief has lost its original character.

"In all the groups the totems appear to be animals, no example of a vegetable totem has been discovered.

Supposed consequences of eating the totem (*muziro*).

"The Bantu group use the word *muziro* to denote the totem and, contrary to the usual belief, the eating of a totem animal is not thought to be followed by death, but only by a severe skin eruption; and if, by any mischance, the meat of the totem is eaten, the evil consequences referred

<sup>1</sup> C. W. Hobley, *Eastern Uganda*, p. 13.

Africa, Anthropological Studies in Kavirondo and Nandi," *Journal of the Anthropological Institute*, xxxiii. (1903), pp. 346-349.

to can be averted by making a medicine *dawa*, extracted from certain herbs, and this extract is mixed with the fat of a black ox and rubbed all over the body of the patient.

“Among the Nilotic Ja-Luo the totems are called *kwero*, and there is a long list of *kwero* animals which are forbidden as food to both men and women; there is, however, an additional list of food that women must not touch. Upon no occasion is the rule of the *kwero* relaxed, but, curiously, the animals on this *index expurgatorius* are considered malignant in their influence, and it is thought praiseworthy to kill them. Thus any *kwero* animal can be hunted, with the exception of the crested crane (*Balearica gibbericeps*), which is, generally speaking, strictly preserved by all the Kavirondo. The Gemi tribe, however, do not consider it wrong to kill and also eat this beautiful bird. The Gemi, Lego, and Sakwa tribes can also eat the wild cat, called by them *ogwang*. The Ja-Luo often wear the teeth of the leopard and crocodile as ornaments, and the skin of the leopard and wild cat; this is not considered an infringement of the *kwero* law.

(*kwero*) of  
the Nilotic  
Ja-Luo.

“EXAMPLES OF THE TOTEMS OF THE BANTU FAMILY

Clan or Tribe.	Special Totems.
Kisesi clan of Awa Wanga	<i>Imbongo</i> , bushbuck.
Marama and part of Tsoso and Isukha	<i>Kuru</i> , waterbuck or <i>Ikulu</i> .
Awa-Genya and Awa-Mrashi	<i>Liusi</i> , pigeon.
Awa Shekwi of Nyole	<i>Njofu</i> , elephant.
In Ketosh there are several, according to the clan, but over a large portion the special totem is	<i>Makuyi</i> , a large black and white stork which appears in large flocks about November; it eats locusts.
Tasoni tribe (Ngaki section)	<i>Isunu</i> , reed buck.
Ithako, E. Tsoso, S. Kabras	<i>Imbongo</i> or <i>Ngawe</i> .
Probably the totem most common in Kabras is	<i>Mbiakalo</i> , white ants in the flying stage (but cooked). They can be eaten raw, but not when cooked.

"THE TOTEMS (*KWERO*) OF THE NILOTIC GROUP

	Name in Tho-Loo.		Name in Tho-Loo.
Crocodile . . .	<i>Nyang</i>	Nile monitor (lizard) .	<i>Ngnech</i>

"The elephant, although looked upon as a totem, can be eaten without evil effects.

Belief  
of the  
Kadimo  
in their  
descent  
from the  
python.

"I omitted to mention above that the Kadimu people, who live on the Lake near the mouth of the River Nzoia, believe that they are descended from the python; these reptiles are looked upon as sacred, and annual sacrifices are made upon a hill in Kadimu to the common ancestor. The Kadimu people are a Bantu tribe which has adopted the language of the Nilotic Ja-Luo, and it is thus the only Bantu tribe in the country which looks upon its totem as its ancestor.

Sacred  
snakes  
among the  
Wanyam-  
wezi.

"Certain snakes, however, are looked upon as sacred animals among some of the Unyamwezi clans, and it is highly probable that, as among the Kadimu, this is due to the belief that the snake was their common ancestor.

Many Wanyamwezi consider it a deadly sin to kill a snake, and one occasionally meets an individual belonging to one of these clans who is said to be immune from the effects of snake poison.<sup>1</sup>

"The totems of the Koromjo people who live north of Mount Elgon are snakes, frogs, the monitor lizard, the hyæna, and the cheetah; they believe they will die if they eat any of these. If, however, by any mischance, the meat of a *muziro* animal be eaten, a medicine called *Eyarri*, if taken in time, will save the life of the person. It is made from a tree with very dark leaves called *Emuthi*; the patient is violently purged and, eventually, recovers."

Totems of the Koromjo.

Among the Bantu tribes of Kavirondo a man has the right to marry all the younger sisters of his wife as they come of age; they cannot be given in marriage to any one else till he has declined their hands.<sup>2</sup>

Right to marry a wife's sisters.

### § 10. *Exogamy among the Bageshu*

The Bageshu are a large Bantu tribe or nation, estimated to number not less than a million, who inhabit chiefly the eastern and south-eastern slopes of the lofty Mount Elgon, on the eastern boundary of the Uganda Protectorate. They are a primitive race of cannibals standing low down in the human scale. Their country might be called a land without graves; for like the Nandi they fling out their dead towards evening to be devoured by the wild beasts. But the old women steal forth under cover of darkness and carve out the prime pieces of the corpses to furnish a meal, while they leave only the refuse to the brutes. These savages were visited in their native homes by the Rev. John Roscoe in the summer of 1908, and it is on his notes that the present account of the people and their customs is based.<sup>3</sup>

The Bageshu, a Bantu people of Mount Elgon.

The Bageshu say that they formerly dwelt high up on Mount Elgon, inhabiting the caves which abound there, and that they have gradually worked their way down to the

The country of the Bageshu, a land of mountains and waterfalls.

lower slopes, which they now occupy, each clan taking in fresh land year by year, but always descending in a straight line so as not to encroach on the domain of their neighbours. The sides of the great mountain are terraced and afford ample room for good gardens and villages; and copious streams of excellent water flowing from the summit provide for the needs of the people and irrigate the plantations. Many of these streams, tumbling over the precipitous sides of the mountains, form beautiful waterfalls which dash themselves in clouds of iridescent spray on the rocks hundreds of feet below. The superstitious natives regard these foaming, thundering cascades as the abode of spirits, and they catch the falling water in vessels to carry it home and sprinkle it, as a charm for health and strength, on the heads of their children. In the mountains, too, there are many natural caves which for ages have served the people as strongholds to which they flee in time of danger. Some of them used to be kept always stored with provisions, so that at the least alarm the villagers could retreat to them, driving their bleating flocks and lowing herds before them up steep and narrow paths which often formed the solitary approach to these sequestered fastnesses. There the sheep and cattle were kept in the caverns by day to be driven out to pasture in the darkness of night.<sup>1</sup> The breed of cattle which the Bageshu keep is well adapted to life in these highlands, for it is small and nimble, and can browse and scramble like the goats themselves on the sides of the mountains. The cows are herded by boys and girls, and both sexes are free to milk them. But the Bageshu live mainly by agriculture. They work chiefly at their plantations of plantains in the valleys and moist hollows of the hills. These furnish their staple food, but they also raise crops of millet, maize, sweet potatoes, peas, and a variety of dwarf beans.<sup>2</sup>

The Bageshu are divided into a number of exogamous

The caves used by the Bageshu as retreats in time of danger.

Harry Johnston, *The Uganda Protectorate*, i. 52 sqq.

<sup>2</sup> Rev. J. Roscoe, "Notes on the Bageshu," *Journal of the Royal Anthropological Institute*, xxxix. (1909) pp. 192 sq.

clans, each of which occupies its own lands and holds aloof from its next neighbours, resenting as an act of hostility and ground for war any encroachment upon its territory. However, the members of neighbouring clans meet on occasions of festivities, and each clan seeks its wives from an adjacent clan. The names of twenty-nine clans were ascertained by Mr. Roscoe. No man may marry a woman either of his father's or of his mother's clan; all the women of his mother's clan are regarded as his near relations; his mother's sisters he calls his mothers. The marriage between a young couple is arranged by their parents; it is a purely financial transaction; the affection of the parties chiefly concerned has nothing to do with it. Polygamy is commonly practised; a man may marry the sisters of his first wife, if he chooses to do so.<sup>1</sup> A father names his child after one of his ancestors, and the ghost of the eponymous ancestor is believed to take charge of the child and to become its guardian spirit. When a wife has been unfaithful, she prays the ancestral ghost of the child's real father to protect it against the ancestral ghost of its nominal father, who may naturally be supposed to owe the bastard a grudge. If a child pukes and pines after receiving its name, the medicine-man will sometimes advise the parents to change the infant's name and give it a new one, in order thereby to place their offspring under the patronage of a more efficient guardian spirit.<sup>2</sup>

guardian  
spirits.

Boys and girls are both circumcised at the age of puberty; it is then that the lads are initiated into the mysteries of the clan. Their severed foreskins are collected and buried under the chief's house. At the same time both sexes have the front lower teeth extracted. When their wounds are healed, the boys and girls bathe in a sacred pool, which is supposed to be guarded by snakes. A festival of dancing and beer-drinking follows. It lasts for several

cision.

days, and during its continuance "there is the fullest license given to both sexes; men and women have promiscuous intercourse without any restraint."<sup>1</sup> We have seen that similar scenes of debauchery attend the practice of circumcision in Fiji and among the Wagogo.<sup>2</sup> The exact meaning of such orgies is not clear.

Totems not  
discovered  
among the  
Bageshu.

Mr. Roscoe's enquiries failed to elicit the existence of totems among the Bageshu; but he adds: "There was every indication of the system, the limited knowledge of the language, however, made it impossible to get at them."<sup>3</sup> It is to be hoped that future enquiries among this interesting people will supply the blank in our record.

### § 11. Totemism among the Bakene

The  
Bakene,  
a Bantu  
people of  
Busoga,  
inhabiting  
the papyrus  
swamps  
of the  
Mpologoma  
River.

The Bakene are a Bantu tribe of Busoga, the country which bounds Uganda on the east. The tribe was visited in the summer of 1908 by the Rev. J. Roscoe, to whom we owe an account of the people.<sup>4</sup> They live chiefly on the Mpologoma River, but they extend to Lake Kioga and are said to be found also on Lake Salisbury. The Mpologoma River rises in Mount Elgon and flows for some miles in a southerly direction; it then winds westward and rapidly widens out until it empties itself into Lake Kioga. The current is choked and the water dammed up by the enormous growth of papyrus, so that the river expands into a series of broads or lagoons, which in some places are fully six miles wide. It thus forms a complete barrier between the Bantu tribes on the one bank and the Nilotic races on the other as far as Lake Kioga, and the barrier is continued by the Nile to Lake Albert Nyanza. The Mpologoma River is the true home of the Bakene; the tall papyrus beds of its swamps provide a perfect shelter for their floating houses, and its fish furnish them with an abundant supply of food. They build their huts on the roots of the

<sup>1</sup> Rev. J. Roscoe, "Notes on the Bageshu," *Journal of the Royal Anthropological Institute*, xxxix. (1909) pp. 185-187.

<sup>2</sup> See above, pp. 145 *sqq.*, 403.

<sup>3</sup> Rev. J. Roscoe, "Notes on the

Bageshu," *Journal of the Royal Anthropological Institute*, xxxix. (1909) p. 182.

<sup>4</sup> Rev. J. Roscoe, "Brief Notes on the Bakene," *Man*, ix. (1909) pp. 116-121.

papyrus at a safe distance from the shore and are careful to hide them away in the recesses of the marsh. Tortuous water-ways fringed by tall papyrus plants, which tower like green walls on either side of the winding channel, lead to their secluded dwellings, and as the traveller glides along them in a canoe, with no sound to break the silence but the monotonous splash of the paddle and the ripple of the water at the bow, he might almost fancy himself transported to Venice, were it not that forests of reeds have taken the place of marble palaces, and a sky of deeper than Italian blue broods overhead. It is pleasant to come upon such an African Venice in the early morning when the sun is up and to see the people, men, women, and children, busy at their various occupations, some baiting their fish-traps, others fishing in deep water, women plunged up to their waists in the swamp emptying holes of the small fry that have been caught in them overnight, and children paddling in tiny canoes from tuft to tuft of papyrus, or watching a crocodile as he floats lazily basking in the sunshine. On some of the clumps of papyrus miniature huts may be observed; in these the spirits of the dead are supposed to dwell, and there offerings of food and clothes are deposited that the ghosts may not come and haunt the living.<sup>1</sup>

In their customs, language, and appearance the Bakene closely resemble the Basoga of the north-east, and they have a tradition that their forefathers came from that quarter. Both sexes extract the two lower front teeth, and the women pierce the under lip, but they do not disfigure themselves in any other way.<sup>2</sup> They subsist chiefly on fish, which they catch with rods, lines, traps, and by spearing them in shallow water. They eat the fish both fresh and dried, and they barter them for clothing and for other food. Their houses, built on the floating roots of papyrus, usually open directly on the water, so that the people step from their door into their canoe. Men, women, and even small children are all expert paddlers. The canoes are dug out of solid logs, and are propelled by long heavy paddles, which, like the gondoliers of Venice, the canocmen generally ply standing up. The

<sup>1</sup> Rev. J. Roscoe, "Brief Notes on the Bakene," *Mau*, ix. (1909) pp.

116 sq.

<sup>2</sup> Rev. J. Roscoe, *op. cit.* pp. 116 sq.

water-ways are kept open by constant use and by cutting back the rank growth of the reeds. The side canals, as we may call them, are private ways; each of them is for the use of the family whose hut stands at the end of it. The entrance to one of these side canals is often arched over, and charms hang from the arch to protect the inmates of the house from harm.<sup>1</sup>

Exogamous and totemic clans of the Bakene.

The Bakene are divided into a number of exogamous and totemic clans. The Bakoma clan has for its totem the husk of the small millet (*bulo*); the Baholwa clan has for its totem the guinea-fowl; the Bagota clan has for its totem the *kyachuli*, a small animal of the cat tribe; the Babira clan has for its totem the *ng'onge*, an otter; and the Bahaugo have for their totem the *mondo*, a civet cat. Besides these clans there are two others, the Bagule and the Bahobando, the totems of which Mr. Roscoe was not able to ascertain. Each clan has its head man or chief; he is elected by the clan and holds office for life, unless he forfeits it by vicious conduct or is incapacitated by illness.<sup>2</sup>

Rules of marriage.

The people seem to be debarred from marrying into the clan of their father as well as into the clan of their mother. At least this appears to be implied by Mr. Roscoe's statement that "polygamy is practised by the tribe, and they are also exogamists. The children all regard their father's relations as their own special clan, and their mother's sisters are all mothers to them, so that the relationship always debars them from marrying into their mother's clan."<sup>3</sup> The custom of children regarding their mother's sisters as their mothers is a clear mark of the classificatory system of relationship. It is a woman's brother, not her father, who has the right to give or to refuse her hand in marriage; and it is he who conducts her to her new home. For a man may not marry till he has built a new house for his wife. Thither the bride, veiled from head to foot in a bark-cloth, is conveyed in a canoe, attended by her friends in their canoes, the whole convoy singing to the measured dip of the paddles in the water. They time the voyage, be

Indication of the classificatory system.

The bridal convoy.

<sup>1</sup> Rev. J. Roscoe, "Brief Notes on the Bakene," *Man*, ix. (1909) pp. 116 sq., 119 sq.

<sup>2</sup> Rev. J. Roscoe, *op. cit.* pp. 117, 120.

<sup>3</sup> Rev. J. Roscoe, *op. cit.* p. 117.

it long or short, so as to reach the bride's new home when the sun is setting behind the papyrus swamp and all the water-ways are ruddy with his dying light. The bridal party stays overnight with the young couple, and next morning they receive presents from the bridegroom and paddle home.<sup>1</sup>

A child is named after one of its father's ancestors, whose ghost is supposed to look after it. Twins are thought to be a gift of the gods, and the happy father announces their birth by beating a drum. The sound is taken up and repeated by his neighbours, so the good news goes rumbling down the water-ways for a long distance. The father's sister's son hastens to the house, closes the front door, and makes a temporary opening at the back of the hut. He takes the leading part in the dancing ceremonies which follow. The after-birth of the twins is put into two new cooking-pots and dried; then it is taken ashore and left in the grass near one of the gardens.<sup>2</sup>

Children guarded by an ancestral ghost. The birth of twins.

### § 12. Totemism among the Basoga

Immediately to the east of Uganda and divided from it by the ample stream of the new-born Nile, is the district of Busoga, bounded on the south by the broad waters of the Victoria Nyanza. In physical features and in the character of the people Busoga strongly resembles Uganda. The country has been described as a dam which shores up the northern end of the great lake and slopes away from it gradually to the northward. Grand tropical forests, gay with the bright blossoms of many flowering trees and enlivened by parrots and other birds of brilliant plumage, occupy much of the land, and on plunging into their depths the traveller from the east coast feels that he has reached at last the Africa of his dreams. In the clearings of the woods flourish luxuriant plantations of bananas. But the climate is unhealthy, and there are few running streams; for the brooks, choked with rank vegetation, soon degenerate into

Busoga, its physical features and climate.

<sup>1</sup> Rev. J. Roscoe, "Brief Notes on the Bakene," *Mau*, ix. (1909) pp. 117 sq.

<sup>2</sup> Rev. J. Roscoe, *op. cit.* pp. 118

The  
Basoga,  
their way  
of life.

swamps in the sunless glades of the forest or into marshes in the open.<sup>1</sup> The inhabitants of the country, the Basoga, are closely akin to their neighbours the Baganda in race, appearance, customs, and language. They live in thatched beehive huts, keep cattle, sheep, goats, and fowls, and till the ground. Their favourite food is the banana, but they also cultivate and use sweet potatoes, ground-nuts, beans, eleusine, and sorghum. Tobacco and cotton are grown. The country has never, like Uganda, been united under a single ruler; the people have always been broken up into separate communities under more or less powerful chiefs.<sup>2</sup>

Totemic  
clans of the  
Basoga.

The Basoga were investigated in the summer of 1908 by the Rev. John Roscoe, who found that they are divided into a large number of exogamous and totemic clans with descent in the paternal line. I am indebted to his kindness for the following information on the subject.

Three  
tribes in  
Busoga.

There are three distinct tribes in Busoga. First, in the north-west of the country is the tribe commonly called Gabula's, after an important chief of that name; they used to look to the Banyoro as their feudal lords. Second, in the north-east of the country is the tribe called Zibondo's, after a chief of that name; they used to look to the Nilotic Bateso as their feudal lords. Third, in the east of the country is a tribe which may be called Luba's, after a former chief; they have always looked to the Baganda as their feudal lords.

Paternal  
descent of  
the totems.  
Respect  
for the  
mother's  
totem.

Descent of the totem among the Basoga is in the male line; that is, children belong to the totemic clan of their father, not of their mother. But, as happens in other Bantu tribes, children respect their mother's totem during their minority, and neither they nor their children may marry into her clan.

The following is a list of the Basoga clans and totems, so far as they have been ascertained by Mr. Roscoe:—

<sup>1</sup> Sir Harry Johnston, *The Uganda Protectorate* (London, 1904), i. 66-68.

<sup>2</sup> Sir Harry Johnston, *The Uganda Protectorate*, ii. 713-715.

## CLANS OF NORTH-WEST BUSOGA (GABULA'S TRIBE)

Clans.	Totems.	Clans.	Totems.
1. Mpongo .	bushbuck ( <i>mpongo</i> )	31. Sendasi .	bushbuck ( <i>mpongo</i> )
2. Baigaga .	chaff from millet ( <i>bulo</i> )	32. Mutedeba .	...
3. Bahoya .	...	33. Bango .	a bird called <i>usosoli</i> or <i>sosolya</i>
4. Kwanga .	hippopotamus ( <i>njovu</i> )	34. Toli . . .	bushbuck ( <i>mpongo</i> )
5. Soswa .	jackal ( <i>mpisi</i> )	35. Bere . . .	...
6. Baisongo .	serval ( <i>mondo</i> )	36. Mayanja .	...
7. Mulondo .	grey monkey ( <i>nkima</i> )	37. Kisuwi .	leopard ( <i>mpala</i> )
8. Lemu . . .	leopard ( <i>mpala</i> )	38. Basuswi .	jackal ( <i>mpisi</i> )
9. Wiro . . .	certain women who may not come near men at any time	39. Mwebya .	a grass called <i>buyanja</i> , which the clan may not cut or touch
10. Mulimi .	goats of a particular colour	40. Semagoba .	hippopotamus ( <i>nrvubu</i> )
11. Ruba . . .	Oribi gazelle ( <i>kasiri</i> )	41. Wenzu . . .	a little salt? ( <i>kole</i> )
12. Mutwa .	female bushbuck ( <i>mpongo</i> )	42. Busigisigi .	a dove ( <i>emba</i> )
13. Mpazira .	yams ( <i>ngobi</i> )	43. Baego . . .	civet cat ( <i>enfiombe</i> )
14. Mwanga .	...	44. Sekiju . . .	the lungfish ( <i>nakibala</i> )
15. Mugonya .	mushrooms ( <i>butiko</i> )	45. Bakose . . .	chaff or husks from the semsem
16. Kinminya .	jackal ( <i>mpisi</i> )	46. Umbwe . . .	white ants ( <i>enswa</i> )
17. Kitengya .	wild pig ( <i>mbizi</i> )	47. Basoko . . .	bushbuck ( <i>mpongo</i> )
18. Mukose .	chaff from the small millet ( <i>bulo</i> )	48. Bambade .	chaff of all kinds ( <i>musisi</i> )
19. Mulemya .	...	49. Eboka . . .	crow ( <i>kozwa</i> )
20. Segaga .	chaff from the small millet ( <i>bulo</i> )	50. Sango . . .	guinea-fowl ( <i>nkofu</i> )
21. Semoyo .	bushbuck ( <i>mpongo</i> )	51. Kaima . . .	reedbuck ( <i>njaza</i> )
22. Mulandya .	...	52. Gulu . . .	the mouth of an old water-pot. The clan may not touch it nor have it in their presence
23. Bamyakat- amya	waterbuck ( <i>njobi</i> )	53. Kiemba . . .	posts made from a tree called <i>nsambya</i> . The clan may not use such posts in building their houses or fences
24. Kadodo .	frog ( <i>kikere</i> )	54. Kaibare . . .	dog ( <i>embwa</i> )
25. Nsanga .	birds ( <i>kanyonyi</i> )	55. Kigoma . . .	the clan may not look at the full moon
26. Nyanzi .	...	56. Lubanga .	...
27. Muluta .	Colobus monkey	57. Sabwiri . . .	lungfish ( <i>nabibalu</i> )
28. Muyombo .	a bird called <i>kasusimu</i>		
29. Musere .	rivers which are full or overflowing ( <i>miga ejude</i> ). The clan may not draw water from them nor attempt to cross them		
30. Mugwano .	...		

## CLANS OF NORTH-EAST BUSOGA (ZIBONDO'S TRIBE)

Clans.	Totems.	Clans.	Totems.
1. Balondo .	grey monkey ( <i>nkima</i> )	12. Banangwe	goats which are pre-maturely born ( <i>akabuzi akasolwa</i> )
2. Basekwe .	1st totem mushroom ( <i>butiko</i> ); 2nd totem <i>tabulantya</i>	13. Bakoyo .	lungfish ( <i>mamba</i> )
3. Senkwunga	1st totem elephant ( <i>njovu</i> ); 2nd totem antelope ( <i>kongone</i> )	14. Semugaya	water lizard ( <i>mbululu</i> )
4. Baise or Ngobe	bushbuck ( <i>mpongo</i> )	15. Bagaya .	birds ( <i>nyonyi</i> )
5. Semwayo .	birds ( <i>akasense</i> )	16. Mwasi .	an antelope ( <i>njazi</i> )
6. Basubo	two birds known as <i>kanyali</i> and <i>kasaki</i>	17. Basekula.	wild pig ( <i>mbizi</i> )
7. Baise or Magamba	a root of the arum lily ( <i>ziriyamiri</i> )	18. Kitamwa	guinea-fowl ( <i>nkofu</i> )
8. Gaga .	husks of the small millet ( <i>bulo</i> )	19. Mwangu .	bushbuck ( <i>mpongo</i> )
9. Semsolya .	otter ( <i>ngongo</i> )	20. Nono .	cooked plantains ( <i>mfuku</i> )
10. Bakika .	buffalo ( <i>mbogo</i> )	21. Senyulya	a bird called <i>kasenki</i>
11. Njeru	...	22. Tambi .	...
		23. Mabiro	dry slices of vegetable marrow ( <i>bikukuju</i> )
		24. Katuma .	flea ( <i>nkukunyi</i> )
		25. Mulinda .	swallow ( <i>katai</i> )
		26. Nyana .	small calves ( <i>nyana</i> )

From the preceding tables it appears that only two (the first and the last) of all these clans take their names from their totems; in all the other recorded cases the name of the clan differs from the name of the totem. Further, several clans bearing different names have nevertheless the same totem. Thus in Gabula's tribe no less than six clans have for their totem the bushbuck; and the one which takes its name (Mpongo) from the animal is the principal clan of the country. This suggests that the various Bushbuck clans may be subdivisions of one large original Bushbuck clan, all of which, when they branched off from the parent stock, took new and different names for the sake of distinction, while at the same time they all retained the old bushbuck totem.

In regard to the marriage of cousins it is a rule with the Basoga that a man's children may not marry his sister's children, but that his son's children may marry his sister's daughter's children. In other words, first cousins, the children of a brother and sister, are forbidden to marry each other, but second cousins may marry each other, provided that they are the grandchildren of a brother and a sister respectively, and that the father of one of them was a son

The various Bushbuck clans may be subdivisions of one.

First cousins forbidden, but second cousins allowed, to marry each other.

of that brother, and that the mother of one of them was a daughter of that sister.

Among the Basoga it was customary for a wife to induce her sister or sisters to come and live with her and become wives of her husband. When a man died, his brother might marry the widow or widows, provided he were chosen heir to the deceased; or if the brother were not heir, he might still receive from the heir one of the widows to wife. But except in these cases a man had no right to marry the widows of his deceased brother.

Custom of marrying several sisters.

A husband avoided his wife's mother and only spoke to her when she was in another room and out of sight. He respected his wife's father but did not avoid him.<sup>1</sup>

Avoidance of wife's mother.

The Basoga abhor incest even in cattle. If a bull covers his mother-cow or his sister-cow, the two culprits are sent by night to a fetish tree and tethered to it, there to meditate on the heinousness of their offence till the morning, when the chief appropriates them to his own use.<sup>2</sup>

Abhorrence of incest even in cattle.

### § 13. Totemism among the Bateso

The Bateso, as they call themselves, are a tribe of Nilotic negroes, whose territory borders on Northern Busoga. They are commonly known as the Bakedi or Naked People on account of their absence of clothing, which is common to both sexes. This nakedness of theirs excites the disgust of the Baganda, who are prudish in matters of dress.<sup>3</sup> The Nilotic negroes, of whom the Bateso are a branch, extend along the north bank of the Nile and round the eastern side of the Victoria Nyanza. Some of the tribes claim kinship with the Nandi and Masai. They seem to observe fewer religious ceremonies than the Bantu peoples and have no name for the Creator, but speak of the rain-maker as the supreme being. They often employ Bantu medicine-men and fetishes when they migrate into Bantu countries.<sup>4</sup>

The Bateso a tribe of Nilotic negroes.

<sup>1</sup> For the information as to the marriage customs, as well as the totems, of the Basoga I am indebted to the kindness of the Rev. John Roscoe.

<sup>2</sup> Sir Harry Johnston, *The Uganda Protectorate*, ii. 719.

<sup>3</sup> *Ibid.* ii. 772. See below, pp. 464, 467.

<sup>4</sup> From the notes of the Rev. John Roscoe, who visited the Bateso in the summer of 1908 and has kindly furnished me with the following notice of the tribe and its clans. As to the Nilotic negroes, see Sir Harry Johnston, *The Uganda Protectorate*, ii. 756 *sqq.*

The Bateso are both agricultural and pastoral.

The Bateso are an agricultural people, who regard millet as their staple food, though they also grow many other cereals and vegetables, such as maize, semsem, sweet potatoes, marrows, dwarf beans, and peas. They also keep flocks of goats, and most of them have cattle besides. Both men and women work in the fields, and the young men herd the cattle. Goats and cows are often herded together. A village will contain from four to forty families. The huts are circular in shape and constructed of stout branches interwoven with creepers. The interstices of the walls are stopped with mud, which is smoothed on the inside so as to present an even surface, while the outside is left rough. An upright pole in the centre supports the conical roof, which is carefully thatched. Each wife has a hut of her own, and a man may have as many wives as he can afford to pay for. Often he builds houses for them in villages some little distance apart.

Their round huts.

Polygamy.

Exogamous and totemic clans of the Bateso.

The tribe is divided into a number of exogamous and totemic clans with descent in the male line. Children therefore belong to their father's clan and may not marry into it, but they are also forbidden to marry into their mother's clan. The following is a list of the Bateso clans with their totems, so far as these were ascertained by the Rev. John Roscoe :—

#### BATESO CLANS

Clans.	Totems.	Clans.	Totems.
1. Katikoko .	sheep ( <i>ndiga</i> )	8. Bararaka	bones of the Oribi antelope
2. Pasama .	sugar-cane ( <i>tiroko</i> )	9. Igorya .	Oribi antelope
3. Maditoko .	bones from cooked meat	10. Pokoro .	they may not shave a baby's head
4. Eraraka .	they may not look at the Oribi antelope	11. Katikoko	a tree called the <i>edodoro</i>
5. Kuribwoko	mushrooms	12. Madokoya	Oribi antelope
6. Koroko .	Oribi antelope		
7. Iraka . .	Oribi antelope		

Frequency of the Oribi antelope totem.

In this list the number of different clans which have the Oribi antelope for their totem is remarkable. Here again, as in the case of the Bushbuck clans of the Basoga,<sup>1</sup> we may suspect that the multiplication of the same totem in different clans has arisen through the subdivision of one original clan which possessed the common totem.

<sup>1</sup> See above, p. 460.

As a rule parents agree to the future marriage of their children while these are both small. When the children grow up, the boy's father gives the dowry and the engagement is formally settled. The dowry varies from two to twenty cows, with a number of goats, which may be as many as fifty. The children generally live in different parts of the country and seldom see each other before marriage. A man might marry several sisters, and they might agree to live together, but such was not the usual practice. When a man dies, his eldest son as a rule succeeds him and inherits the property. The widows belong to the heir, and should the clan select as heir a brother of the deceased, he marries the childless widows as a matter of course. With regard to cousin marriages the rule of the Bateso seems to agree with that of the Basoga; that is, first cousins, the children of a brother and a sister respectively, are forbidden to marry each other; but second cousins are allowed to marry each other, provided that they are the grandchildren of a brother and a sister respectively, and that the father of the one was a son of that brother, and that the mother of the other was a daughter of that sister. In other words, a man's children may not marry his sister's children, but a man's son's children may marry his sister's daughter's children.

Marriage customs of the Bateso.

Right to marry several sisters.

First cousins forbidden, but second cousins allowed, to marry each other.

#### § 14. *Totemism among the Baganda*

The great tribe or rather nation of the Baganda are a Bantu people, whose country, named after them Uganda, stretches along the north and north-western shores of Lake Victoria Nyanza. Though Uganda lies on the equator, it enjoys a mild and equable climate in consequence of its great elevation, between five and six thousand feet, above the level of the sea. The nights are often refreshingly cool, and in the day the heat is seldom oppressive. Vegetation hardly withers at any time, for, lying within the belt of perpetual rain, the land is kept evergreen by showers even in the dry season. In spite of the great moisture of the atmosphere, Uganda was on the whole fairly healthy till the fatal epidemic of sleep-sickness broke out and made havoc with the native population. The rich soil, constantly

Uganda, its climate and scenery.

watered by the rain, is luxuriantly fertile. On the whole the scenery is uniform, consisting for the most part of rolling green downs intersected by deep swampy valleys, where sluggish rivers ooze through dense thickets of reeds and papyrus, while the hill-sides on either bank are clothed with magnificent tropical forests and a rank undergrowth of ferns. In these beautiful woods the trees are festooned with creepers; troops of monkeys swing from bough to bough and rend the air with their discordant shrieks; flocks of grey parrots fly screaming about; delicate little honey-birds, their plumage glowing like rubies or emeralds in the sunshine, hover over the gay flowers on the edge of the forest; and in the open glades countless butterflies, of all the hues of the rainbow, flit through the air. As the traveller recedes from the lake northwards, the valleys widen, the hills lessen, then die away into a great plain covered with jungle or thinly wooded and cleft at long intervals by huge drains choked with rushes, the home of elephants, rhinoceroses, antelopes, and wild boars.<sup>1</sup>

The Baganda the highest type of the Bantu race. Their dress.

Cultivation of the banana.

In intelligence, material culture, and polity the Baganda represent the highest level attained by any pure Bantu race. Unlike most Africans, they clothe themselves from head to foot; the native laws as to dress were very strict, and it was death for a man or woman to be found in the public roads without proper clothing.<sup>2</sup> Their staple food is the banana, of which many varieties are cultivated. The natives say that there are more than a hundred sorts. Some are boiled green, others eaten ripe, others made into beer; and every variety has its special name. The tree flourishes everywhere; every village and every hut is surrounded by banana groves, which are very neatly kept. With its great brilliantly green leaves, glossy black stems, and huge purple spathes a banana plantation presents a feast of colour to the eye. If you climb a hill in any densely populated district you will see these verdant groves stretching away

<sup>1</sup> C. T. Wilson and R. W. Felkin, *Uganda and the Egyptian Sudan* (London, 1882), i. 143 sqq.; F. Stuhlmann, *Mit Emin Pascha ins Herz von Afrika* (Berlin, 1894), pp. 170 sq.; Sir Harry Johnston, *The Uganda Protectorate*, i. 85 sqq. Opinions differ as

to the healthiness of Uganda. Stuhlmann says that it is very healthy; Sir Harry Johnston says (*op. cit.* ii. 646) that it is not healthy either for Europeans or natives.

<sup>2</sup> C. T. Wilson and R. W. Felkin, *op. cit.* i. 151 sq.

mile after mile on every side and reaching far up the hillslopes to the horizon. Next to the banana, the sweet potato is the main article of food and is the chief vegetable cultivated by the Baganda, though they also grow yams, beans, pumpkins, sugar-cane, maize, and millet. The cultivation of the ground is chiefly carried on by the women; house-building and war are, or used to be, the occupations of the men. It is thought that a barren wife prevents her husband's plantations from bearing fruit, but that a prolific wife causes the trees to bear plentifully.<sup>1</sup> The Baganda keep cattle, sheep, and goats, and drink the milk of their cows, but most of the herds are tended for them by Bahima herdsmen.<sup>2</sup> The manufactures of the Baganda include pottery, bark cloths, baskets, mats, metal-work, wood-work, leather-making, and dyeing. In all branches of industry they display a fine artistic sense. Their pottery is beautifully finished and tastefully decorated; their baskets are so skilfully woven that they are water-tight. In metal-work the blacksmiths of Uganda are far superior to their neighbours; they obtain the iron ore in the country. But the handicraft in which the Baganda most excel is perhaps the dressing of skins, which they make as soft and pliant as kid-leather and dye them with patterns in black and orange.<sup>3</sup> They are a musical race and possess a tolerable variety of musical instruments, including harps, drums, flutes, horns, and a sort of harmonium called *amalinda*; this last consists of a number of flat pieces of hard resonant wood which are laid side by side and struck with drumsticks so as to give out melodious notes. The harp of Uganda is interesting because its shape agrees exactly with that of the ancient Egyptian harp depicted on the monuments.<sup>4</sup>

The arts and manufactures of the Baganda.

The houses  
of the  
Baganda.

In house-building the Baganda excel their neighbours, the houses of the upper classes being neat, clean, and roomy. The establishments of the great chiefs or earls are very large, sometimes covering several acres and comprising many huts. The whole is surrounded by a high fence of grass supported by trees, generally fig-trees, which send out a crown of leaves and afford a grateful shade. Within the enclosure the ground is divided by fences into courts or gardens, each with its house or houses, and each shaded by bananas and fig-trees. The houses in the inner courts are occupied by the chief and his harem; those in the outer courts are tenanted by slaves. All chiefs of high rank have such establishments in the country as well as a town house in the capital. The town residences of the prime minister (*Katikiro*) and another high minister (the *Kimbugwe* or keeper of the king's placenta) occupy enclosures each of about half a mile square in the capital, and each contains from one hundred to two hundred huts for wives and retainers. The fences of an earl's residence which adjoin a public road are beautifully worked; the height of the fence and the size of the reed-rib which runs along top and bottom indicate the rank of the owner. The huts of the peasants are much simpler; they are circular or dome-shaped, and being thickly thatched with fine long grass down to the ground resemble gigantic beehives. An Uganda town is a garden-city embowered in fine trees and rich vegetation and intersected by broad well-kept avenues, which sometimes stretch away in a straight line for a mile or more together.<sup>1</sup> A feature of the country which strikes the European traveller, and which, like so much else, evinces the superiority of the Baganda to the surrounding nations, is the wonderful network of native roads, which connect the principal villages with each other and with the capital. These roads often lead straight as an arrow over hill and dale, through forests and across swamps, and even in thinly-peopled districts they are kept remarkably clean and free

from weeds. Across the larger swamps are carried causeways built on piles and forming hard roads, which rise some six feet above the surface of the marsh, with tunnels at intervals through the piles to allow the slowly oozing water of these choked and sluggish rivers to find its way.<sup>1</sup>

The Baganda are also honourably distinguished by personal cleanliness and a care for the sanitation of their houses and villages which is very rare in native Africa.<sup>2</sup> A proof of their intelligence is their aptitude for arithmetic. They have native names for all multiples of ten up to twenty millions.<sup>3</sup> Yet with all their refinement in the arts of life, their scrupulous, almost prudish regard for decency,<sup>4</sup> and their vegetable diet, the Baganda are by no means weaklings or effeminate. They are so strong that they will race a bicycle for miles without an effort,<sup>5</sup> and their valour made them in former times the terror of the surrounding nations, not only on land but on the water. Every man who could handle a spear and a shield was a soldier, and armies were mustered with astonishing rapidity. They had a large fleet of war-canoes, splendidly built and sometimes manned by a crew of forty men. It was a fine sight to see two or three hundred of these graceful vessels threading their way among the wooded islands of the great lake, the regular dip of their paddles in the water keeping time to the measured beat of the drums.<sup>6</sup>

Character  
of the  
Baganda.

Their  
military  
prowess.

The native government of Uganda was an absolute monarchy: the king held in his hands the power of life and death; he owned the whole of the land, and could dispose of it at his pleasure. The only exception to this last rule

the earls,  
and the  
chiefs.

was that land which had served as the burying-ground of a clan for three generations belonged to it in perpetuity and not even the king could take it away.<sup>1</sup> The king must always be of the blood royal, but whereas commoners trace their descent through their paternal clan, the kings trace their pedigree through the maternal clan. When the king dies, his successor is chosen from among his sons by the prime minister (*Katikiro*) and another great nobleman (*Kasuju*), the guardian of the princes; but curiously enough they may never elect the eldest son, who holds the office of *Kiwerwa* or father of all the young princes. Generally the king before his death tells the prime minister which of his sons he wishes to succeed him, and if his choice is a good one, his wishes are followed; otherwise the electors do not hesitate to set them aside.<sup>2</sup> After his election the king appoints the *Katikiro* (prime minister and chief justice), and also ten earls (*Basazas*) to rule the ten earldoms (*sazas*) into which the whole country is divided. In each earldom there are chiefs (*Bami*), who are also appointed by the king in consultation with the earl; but after their appointment the chiefs are responsible not to the king but to the earl. All taxes and all duties exacted from labourers engaged in public works pass through the earl's hands to the prime minister. The earl is responsible for all the people in his earldom; he tries all cases within his dominions, and if an appeal from his verdict is made, he attends when the case is tried in a higher court. He and the chiefs under him are bound to see that the roads and bridges leading from the capital to their country residences are kept in repair. Earls and chiefs have large tracts of land in their gift, and members of their respective clan gather

<sup>1</sup> Rev. J. Roscoe, "Further Notes on the Manners and Customs of the Baganda," *Journal of the Anthropological Institute*, xxxii. (1902), pp. 50 sq., 62, 66. The native system of government in Uganda has been carefully investigated by Mr. Roscoe, who has kindly placed at my disposal much unpublished information collected by him. I shall draw upon it in what follows.

<sup>2</sup> Rev. J. Roscoe, in *Journal of the Anthropological Institute*, xxxi. (1901), p. 129, and xxxii. (1902), pp. 27, 44, 62. Some of the details in the text are derived from Mr. Roscoe's unpublished manuscripts. According to Messrs. Wilson and Felkin, the king is chosen by three hereditary *bakungu* or chiefs of the highest rank (C. T. Wilson and R. W. Felkin, *Uganda and the Egyptian Sudan*, i. 193 sq., 200).

about them in the hope of obtaining either offices or banana plantations. Each earldom has annually to contribute, in addition to a tax on every hut, a certain amount of labour for the execution of public works, such as building houses and fences for the king, making roads, and bridging swamps.<sup>1</sup>

Two very important personages in the polity of the Baganda are the Queen Mother or Dowager Queen (*Namasole*) and the Queen Sister (*Lubuga*). If the king's mother is alive when he comes to the throne, she naturally assumes the office of Queen Mother; but if she is dead, another woman of her clan is elected to the dignity. The office carries many privileges with it, and estates in each earldom are attached to it. She appoints chiefs to manage her estates and bestows on them the same titles which the king confers on his ministers. She has absolute power over her chiefs and followers; she holds her own court, tries all her own cases, and is called a king. But after she has come into office, she only visits her son once, when she appoints his three principal wives. After that the king may never see his mother again, for were he to see her, they think that some evil, probably death, would surely ensue. Yet he may consult her and she may advise him through a third party. A running stream must always flow between her residence and his.

The Queen Sister (*Lubuga*) has also her own establishment with lands and officers attached to it just like the king; she rules her own people and is called a king. Neither she nor the Queen Mother pays taxes, nor do they contribute labourers for public works. In old times the Queen Sister was also the king's wife, indeed the only one of his wives to whom he was formally married. Yet she might not bear him a child. After his death she takes charge of his tomb (*mulalo*) and removes her household to the hill where the tomb is situated. There she rules all the earls and chiefs of the deceased king, her brother, and has land enough to give to each of them gardens which enable them to live in comfort. The royal tomb (*mulalo*) is the abode of the king's ghost. It is a

The Queen Mother (*Namasole*), her power and privileges.

The Queen Sister (*Lubuga*), her power and privileges.

She guards the royal tomb (*mulalo*), where the ghost of the late king is believed to dwell.

<sup>1</sup> Rev. J. Roscoe, in *Journal of the Anthropological Institute*, xxxii. (1902), pp. 63 sqq.

large house which the king always builds in his lifetime within the royal enclosure. The new king deserts the enclosure of his predecessor and constructs a new one in another place. But the late king's tomb is kept in repair by the State. The enclosure and the interior of the tomb are looked after by the king's widows who had children by him or who were specially chosen for the duty. If any one of these widows dies or leaves the tomb for any reason, her clan must supply another woman as a substitute, who is reckoned among the wives of the deceased king. In a chamber at the back of the tomb are kept the jaw-bone and the placenta of the departed monarch, and to these his ghost is supposed to be attached. The jaw-bone in particular is called "the king." When the dead king wishes to hold his court, or it is desired to consult him about anything, the jaw-bone and the placenta are brought out from the inner chamber and placed on a dais or throne, which is covered with lion and leopard skins and railed off by a row of spears and shields. Communications with the departed ruler are held by means of his high priest (*mandwa*), who acts as his prophet or medium. This power the priest acquires by drinking beer out of the dead king's skull; after that the king's spirit enters into the priest, whenever his late Majesty desires to communicate with his successor or with the people. On such occasions the priest goes to the throne and, speaking to the spirit in the inner room, tells him the business he has come about. He then smokes one or two pipes and begins to rave, which is a sign that he is possessed by the king's spirit. In this condition, imitating the king's voice, he declares the king's will. After this communication has been made, the spirit returns to the inner room, and the priest goes away. The possession of the priest by the king's spirit is only occasional, not permanent. Within the house, or rather mausoleum, dwell the wives who bore children to the late king; his other wives have separate houses within the enclosure. Outside of the enclosure the Queen Sister has her residence, and with her are several of the late king's chiefs, who have been pensioned off and hold pieces of land, but bear the same titles as of old. The Queen Sister has authority

The jaw-bone and placenta of the late king are kept in his tomb.

Mode of consulting the spirit of the dead king. The high priest (*mandwa*) drinks beer from the dead king's skull, and being thus filled with the king's spirit he gives oracles.

over all the chiefs and widows who are associated with the royal tomb.<sup>1</sup>

Both the Queen Mother and the Queen Sister enjoyed a remarkable privilege. They were allowed to practise polyandry, cohabiting with as many men as they pleased, but not marrying them or bearing them children; indeed death was the penalty if they had offspring. Hence they resorted to abortion. Yet so loose were their relations with the other sex that according to a common saying all Uganda was their husband. They were fickle, living with a man for a few days and then inviting another to take his place. All the other princesses were equally forbidden to marry, but they were not equally privileged, for though one of them might occasionally be given in marriage to a great chief as a mark of special favour, the rest were condemned to perpetual virginity, because they were regarded as the king's wives, and if they were detected in an intrigue, the punishment was death. Yet most of them led a life of debauchery. We read that "they often use every blandishment, and even force, to secure some young peasant, the unhappy object of their affection; but, should he be

Remarkable privilege of the Queen Mother and Queen Sister; they may have as many lovers as they please, but they may not marry them nor bear children to them under pain of death.

<sup>1</sup> Rev. J. Roscoe, "Notes on the Manners and Customs of the Baganda," *Journal of the Anthropological Institute*, xxxi. (1901), pp. 128-130; *id.* "Further Notes on the Manners and Customs of the Baganda," *Journal of the Anthropological Institute*, xxxii. (1902), pp. 43-46, 67. I have also drawn on Mr. Roscoe's manuscript materials for a few details as to the Queen Mother and the Queen Sister, particularly for the statement that they both bear the title of king in the king's lifetime. Similarly Mr. R. P. Ashe says that in Uganda "there are three persons who bear the royal title of Kabaka, namely the king, the queen-mother, and the queen-sister" (*Two Kings of Uganda*, p. 87). After the king's death the Queen Sister (*Lubuga*) seems to take the title of *Nalinya*. With regard to the worship of the dead kings of Uganda compare C. T. Wilson and R. W. Felkin, *Uganda and the Egyptian Sudan*, i. 208: "The former kings of the country appear also to be

regarded as demi-gods, and their graves are kept with religious care, and houses are erected over them, which are under the constant supervision of one of the principal chiefs of the country, and where human sacrifices are also occasionally offered." Mr. R. P. Ashe has recorded the belief "that the soul of a departed king can come back and enter into certain persons who are said to *samira*—'be possessed of'—the spirit of such and such a departed king. The word *samira*, translated 'possessed of,' is not, however, passive, but has more the force of the Greek middle. The active form of the word would be *sama*. That the person who *samiras* has control over the spirit seems to be the prevalent idea, and Mutesa begged that after his death no one should *samira* him. A person who *samiras*, works himself up into a state of ecstasy or madness until the afflatus has subsided" (R. P. Ashe, *Two Kings of Uganda*, p. 316).

discovered with them, he must meet the awful fate of death by fire, the common capital punishment in Buganda."<sup>1</sup> We are reminded of the lovers of Semiramis.<sup>2</sup>

Totemism in Uganda. The Baganda are divided into many totemic and exogamous clans.

On the whole, Uganda has been justly described as "one of the best organised and most civilised of African kingdoms at the present day."<sup>3</sup> It is therefore all the more remarkable to find that a nation which has made so considerable advances in culture should nevertheless retain a totemic system of the most regular orthodox pattern.<sup>4</sup> For the Baganda are divided into a large number of totemic clans, the members of which observe the two fundamental canons of normal totemism, since they abstain both from injuring their totem and from marrying a woman of the same clan. Each clan is called a *kika* (plural *bika*); it traces its origin to one man, and has a principal totem and a secondary totem. The principal totem, by which the clan

<sup>1</sup> R. P. Ashe, *Two Kings of Uganda*, pp. 87 sq.; Rev. J. Roscoe, "Notes on the Manners and Customs of the Baganda," *Journal of the Anthropological Institute*, xxxi. (1901), p. 122; *id.* "Further Notes on the Manners and Customs of the Baganda," *Journal of the Anthropological Institute*, xxxii. (1902), pp. 36, 67.

<sup>2</sup> *The Golden Bough*,<sup>2</sup> iii. 162 sq.

<sup>3</sup> Sir Harry Johnston, *The Uganda Protectorate*, ii. 636.

<sup>4</sup> For the following account of the totemic system of the Baganda I am indebted almost entirely to the researches of my friend the Rev. John Roscoe of the Church Missionary Society, who has drawn his information direct from the best native sources, questioning men of each clan as to their customs and traditions. In his researches he has had the active co-operation of the native Prime Minister (*Katikiro*), who gave him all facilities for prosecuting his enquiries. As Mr. Roscoe is further intimately acquainted with the native language, and has for many years enjoyed the confidence of the people, his writings on the subject of their customs and beliefs possess the highest authority. He has collected a large mass of information which still remains unpublished. I have gladly

availed myself of his generous permission to make free use of the manuscript materials which he has placed in my hands. For his published accounts of Baganda totemism, on which as well as on his unpublished papers I have drawn in the text, see Rev. J. Roscoe, "Notes on the Manners and Customs of the Baganda," *Journal of the Anthropological Institute*, xxxi. (1901), pp. 118 sq., 120, 121; *id.* "Further Notes on the Manners and Customs of the Baganda," *Journal of the Anthropological Institute*, xxxii. (1902), pp. 27-29, 35, 50, 51, 53. For earlier accounts of totemism among the Baganda see R. P. Ashe, *Two Kings of Uganda*, pp. 85, 285; F. Stuhlmann, *Mit Emin Pascha ins Herz von Afrika* (Berlin, 1894), p. 190; L. Declé, *Three Years in Savage Africa* (London, 1898), p. 443; Sir Harry Johnston, *The Uganda Protectorate*, ii. 691 sq. Mr. Ashe was the first to put the totemic system of the Baganda on record. He clearly stated the two principles that no one may eat his totem animal or marry a woman of his totem clan. Among the clans which he mentions are those of the Grasshopper (*Ensenanc*), Sheep (*Endiga*), and Crocodile (*Engonya*). He gives the native name for a clan as *kyika*, plural *ebiyika*.

is always known, is called *muziro*; the secondary totem is called *kabiro*. Both totems are sacred to members of the clan, who may neither kill nor destroy them. Other people, however, may kill or destroy them for a reasonable purpose without hurting the feelings of members of the clan. Except in the case of the royal family, children always take their father's totem and belong to his clan. A wife adopts her husband's totem, but retains her own and teaches her children to regard both sets of totems as sacred. When the children grow up and leave their home they may do as they please about their mother's totem; they are not bound to observe it. Yet it is, or used to be, customary for them to adopt their mother's totem also, so that a man's children would usually have their mother's totem as well as his. But the mother's totem did not descend to the second generation; children took the totem of their father and generally also the totem of their mother, but not the totem of their grandmother. Each clan has special names for its children, so that members of a clan always know from a child's name whether it belongs to them or not. It is customary to have a second name for common use and to keep the childhood name secret, for it is contrary to usage for a person to mention the clan to which he belongs. If there is a question of importance to be solved, he will, indeed, readily tell his clan name, and even his childhood name. But if there is no special reason for giving it, he will refuse to answer the question and will refer the enquirer to a third person for the information. They think that any one who kills or eats his totemic animal or plant will die, or, if not, that he will fall sick or suffer from an eruption of sores all over his body. The usual explanation they give of their totems is that their forefathers fell ill after partaking of them, and that they accordingly enjoined their children not to kill or eat the animal or plant which had disagreed with them.

All the women of a man's clan are regarded as his sisters; hence he may neither marry nor have sexual intercourse with them. Any infraction of this rule used to be punishable by death. It was thought that if a man secretly broke the rule, either he or his children would fall ill, so that his guilt would transpire and punishment

Each clan has its principal totem (*muziro*) and its secondary totem (*kabiro*). Children take their father's totem and belong to his clan.

Each clan has special names for its children.

Ill effects of killing or eating the totem.

A man may neither marry into his own clan nor into his mother's clan.

follow. Further, no man may marry into his mother's clan, since all the women of that clan are regarded as his mother's sisters and are called his great mothers or his little mothers (*bakulu* or *banyina bato*) according to their age. But it is the correct thing for a man to take his second wife from his father's mother's clan. This wife always bears the title of *Nasasa*; it is she who shaves her husband's head and pares his nails and sees to it that the clippings of the hair and the parings of the nails do not fall into the hands of an ill-wisher, who might do her husband a mischief by working magic with these severed portions of his person. However, the rule of exogamy, which applies to all the other Baganda clans, does not apply to the Lung-fish (*Mamba*) clan. But that clan is the largest of all and is, moreover, divided into two sections, each with a different secondary totem and each residing in a different district. One section dwelling by the lake has another fish called *muguya* for its secondary totem; the other section, dwelling inland, has the frog for its secondary totem. We are not told, but seem left to infer, that the rule of exogamy may only be broken by members of different sections of the clan, not by members of the same section; in other words, that a Lung-fish man may only marry a Lung-fish woman if her secondary totem is different from his; that is, if he is a *Muguya*-fish man, she must be a Frog woman; if he is a Frog man, she must be a *Muguya*-fish woman.

The Lung-fish (*Mamba*) clan is an exception to the rule of exogamy.

Each clan has its family estates (*masiga*).

Each clan has its family estates, which are as a rule situated on some hill with the gardens running down its slopes into the valleys. The principal estates, situated in different parts of the country, are called *Masiga* and represent the chief branches of the clan. Generally they were the estates belonging to the sons of the father of the clan, but a few were those of the grandsons. Great-grandsons were seldom counted as heads of the branches of a clan. Upon each of the estates there is a chief who is responsible for the conduct of the members of his branch of the clan. If he has the oversight of the whole clan he is called its Father. The Father of the clan has naturally the best and most important estate. Many of the clans have their family gods (*lubare*), or they may have charge of one of the

The Father or head of the clan.

national gods. In such cases the chief of the clan or of the branch of the clan on whose estate the temple stands becomes the priest and has charge of the temple. The temples are generally built on the tops of hills, and are surrounded by some good land for the use of the god.

Besides these old family estates the clan has others called *butaka*, where three or four generations of the clan have been buried. It behoved a chief to be ever on the alert to prevent members of a clan from burying their dead in good gardens, which they wished to secure for their children; because even the king would scruple to turn out any man who had succeeded in burying three generations in the place. If people were discovered burying their dead in a garden, they were ordered to take the body away to the family estate. The burial place of a clan is regularly on the top or side of a hill and is enclosed by a fruitful garden of bananas. When three successive generations, father, son, and grandson, have been interred in such a garden, it becomes a *butaka* or freehold burial ground, where other members of the clan may bury their dead. Some members of the clan must reside in it to tend the graves and keep others from using it. They are given the land around the graves as a remuneration for their watchful care.

Hereditary burial-grounds (*butaka*) of the clans.

Each clan has its special beat of drum. In Uganda the drum is an indispensable instrument. It peals forth the news of birth and of death, of joy and of sorrow, of peace and of war. To its measured cadence the feet of the weary wayfarer keep time; burdened porters press forward more cheerily for its notes; and chiefs are known afar off by the roll and rumble of their drums.

Each clan has its special beat of the drum.

For sympathy and help in time of trouble a man always turns to the members of his totemic clan. When one of them has been murdered, his relations and his clan take up the matter and seek the murderer to punish him; failing to find him they hold one of his clan as a hostage.

Social obligations of the clans-people.

With regard to the origin of their totemic clans the Baganda have a tradition, which runs thus. In the reign of Kintu, the first king, the whole nation lived by the chase alone. When game became somewhat scarce, King Kintu, with the general consent of his people, made it a law that

Tradition as to the origin of the totemic clans.

certain species of animals should be tabooed to certain families, in order that these animals might have a better chance of multiplying than if everybody hunted them indiscriminately. The test adopted in order to determinate which animals were to be tabooed was one of health or digestion. If a family found that the flesh of a certain animal disagreed with it, the members of that family abstained in future from partaking of that animal. In that way, according to tradition, originated the totems of the clans.<sup>1</sup> The theory that the totemic taboos are based on a sort of Act for the Preservation of Game can hardly be primitive. Like the somewhat similar view propounded by Mr. W. E. Roth as to the origin of totemism in Queensland,<sup>2</sup> it has all the appearance of an inference drawn in later times by persons of a rationalising turn of mind, who have long outgrown the crude superstitions which lie at the root of totemism. Moreover, as might be expected, the traditions of the Baganda are not consistent with each other on the subject. For according to other accounts, when Kintu came to the country, he found several of the clans there before him, or they came to him from neighbouring countries. From the traditions we may gather that Kintu was a powerful ruler who invaded and conquered the land, and by his statecraft incorporated the clans into one nation under his government. If asked from whom he is descended, any Mugandu<sup>3</sup> will readily answer "From Kintu"; if he is questioned more closely, he will give an account of the father or founder of his clan, where he came from, and when he first joined either Kintu or one of the early kings.

List of the  
clans of the  
Baganda  
with their  
totems.

The clans of the Baganda take their names from their principal totems (*muziro*). The following is a list of the clans with their principal and secondary totems, so far as they have been ascertained.<sup>4</sup>

<sup>1</sup> This tradition forms part of Mr. Roscoe's unpublished papers. He sent it to me from Uganda on the 29th November, 1908.

<sup>2</sup> See vol. i. p. 137.

<sup>3</sup> The singular form of Baganda.

<sup>4</sup> The fullest list hitherto published of the Baganda clans and totems is that given by Mr. J. Roscoe in *Journal of*

*the Anthropological Institute*, xxxii. (1902), pp. 27 sq.; compare the list given by him in *Journal of the Anthropological Institute*, xxxi. (1901), p. 118. A list of twenty-nine totemic clans is given by Sir Harry Johnston (*The Uganda Protectorate*, ii. 691 sq.). The table in the text is based chiefly on Mr. Roscoe's manuscripts, especially on

## BAGANDA CLANS AND TOTEMS

Principal Totem ( <i>muuziro</i> ), which gives its name to the clan.	English Equivalent.	Secondary Totem ( <i>kabiro</i> ).	English Equivalent.
1. <i>Ngo</i>	leopard	<i>kasimba</i>	genet
2. <i>Mpologoma</i>	lion	<i>mpungu</i>	eagle
3. <i>Ngeye</i>	Colobus monkey	<i>munyungu</i>	small monkey
4. <i>Ngonge</i>	otter <sup>1</sup>	<i>kasimba</i>	genet
5. <i>Nsenene</i>	grasshopper (small green locust)	<i>nabangogo</i> (or <i>nabangogoma</i> )	a small insect which lives in the plantain
6. <i>Fumbe</i>	civet cat	<i>kikerekere</i>	frog
7. <i>Njovu</i>	elephant	<i>uvubu</i>	hippopotamus
8. <i>Mamba</i>	lung-fish <sup>2</sup>	<i>muguya</i>	a small fish
9. <i>Mamba</i>	lung-fish <sup>2</sup>	<i>katuba</i> or, ac- cording to many, <i>kike- rekere</i>	a fish  a frog
10. <i>Lugave</i>	manis or pangolin (scaly ant-eater)	<i>butilo</i>	mushroom
11. <i>Endiga</i>	sheep	<i>mpologoma</i>	lion
12. (a) <i>Mbogo</i>	buffalo	<i>ntamu</i>	a new cooking- pot
13. <i>Nkima</i>	small grey monkey <sup>3</sup>	<i>byenda</i>	entrails of animals
14. (a) <i>Mpewo</i>	Oribi antelope	<i>kayezi</i>	grey rat
15. (b) <i>Katirwuma</i>	a small seed of a shrub, used as beads		all kinds of beads
16. (a) <i>Nyoni</i>	birds <sup>4</sup>	<i>kunguvu</i>	a special kind of bird
17. (a) <i>Musu</i>	a large rat <sup>5</sup>	<i>muyoze</i>	a small rat
18. (a) <i>Kobe</i>	yam	<i>kama</i>	another kind of yam
19. (a) <i>Mpindi</i>	beans <sup>6</sup>	<i>kindira</i>	a wild bean
20. (a) (b) <i>Ngabi</i>	bushbuck <sup>7</sup>	<i>jerengeze</i>	a kind of grass
21. (b) <i>Abwa</i>	dog		iron bell for dog,
22. (a) (b) <i>Kibe</i>	jackal	<i>mpiri</i>	puff-adder
23. (a) <i>Nvubu</i>	hippopotamus	<i>ufudu</i>	tortoise

a list of principal and secondary totems which he sent me on 22nd December 1908. In his published accounts Mr. Roscoe does not notice the secondary totems.

<sup>1</sup> Mr. L. Decle calls the animal a beaver (*Three Years in Savage Africa*, p. 443). Mr. Roscoe agrees with F. Stuhlmann and Sir Harry Johnston in calling it an otter, which is no doubt correct.

<sup>2</sup> The *Protopterus*, according to Sir Harry Johnston and Mr. F. Stuhlmann.

<sup>3</sup> *Cercopithecus petaurista* or *rufiviridis*, according to Sir Harry Johnston.

<sup>4</sup> The widow-bird (*Vidua*, *Penthetria*, *Chera*, etc.), according to Sir Harry Johnston.

<sup>5</sup> Ground-rat, an octodont rodent (*Thryonomis swinderemianus*), according to Sir Harry Johnston. Mr. Stuhlmann calls it *Analcodes*.

<sup>6</sup> Haricot beans, according to Sir Harry Johnston.

<sup>7</sup> *Tragelaphus*, according to Sir Harry Johnston.

Principal Totem ( <i>muziro</i> ), which gives its name to the clan.	English Equivalent.	Secondary Totem ( <i>kabiro</i> ).	English Equivalent.
24. (a) <i>Nialaganya</i>	<i>Cephalophus</i> antelope	<i>malere</i>	tree fungus
25. (a) <i>Njaza</i>	reedbuck		
26. <i>Kasimba</i>	genet <sup>1</sup>		
27. <i>Byenda</i>	entrails of animals	<i>maugwe</i>	lungs of animals
28. <i>Nte ezalibwa nga teriko mukiro</i> <sup>2</sup>	tailless cow	<i>ngali</i>	crested crane
29. (a) <i>Ente ya lub-ombwe</i>	spotted cow		
30. (a) <i>Nganga</i>	hornbill		
31. (a) (b) <i>Ma'zi</i>	rainwater from roofs		
32. (a) (b) <i>Namun'-gona</i>	crow	<i>mutima</i>	hearts of animals
33. (a) <i>Kinyomo</i>	red ant		
34. (a) <i>Kitete</i>	kind of grass		
35. (a) <i>Ngali</i>	crested crane		
36. <i>Butiko</i>	mushroom	<i>nsenko</i> and <i>nsanga</i>	snail and small ivory discs
37. <i>Mutima</i>	heart	<i>maugwe</i>	lungs
38. <i>Lukindo</i> <sup>3</sup>	wild date palm		
39. <i>Nombe</i> <sup>4</sup>	ox ( <i>Buddu</i> only)		
40. <i>Gonya</i> ( <i>Engonya</i> ) <sup>5</sup>	crocodile		
41. <i>Mperwo</i>	wind <sup>6</sup>		
42. <i>Bugeme</i> <sup>7</sup>	beer from wild date palm		
43. <i>Nkeje</i> <sup>7</sup>	small fish like sprat		
44. <i>Kivungulu</i> <sup>7</sup>	owl?		
45. <i>Kanyonyi aka-bira munte</i> <sup>7</sup>	small bird which cries among cows		

<sup>1</sup> Serval cat, according to Sir Harry Johnston.

<sup>2</sup> Elsewhere Mr. Roscoe gives the native name of this clan as *ente etalina mukiro*. The clan is usually called the Bagabo clan.

<sup>3</sup> Mentioned by Sir Harry Johnston, but not by Mr. Roscoe.

<sup>4</sup> Mentioned by Sir Harry Johnston, but not by Mr. Roscoe. Sir Harry Johnston adds: "It is remarkable to find this old Bantu word for 'ox' surviving in the totem name. In ordinary parlance in Luganda and Urunyoro it has long since been dropped in favour of *ente*" (*The Uganda Protectorate*, ii. 692 note).

<sup>5</sup> This clan is mentioned by R. P. Ashe (*Two Kings of Uganda*, p. 85).

Mr. F. Stuhlmann (*Mit Emin Pascha ins Herz von Afrika*, p. 190 note\*), and Mr. L. Declé (*Three Years in Savage Africa*, p. 443). It is mentioned neither by Mr. Roscoe nor by Sir Harry Johnston. According to Mr. Declé, the Crocodile clan is found in the Sese Islands of the Victoria Nyanza.

<sup>6</sup> Rev. J. Roscoe, "Nantaba, the Female Fetich of the King of Uganda," *Man*, viii. (1908), p. 132, and below, p. 486. The Wind clan is not mentioned by Mr. Roscoe in his lists of the clans, because his informant having died he was unable to confirm the statement and the *Katikiro* threw doubt on it.

<sup>7</sup> Not mentioned by Mr. Roscoe in his latest (manuscript) list.

In the foregoing table the clans marked (a) were never allowed to present a prince as heir to the throne. The king might indeed marry girls from these clans and have children by them, but none of these children might ever succeed to the crown. In order to evade this disqualification the members of these clans gave their daughters to members of other clans, who adopted them; and the children of such women, being reckoned to their adopted clans, were eligible to the throne. The clans marked (b) in the table joined other clans, either because their own clans were despised, or because they desired that their daughters, by adoption into these clans, might have children who might succeed to the kingdom. Though they thus associated with other clans and had the right to use their totem names, yet they were never regarded by these associated clans as blood relations; hence they were free to marry members of their adopted clans. Thus the *Katinvuma* (small seed) clan joined the Mushroom clan. The Bushbuck clan joined the Monkey clan. The Dog clan joined the Civet Cat clan. The Jackal clan joined the Otter clan. The Rainwater clan joined the Lion clan. The Crow clan joined the Otter clan.

Some clans were not allowed to give an heir to the throne.

Some clans joined others.

We will now take up a number of the Baganda clans separately and give some account of their customs, duties, privileges, and superstitions. The following details were taken down from the lips of members of the clans by the Rev. John Roscoe, whose indefatigable zeal has rescued them, with so much more, from the oblivion that must otherwise almost certainly have overtaken them. I am indebted to his friendship and kindness for permission to incorporate in this book these vanishing relics of a savage past.<sup>1</sup>

Mr. Roscoe's information as to particular clans of the Baganda.

The Leopard (*Vgo*) clan has for its secondary totem the genet (*kasimba*). Members of this clan are not allowed to eat any meat which has been torn by an animal or even scratched by one. If one of their cows has been torn by a wild beast, they may not let it mix with the herd, even though its wounds are healed; they must sell the cow. The

The Leopard clan.

<sup>1</sup> In his manuscript notes on the clans Mr. Roscoe generally gives a list of the principal landed estates of each clan.

I have not thought it necessary to reproduce this part of his information.

Leopard clan is a royal one, but of its many branches there is only one of which the members are deemed eligible to the throne. The clanspeople are not bound to do any work for the king. Their only public duty is to keep up the estate called Magonga, where Kintu first lived, and where there is a temple to him. They claim also to possess the original plantain which was brought into the country at Kintu's first coming. It is a sacred plant.

The Lion  
clan.

The Lion (*Mpologoma*) clan has for its secondary totem the eagle (*mpungu*). It is a royal clan and claims descent from Sabaganda, a son of Kintu. To explain their totems they say that Kintu killed a lion and an eagle and had their skins made into royal rugs. Since then the beast and the bird have been deemed sacred, and their skins, together with a leopard's skin, form the royal rug on which the kings sit or stand at state ceremonies. The clan has charge of a small drum called *nalubare* which is always kept and used in the shrine of Kintu on the hill Magonga in the Busuju district. On another hill in one of their estates (Nsanganzira, in the Busiro district) there is a shrine of the great national god Mukasa, where each king, as he went to Nankere to observe the ceremonies for the prolongation of his life,<sup>1</sup> used to change his clothes and leave the discarded garments to be kept in the holy place. No member of the Lion clan is eligible for the throne. The king might marry women of the clan, but if they bore him sons, the infants were strangled at birth; only daughters of these royal wives were suffered to live. The Lion clan had a deity called Luwada on their estate of that name. He was served by a priest, a member of the clan; and from time to time the god took bodily possession of the priest and made his wishes known through him.

The  
Colobus  
monkey  
clan.

The Colobus Monkey (*Ngeye*) clan has for its secondary totem a small black monkey (*munyungu*) with longish hair. The clan is reckoned one of the oldest in the country. They say that Kintu found it settled there when he first came to Uganda, and that they furnished him with his

<sup>1</sup> As to these ceremonies see my *Adonis, Attis, Osiris*, Second Edition, (London, 1907), p. 405, where I have

described them on the authority of the Rev. J. Roscoe.

first wife Nambi. They trace their origin to a man named Kyesimba Kasuju. Judged by the number of offices which it holds about the king, the Colobus Monkey clan is an important one. They supply the king's butler, the potter who makes the royal cooking pots, and also the man who has charge of the royal drinking-water. This last bears the title of Kalinda and used always to be put to death when the king died, in order that his ghost might wait on the king's ghost in the other world. Another member of the Colobus Monkey clan has charge of all the king's goats; and another is always sent by the new king to announce his accession to the god Mukasa, taking with him for the deity an offering of nine slaves, nine women, nine white cows, nine white goats, nine white fowls, nine loads of cowry shells, and nine loads of bark cloths. During his journey this envoy to the god may not eat with any one; he crosses the lake in a special canoe, and when he enters the temple he wears two bark cloths, as though he were a prince.

The sacred  
envoy.

The Otter (*Ngonge*) clan has for its secondary totem the genet (*kasimba*). The forefather of the clan, by name Mwanga-kisolo, is said to have been prime minister to Kintu, who killed him in a fit of rage.<sup>1</sup> Their chief duty in the king's service is to make his bark cloths. They also supplied the king with a wife whose special duty it was to make his bed. When the king died, she had to go to his tomb there to wait on the royal ghost till death relieved her of her duties. The clan also furnished the king with a butler, whose chief duty was to look after the royal tobacco. After being knocked on the head by his royal master, the founder of the Otter clan, Mwanga-kisolo, was raised to the rank of deity, and in that capacity helped his clansmen by making their women fruitful and their cattle prolific. In gratitude for his help mothers brought him offerings of beer, cattle, and firewood. His temple stood on the hill Nseke. The priest was always a member of the Otter clan, but the inspired medium or prophet who spoke the god's will might be chosen by the deity from any clan.

The Otter  
clan.

Makers of  
the king's  
bark-  
cloths.

A god of  
fertility.

The Grasshopper or Green Locust (*Nsenene*) clan has for

<sup>1</sup> See the legend given more in detail by the Rev. J. Roscoe, in *Journal of the Anthropological Institute*, xxxii. (1902) pp. 25 sq.

The Grass-  
hopper  
clan.

its secondary totem an insect called *nabangogoma*, which lives in the upper part of the plantain stem. They were originally a cattle-keeping clan and lived in Busongola, which formed part of Bunyoro. Their forefather was Kiroboza. In consequence of a quarrel the clan split in two, one part remaining in Bunyoro and the other migrating to Uganda. On their Bujubi estate in Busuju the Grasshopper clan has a fetish which is supposed to protect the clanspeople from plague. It is kept in a small shrine enclosed by a fence. An old Munyoro woman used to keep the shrine in order and free from weeds.

Ceremony  
performed  
by women  
of the  
Grass-  
hopper  
clan when  
they catch  
grass-  
hoppers  
for their  
husbands  
to eat.

The particular grasshopper or green locust (*nseene*) which gives its name to a clan is eaten by the Baganda, who regard it as a great delicacy. At certain times of the year the insect is found in large numbers and the people go out to capture it. Any married woman of the Grasshopper clan may then catch and cook the grasshoppers for her husband to eat, though she may not herself partake of them. Her husband "immediately after eating them must have intercourse with his wife, in order to cause the locusts to increase and avert any ill consequences to her children, which might otherwise arise from her catching her totem: this is an annual ceremony when the locusts first appear."<sup>1</sup> When any king had twins born to him, it was the duty of the head of the Grasshopper clan to relieve him of the burdensome ceremonies and taboos entailed by the birth of twins and to undertake them himself vicariously for his Majesty.<sup>2</sup> Further, it is the business of this clan to look after the men who decorate the navel-strings of the kings and give them over to the chief or minister Kimbugwe.<sup>3</sup>

<sup>1</sup> Rev. J. Roscoe, in *Journal of the Anthropological Institute*, xxxii. (1902) p. 53. Mr. Roscoe has sent me some fuller notes in manuscript on the Grasshopper or Green Locust clan. In these notes, which I have used in the text, Mr. Roscoe writes thus with regard to the ceremony in question: "There is a restriction attached to the first meal of the season; when a woman has prepared some of the grasshoppers for her husband, he must either jump over her or have sexual connection

with her, otherwise sickness will enter his family. On account of this taboo the clan has always been held in great respect in the country."

<sup>2</sup> As to the ceremonies and taboos entailed by the birth of twins, see the Rev. J. Roscoe, *op. cit.* pp. 32-35.

<sup>3</sup> As to the elaborate care taken of the king's navel-string, see the Rev. J. Roscoe, "Kibuka, the War God of the Baganda," *Man*, vii. (1907), p. 165: "In the case of princes the cord [navel-string] is carefully

Moreover, when one of the king's wives has lost several children at birth or in infancy, and she has been delivered of another, she is sent to the head of the Grasshopper clan to be guarded until the child is weaned. This clan always supplied the king with one wife, who took the title of Nakimera, in memory of the wife who gave birth to Kimera, one of the early kings.

The Civet Cat (*Fumbe*) clan has for its secondary totem the frog (*kikerekere*). The members of the clan can give no explanation of the origin of their totems. They claim to have been settled in Uganda long before the coming of Kintu and to have been at that time the most important of all the clans. They trace their origin to a king of Uganda named Ntege, who was deposed by the conqueror Kintu but was allowed to retain a few estates and the title of king. When Kintu died, his son Cwa received a wife named Naku from Ntege, and since then every king has married a wife of the Civet Cat clan, who regularly takes the name of Naku as her title. On the principal estate of the clan there is a temple to Naku, which was once of great importance. At this shrine the kings used to perform some of the ceremonies for the prolongation of their life. Other ceremonies for this purpose were observed on another estate of the Civet Cat clan (the estate of Baka), when the king returned from Nankere. On the hill of Baka stood a temple to the god of

The Civet  
Cat clan.

preserved, and the fortunate prince who becomes king has the cord decorated and made into a twin (*mulongo*) as described above. This is handed to the Kimbugwe's care, who is one of the most important chiefs in the country. Each month, directly after the new moon appears, the Kimbugwe has to bring the 'twin' and carry it wrapped in barkcloths to the king, who holds it for a moment or two and then hands it back to the Kimbugwe. It is carried in state to the Kimbugwe's enclosure, drums are beaten in the procession, and the twin is honoured as a king. When it is returned to its house it is not put inside, but is placed by the door and guarded all night; next morning Kimbugwe comes and rubs butter on it and restores it to its usual place inside the temple or hut."

Along with the navel-string is preserved the placenta, which the Baganda regard as a double or twin (*mulongo*) of every person who is born. Apparently the navel-string is viewed as the thing to which the ghost of the placenta, which is the person's double, attaches itself. The Baganda think that the placenta of a prince has power to kill the offspring of royalty if it is not treated with honour. Hence kings always keep their placenta and have it decorated and treated as a person. The Kimbugwe, who has charge of it, is the second minister in Uganda, next to the prime minister (*Katikiro*), with whom he takes his seat in all councils of state. See Rev. J. Roscoe, in *Man*, vii. (1907), pp. 164 *sq.*; *id.* in *Journal of the Anthropological Institute*, xxxii. (1902) pp. 33, 63, 76.

that name, who was one of the first deities of the country. The priest was always a member of the Civet Cat clan, but the god was free to choose his inspired medium from any other clan. On the same estate there was a temple to Wanga, a deity who was imported from the Sese Islands in Lake Victoria Nyanza. This Wanga once restored light to the world by lifting the sun and moon out of a pit into which they had fallen in the reign of King Juko. When any person appealed from the king's decision to the poison ordeal, it was the duty of the Civet Cat clan to supply the man who administered the potion.

The  
Elephant  
clan.

Ceremonies  
at the coro-  
nation of a  
king.

The Elephant (*Njovu*) clan has for its secondary totem the hippopotamus. They claim to be descended from Sesanga, who came to Uganda with Kintu as his herdsman and settled down at Sesanga in Busuju. For many years the clan continued to supply the kings of Uganda with their chief herdsman, and as herdsman they had to perform certain rites at the coronation of a king. The new monarch came to inspect them and to be initiated by them into the business of a herdsman. They presented him with a flute on which King Kimera is said to have played when he herded the kine. The new king played a few notes on the flute and gave it back to the herdsman. Next they handed the king a milk-pot and placed on his shoulders a calf-skin, such as herdsman wear when they are tending the cattle. Thus attired the king had to herd cows for a time. Then the flute, the milk-pot, and the calf's skin were delivered back to the chief herdsman and put away in the hut where they were kept, not to be used again in the king's lifetime. The island of Bulungugi was one of the estates of the Elephant clan. It had to supply the king's table with a particular kind of fish called *nsonzi*, which is much relished by the Baganda. It was also the duty of the Elephant clan to furnish the royal household with a particular kind of bark-cloth; and after a king's death the chief herdsman had to drink the bowl of liquid butter in which the dead monarch's jawbone had been placed. If the butter disagreed with him, he was put to death as an impostor, who had wormed his way unlawfully into the Elephant clan. No true born Elephant-man, they thought,

could suffer in his stomach for drinking the melted butter in which the king's jawbone had been steeped. The Elephant clan had also charge of two drums, one of which was beaten when the king went out to hunt. One of their chiefs always helped to decorate the king's navel-string, which, as we have seen,<sup>1</sup> was regularly preserved and treated with great ceremony. Another member of the clan had charge of the king's war apron, a leopard's skin beautifully dressed.

The Lung-fish (*Mamba*) clan is the largest of all the Baganda clans, and, as we saw,<sup>2</sup> it is divided into two sections, which have different secondary totems. One section has for its secondary totem the small fish called *muguya*. The other section has for its secondary totem the *katuba*, a fish which lives in the swamps. But others say that the secondary totem of this section is the frog (*kikerekere*); and that is why members of this section are called Frogs (*Bakerekere*). These two sections of the Lung-fish clan intermarry with each other, just as if they had not the same primary totem; and they are the only clan of the Baganda who are thus free to marry among themselves. The lung-fish is a favourite food of the Baganda, but no member of the Lung-fish clan may kill or eat it.<sup>3</sup> Both sections of the clan trace their descent from one man, and each claims to be the more important of the two. But the *Muguya* branch has the clearest records of its forefathers. They say that they came to Uganda from a place called Bumogera to the north of the great lake. Their forefather was one Mubiru. All through their history they have been connected with canoes and fishing, and the reason why some of them quitted their old country and settled in Uganda in the reign of Kintu was a dispute about a canoe. They became the king's principal canoe-builders, and one of them was made chief over the royal canoes. The Frog branch of the Lung-fish clan trace their descent from a man Nankere, who was compared to a frog on account of the number of children he spawned and also because of his dirty habits. The only duty the Frogs had in respect of the king was to find a substitute for him

The Lung-fish clan, with its two branches.

The frog-like man.

<sup>1</sup> Above, p. 482 n. 3.

<sup>2</sup> Above, p. 474.

<sup>3</sup> Sir Harry Johnston, *The Uganda Protectorate*, ii. 692.

when he went through the ceremonies for the prolongation of his life. The Frog-man (Nankere) was never allowed to attend the king's receptions or even to see his Majesty except when the king came to perform these important ceremonies. Yet every new king sent the Frog-man a leopard's skin for his use, as if the Frog-man were of the blood royal ; for leopard skins are reserved for royalty.

The Manis  
or Pangolin  
(Spiny  
Ant-eater)  
clan.

The Manis or Pangolin (*Lugave*) clan has for its secondary totem a fungus which grows on tree trunks (*butiko wa malere*). The animal which they have for their primary totem is perhaps more familiarly known as the spiny ant-eater. The clan is one of the oldest in the country. They say they were there when Kintu came to it. Their forefather was Mukibe Sekiwunga, to whom Kintu gave the hill of Kapaka in Busiro. The clan has two temples with their priests and mediums ; one is a temple of Wanga, the other is a temple of Wamala. The chief steward of the Queen Sister (*Lubuga*) is always taken from this clan. Further, a chief of the Spiny Ant-Eater clan had always to bring to a new king at his coronation the curious fetish called *Nantaba*, which seems to have been a spirit of the wind captured at the cutting down of a special sort of tree (*lusambye*) and imprisoned in a gourd. A member of the Wind clan had always to be present at this capture of the spirit of the wind. The captive spirit in her gourd (for she was deemed feminine) was afterwards kept in a hut and held in high esteem ; but whenever the wind blew high, a drum was beaten in the hut to let the prisoner know that, roar as she might, she could not escape. She was thought to help the king's wives to become mothers ; so on sunny days the gourd used to be brought out and set in the sun in the middle of the courtyard, and the king's wives would come and sit round it, looking wistfully at the wonderful gourd and hoping to receive into their wombs its quickening virtue. But when the king died, the gourd was thrown away, and the spirit of the wind was caught afresh in a new gourd for the new king.<sup>1</sup> It was at this ceremony of

Capture  
and im-  
prisonment  
of the spirit  
of the wind.

<sup>1</sup> Rev. J. Roscoe, "Nantaba, the Female Fetich of the King of Uganda," *Man*, viii. (1908) pp. 132 sq.

catching and imprisoning the wind that a chief of the Spiny Ant-Eater clan was bound to assist. Further members of this clan take charge of two of the king's drums and also of his royal rug, on which he stands or sits at state ceremonies. It consists of four skins stitched together, the skin of a lion, the skin of a leopard, the skin of a hyæna, and the skin of an eagle.

The Sheep (*Endiga*) clan has for its secondary totem the lion (*mpologoma*). The clan was in Uganda before Kintu came to it. They trace their descent from a man Mbale who lived at Mbale in Mawokoto. A chief of the Sheep clan was entrusted with one of the king's principal fetishes called *Mbajwe*, who had his priest, his inspired medium, and his place where human victims were sacrificed to him. The clan had also charge of the war-god Kibuka and his temple.<sup>1</sup> The mortal remains of that great and powerful deity, consisting of his jawbone, his genital organs, and a piece of his navel-string, are now preserved in the Ethnological Museum at Cambridge.

The Buffalo (*Mbogo*) clan took for a second totem a new cooking pot; hence they were never allowed to use a cooking pot to cook their food until some one else had used it once or twice. They say that their forefather was a man called Nabuguyu, who came to Uganda from Bunyoro in the early days of the kings but after the time of Kintu. This clan has always had the honour of being the bearers of the kings of Uganda. Wherever the king went he was carried astride on the shoulders of men of the Buffalo clan, who relieved each other when they were tired of their royal burden, one bearer shooting the king from his shoulders to the shoulders of another man without allowing his Majesty's feet to touch the ground; for the king never walks anywhere outside of his own enclosure. They went along at a great pace and covered long distances in a day when the king was on a journey. The bearers had a special hut in the royal enclosure, so that they were always at hand when the king wanted them. The clan also supplied bearers for the king's mother and sister, because these two women were regarded

<sup>1</sup> Rev. J. Roscoe, "Kibuka, the War God of the Baganda," *Man*, vii. (1907) pp. 161-166.

as queens and treated with the respect due to royalty.<sup>1</sup> Moreover, the Buffalo clan had charge of the bark-cloths on which the king sat while he was being carried; these they had to guard with great care lest they should be contaminated by the touch of people of other clans. No man might put his hand on the shoulder of a Buffalo man even in a friendly way, because that was the seat of the king. If any one thoughtlessly took such a liberty, the Buffalo man would promptly ask him, "Are you a prince?" and would have him fined for his presumption. Further, the Buffalo clan provided the king with one of his principal wives, who bore the title of Nanzigu. She always had her own little enclosure inside the royal one and was quite separate from the other wives. The king used to appoint a page to supply her with torches for her house. On their Muguya estate the clan had charge of a temple of Musoke, to which the king always sent offerings and received in return oracles from the god. In another of their estates there is a river where, oddly enough, the ghost of a leopard had his abode. Near the river was a temple, with its priest; and the ghost revealed its will by the mouth of an inspired man.

The  
Monkey  
clan.

The office  
of Mugema  
or earl of  
Busiro.

The Monkey (*Nkima*) clan had for its secondary totem the entrails of animals (*byenda*). They trace their origin to a man named Bwoya, who came to Uganda with Kintu. To the Monkey clan belongs the high office of Mugema, or earl of Busiro,<sup>2</sup> who has the title of the King's Father and whose person is inviolable; any one who laid his hands familiarly on the earl might in the old days be put to death. At the coronation it is the Mugema who places the crown on the king's head, makes him swear to be loyal to the people, and charges the people to be loyal to the king. His chief duty, however, is to act as prime minister (*Katikiro*) to the dead kings. He has charge of all the royal tombs. Wherever a king is buried, the hill on which his temple stands becomes part of the domain of the Mugema or earl of Busiro. Indeed his earldom

<sup>1</sup> From the Rev. J. Roscoe's manuscripts. Compare *id.* in *Journal of the Anthropological Institute*, xxxii. (1902) p. 62. As to the Queen

Mother and Queen Sister, see above, pp. 469 *sqq.*

<sup>2</sup> Compare Rev. J. Roscoe, *op. cit.* p. 46.

took its name from the tombs ; for Busiro means the place of the *masiro* or graves. It was the earl's duty to see that the bodies of the kings were properly embalmed, that their jawbones were extracted, and that a temple was prepared for the reception of the jawbone and the navel-string. Another of his duties was to supply each wife of the king at a certain stage of her pregnancy with a girl who always remained with her till the child was born. Some rules of etiquette were strictly observed by the Mugema. It was not thought proper for him to visit other chiefs or to eat in their houses. He might not enter the king's house or the houses of the king's wives. If he wished to talk to the king, he had to do so sitting outside the house by the door, while his Majesty answered from within. When a prince was asked who was his father, it was customary for him to answer "The Mugema," but never "The King." Moreover, if any of the king's wives were found to be unfaithful and were about to be put to death by the king's command, it was enough for them to say that they were with child by the Mugema (*tu lya Mugema*) to be allowed to live ; indeed all the king's wives in their pregnancy made use of this expression. Yet the Mugema had charge of the place of execution where the paramours of princesses, wives who had been false to the king, and men who had married near relations were put to death.

Etiquette  
observed  
by the  
Mugema.

The king's  
children  
fathered  
on the  
Mugema.

The Antelope (*Mpevo*) clan has for its secondary totem a large grey rat (*kayosi*). Their forefather was Kaimyebutenga, who came to Uganda with Kintu and was afterwards raised to high office by King Cwa with the title of Kibare. Ever since then the Kibare, a member of the Antelope clan, has acted as viceroy during the king's absence from the capital. He has also charge of the king's state crown, which is adorned with a pair of antelope horns. The clan helps to make the rug on which the king sits on solemn occasions.

The  
Antelope  
clan.

The Seed clan takes its name from a small seed (*katinvuma*) which of old was worn as a bead in Uganda. The clan has for its secondary totem beads of all kinds. They explain the origin of their totem by saying that once a girl snatched some seeds from another girl, her playmate,

The Seed  
clan.

and swallowed them. To recover the stolen property the parents of the injured damsel resorted to the summary process of killing the little culprit, opening her stomach, and extracting the seeds. Since then the family of the dissected girl have foresworn the use of beads. That is why seeds and beads are their totem. They trace their descent from a man named Kyadondo, a son of Kintu, first king of Uganda. They furnish the bearers to carry the deities from place to place or to war. Representatives of the clan must assist at the building of any new temple to a god; and when the king has a new house built in the royal enclosure, the chief Segaluma, who is a member of the Seed clan, has to carry the fetishes into the house to bless it before the king or any of his wives may use it. For a few months after a king has come to the throne, this chief has to attend him constantly with a number of fetishes for the purpose of dispelling any harm which his enemies may try to do him by magic. For the same reason the chief sleeps at the king's door and presents his Majesty in the morning with a bowl of water with which the king washes his face and hands to remove, not the dirt, but anything uncanny which may have settled on him during the hours of slumber. The ablutions of savages have often no other motive. Cleanliness may be, according to the proverb, next to godliness in point of value; it is almost certainly later than godliness in the order of evolution. Men were pious and dirty long before they were impious and clean.<sup>1</sup>

Bearers of deities and fetishes.

The Bird clan.

The Bird (*Nyonyi*) clan has to respect all birds; members of the clan may not eat any. Yet with this comprehensive taboo they have taken as their special totem a particular kind of bird called *nyangi* and for their secondary totem another bird called *kunguvu*, which is a brown bird with long tail feathers. They claim descent from a man named Njuwe, who was in Uganda before Kintu came to it. They have charge of a fetish called Buganda, one of the most potent and dreaded of all the fetishes. Anybody who went

The fetish Buganda.

<sup>1</sup> On water as a means of warding off dangerous spirits, see my article, "Some Burial Customs as Illustrative of the Primitive Theory of the Soul," *Journal of the Anthropological Institute*,

near the door of a hut where the fetish stood was put to death. The sacred fire, which burned perpetually at the entrance to the royal enclosure and was only extinguished at the king's death, used to be guarded by a chief named Musolozza, a member of the Bird clan.<sup>1</sup> The clan had also the charge of a certain royal drum, which was beaten at intervals by day and by night to tell the people by its booming sound that the king was still alive. They also supplied every king with a wife and a head cook.

The perpetual sacred fire.

The royal signal drum.

The Rat (*Musu*) clan has for its secondary totem a small rat (*myuozze*). Both these species of rats are herbivorous and edible to other people, though not to members of the clan. The forefather of the clan was a man Miigo who came to Uganda with Kintu. King Mawanda appointed the clan to the offices of guardians of the royal privies and spies upon the army.

The Rat clan.

The Yam (*Kobe*) clan has for its secondary totem another kind of yam which they call *kama*. They say that their forefather Sedumi came into Uganda with the conqueror Kintu. To explain the origin of their totems they tell how their ancestor Sedumi, who came in with the conqueror, stole some yams and being detected was so ashamed that he hanged himself. Since then his descendants have abstained from eating yams. The clan had charge of the bow and arrows with which the human scapegoat (*kyonzire*) used to be shot for a new king at his accession to the throne. Further, it was the duty of the clan to make a kind of white bark-cloth for the king, also a special sort of anklets which the new king wore when he ceased mourning for his predecessor. They were made of a particular kind of wood from a tree which grew on one of the estates of the clan. These anklets were worn only one day and then kept by one of the king's wives who belonged to the Yam clan. Moreover, the clan had charge of the special hoe which was used to dig the shallow sort of grave under the trestle upon which the body of the king was laid for interment. And

The Yam clan.

The king's anklets.

<sup>1</sup> As to the perpetual fire at the king's gate see Rev. J. Roscoe, in *Journal of the Anthropological Institute*, xxxii. (1902) p. 51. The guardian of

the fire is there called Kalinda. In the text I follow Mr. Roscoe's unpublished papers.

The king's  
navel-  
string.

when the king's jaw-bone was removed, members of the clan had to put it into an ant-hill, till the ants had gnawed away all the flesh from the bone. Further, a large royal shield called *kamanya* and a royal flute called *kanga* were committed to the keeping of the Yam clan. It was they who made the king's bedstead, and they helped to adorn his navel-string which, as we have seen,<sup>1</sup> was always religiously preserved. On their estate in Buziwa they had a shrine where the navel-strings of Kayonge and Male were kept. The chief who had charge of this shrine bore the title of Male, and he herded some sacred buffaloes of the king. On two of their estates the Yam clan had also temples of the two national gods Wanema and Nainda; and on another of them all the paddles for the temple of the great national god Mukasa were kept.<sup>2</sup> On yet another of their estates they had a clan deity named Kabala.

The Bean  
clan.

The Bean (*Mpindi*) clan has for its secondary totem a wild bean (*kiindiru*). They trace their descent from a man named Wakaibu, whom they say Kintu found in Busiro when he came to Uganda. To explain the origin of their totem they say that once when a member of the clan was fleeing before his enemies his foot caught in a bean creeper, so that he fell to the ground and was speared to death by his foes before he could get up. His flowing blood formed the river Naki'za. From that day the bean has been the totem of the clan; no member of the clan will eat or even cultivate beans. One of them is said to have once partaken of the forbidden food and to have died on the spot. From early times the clanspeople have been among the makers of bark-cloth for the king; one of their ancestors is said to have learned the art in Bunyoro. But their chief service for the king was to take care of four of his large canoes and to man them with crews. They worship the spirit of the river Naki'za, which, as we have seen, is supposed to have been formed by the blood of their ancestor. The head of the clan is the priest. There is no temple, but at the ford there are two great piles of sticks and grass, one on either bank.

Worship of  
the river  
Naki'za.

<sup>1</sup> Above, p. 482 n. 3.

J. Roscoe, in *Journal of the Anthropological Institute*, xxxii. (1902) pp.

<sup>2</sup> As to these national gods see Rev.

74 sq.

At these heaps members of the clan offer goats, beer, bark-cloth and fowls, and kneeling down before the heap they pray the spirit of the river to help them. The priest takes charge of the offerings. If they are live animals, he guards them for the deity; if they are food or beer, he eats or drinks them himself. When people ford the river, they throw a handful of grass or a few sticks on one of the heaps before they plunge into the current; and when they emerge dripping from it on the further bank, they cast a few more sticks or blades of grass on the other heap as a thank-offering for a safe crossing. But if the river is in flood, the priest will let no member of the clan adventure himself into the angry swirling torrent under pain of death.

Ceremony  
at the ford.

The Bushbuck (*Ngabi*) clan has for its secondary totem a kind of grass (*jerengese*), on which bushbucks love to browse. This clan claims to be related to the kings of Uganda; for they say that they are descended from a woman Wanana, who was wife to Wunyi, king of Bunyoro, and that when Kalimera prince of Uganda was visiting his uncle Wunyi at the court of Bunyoro he had an intrigue with his uncle's wife, and that she bore him a son Kimera, who afterwards sat on the throne of Uganda. Yet, though they plumed themselves on their kinship with the royal house, no member, at least no male member, of the Bushbuck clan might enter the royal presence, because King Kimera is said to have been killed while he was hunting bushbuck. Both the animal and the clan are tabooed to the kings of Uganda. Nevertheless when the king sent out his catch-poles into the roads to seize all and sundry for the purpose of sacrificing them to the gods, any person who could prove that he or she was a member of the Bushbuck clan was at once released, while the rest were dragged away to be massacred.<sup>1</sup> Women of the Bushbuck clan might become wives of the king, but if one of them gave birth to a male child, he was strangled at birth. Hence women of the Bushbuck clan who were promoted to the royal harem claimed to belong to the Monkey (*Nkima*) clan. On the

The  
Bushbuck  
clan.

Privilege of  
the clan.

<sup>1</sup> As to these wholesale massacres see my *Adonis, Attis, Osiris*, Second Edition (London, 1907), pp. 405 *sq.*,

where the account is based on information given me by the Rev. J. Roscoe.

The lion-god. hill Masike the clan had a temple of the lion-god Yaiga ; he is said to have been an ancestor of the clan and to have turned into a lion at his death.

The Dog clan. The Dog (*Mbwa*) clan has for its second totem the iron bell which hunters fasten round the loins of their chief dog when they are hunting. They trace their pedigree back to a man Lusunde, who lived on their Kigwa estate in Busuju. On their Lusundu estate they had a temple to the national deity Musisi ; the priesthood of the god was always held by the chief of the estate. Members of the Dog clan have charge of the tombs of the Queens. When the Queens are growing old and feeble, they go to a hill named Lusaka, where they say Queen Wanyana sat at her first coming to Uganda. From a tree in the garden where her tomb stands bark-cloth has always been made for the king. It is the duty of the Dog clan to make and put the fetish into the king's chief *mujaguzo* drum. After the king has gone through the ceremonies for the prolongation of his life, a member of the Dog clan takes charge of the dowager Queen.

The Jackal clan. The Jackal (*Kibe*) clan has for its secondary totem a horned puff-adder (*mpiri*). They say their forefather was a man named Muige, who crossed over in his canoe to Uganda from the island of Nyende in the reign of Kimera. The clan had three temples on their estates, all dedicated to the great national god Mukasa. The priests of all three temples were members of the Jackal clan, but the inspired mediums of the god might be drawn at his pleasure from any clan. The only work the Jackal clan did for the king was to keep in repair the canoe in which their father is said to have paddled to Uganda. It was one of the royal canoes and with its crew was always kept in readiness to put off at the king's command.

The Hippopotamus clan. The Hippopotamus (*Nvubu*) clan has for its secondary totem the tortoise (*nfudu*). They claim to be descended from Kaita, a son of Kintu. To explain the origin of their totems they tell a strange tale. They say that when Kaita was born his mother brought forth a tortoise instead of the afterbirth, and that this tortoise afterwards turned into a hippopotamus, so that the clanspeople are related to both their totemic animals, the tortoise and the hippopotamus.

Legend of a woman who gave birth to a tortoise.

All the estates of the Hippopotamus clan lie on or near the lake. They had to keep several large canoes always ready for the king's service, each with its crew to man it. They had to help to find drummers to beat the signal drum in the royal enclosure, whose deep notes rose above the hum of day and broke the stillness of night at regular intervals, proclaiming to his people that the king of Uganda was in life. Members of the clan made shields for the king and his retainers, and also bracelets and anklets for his wives. The Hippopotamus clan worshipped all the gods of the lake, to wit Mukasa, Musisi, and Wanema. They cared for the temple of Nangera, son of Musisi, in the island of Mbazi. To this deity they ascribed all their prosperity and good fortune, and to his temple in the island the chiefs of the clan repaired to make him thank-offerings for his favours.

The king's drummers.

The *Cephalophus* Antelope (*Ntalaganya*) clan has for its secondary totem a fungus (*malere*) which grows on the trunks of trees. Their forefather was named Bambaga, who is said to have attended Kintu when he first came to Uganda. The clan were hunters and had the charge of the king's dog named Mukoza. They tied a sacred bell called *Sirilwanagamba* round the dog's loins when they hunted with it, believing that the bell not only told them where the dog was, but also enabled the animal to put up the game and drive them into the net. They hunted all wild animals from the buffalo down to the smallest kind of edible rat, and they had to bring the king from time to time a portion of their bag. On their estate of Bugala the *Cephalophus* Antelope clan had a shrine where the king's fetish Lugala was kept. This fetish was a large gourd, and the chief of the estate, who always takes the title of Bambaga, had charge of it. Every new moon, on the fifth day after the crescent appeared in the sky, the fetish Lugala was carried in state to the capital and handed to the king, who took it for a few moments and then returned it to the keeper. This gourd had an iron crown, consisting of three heart-shaped hoes fastened to a ring by a prong. The crown was called *Kalamasi* and was always carried to battle and placed with other fetishes in a hut near the hut of the general in command.

The *Cephalophus* Antelope clan.

The fetish Lugala.

Sacred drum kept in a shrine, which served as a sanctuary for man and beast.

Further, in the Gomba district the *Cephalophus* Antelope clan had charge of a sacred drum named *Nakanguzi*, which had a fetish inside it. This drum was brought to court and beaten when the king had been mourning and wished to cease. At the sound of the drum the whole country knew that the court had gone out of mourning and that they must hasten to do the same. So they shaved their heads and laid aside all tokens of sorrow. Any person who delayed to do so was captured and put to death. The shrine where the drum was kept served as a sanctuary for man and beast. If a slave or a man condemned to death escaped to it, he was safe and free; he was the slave of the drum and might not be carried off. Should any animal, cow, goat, or sheep, stray thither, it might not be taken away or killed, and it was free to roam as it pleased in future; for it had become the property of the drum and was a sacred animal.

The Reedbuck clan.

Hunters of elephants.

The Reedbuck (*Njaza*) clan has for its secondary totem a kind of antelope (*njugulu*). This clan has always lived in the great wood called the Mabira forest. Their forefather Lutimba was there when Kintu came to the country. From the earliest times they have been hunters of elephants, and when the monarchy was established they became hunters to the kings and paid them tribute in ivory from the elephants they killed. They also supply some workmen to build the houses in the royal enclosure. They had the care of the gods of the chase in the wild woodland country where they dwelt. The chief god to whom they appealed for help in hunting was Mpa-amaso, but they also worshipped Mbiru, Nahalanga (who is also called Dungu), Nabambu, and Nyenga. The night before they went out to hunt they placed their spears in the temple of one of the gods and offered beer and a goat to secure the blessing of the deity. And in the chase they wore a fetish called *zinga* on the upper right arm, believing that the fetish lent certainty to their aim and strength to their arm, and that it entangled the prey so that it could not escape. When they killed an elephant they drew out the nerve from the tusk and buried it in a sequestered spot, marking the place lest any one should unwittingly step over it. For they thought that the ghost of the elephant was in the nerve of his trunk, and

Ceremonies performed by elephant hunters.

that if any man stepped over it he would die. Immediately after the coronation of a new king the Reedbuck clan brought him a tusk of ivory, which he had to jump over in order to cause the elephants to multiply in the land.

Ceremony for the multiplication of elephants.

The Tailless Cow (*Ente etalina mukiro*) clan is usually called the Bagabo clan. It has for its secondary totem the crested crane. They cannot say why they have a tailless cow for their chief totem, but they tell a story to explain their secondary totem, the crested crane. They say that a girl of the clan had been newly married and was returning home with some companions. Being left alone in the road for a short time she began to eat some small fruits which the natives call *ntuntunu*. On their return her companions found the bride munching the fruit and jeered at her. At this she was so ashamed and angry that she fled from them to a flock of crested cranes and was never seen again. Her companions averred that no sooner had she reached the flock of birds than she turned into a crested crane herself; and from that time the clan took the crested crane for their secondary totem. They trace their descent from a man named Kitongole who came from Bunyoro. Their business has always been that of smiths, and the art of smelting and working iron has been handed down among them from father to son for generations. They smelt the iron from the ore and work it up as they require it. They are smiths to the king and pay tribute to him in hoes. Their chief deity was Wangi. His temple stood on the hill Mulema, and on the same estate of the clan was another temple to the god Lwerekera. Each god had his inspired medium or prophet, but a single priest attended to both temples. When one of the prophets died, the clan met in solemn conclave to discover whom of their number the deity would choose to be the vehicle of divine inspiration, and the chosen vessel at once gave the usual symptoms of inspiration. This was the only occasion on which the Tailless Cow clan met for any religious observance. At other times members of the clan repaired singly to one or other of the temples to enquire of the god or to make him offerings for favours received.

The Tailless Cow clan.

The Crow (*Namu'ngona*) clan has for its secondary totem the hearts of animals. The clan is commonly called

The Crow clan.

Bandyala ; its chief estates are in the Budu district. They claim to be the descendants of a man Kidiba, a son of Kintu ; and they explain their totem the crow by saying that their forefather Kidiba cultivated land near a tall tree on the branches of which crows used to build their nests, so the people near it were called the people of the crows. The Crow clan is one of those which may not give birth to a prince ; so to evade this disqualification they bestowed their daughters on men of the Otter clan, who presented them to the king as members of the Otter clan ; hence the Crow clan claims to be related to the royal family.

Worship of  
the god  
Kagera by  
the Crow  
clan.

The Crow clan had a god (*lubare*) called Kagera. His temple was at Kasaka in Budu, and his chief business was to bestow offspring on women ; but he also helped members of the clan in all kinds of sickness. Any woman of the clan who did not have children as soon as she wished, went to the temple, taking with her a present of a gourd of beer, a bark-cloth, a cowry shell, and a seed of the wild banana. The priest consulted the god for her, and having obtained the necessary instructions gave the woman an amulet to wear, some herbs mixed with water to drink, a cowry shell, and a seed of the wild banana, also a giridle made of a creeper to put on. With these things she went back to her husband and soon found herself with child. When the infant was born, the mother returned to the temple and made a thank-offering to the god. Sometimes the god Kagera and his divine partner Kasinya were invoked by the Crow clan to give them rain. In a season of drought the people would go to the temple with an offering of food and beer, and some of the withered fruits of the earth to shew to the god. The priest told the god what had been brought to him, shewed the withered fruits, and asked for rain for the people. The deity answered by the mouth of a woman named Kaisa. When the showers began to fall, the people beat their drums in honour of the god who had granted their prayer. Once a year the clan held a great festival at the temple, dancing and feasting for four days, the drums beating the whole time and fires burning brightly all night long.<sup>1</sup>

by the  
Crow clan.

<sup>1</sup> From the Rev. J. Roscoe's manuscripts.

The Mushroom (*Butiko*) clan took for their secondary totem the snail (*nsonko*) and small ivory discs (*nsanga*). They say that their forefather was Manyagalya, who came to Uganda with Kintu ; but it was his son Wagaba who formed the clan and forbade them to eat mushrooms, because when he had buried his father Manyagalya he found mushrooms growing on the grave next morning. Manyagalya is said to have brought the first plantains into Uganda, also the kind of fig-tree from which bark-cloth is made. Members of the clan have been makers of bark-cloth ever since. It was Manyagalya, too, who brought the seeds for their bottle-gourds, and presented the king with the first gourd. On their estate of Bukerere in Kyagwe stood the temple of Nende, the second god of war. The care of this deity was the most important duty the clan had to perform. The priest of the god was a member of the clan. They had also charge of a certain royal drum and a royal stool, both of which were made in the Wagaba garden of the clan. Moreover they were gate-keepers to the king and made all the reed gates for the royal enclosure. When they had made the new gate for the royal enclosure after the accession of a king, they took toll of the cattle and tribute that entered the gate for the first time. They had also to supply the Queen Sister (*Lubuga*), the prime minister, and the second minister (*Kimbugwe*) with gate-keepers. Moreover, the Mushroom clan had charge of the king's gourd *namvuma*, from which his forefather first drank. Every new moon this drinking-cup was brought to the king, who took it into his hands and then passed it back to the keeper. One of the king's wives, called Najuko, is always taken from the Mushroom clan. When a king on his accession occupies his new enclosure, this wife must dig the first sod in it for making the gardens.

The Heart (*Mutima*) clan has for its secondary totem the lungs (*maugwe*) of animals. Though they may eat the flesh of any animal, they are strictly forbidden to touch the heart and lungs. They have kept exclusively to the south of Uganda ; all their estates are in the Budu district. Their forefather is said to have been a man Namugera, who lived and died on an island near Sese. His sons

came to Uganda and accepted service under King Wunyi, who gave them their Budu estates. The clan is noted for its skill in weaving fine baskets. They had to bring a tribute of fish caught in the river Mujuzi to the king every six months. On the hills Bale and Lwamunyi the clan has two small temples to the national god Mukasa with priests and mediums.

Worship of the python by the Heart clan.

The Heart clan had also charge of a temple where the python was worshipped under the titles of Selwanga and Magobwe, which were also names of men.<sup>1</sup> The temple stood in a forest on the bank of the Mujuzi River. The estate is called Bulonge; it forms part of Budu, a district in the south of Uganda, bordering on the western shore of the Victoria Nyanza. The temple was a large conical hut built of poles and thatched with grass. On the floor was spread a layer of sweet-smelling grass, and upon it was the sacred place of the python, a log and a stool covered with bark-cloth. A round hole in the side of the hut allowed the serpent to crawl out and in. The guardian of the python was a woman called Nazimbe, who might never marry. She daily fed the serpent with milk out of a large wooden bowl, the reptile lying with its head over the stool and drinking freely. The milk was drawn from certain sacred cows, which were kept for the sole use of the python. White clay was mixed with the milk which the serpent drank; and the creature was also given fowls and small goats.

The feeding of the sacred serpent with milk.

The python's inspired medium (*Mandwa*).

Within the hut, opposite the serpent's place, stood a bedstead, on which the python's inspired medium (*Mandwa*) and his assistant slept. It was the medium's duty to bring the milk from the sacred cows for the python, and from time to time he took fowls or goats and tied them on the bank of the river, and the python went down and devoured them. These offerings were made whenever the medium wished to go afishing, because the python was believed to have power over the river and all the fish in it. After a good catch the medium would call all the people of the

<sup>1</sup> The following curious and valuable description of the worship of the python, like the rest of the information as to the Baganda clans which is embodied

in the text, is derived from the manuscripts of the Rev. J. Roscoe, which he has generously placed at my disposal.

estate together to partake of a sacred meal of the fish caught ; he prepared the fish and they provided the cooked vegetables and beer. From time to time the medium went over to the Island of Sese to get cows from the god Mukasa with which to provide milk for the python. The reason why he applied to Mukasa was that the god's wife was a female python named Nalwanga, sister of the male python Selwanga ; hence according to the custom of the country Mukasa was bound to make presents to his wife's brother from time to time. The cows always came decorated with creepers about their bodies to shew that they were sacred. They were kept close by the temple and milked daily for the python.

The chief business of the python was to bestow offspring on people. Newly married men and husbands of barren wives resorted to the temple for the purpose of obtaining children with the help and blessing of the serpent. Other requests were also brought to him, but he was called above all the Giver of Children. The king himself used to send the chief of the district (*Pokino*) to the python to ask his blessing, that he might have offspring.

The sacred python called the Giver of Children.

The time for the worship of the python was at the new moon. For several days before the moon appeared the people made preparations, because no work might be done on the estate for seven days. As soon as the crescent was seen, the drums beat and the people gathered for the worship, bringing their offerings for the god, which were chiefly beer, cowry shells, and a few goats and fowls. The hereditary priest, who was always chief of the estate, came with a following of lesser chiefs. Having received the offerings from the people and informed the python of the requests which were made to him, the priest dressed the medium in the sacred garb that he might be ready for the python to take possession of him. This garb consisted of two bark-cloths thrown over the shoulders, two white goat-skins worn as aprons, a leopard skin wrapt round the chest, and a crown of goatskin, decked with beads and wild banana seeds, on the head. Thus attired, and holding two fly whisks in his hand, the medium received from the priest a cup of beer and some of the milk mixed with white

Worship of the python at the new moon.

The python gave oracles through a human medium, who was inspired by the serpent.

clay from the python's bowl. These he quaffed, and then, the spirit of the python coming upon him, he fell on his face and wriggled like a serpent on his belly, uttering strange sounds and speaking in an unknown tongue. When the fit of inspiration was over, and the medium, exhausted by the strain, had fallen into a deep sleep, an interpreter explained the inspired but mysterious utterances to the fortunate persons whose prayers had been granted. He told them what human means it was necessary to adopt in order to ensure the divine blessing, what medical treatment the wife must undergo, and so forth. When the children promised by the python were born, the happy parents had to bring an offering of a goat or fowls to the temple, and if they failed to do so, their little ones were stricken with disease.

The totemic system of the Baganda seems to contain little that is primitive.

The preceding account of the totemic system of the Baganda, which we owe to the prolonged and accurate researches of the Rev. John Roscoe, suggests several observations. In the first place there appears to be little in the system that can be described as primitive or that throws light on the origin of totemism. The Baganda are a people who have made very considerable advances in culture, and though they retain the division into totemic clans for the regulation of marriage, and continue to respect their totemic animals and plants, they seem for the most part to have passed beyond the savage superstitions which probably lie at the root of totemism. In general they either cannot account at all for their totems or they account for them by jejune stories, the worthless product of a late and shallow rationalism. The fundamental notion of a physical kinship between a man and his totem seems to have almost disappeared. Yet in a few cases it survives. Thus the clan which has for its totems the hippopotamus and the tortoise tells how their ancestress gave birth to a tortoise, which afterwards turned into a hippopotamus, so that members of the clan are akin to both their totem animals.<sup>1</sup> This story smacks of true totemism. Again, the tradition of the Tailless Cow clan, that they took the crested crane for their secondary totem because a girl of the clan had been turned into a bird of that sort,<sup>2</sup> also reflects the old

<sup>1</sup> See above, p. 494.

<sup>2</sup> See above, p. 497.

totemic sense of the closeness between man and beast and the easy transition from one to the other. Slighter traces of the same train of thought may be detected in the story of the Mushroom clan, that they respect mushrooms because mushrooms grew on their founder's grave;<sup>1</sup> and again in the tradition of the Frog branch of the Lung-fish clan, that their human ancestor resembled in certain respects a frog.<sup>2</sup> With these hints of genuine totemism before us we may guess that many more totemic clans of the Baganda formerly explained the origin of their totems by similar legends of a physical affinity between their human ancestors and their totemic animals or plants.

Another feature in the totemism of the Baganda which bespeaks its high development or rather decay is the almost total absence from it of magical ceremonies for the multiplication or control of the totems. The only clear and indubitable exception is the ceremony performed by Grasshopper women for the multiplication of their edible totem the grasshopper.<sup>3</sup> As the Baganda clans are regularly forbidden to injure or eat their totems, it would seem that this ceremony can only be performed by Grasshopper women for the benefit of other people, who eat grasshoppers and regard them as a dainty. Thus the rite observed by women of the Grasshopper clan for the multiplication of grasshoppers is strictly analogous to the *intickiuma* or magical rites observed by totem clans in Central Australia for the multiplication of their totems. But this is the only case of such a magical rite performed by a totemic clan for the increase or control of the totem which Mr. Roscoe was able to discover among the Baganda, though he made searching enquiries on the subject. However, a hint of the same thing occurs in the rule that a member of the Wind clan must assist at the capture of the spirit of the wind.<sup>4</sup> We have also seen that the King of Uganda performed a magical ceremony for the multiplication of elephants with the

Absence of magical ceremonies for the multiplication or control of the totems.

<sup>1</sup> See above, p. 499.

<sup>2</sup> See above, p. 485.

<sup>3</sup> See above, p. 482. Observe that the husband of the Grasshopper woman is of course not a member of the

Grasshopper clan and is therefore free to eat grasshoppers; and the same privilege is enjoyed by his children, since they are of his clan and not of their mother's.

<sup>4</sup> See above, p. 486.

assistance of elephant-hunters ;<sup>1</sup> but as these elephant-hunters belonged to the Reedbuck, not to the Elephant, clan, the ceremony is not strictly analogous to the Central Australian ceremonies of *intichiuma*.

The totemic system of the Baganda seems to have had very little influence on their religion.

Another observation suggested by Mr. Roscoe's account of Baganda totemism is that the system appears to have had extremely small influence on the religion of the people. There is little or no evidence that in Uganda, as in Samoa,<sup>2</sup> the old totemic superstitions were developing into a regular worship of the totemic animals and plants. Each totemic clan seems, indeed, to practise certain religious observances of its own ; but, apart from the custom of not killing or injuring the totem, these observances have little or no reference to the totemic animals or plants. For the most part they are concerned either with the great national deities or with the once human but now deified ancestor of the clan. Even when we do find a totemic clan worshipping an animal with truly religious rites, that animal is not their totem. It is the Heart clan, not a Python clan, which worships the python. Thus the totemism of the Baganda should serve as a warning against the supposition that totemism almost necessarily develops, first, into a worship of sacred animals and plants, and afterwards into a worship of anthropomorphic deities with sacred animals and plants for their attributes. At the same time we are bound to remember that the system of the Baganda has all the appearance of being highly developed, and that it may have passed through one or more stages of this development before it came within the ken of European observers. It is possible that the ancestors to whom the clans trace their origin were once deemed to be animals or plants of the totemic species ; or to be more exact, it may have been imagined that the ancestors were beings who partook both of the nature of men and of the nature of animals or plants, so that to the vague thought of those primitive philosophers it was impossible to draw a sharp distinction between the two. Such semi-human creatures, hovering on the line between man and beast or between man and plant, were according to Central Australian traditions the forefathers of the totemic clans.

<sup>1</sup> See above, p. 497.

<sup>2</sup> See above, pp. 151 *seq.*

One more observation suggested by the foregoing notice of the Baganda clans is that some of the clans seem almost to have developed into hereditary professional castes. Thus the members of one clan are elephant-hunters ; the members of a second are smiths ; the members of a third are makers of bark-cloth ; and the members of a fourth are noted for their skill in basket-weaving. And this incipient tendency towards an industrial system based on a division of labour between families has apparently been fostered by the kings, who have assigned to most, if not all, of the clans certain special duties or functions to be performed by them for the royal family. Hence in Uganda, as probably in many other barbarous nations, the existence of an absolute monarchy has been favourable to the growth of the mechanical arts by creating a demand for many different kinds of skilled labour and by holding out ample rewards for proficiency in them.

A very singular feature of the Baganda clans is that in spite of the custom of exogamy, which necessitates a constant inflow of fresh female blood from outside into the clan, each clan nevertheless preserves a distinct physical type of its own, which is so clearly marked that an experienced observer can commonly tell a man's clan at sight without needing to ask him which he belongs to.<sup>1</sup> Thus, for example, members of the Grasshopper clan are distinguished by high pointed heads ; members of the Lung-fish clan may be recognised by their broad noses ; and members of the Oribi Antelope clan are conspicuous for the refined cast of their features, particularly their thin shapely noses and less protuberant lips. The royal family is likewise distinguished from others by the finer type of its features, which are thought to resemble those of the Bahima ; yet the type differs from that of the Oribi Antelope clan. Exact measurements confirm and accentuate these corporeal distinctions, which cannot be ascribed to any artificial manipulations or mutilations of the body, since no such manipulations or mutilations are practised by the Baganda. Yet when a woman bearing all

<sup>1</sup> For this information as to the physical types of the Baganda clans I am indebted to the Rev. J. Roscoe. He has taken many exact measurements

of many members of the various clans, and these measurements will be published in due course.

Suggested  
 explanation  
 of the  
 permanence  
 of the  
 paternal  
 type.

the characteristic features of her clan is given in marriage to a man of another clan and has children by him, these children reproduce the physical type, not of their mother, but of their father ; they resemble him, not her ; the mother's bodily characteristics are, so to say, obliterated in her offspring. Why this should be so, why among the Baganda children should regularly be like their fathers and not like their mothers, is a question on which that branch of biological science which investigates the propagation of the species may yet throw light. If the popular opinion, shared by experienced breeders, that impressions made on mothers during their pregnancy are often permanently imprinted on their offspring, should prove to be correct, we could easily understand why women, taken in childhood from their mothers' families and brought up, as they usually are among the Baganda, in the families of their future husbands, should bear children who reproduce the physical type of the persons whom their mothers have had constantly before their eyes during the critical seasons of conception and pregnancy. And on the same principle we might perhaps expect to find conversely, that wherever it is the custom for husbands to take up their abode permanently in their wives' families, the children would tend to resemble their mothers rather than their fathers, since in that case the women during pregnancy would be surrounded by persons of their own physical type, not by persons of the physical type of their husbands. Yet this tendency would probably be far less decided than the other ; since on the hypothesis in question the physical type of the father must always count for much, and the impression which it makes on the wife and mother, though it might be weakened, could hardly be wholly effaced by the impression made on her by persons of a different type. If there is any truth in these speculations, it may be anticipated that wherever a wife lives with her husband's family, the children will strongly resemble their father ; and that wherever a husband lives with his wife's family, the children will tend, though in a far less degree, to resemble their mother. But to the question thus raised by the physical diversity of the Baganda clans we shall have occasion to recur in the sequel.

Like the tribes of Central and Northern Australia the

Baganda believe that women may be impregnated without commerce with the other sex; but unlike the Australian aborigines they hold that such impregnation is exceptional, not universal.<sup>1</sup> When a wife is found to be pregnant in circumstances which exclude the possibility that the child might have been begotten by her husband, she will sometimes plead that she got it through the flower of the banana falling on her back or shoulders, while she was at work in her garden. This account is at once accepted as a sufficient explanation of her pregnancy and her husband is satisfied; for the Baganda do not doubt that a woman may be impregnated by the flower of the banana. If a woman were for any reason debarred from having recourse to this plea, she might under the old régime be lawfully put to death by her husband, and such executions were not infrequent. Nothing could well illustrate more strikingly the firm faith of the Baganda in the possibility of conception without cohabitation than the readiness of a husband to accept such an excuse and on the strength of it to let the adulteress go free, whom otherwise he might have punished with death. The notion that the flower of the banana may get with child any woman on whom it falls is perhaps connected with the custom, invariably observed by the Baganda, of burying an infant's placenta at the root of a banana tree. For as they deem the placenta a double or twin, as they call it, of the child, they might easily fancy that a spirit child is absorbed by the root of the tree and that, being drawn up by the sap, it breaks out in the sunshine into the great purple bloom of the banana, ready to drop on some passing woman and to be born again from her womb. The same custom may also explain the notion of the Baganda that a banana grove is the play-ground of ghosts. No wonder that a woman should become a mother on such haunted ground.

But in Uganda children may come, unfathered, into the world in less lovely ways than from the purple blossoms of a verdurous banana grove. Infants born feet foremost are killed and buried at cross-roads; and at cross-roads the

Belief of the Baganda that conception may take place without sexual intercourse. They think that a woman may be impregnated by the flower of the banana.

Suicides and children born feet foremost are buried

<sup>1</sup> For the evidence of this belief I am indebted to my friend the Rev. John Roscoe.

at cross-roads, and it is believed that their spirits can enter into passing women and be born again.

bodies of suicides are burned together with the fatal tree on which they hung or the house in which they took their lives. All women, whether married or unmarried, who pass these ill-omened spots, cast sticks or straws on the graves till great piles have accumulated over them. This they do to prevent the unquiet spirits from entering into them and being born again.<sup>1</sup>

These superstitions demonstrate the belief of the Baganda that women may and do conceive without the co-operation of a male. We have seen reason to think that notions of this sort lie at the root of totemism.

Marriage of first cousins forbidden, but marriage of second cousins allowed. Mutual avoidance of first cousins.

Marriage between first cousins is forbidden among the Baganda.<sup>2</sup> We are not told that there is any exception to this rule. But second cousins are free, at least in certain cases, to marry each other. Thus whereas first cousins, the children of a brother and of a sister respectively, are forbidden to marry each other, the children of these cousins are at liberty to do so in the case where the father of one of them is the son of that brother, and the mother of the other is the daughter of that sister. In short, a man's children may not marry his sister's children, but a man's son's children may marry his sister's daughter's children.<sup>3</sup> Not only may first cousins not marry each other but they may not even come near each other nor speak to each other, they may not enter the same house nor eat out of the same dish.<sup>4</sup> This custom of mutual avoidance no doubt springs from the prohibition of marriage and is intended to guard against incest.

Custom of avoidance between a man and his wife's mother and between a woman and her husband's father, etc.

Further, among the Baganda, as among so many peoples who practise exogamy, a man may neither see his mother-in-law nor speak to her face to face. If he wishes to hold any communication with her, it must be done through a third person, or she may be in another room out of sight and talk to him through the wall or open door. A woman may speak to her father-in-law, but she may not take his hand or

<sup>1</sup> From information given me by the Rev. J. Roscoe. Compare his "Further Notes on the Manners and Customs of the Baganda," *Journal of the Anthropological Institute*, xxxii. (1902) p. 30.

<sup>2</sup> Sir Harry Johnston, *The Uganda*

*Protectorate*, ii. 688.

<sup>3</sup> From information given me by the Rev. J. Roscoe.

<sup>4</sup> Sir Harry Johnston, *The Uganda Protectorate*, ii. 695, confirmed and extended verbally by the Rev. J. Roscoe.

touch him or even hand him anything. Any breach of these customs is supposed to be punished by nervous debility with tremors in the hands and other parts of the body.<sup>1</sup> Further, a man had to avoid his sister's daughters; he might neither eat with them nor let them come near him. They were not allowed to enter his house if he was at home.<sup>2</sup>

The Baganda have the classificatory system of relationship.<sup>3</sup> Thus in the generation above his own a man calls his father *kitange*, "my father," and he calls his father's brother, whether younger or older than his father, *kitange muto*, "my little father." But he has quite a different term (*kojawe*) for his mother's brothers. He calls his mother *mange*, "my mother," and he calls his mother's sister, whether older or younger than his mother, *mange muto*, "my little mother."<sup>4</sup> But he has quite a different term (*sengarwo*) for his father's sisters. In his own generation he applies the term *muganda wange* to his brothers and the term *muganda* to his male first cousins, the sons either of his father's brothers or of his mother's sisters. He applies the same term *mwanyina* to his sisters and to his female first cousins, the daughters either of his father's brothers or of his mother's sisters. But he has quite different terms for his other first cousins, the children either of his father's sisters or of his mother's brothers. Thus he calls the sons and daughters of his father's sisters *kizibwewe*, and he applies the same term to the daughters of his mother's brothers. The sons of his mother's brothers he calls *kojawe*; but he may also call them *muganda*, "brothers." In the generation below his own a man applies the same term *mutabane* to his sons and to his brothers' sons. The term *muganda wange* is applied by a man to his brother and by a woman to her sister. The term *mwanyina* is applied

The classificatory system of relationship among the Baganda.

(1901) p. 124; *id.* "Further Notes on the Manners and Customs of the Baganda," *Journal of the Anthropological Institute*, xxxii. (1902) p. 39. Compare Sir Harry Johnston, *The Uganda Protectorate*, ii. 688.

<sup>2</sup> From the manuscripts of the Rev. J. Roscoe.

<sup>3</sup> The following account of the

classificatory system of relationship among the Baganda is drawn from the manuscripts of the Rev. J. Roscoe, which he has kindly placed at my disposal.

<sup>4</sup> "The clan system also has a tendency to make relationship rather general than particular, and hence a child calls all its father's brothers 'father,' and all its mother's sisters 'mother'" (R. P. Ashe, *Two Kings of Uganda*, pp. 286 sq.).

by a man to his sister and by a woman to her brother. It deserves to be noticed that the system of relationship of the Baganda is sufficiently advanced to distinguish between a wife and a wife's sisters, and conversely between a husband and a husband's brothers. Thus a man calls his wife *mukazi* or *muka*; but he calls his wife's sisters *mulamu*. A woman calls her husband *ba* or *baze*; but she calls her husband's brothers *mulamu*.

Two peculiarities of the classificatory system of relationship among the Baganda. First, a man calls his mother's brother's wife his wife and she calls him her husband.

Two peculiarities in the classificatory system of the Baganda deserve particular notice. In the first place a man calls his mother's brother's wife his wife (*mukazi*), and she calls him (her husband's sister's son) her "husband" (*baze*). This seems to imply that among the Baganda in former times, as among the Barongo at present,<sup>1</sup> a nephew exercised marital rights over the wife of his maternal uncle (his mother's brother), or in other words, that a woman was bound to submit to the embraces of her husband's nephew (his sister's son) whenever the nephew chose to require it of her. The implication is strongly confirmed by the observation that among the Baganda as among the Barongo the nephew still inherits the wife (or one of the wives) of his deceased maternal uncle; that is, on his uncle's death he marries the woman (his uncle's wife) whom even in his uncle's lifetime he had called his wife, and the widow on her side marries the man (her husband's nephew) whom even in her husband's lifetime she had called her husband. Similarly among the Republican Pawnees of North America a man called his mother's brother's wife "my wife" (*Tâ-te-luk-tuk-û*), and consistently with this nomenclature he called the woman's child "my child" (*pe-row*).<sup>2</sup> We can now understand why in several Indian tribes of North America, such as the Minnetarees and the Choctaws, a man calls his first cousins, the children of his mother's brother "my son" and "my daughter"; and why conversely in these tribes a man calls his first cousins, the children of his father's sister "my father" and "my mother."<sup>3</sup> These terms so applied are perfectly intelligible

<sup>1</sup> See above, p. 387.

<sup>2</sup> L. H. Morgan, *Systems of Consanguinity and Affinity of the Human Family* (Washington, 1871), p. 331

(*Smithsonian Contributions to Knowledge*, xvii.).

<sup>3</sup> See below, vol. ii. pp. 149, 175 sq.

on the hypothesis that in former times a man of these tribes, like a Barongo man at present, regularly exercised marital rights over the wife of his maternal uncle (his mother's brother), for in that case the woman's children might be in very truth his sons and daughters. Similarly, in the Mota form of the classificatory system a man is called the father (*tamai*) of his first cousins, the sons and daughters of his mother's brothers,<sup>1</sup> which suggests that he has, or once had, marital rights over their mother, the wife of his maternal uncle, in other words, that a man is bound to place his wife at the disposal of his nephew, the son of his sister, whenever the nephew chooses to exact the privilege. This accords very well with the extraordinary rights which in Fiji the sister's son (*vasu*) enjoyed against his maternal uncle, his mother's brother.

The second peculiarity in the classificatory system of the Baganda which deserves attention is this. A man calls his wife's brother's daughter his wife, and she calls him her husband. This is explicable on the hypothesis that the two enjoy, or formerly enjoyed, the right of having sexual intercourse with each other. That right would in turn explain the names which among certain tribes of North American Indians first cousins, the children of a brother and of a sister respectively, apply to each other. Thus among the Miamis and Shawnees a man calls his female cousin, the daughter of his mother's brother, "my mother," and she calls him "my son."<sup>2</sup> This would be intelligible if the man's father had a right of access to his wife's brother's daughter, for in that case his son might be quite right in calling that woman "my mother," since she might really have given birth to him.

Thus these particular Melanesian and North American terms for cousins are readily explained by the peculiarities of the Baganda system to which I have just called attention: we have only to assume that among the Baganda the terms "husband" and "wife" mean what they imply, and we at once understand why in Melanesia and North America two

The second peculiarity of the Baganda form of the classificatory system is that a man calls his wife's brother's daughter his wife and she calls him her husband.

These two peculiarities explain certain Melanesian and North American terms for cousins.

<sup>1</sup> R. H. Codrington, *The Melanesians* (Oxford, 1891), pp. 37-39.

<sup>2</sup> See below, vol. iii. pp. 70 sq., 74. Compare the terms for consins, the

children of a brother and sister respectively, in the Omaha and Creek forms of the classificatory system (*ibid.* pp. 115-117, 165-167).

persons, who seem to be first cousins, may quite correctly call each other "mother" and "son" respectively.

The peculiarities of the Baganda system point to certain extended marital rights.

It should be observed that whereas the first of the peculiarities of the Baganda system points to the exercise of marital rights by a man over a woman in the generation above him, namely, his mother's brother's wife, the second peculiarity points to the exercise of marital rights by a man over a woman in the generation below him, namely, his wife's brother's daughter. It is remarkable that, if we may judge by their terms of relationship, both these privileges should have been accorded to men by the Baganda.

Relics of mother-kin among the Baganda.

The first of the peculiarities of the Baganda system to which I have called attention may be considered a relic of mother-kin; for it seems hardly possible to explain otherwise the custom which allows a man to call his mother's brother's wife "my wife" and to marry her on the decease of his maternal uncle. Such a custom points plainly to that position of privilege enjoyed by a man in respect of his maternal uncle which was perfectly natural when he was his uncle's heir under the system of mother-kin, but which becomes strange and anomalous under a system of father-kin, such as now obtains in Uganda, under which a man's heirs are not his sister's sons, but his own sons. Another relic of the privileges formerly granted to the sister's son under a system of mother-kin survives among the Baganda at funerals; for it is then the duty of the sister's son, and of him alone, to conclude the obsequies by solemnly burning the house-pole of his deceased maternal uncle.<sup>1</sup> But among the Baganda, as among other peoples who have followed the custom of mother-kin, the advantage is by no means altogether on the side of the nephew as against his maternal uncle; on the contrary we are told that in former times "a man always looked upon his sister's children and treated them as slaves."<sup>2</sup> This despotic power possessed by a man over his sister's children is a natural consequence of the system of mother-kin, which places a woman's brother, not her husband, at the head of her family and thereby permits him to exercise the same authority over her children which

<sup>1</sup> From information given me by the Rev. J. Roscoe.

<sup>2</sup> From the papers of the Rev. J. Roscoe.

under the system of father-kin would be exerted by their father. In the history of institutions the authority of the maternal uncle, the mother's brother, as a rule precedes that of the father: *avunculi potestas* is commonly older than *patria potestas*.

To the traces of mother-kin among the Baganda may perhaps be added the rule according to which kings and princes belong to the clan and take the totem of their mother, while commoners on the other hand always belong to the clan and take the totem of their father. But, as we shall see presently, there is reason to think that this royal custom of heredity, so different from the custom of their subjects, is rather an importation from an alien race than evidence of the ancient practice of the Baganda themselves.

Maternal descent in the royal family of Uganda.

### § 15. Totemism among the Banyoro

The Banyoro are a Bantu people inhabiting Unyoro, the country which lies to the north-west of Uganda and borders on Lake Albert. Down the centre of this region runs a line of bold heights, sometimes rising into pinnacles and crags of striking aspect. Here the country is open, grassy, and rocky, but along the western foot of the ridge stretches a belt of tropical forest, where chimpanzees live and large-tusked elephants abound.<sup>1</sup> The Banyoro shew an admixture of Hamitic and Nilotic blood with the Bantu stock. Their figures are tall and shapely and their faces would be pleasing but for the practice of extracting the four lower incisor teeth. They keep cattle, sheep, and goats, but their staple food is now the sweet potato and the eleusine grain.<sup>2</sup> They have a totemic system, which has been briefly described as follows by Sir Harry Johnston: "The Banyoro are divided into many clans, which would appear to have totems as sacred symbols or ancestral emblems like the similar clans in Uganda. This institution, however, like so many other customs connected with the Banyoro, has lately been much defaced and obscured by the appalling depopulation of the country consequent on civil wars and foreign

The Banyoro and their country.

Totemism of the Banyoro.

<sup>1</sup> Sir Harry Johnston, *The Uganda Protectorate*, i. 139 sqq.

<sup>2</sup> Sir Harry Johnston, *op. cit.* ii. 581, 586.

invasions. The animals or plants chosen as totems are much the same as in Uganda, varying, however, with the existence or non-existence of the symbols in the flora and fauna of Unyoro. There is probably a greater preponderance of antelopes as totems compared with what occurs in Uganda. It is unlawful by custom for a Muryoro to kill or eat the totem of his clan. Thus, if the hartebeest should be the totem of a clan or family, members of this clan must not kill or eat the hartebeest. I have never been able to ascertain either from Banyoro or Baganda that their forefathers at any time believed the clan to be actually descended from the object chosen as a totem. The matter remains very obscure. It may be remotely connected with ancestor-worship, which is certainly the foundation of such religious beliefs as are held by the Banyoro, as by most other negro races."<sup>1</sup>

Two groups of totems among the Banyoro, the one pastoral, the other agricultural.

Full details as to the totemic system of the Banyoro were obtained by the Rev. John Roscoe during a visit which he paid to their country in June 1909. He found that their totems fall on the whole into two groups, the one pastoral, the other agricultural, corresponding to the twofold division of the people into herdsmen and husbandmen. These two classes are socially distinct. The herdsmen are descendants of a nomadic race who have settled down in permanent abodes, while their large herds are still driven from place to place for pasturage, according to the requirements of the seasons and the state of the grass. They despise the husbandmen as an inferior race and speak of them as peasants and slaves. Few cattle are kept by these farmers and the few they have are grudged them by the herdsmen, who think that a mixed diet of milk and vegetables, such as farmers who breed cattle naturally permit themselves, must be detrimental to the milch kine, the contact of milk with vegetables in the stomachs of the people being supposed to affect sympathetically the milk in the udders of the cows. If a man should partake of vegetable food, he may not drink milk for twenty-four hours afterwards ; but if the vegetable which he has eaten should be sweet potatoes, the abstinence from milk must be prolonged for three days. Such periods of abstinence are

<sup>1</sup> Sir Harry Johnston, *The Uganda Protectorate*, ii. 587 sq.

doubtless intended to guard against the contact of milk with vegetables in the belly of the eater. We have seen that among the Masai, another great pastoral tribe of Africa, warriors in like manner scrupulously avoid a mixed diet of milk and vegetables, and no doubt for the same reason, since these Masai warriors are also most careful not to mix milk with flesh or blood in their stomachs, lest the contact of the two should sympathetically injure the cows and thereby diminish their supply of milk.<sup>1</sup> However, amongst the Banyoro there is a class of people intermediate between the herdsmen and the farmers; they consist of husbandmen who have been admitted by marriage into some of the pastoral clans, and whose mixed totems accordingly reflect a blending of the two distinct modes of life.

All the Banyoro clans are exogamous with descent in the male line; that is, no man may marry a woman of his own clan, and the children always belong to the clan of their father, not to that of their mother. So strict is the rule of exogamy that formerly breaches of it were capital crimes: a man who married a woman of his own clan was put to death. However, to this rule the practice of the royal family, as we shall see, presented a singular exception.

In the following list of Banyoro clans with their totems and taboos, which we owe to the researches of the Rev. J. Roscoe, the distinction between the three classes, the herdsmen, the husbandmen, and the mixture of the two, is indicated by grouping the clans of these divisions separately:—

The Banyoro clans are exogamous with descent in the male line.

List of Banyoro clans, totems, and taboos.

<sup>1</sup> See above, p. 414.

## CLANS OF THE BANYORO

## I. Pastoral Clans

Clans.	Primary Totems.	Subsidiary Totems.	Taboos, etc.
1. Babito	bushbuck ( <i>ngabi</i> )	rain water from the roofs of houses ( <i>maleghya</i> )	This is the clan of the royal family and princes.
2. Balisa	cows which have red marks on a black or red ground ( <i>timba</i> )	rain water from the roofs of houses ( <i>maleghya</i> )	No member of this clan may drink the milk or eat the flesh of cows thus marked with red.
3. Bafumam-bogo	grasshopper ( <i>nseene</i> )	(1) a kind of cow with peculiar red marks ( <i>bambo</i> ); (2) the buffalo	The clan may not drink the milk of cows thus marked, nor eat the flesh of cows, buffaloes, or grasshoppers.
4. Basonga	grasshopper		
5. Balanze	a nursing mother	grasshopper	No woman who is nursing a child may enter into the kraal or house of any member of the clan.
6. Basita	milch cow which has been with the bull	dew upon the grass	Members of the clan may neither drink the milk of cows that have been to the bull nor touch the dewy grass.
7. Basingo	cows with humps	cows in calf ( <i>murara</i> )	Members of the clan may not drink the milk nor eat the flesh of humped cows and cows which die in calf.
8. Bagimu	Red and white cows ( <i>mpula</i> )	rain water from the roofs of houses	Members of the clan may not drink the milk nor eat the flesh of red and white cows, nor use the rain water which has dripped from roofs.
9. Baisanza	a woman who enters a house and solicits a man and is afterwards found to be with child ( <i>butweke</i> )		Such a woman may never enter the kraals of such a clan again, nor may any member of the clan hold any intercourse with her.
10. Basengya	the tongues of animals ( <i>lulimi</i> )		
11. Babyasi	milch cows with calf for a second time ( <i>ekuluzi</i> )		The clan may not drink the milk nor eat the flesh of such cows.
12. Banyakwa	cows with straight horns ( <i>ngabi</i> )		The clan may not drink the milk nor eat the flesh of straight-horned cows.
13. Bacwezi	cows which have drunk salt water	cows which have been with the bull	Members of the clan may not drink the milk of cows which have drunk salt water until the second day after the animals have partaken of the brine; and they may not drink the milk of cows which have been to the bull for five days afterwards.

CLANS OF THE BANYORO—*continued*

Clans.	Primary Totems.	Subsidiary Totems.	Taboos, etc.
14. Baitira	cows of a particular colour ( <i>mbazi</i> )	a nursing mother whose child is a girl	
II. <i>Mixed Clans</i>			
15. Bakwonga	bushbuck ( <i>ngabi</i> )	rainwater of the roofs of houses	A nursing mother may not enter the houses nor the kraals of this clan.
16. Baswa	bushbuck ( <i>ngabi</i> )		
17. Mbazi	cows of a particular colour ( <i>mbazi</i> )	a nursing mother	
18. Baboro	the hearts of animals	empty baskets ( <i>kaibo kasa</i> )	
19. Bayangwe	a kind of monkey ( <i>enkende</i> )	another kind of monkey ( <i>nkobe</i> )	
20. Bagwiju	a house which has been burnt down		No member of the clan may approach such a house or take anything from it.
21. Batongo	the stomachs of animals ( <i>amara</i> )		
22. Basengya	bushbuck ( <i>ngabi</i> )	rain water from the roofs of houses	
23. Banywagi	bushbuck ( <i>ngabi</i> )		
24. Baduku	a worn-out drum-skin on the top of a drum ( <i>kabambiro</i> )		
25. Bahenga	a species of bird ( <i>kagondo</i> )		
26. Banyakwa	bushbuck ( <i>ngabi</i> )		
27. Bane	a fungus growing on trees ( <i>katozi</i> )		
28. Baisanza	a small edible animal ( <i>epo</i> ), possibly a kind of antelope		
29. Bakimbiri	a nursing mother ( <i>isereka</i> )		A nursing mother may not enter the house of any member of this clan.
30. Bakwonga	bushbuck ( <i>ngabi</i> )		
31. Bakwonga (subsection of the preceding)	a trickling stream ( <i>ekirira</i> )		Members of the clan may not cross a trickling stream.
32. Bapima	bushbuck ( <i>ngabi</i> )		
33. Bagombe	hippopotamus ( <i>kiroko</i> )		
34. Baisanza	grasshopper ( <i>usenene</i> )		
35. Banyampaka	a water bird ( <i>kagondo</i> )		

CLANS OF THE BANYORO—*continued*III. *Agricultural Clans*

Clans.	Primary Totems.	Subsidiary Totems.	Taboos, etc.
36. Basambo	an empty basket	a pointed instrument of wood or iron	No one may bring an empty basket into the presence of members of the clan, nor present any pointed instrument to them without first wrapping it up.
37. Banyoza	a kind of bird ( <i>nyoza</i> )	an empty basket	
38. Bayaga	birds in general	small millet ( <i>bulo</i> )	Members of the clan may not destroy or eat birds. If at harvest, any reaped millet has been forgotten in the field, members of the clan may not transport it to the store-house on the following day. On account of this second totem the clan is called <i>Abaruka omabibi</i> .
39. Batwa	milch kine ( <i>bukama</i> )	stalks of grass or straws	Members of the clan may not milk cows nor put stalks of grass or straws in their mouths ( <i>nsugu</i> ), when they are walking, as other people commonly do.
40. Bakimbira	potter's clay ( <i>bumba</i> )	millet ( <i>bulo</i> ) which has been overlooked after it has been reaped and left in the field all night	
41. Bakimbira	a nursing mother ( <i>isereka</i> )		
42. Baraha	wagtail ( <i>akanyangonge</i> )		
43. Bagimu	yams ( <i>ngobe</i> )		
44. Baregeya	birds called <i>ndegeya</i>		
45. Bahembo	an empty basket ( <i>kaibo kasa</i> )		
46. Basengya	a wooden porridge spoon		No member of the clan may touch a wooden porridge spoon.

Some of the Banyoro clans have the same name but different

In this list it will be observed that some clans have the same name but different totems, while others conversely have the same totem but different names. Each and all of these clans are distinct; members of any one of them are free to marry members of any other. For example, a Baisanza

man may marry a Baisanza woman, provided that his totem is the animal called *epo* and hers the grasshopper (*nseene*); or again, a Bakwonga man may marry a Bakwonga woman, provided that his totem is the bushbuck and hers a trickling stream. Conversely a man of the bushbuck totem may marry a woman of the bushbuck totem, provided that, for example, he is of the Babito clan and she of the Bakwonga clan; or again, a man of the grasshopper totem may marry a woman of the grasshopper totem, provided that he is of the Bafumambogo clan and she of the Basonga clan. Thus the two badges of exogamy are as usual the totem and the name of the clan, but where the badges overlap, either of them has power to override the other; men and women of the same totem may marry each other, if only their clan names differ; men and women of the same clan name may marry each other, if only their totems differ.

We naturally ask, How is it that clans of the same name come to have different totems? How is it that clans of different names come to have the same totem? The answers to these questions can only be conjectural, since no positive information on the subject seems to be forthcoming. We may suppose, for example, that these anomalies have both arisen by subdivision; that is, that a clan bearing the same name and possessing the same totem may have subdivided into several sections, each of which became a new clan and in order to distinguish itself from its mother clan and sister clans either took a new name, while it retained the old totem, or conversely took a new totem, while it retained the old name. The frequent occurrence of the bushbuck totem, for instance, suggests that a large original clan of Bushbucks may have split up into a number of minor clans, each of which adopted for distinction a new name while it clung with pride to the old bushbuck totem. We have seen similar grounds for conjecturing that a like subdivision of a Bushbuck clan has taken place among the Basoga.<sup>1</sup>

Like the Baganda, the Banyoro clans have regularly a secondary or subsidiary as well as a primary totem. The most probable explanation of this duplication of totems

totems ; others have different names but the same totem.

These anomalies may have arisen through the subdivision of a clan into sections, each of which took for the sake of distinction either a new name or a new totem.

Subsidiary totems of the Banyoro.

<sup>1</sup> See above, p. 460.

seems to be that the subsidiary totem was the totem of an ancestress of the clan, the wife perhaps of the founder, and that out of regard for her feelings her descendants continued ever afterwards to respect her totem in addition to the one which they inherited from their fathers. Though this explanation of subsidiary totems was not definitely put forward by the natives whom Mr. Roscoe questioned on the subject, it is the conclusion to which the most reasonable and probable of their answers, taken together, appeared to point; and it is strongly confirmed by a custom common to the Baganda and the Banyoro, both of whom regularly respect their mother's totem as well as their father's up to the time of their marriage and very often to the end of their lives.<sup>1</sup> We have seen that the natives of the Western Islands of Torres Straits account for their subsidiary totems in a precisely similar way.<sup>2</sup>

Peculiarities of some of the Banyoro totems. Split totems,

Some of the Banyoro totems are remarkable. In the first place there are several of what I have called split totems, such as the tongues, the hearts, and the stomachs of animals. Then the varieties of cows which form several totems deserve to be noted, such as red and white cows, cows with red blotches, cows with humps, and cows with straight horns. To a pastoral people the custom of thus constituting a variety of totems by differentiating between their cattle is natural enough; we shall meet with it again among the pastoral Bahima.<sup>3</sup> But some of the pastoral totems of the Banyoro are singular, if not unique, in this that they are temporary, not permanent like all or almost all the totems which we have hitherto met with in our survey of totemism. Such temporary totems are cows that have been to the bull and cows that have drunk salt water; for the taboos which make these animals into totems are not permanent; one of them lasts only five days and the other lasts only one or two days. Almost the only other temporary totemic taboos, so far as I remember, which have been recorded elsewhere are the prohibitions laid on some clans in India to look upon or touch either animals with their eyes shut or animals with their eyes open; <sup>4</sup> for clearly

Temporary totems,

<sup>1</sup> As to the Baganda practice see above, p. 473.

<sup>2</sup> See above, p. 15.

<sup>3</sup> See below, pp. 536 *sq.*

<sup>4</sup> See above, pp. 279, 290, 295, 297, 314.

these taboos cease to operate either when the animals open or when they shut their eyes. Amongst the Banyoro another temporary totem is that of a nursing mother ; for here again it follows that when the woman ceases to nurse a child, the embargo laid on her is removed ; she ceases to be a totem and is now free to enter the houses of members of the totemic clan, where during the period of lactation she might not set foot. With this temporary human totem we may compare the Central Australian totem of laughing boys.<sup>1</sup> For as a woman is not always nursing, so a boy is not always laughing ; hence when she ceases to nurse and he to laugh, they both cease to be totems, the one for the Banyoro in the heart of Africa, the other for the Warramunga and Tjingilli in the heart of Australia. What taboo the totem laughing boys carries with it we do not know ; on analogy we may conjecture that the members of this clan are distinguished from their more light-minded fellows by the unmoved gravity of their deportment, and that social etiquette requires them to avert their eyes and stop their ears whenever a youngster bursts into a guffaw. As to the totem nursing mothers among the Banyoro our information is precise : such women may not enter the houses or even the kraals of the clan of which they are the totem. The origin of this singular totem is obscure ; but when we remember how many superstitious rules are observed by pastoral tribes in Africa from a fear of impairing the supply of milk from their cows,<sup>2</sup> we may guess that the same fear underlies the rule which excludes women during the period of lactation from the houses and kraals of certain clans. Perhaps the idea is that the milk in the woman's breasts would be so much milk abstracted from the udders of the cows. If that notion were general among the pastoral Banyoro, it would readily explain why a nursing mother occurs so often either as a primary or as a subsidiary totem of their clans.<sup>3</sup> It is possible that the same superstitious

Nursing mothers as a totem.

The taboo on nursing mothers perhaps springs from a fear that they might magically deprive the cows of their milk.

<sup>1</sup> Spencer and Gillen, *Northern Tribes of Central Australia*, p. 773. See also above, vol. i. p. 253.

<sup>2</sup> See my paper "Folk-lore in the Old Testament," *Anthropological Essays presented to E. B. Tylor* (Ox-

ford, 1907), pp. 154 *sqq.*

<sup>3</sup> After proposing this explanation of the totem nursing mothers I questioned my friend the Rev. J. Roscoe on the point, and he informed me that the herdsmen do definitely

apprehension of injuring the cows, rather than any regard for the health of the people, may be the motive for forbidding some of the Banyoro to drink the milk of cows which have lately been to the bull or which have lately drunk salt water. In confirmation of this view it may be added that among the Banyoro menstruous women are forbidden to drink milk lest they should harm the cows; they have then to live on vegetables, or if a man is rich he may give his wife at such periods an old cow, whose milk she may drink without the risk of hurting a valuable animal by her dangerous contagion.

First  
cousins  
forbidden  
but second  
cousins  
allowed  
to marry  
each other.

Among the Banyoro first cousins, the children of a brother and a sister respectively, are forbidden to marry each other; but second cousins, the grandchildren of a brother and a sister respectively, are allowed to marry each other, if the father of the one is a son of that brother, and if the mother of the other is a daughter of that sister. In other words, a man's children may not marry his sister's children; but a man's son's children may marry his sister's daughter's children.

Marriage  
with a  
wife's  
sisters.

There are no restrictions on a man's marrying several sisters; he may marry two or more sisters at the same time. Moreover, if his wife dies, especially in childbed, he expects her parents to furnish him with one of her sisters to replace the dead wife. Further, if his wife proves childless, he may demand one of her sisters in marriage, and in that case the barren wife may either remain with him or return to her parents, as she pleases. A man has not a legal right to marry his dead brother's widow, but he may do so if the clan appoints him heir to the deceased. Formerly a man avoided his wife's mother and might not meet her or speak face to face with her, though he was allowed to carry on a conversation with her if he sat outside the house and she inside. He greatly respected his wife's father, but was free to see him and speak with him.

Avoidance  
of a wife's  
mother.

To the rule of exogamy observed by the totemic clans of

believe the entrance of a nursing mother into their houses or kraals to be in some way harmful to their cows; but in what the harm consists, he was

not able to ascertain. So far as it goes, the statement of the herdsmen confirms the explanation which I had independently given of the totem.

the Banyoro there was one remarkable exception. Princes might cohabit with princesses and have children by them, though in such cases the couple necessarily belonged to the same totemic clan, namely, the Babito clan with its totem the bushbuck. However, this cohabitation was not marriage. "The rule," says Mr. Roscoe, "was for princes and princesses to live together promiscuously and not to regard each other as husband and wife, though the king might take a princess and keep her in his enclosure." He might even cohabit thus with his full sister and beget children by her. We have seen that among the Baganda the royal family was in like manner exempt from the rule of exogamy, the king regularly marrying his own sister, who was necessarily a member of his own totem clan, though he might not have a child by her.<sup>1</sup> Similarly we shall find that among the Bahima the princes were allowed to marry their own sisters.<sup>2</sup>

What is the reason for these remarkable anomalies? Why should the royal families of three great African tribes, the Baganda, the Banyoro, and the Bahima, observe a marriage custom which so flagrantly contravenes the practice of their subjects and which, if observed by any but the royal family, would excite their deepest horror and detestation? A possible answer is that in all three tribes the royal families are members of an alien race to which the rule of exogamy was unknown, and that when they established themselves as reigning dynasties in Uganda, Unyoro, and Ankole, they adhered to their ancestral practice of endogamous and consanguineous marriages, while they allowed their people to follow their ancient custom of exogamy. Thus as strangers and foreigners the king and the princes might be thought to be exempt from those laws which were binding on natives of the country; and hence they might with impunity continue to do what if done by anybody else would have been accounted a high crime and misdemeanour punishable with death. This explanation of the endogamy of these royal families is the one adopted by the experienced observer the Rev. John Roscoe, who holds that the ruling dynasties of the Baganda, Banyoro, and Bahima have all sprung from

Exception to the rule of exogamy among the Banyoro. Princes may cohabit with princesses of their own totemic clan, and kings may cohabit with their sisters.

The exception may be explained by the theory that the royal family of Unyoro are members of an alien race to which the rule of exogamy was unknown.

<sup>1</sup> See above, p. 469.

<sup>2</sup> See below, p. 538.

one common stock, and that stock the Galla. If he is right, the native rulers of these three important peoples are alien conquerors, who have adopted the language and to a great extent the habits of their Bantu subjects, though they still retain, or retained till lately, a form of marriage which flouts one of the most deeply implanted principles of the Bantu mind. However, in adapting themselves to their surroundings the kings of Uganda went a step further than the kings of Unyoro; for while they regularly married their sisters, they regularly abstained from begetting children by them. The most probable explanation of this abstention is that it was a concession made by politic monarchs to the strength of public opinion: their subjects winked at the shocking marriages of their kings, because they knew that these marriages would be barren. In Unyoro either the dynasty was less conciliatory or the people was less scrupulous; for there the kings were free not only to cohabit with, but also to beget children on the women of their own clan, even on their own full sisters. Yet in one important respect the princesses of Unyoro enjoyed less freedom than the Queen Sister of Uganda. For whereas the Queen Sister of Uganda might take any man, whether prince or peasant, to her bed, the princesses of Unyoro might have none but princes for their lovers; a commoner who presumed to intrigue with a princess was punishable with death.

The rule which forbade kings of Uganda to have children by their sisters may have been a concession to the public opinion of their subjects.

The reason why in some royal families kings marry their sisters is probably a wish to combine an old custom of mother-kin with a new practice of father-kin;

But even if we assume that the ancestors of these royal houses knew nothing of the rule of exogamy, we must still ask why the kings of Uganda were not only permitted but required to marry their sisters. A simple and highly probable explanation of the marriage of a king or chief with his sister was long ago suggested by J. F. McLennan.<sup>1</sup> Under a system of mother-kin a man's heirs are his sister's sons, and accordingly, where that system prevails, it is the king's sister's son, not his own son, who succeeds him on the throne. This custom is practised in

<sup>1</sup> *The Patriarchal Theory*, based on the papers of the late J. F. McLennan, edited and completed by D. McLennan (London, 1885), p. 95; "Another rule of chiefly succession which has been mentioned, that which gives the

chieftainship to a sister's son, appears to have been nullified in some cases by means of an extraordinary but effective expedient — by the chief, that is, marrying his own sister."

many lands and is particularly common in Africa.<sup>1</sup> But when, through a growing certainty of paternity or from other causes, men became more attached to their own children than to the children of their sisters, it was natural that they should wish to transmit to them their property and power; and as no men had so much to transmit as kings, so no men had a stronger motive for substituting paternal for maternal descent. Thus situated they could hardly fail to perceive that there was a simple expedient which would enable them to institute a new custom of descent through men without abolishing the old custom of descent through women. According to immemorial tradition a king's heirs were his sister's sons; hence if he only married his sister, her sons would also be his; the system of maternal descent would be combined with paternal descent; time-honoured usage would be respected, while the natural instincts of a father would also be satisfied. We may conjecture that this was the ultimate origin of the numerous cases in which kings have habitually married their sisters, while commoners abstained from such marriages as incestuous.<sup>2</sup> Among the Hovas of Madagascar a slightly different device was adopted to accomplish the same end. The king generally married, not his sister, but her daughter, his niece, and the children whom he had by her were the heirs to the throne in virtue of a twofold right, since they inherited the blood royal from their mothers as well as from their fathers.<sup>3</sup> It is possible that a similar motive may explain the leave granted by some peoples to an uncle to marry his niece in the case in which the niece is his sister's daughter.<sup>4</sup>

for the offspring of such marriages unite both lines of descent, the paternal and the maternal, being at once the king's own children and the children of his sister.

<sup>1</sup> For examples in Africa see A. H. Post, *Afrikanische Jurisprudenz* (Oldenburg and Leipsic, 1887), i. 16 sqq.

<sup>2</sup> See my note on Pausanias, i. 7. 1 (vol. ii, p. 85).

<sup>3</sup> Le Baron d'Unienville, *Statistique de l'Île Maurice* (Paris, 1838), iii. pp. 286 sq.

<sup>4</sup> For marriage with a niece, a sister's daughter, see above, pp. 271 sq. Such marriages are frequent in Mysore and probably in other parts of India also. The usual rule appears to be that a man may marry the daughter

of his elder sister, but not the daughter of his younger sister, unless there is no other suitable wife for him. Sometimes the marriage with the daughter of an elder sister is not only allowed but specially favoured. See H. V. Nanjundayya, *The Ethnographical Survey of Mysore*, i. 8, iii. 7, iv. 5 sq., vii. 7, viii. 2, x. 5, xi. 4, xii. 5 (Bangalore, 1906-1907, Preliminary Issue). Among some Indians of Brazil a man's proper wife was his niece, the daughter of his sister. See below, vol. iii. p. 575.

Such a marriage would serve the same purpose as marriage with a sister and would be less shocking to traditional sentiment.

The life and death of the kings of Unyoro were regulated by exact rules.

In the old heathen days both the life and the death of the kings of Unyoro were regulated by many precise and curious rules, the discovery of which is not the least interesting result of Mr. Roscoe's enquiries in the country. As the present king is a Christian, many of the old customs have no doubt fallen into desuetude and might have passed away unrecorded if they had not been rescued from oblivion by the exertions of a scientific investigator. Though they do not appear to be directly connected with totemism, a brief account of them may be welcome to the reader as illustrative of that state of savagery, to us so strange and so remote, of which totemism is only one particular product.

The king might not eat vegetables, but must subsist on milk and beef.

The diet of the king of Unyoro, like the diet of the kings of ancient Egypt,<sup>1</sup> was strictly regulated by immemorial custom. He might never eat vegetable food, but must subsist on milk and beef. Mutton he might not touch. The beef he ate must be that of young animals not more than one year old, and it must be spitted and roasted before a wood fire. But he might not drink milk and eat beef at the same meal. He drank milk thrice a day, in the morning, in the afternoon, and at night before he went to bed; after the draught of milk in the afternoon he went to sleep and in the evening he might eat beef. But he was free to quaff beer after partaking of meat. When he went to drink milk in the dairy, every man must leave the royal enclosure and all the women had to cover their heads till the king returned. No one might see him drink. One wife accompanied him to the dairy and handed him the milk pot, but she averted her face while he drained it.

The milking of the king's cows.

A sacred herd was kept for the king's use, and nine cows, neither more nor less, were daily brought to the royal enclosure to be milked for his majesty. They were always kine which had given birth to their first calves, and they were herded by men whose business it was to keep the

<sup>1</sup> The only flesh which the kings of Egypt might eat was veal and goose; and they might only drink a prescribed measure of wine. See Diodorus Siculus, i. 70. Compare *The Golden Bough*, Second Edition, i. 241.

animals from the bulls, so long as they were being milked for the king. Three milkmen were charged with the task of tending and milking the nine cows in the royal enclosure. They held office for a year, and during all that time they must strictly abstain from women; any act of incontinence on their part, it was believed, would be injurious both to the cows and to the king. When they were about to milk the cows they had to wash and smear their faces, arms, and chests with white clay before they addressed themselves to their office; and two wives of the king, who were also concerned with the solemn affair of the royal milk-drinking, had to cleanse or (as we should think) to dirty themselves in like manner. The boy who brought the nine cows from the pasture to the royal enclosure must be a member of a particular clan and under the age of puberty. When he came to puberty, he was dismissed from his post and given in marriage by the king's order. During his tenure of office he, like the king, never partook of vegetables or of mutton; he must live strictly chaste and might not go into long grass nor in any way scratch or wound himself so as to draw blood; for it was believed that the loss of his blood would be detrimental to the king. Nobody might touch him. As he came along the road driving the sacred cows before him, he cried out three or four times and at the cry the people fled from him, covering up their heads till he and the cows had passed by.<sup>1</sup> On reaching the royal enclosure he cried out again, and the three milkmen came and took charge of the cows. With the aid of one of the king's wives the milkmen milked the cows according to certain exact rules into a sacred pot, which neither they nor the woman might touch; a carrier was used to prevent them from defiling the holy vessel by their profane contact. Before the cows were milked their udders and teats were smeared with butter to cleanse them, and before the milkman milked any of the cows water was poured over his hands by the king's wife.

The milk of the nine sacred cows was then carried in the sacred pot into the dairy, where it was kept for the king

The three royal milkmen.

The royal cowboy.

How the king drank the milk.

<sup>1</sup> The information here given as to the sacred cows and the cowboy was obtained by Mr. Roscoe from the lips

of a man who had served as the royal cowboy in his youth.

alone. Thrice a day he drank it sitting on a certain stool, while the wife who had handed him the pot reverently turned away. Any milk that remained over when the king had slaked his thirst must be drunk by the boy who had fetched the cows from the pasture. This custom probably furnishes the clue to the curious rules of life which had to be observed by the cowboy. By drinking the leavings of the royal milk he was doubtless supposed to stand to the king in a relation of such intimate sympathy that any injury to his person, particularly any loss of blood, would be instantaneously felt by the king as if it had been inflicted on his own body. That, too, we may conjecture, was the reason why the cowboy had to be under puberty and to observe strict chastity. Any act of incontinence on his part might be deemed harmful, perhaps fatal, to the king. Similarly, as we have seen, the three milkmen in the royal enclosure had to abstain from women during their term of office lest by indulging in sexual intercourse they should do harm to the cows and to the king. In like manner the most sacred dairyman of the Todas in India has to avoid women altogether;<sup>1</sup> and with the example of the Banyoro before us we may safely conclude that the reason for his chastity is a belief that his unchastity would be harmful to the buffalo cows.<sup>2</sup> In other parts of Africa the incontinence of their subjects, particularly of the young, is supposed under certain circumstances to entail the death of kings or other sacred personages. Thus in the Bantu kingdom of Humbé, on the banks of the Cunene River in the south of Angola, every breach of chastity committed by young people under the age of puberty used to be inexorably punished with death whenever it came to light, because the people believed that if the offence were not thus expiated their king would die within the year. Of late years the capital punishment has been commuted into a fine of ten head of cattle; and this mitigation of ancient severity has attracted crowds of youthful debauchees to Humbé from the neighbouring tribes,

Relation of magic sympathy between the cowboy and the king.

Belief that incontinence in their subjects may be fatal to kings and cows.

<sup>1</sup> W. H. R. Rivers, *The Todas* (London, 1906), p. 236. See above, p. 254.

<sup>2</sup> I had reached this conclusion con-

jecturally before the Banyoro parallel was known. See my article "Folklore in the Old Testament," *Anthropological Essays presented to E. B. Tylor* (Oxford, 1907), p. 162.

among whom the same offence is still punished for the same reason with all the old rigour.<sup>1</sup> For a similar reason, apparently, during the sickness of a Caffre chief his tribe was bound to observe strict continence under pain of death.<sup>2</sup> And in the kingdom of Congo when the holy pontiff called Chitomé was going his rounds through the country, all his people had to live strictly chaste, and all persons found guilty of incontinence at such times were put to death without mercy, because his loving subjects deemed that universal chastity was then essential to the preservation of him whom they revered as the head of their religion and their common father.<sup>3</sup> The mode in which the crime is supposed to produce this disastrous result is not apparent; perhaps the expenditure of vital energy which it entails in the criminals is thought to exhaust the corresponding energy of the king.

During the time a king of Unyoro lay dead all the fires in the country were extinguished, and when food had to be cooked, people kindled fire by the friction of sticks and put it out as soon as it had served its purpose. After the new king was crowned, the people obtained new fire for their houses from the new fire in the royal enclosure.

All fires extinguished at the death of a king.

The kings of Unyoro had to take their own lives while they were still in the full possession of their faculties and before their bodily vigour was impaired by the ravages of disease. As soon as the king felt unwell and thought he was about to die, he called his principal chiefs and after discussing affairs of state with them in council he went to a private house, where only his chief wife was allowed to visit him. There he asked her for "the cup," the poisoned cup, which seems to have been kept always ready, and having received it at her hands he drained it and in a few moments was dead. This custom lasted down to within living memory. The father of the last king, Kaberega, who is now living an exile in the Seychelles, perished thus. If the king faltered or was too ill to ask

The king of Unyoro had to take his own life before his bodily vigour was impaired by the ravages of disease.

<sup>3</sup> J. B. Labat, *Relation historique del' Éthiopie Occidentale* (Paris, 1732), i. 259 sq. The two latter instances have already been cited by me in *Psyche's Task* (London, 1909), pp. 49 sq.

The fight  
for the  
kingdom.

for the cup, it was his wife's sad duty to administer the poison. His death was kept secret for a time, only the two principal chiefs being taken into confidence by the wife. The public announcement of the death was made by the chief milkman. Taking a pot of the sacred milk in his hands he mounted the house-top and cried, "Who will drink the milk?" With these words he dashed the pot on the roof; it rolled off and falling to the ground was broken in pieces. That was the signal for war to the death between the princes who aspired to the throne. They fought till only one was left alive; he was the king. Any prince who did not choose to enter the lists retired to the country and lived there till the internecine struggle was over. The conqueror buried his father and ascended the throne. He inherited the kingdom and all his predecessor's private property and most of his women. But the chief wife of the deceased king was clubbed to death in his open grave, and so was the boy whose duty had been to drive the sacred cows daily to be milked for his royal master. These two were buried with the departed monarch. Others of his wives were set apart to minister to him, the living to the dead, at his tomb. They remained under the authority of his successor.

The custom  
of putting  
a sick king  
to death  
seems to  
rest on a  
belief in  
a sym-  
pathetic bond  
between  
king and  
people.

The rule which obliged the kings of Unyoro to kill themselves or be killed before their strength of mind and body began to fail through disease or age is only a particular example of a custom which appears to have prevailed widely among barbarous tribes in Africa and to some extent elsewhere. Apparently this curious practice rests on a belief that the welfare of the people is sympathetically bound up with the welfare of their king, and that to suffer him to fall into bodily or mental decay would be to involve the whole kingdom in ruin.<sup>1</sup>

### § 16. *Totemism among the Batoro*

The  
Batoro.

The Batoro are a Bantu people inhabiting the district of Toro to the west of Uganda and to the south of Unyoro. They are said to be really a section of the Banyoro with

<sup>1</sup> The evidence for the prevalence and meaning of the custom has been adduced by me in *The Golden Bough*, Second Edition, ii. 8 *sqq.*, etc.

perhaps less admixture of Hamitic blood. Tall men are common among them, but the ordinary Toro peasant is a rather degraded representative of the Bantu type.<sup>1</sup> The Batoro are divided into exogamous and totemic clans, the members of which observe the two fundamental laws of ordinary totemism by refusing to eat their totemic animals and to marry women of their own totemic clan. Apparently people are forbidden to kill as well as to eat their totemic animal. Descent is in the paternal line; in other words, children take their clan and totem from their father, not from their mother. Among the totems are the sheep, the dog, the *omusu* (an edible rodent of a size between a large rat and a small rabbit), the *empara* (an antelope, the same as the *impala* of South Africa), the *njaza* (a small antelope), the *ensenene* (edible grasshoppers), white ants (that is, termites), *emamba* (a large fish found in Lake Albert Edward), raindrops, and perhaps the *enjoga* (hyrax), the *engabi* (a small antelope), and fowls. The totem of the royal family of Toro is the sheep. On his conversion to Christianity the king publicly ate mutton to shew that he respected his totem no longer. In this incomplete list of Batoro totems it seems clear that many totems are identical with those of the Baganda, such as the sheep, the dog, the rodent called *omusu* (Baganda *musu*), the antelope *njaza* (Baganda *njaza*, reedbuck), the grasshopper *ensenene* (Baganda *nсенene*), the fish *emamba* (Baganda *mamba*), the antelope *engabi* (Baganda *ngabi*, bushbuck), and raindrops. Nor is this agreement between the totems of the two peoples surprising; for in past years the Baganda used to raid the Batoro and kidnap their children, and the Batoro retaliated on the Baganda to the best of their ability. Many of the kidnapped children have grown up in their adopted country, and in the present peaceful times they are sometimes exchanged and so return to the land of their birth. The only way in which after an interval of years the relationships can be traced is by means of the totem. When a Mutoro<sup>2</sup> man or woman, brought up in Uganda, comes on a visit to Toro, where his or her kinsfolk may be supposed to live, the first question which

Totemism  
among the  
Batoro.

<sup>2</sup> Mutoro is the singular of Batoro and means a native of Toro.

every one will ask him or her is, "What is your totem (*omuziro*)?" Before long he or she is claimed as a relation by some one, and the claim is always acknowledged. Men are loth to take the law of a member of their own totem clan even when they have sustained a serious injury at his hands. The word for totem, *omuziro* (plural *emiziro*) is connected with the common verb *oku-sira*, "to abstain from"; hence it means "that from which one abstains," "that which is unlawful."<sup>1</sup>

### § 17. Totemism among the Bahima

Ankole,  
the country  
of the  
Bahima,

The Bahima are a Bantu-speaking tribe of herdsmen, who inhabit Ankole, a region larger than Wales, which lies between Uganda on the east and the Lake Albert Nyanza and the Congo Free State on the west. The eastern part of the country consists of undulating downs mostly bare of trees but covered with short grass, which affords excellent pasture. Here the climate is temperate and salubrious; the nights and early mornings are cool or even cold. To an Englishman there is something homelike in the scenery, with its clear running streams, its brackens and daisies and brambles. In the dry season the grass withers and becomes like hay. It is then fired and burned down to the roots. But soon it begins to sprout again, and large herds of cattle are driven to browse on the fresh green blades which cover the swelling downs. But the population of these breezy uplands is sparse. The western part of Ankole is very different. There the land is mountainous, well cultivated, and thickly populated: the rivers and swamps in the valleys are choked with papyrus, and the mists hang thick all night; while down by the lake-shore we meet with dense tropical forests, great heat, and swarms of mosquitoes. In the north-west the scenery is very beautiful. Here the great broken-down craters of extinct volcanoes are filled with clear still lakes, their placid waters overspread

<sup>1</sup> For this account of the totemism of the Batoro I am indebted to the kindness of the Rev. H. E. Maddox, of the Church Missionary Society,

who has resided for nine years as a missionary in Toro, and has translated the Bible into the language of the people.

with the blue lotus or mirroring the surrounding hills and mountains together with the fantastically rich vegetation of palms, forest trees, and flowering creepers, which clothe the banks with a mantle of perennial green.<sup>1</sup>

The origin of the Bahima is uncertain. According to one theory they migrated from the east, perhaps from the Masai country. Others suppose that they came from Egypt. Some of their pots and musical instruments are said to bear a strong resemblance to Egyptian pottery and instruments.<sup>2</sup>

They are a fine tall race with spare, lithe figures, shapely heads, straight well-carved noses, high foreheads, and thin lips. The neck is long and graceful, which gives the head a light easy poise, very different from that of the negro with his squat neck. Their complexion, too, is far less dark than his; indeed it is sometimes a pale or reddish yellow. Their deportment is dignified. In appearance they differ absolutely from the negro type, and in character they are equally distinct from most Bantu-speaking peoples, their uniform apathy, listlessness, and unruffled calm contrasting strongly with the excitability, rapid utterance, and furious gesticulation of other African races. The Muhima (singular of Bahima) is never in a hurry. Pride is the keynote of his character; his ancestors conquered the country some generations ago and he inherits the tradition of the dominant race. All menial labour is done by his slaves, the Bahero or Bairo, who till the ground, build huts, and carry water for their lords and masters. The only occupation which the Muhima deems worthy of him is the tending of the cattle. He loves the huge-horned beasts, which, sometimes vicious with other people, are gentle and docile under his care. He pets them, talks to them, coaxes them, weeps over their ailments, and sometimes commits suicide when a favourite animal dies. Their cattle are of the Galla type, with straight back, no hump, and

enormous horns; the colour is fawn, dun, gray, or white, sometimes blotched with white or other tints.<sup>1</sup> The men always milk the cows. Women are forbidden to do so, but they churn the milk into butter, which the Bahima chiefly use as an unguent. The staple food of the Bahima is milk. They drink it fresh in the morning and at noon, but never allow it to stand after midday or to turn sour. They eschew fowls and fish. Both men and women may eat beef, but not, under ordinary circumstances, vegetables. A person who eats vegetables ought not to drink milk. They think that to eat certain vegetables, such as peas, beans, and potatoes, and to drink milk at the same time, would endanger the life both of the cow from which the milk came and of the calf which came from the cow. But a menstruous woman is forbidden to drink milk and is compelled to eat vegetables and to drink beer so long as her sickness lasts. This she does, not because vegetables and beer are believed to be good for her at such times, but because it is thought that milk in her stomach would be very bad for the cows. It is the cows, and not the woman, which are supposed to benefit by the diet. For a similar reason it is a rule with the Bahima never to boil milk; they imagine that to boil milk would cause the cows to fall ill and die. But beer may be drunk by the people without any harm to the cattle. And just as the Bahima are careful not to mix milk with vegetables in their stomachs from fear of hurting the cows, so they are careful not to mix milk with meat; hence the men drink milk without beef in the morning and afternoon and eat beef without milk at night. But they have no objection to mixing beer with meat in their stomachs; so at night they wash down the beef with beer. Their beer is made from plantains, and it is on plantains that the Bahima women subsist at their monthly periods when their perilous condition debars them from the use of milk. Hence the Bahima have need of plantains. But they would not dream of cultivating

<sup>1</sup> Major Meldon, "Notes on the Bahima of Ankole," *Journal of the African Society*, No. XXII. (January 1907) p. 141; Rev. J. Roscoe, "The Bahima, a Cow Tribe of Enkole," *Journal of the Royal Anthropological*

*Institute*, xxxvii. (1907) pp. 94 sq.; Sir Harry Johnston, *The Uganda Protectorate*, ii. 610 sqq. The type of the Hima cattle and its distribution in Africa are described by Sir H. Johnston (*op. cit.* ii. 620 sqq.).

the vegetable with their own hands. That labour they leave to their slaves the Bahero or Bairo, not from pride but from superstition, because they believe that they would injure the cattle by thus tampering with vegetables. Besides beer they have a common intoxicating drink which is made from milk or honey.<sup>1</sup> The huts of the Bahima are of a primitive beehive pattern, built of sticks and grass and arranged in a circle.<sup>2</sup>

The Bahima are governed by kings, whose principal wealth consists of their herds. Indeed the king is regarded as the owner of all cattle. Land is not valued by him or his people except as pasture; it is not carefully delimited as in Uganda. When the king dies, his body is deposited in a sacred forest and is supposed to turn into a lion. His name after death may not be pronounced. If it was a common word, it is abolished from the language and a new one substituted. For example, the king is often called a lion, and in such a case the name for lion has to be changed at his decease. Before his death the king nominates his successor.<sup>3</sup>

The kings  
of the  
Bahima.

The Bahima are divided into fourteen exogamous and totemic clans. The following list of the clans with their totems (*muziro*) was obtained by the Rev. J. Roscoe during a visit which he paid to the tribe in the summer of 1904:—<sup>4</sup>

Exogamous and  
totemic  
clans of the  
Bahima.

<sup>1</sup> Rev. J. Roscoe, "The Bahima, a Cow Tribe of Ankole," *Journal of the Royal Anthropological Institute*, xxxvii. (1907) pp. 100 sq., 106, 111; Major Meldon, "Notes on the Bahima of Ankole," *Journal of the African Society*, No. XXII. (January 1907) pp. 146 sqq.; R. P. Ashe, *Two Kings of Uganda* (London, 1889), pp. 338 sqq. Some of the statements in the text are based on information verbally given me by the Rev. John Roscoe. A similar practice in regard to menstruous women is observed by the Banyoro. See above, p. 522. As to the prohibition to boil milk see my paper "Folk-lore in the Old Testament," in *Anthropological*

<sup>4</sup> Rev. J. Roscoe, *op. cit.* pp. 99 sq.

Clans.	Totems.
1. Abahinda <sup>1</sup>	<i>Nkima</i> , a monkey.
2. Abasambo	<i>Ngabe</i> , a cow.
3. Abagahiya	<i>Ngobe</i> , a cow.
4. Abasingo	<i>Kitale</i> , a cow with a black stripe from neck to tail.
5. Abasito	<i>Kigabo</i> , a cow.
6. Abasaigi	<i>Lulimi</i> , a cow's tongue.
7. Abami	<i>Ente luuzimu</i> , a cow with black or white spots.
8. Abagai	<i>Ngobe</i> , a cow with stripes upon it; they may not drink the milk from it or even touch it.
9. Abasingo	A cow with markings running from head to tail.
10. Abasikatwa	<i>Ente yalukungu</i> , a cow of a dark brown colour.
11. Abakimbiri	A cow born feet first.
12. Abatalogo	<i>Ebyenda</i> , entrails of cows.
13. Abatwa	<i>Abalongo</i> , twins. When a woman gives birth to twins, they desert the kraal, place the mother and her twins with her parents, and build a new kraal; after the twins have cut their first teeth, the husband restores his wife to her home and has intercourse with her.
14. Abaitira	<i>Mabere</i> , the human breast. When a woman gives birth to a female child, they bring a piece of cow dung, put upon it a little human milk, and throw the dung into the kraal to be trampled by the cows.

Preponderance of cows or parts of cows among the totems of the Bahima. Split totems appear to be especially common among pastoral tribes and to consist in parts of cattle and sheep or in

In this list of totems it will be observed that the majority are cows or parts of cows. This is natural enough in a tribe of herdsmen. Similarly among the pastoral Herero, Wahehe, Mweru, and Banyoro a large number of the totemic taboos of the clans refer to their cattle and sheep.<sup>2</sup> From the lists of totems and totemic taboos recorded among these tribes it seems to follow that the practice of splitting the totem, in other words, of adopting as a totem either a part of an animal or a more or less fortuitously marked variety of it, is especially common among pastoral tribes. Such totems are, for example, a cow's tongue, a cow's entrails, the small stomach of cattle, the leg of an ox, a sheep's head, the hearts and kidneys of animals, an unborn calf, a cow with a black stripe, a cow with a white back, speckled cattle, grey cattle, hornless cattle, humped cattle, a cow born feet first,

<sup>1</sup> Members of this clan are princes only.

<sup>2</sup> See above, pp. 358 *sqq.*, 405, 425, 516 *sq.*, 520.

cows that have drunk salt water, and cows that have been to the bull. The reason for thus splitting or particularising the totem, for cutting it down from a whole species of animals to a mere accidental variety or even to a small part of an animal, is perhaps not far to seek. For it may be observed that the animals which are thus carved up among the clans are commonly good to eat; usually they are the cattle of a pastoral people who live solely or chiefly by their flocks and herds. In such cases it is easy to see that to have cattle in general for a totem would involve very great hardship for the clan which was so imprudent as to adopt it. For if cattle were their totem, they would be debarred from eating the flesh of the beasts and from drinking their milk; and what was there left for them to fall back upon? Famine would stare the tribe in the face. Thus put to it, their wits sharpened by hunger, the more subtleminded of the people hit upon an expedient which at once satisfied their consciences and filled their bellies. The ingenuity which can split a hair could easily split a totem. In fact they quieted their scruples by rigorously abstaining from a part, perhaps the least succulent part, of the whole animal, or from a variety, if possible a rare and accidental variety, of the species, so that they need never, or hardly ever, suffer the pangs of hunger for lack of a prime joint to stay their stomachs. Hence we may infer that split totems of this sort are commonly late and more or less artificial, the product of a lawyer-like turn of mind refining on the gross superstitions of primitive savagery. Yet even in regard to these apparently degenerate totems we must not forget that they may sometimes spring from what is probably the taproot of totemism, the sick fancies of pregnant women. For if the conceptional theory of totemism is correct, it might very well happen that a woman, on feeling the first premonitions of maternity within her, should anxiously consider what food she had last been eating; and if, for example, she had dined on calf's head or leg of mutton, then calf's head or leg of mutton would be her baby's totem when it was born.

Some of the Bahima clans are subdivided, but the subdivisions retain the old totem (*musiro*) common to them all in addition to the new one adopted by each. The

accidental varieties of these animals. Such split totems are probably as a rule late and artificial, being designed to evade the inconvenience of a too sweeping taboo on food.

Subdivisions of Bahima clans.

Origin of  
the totems  
obscure.

Rev. John Roscoe, to whom we are indebted for our knowledge of Bahima totemism, could obtain no satisfactory information as to the origin of the totems. "The same feeble explanations given by the Baganda were offered, namely, that some of their ancestors partook of some portion of the animal and died from the effects, the descendants were then prohibited from eating that food, and it became the family totem."<sup>1</sup> The members of a clan are supposed to be closely related to each other, so that the same term is applied by one to another that would be applied to a brother, a sister, or a cousin.<sup>2</sup> No man may marry into his father's clan: all the women of that clan are reckoned his near relations, and are called his mothers, sisters, and so forth. These restrictions do not apply to princes; they may marry their sisters and have intercourse with their married sisters; only betrothed or unmarried princesses are forbidden to them. The rule of exogamy does not apply to the mother's clan, though it is not usual for a lad to marry into it.<sup>3</sup>

Marriage  
rules.

Princes  
may marry  
their sisters.

Fraternal  
polyandry  
among the  
Bahima.

The Bahima sometimes practise polyandry, several brothers marrying one wife and enjoying her in common. When a man is poor, when his herd does not yield milk enough to support a wife, or he cannot afford the number of cows required for a marriage dowry, he may ask one or more of his brothers to join him, and together they may raise the requisite tale of animals. A woman will readily agree to such an arrangement and become the wife of two or three brothers. They have the right to share her bed turn and turn about until she is with child, when the elder brother alone has the right of access to her. The children born under such circumstances belong to the elder brother. The custom of polyandry seems to be rare among the Bantu peoples. The only other people known to Mr. Roscoe who practise it are the Baziba to the south of Uganda.<sup>4</sup>

The  
Levirate.

brother, unless he happens to have two wives already. In that case the eldest son of the deceased takes charge of the widows, but they are regarded as the property of his paternal uncle, who pays them marital visits from time to time. Any children born to these widows are accounted the children of the deceased, not of their real father his brother.<sup>1</sup>

Women keep themselves veiled from all men, even from their fathers and brothers; yet sexual morality among the Bahima is very lax. Once a woman is married, all restrictions are at an end. She may welcome to her bed any of her husband's relatives or friends with impunity; and the children resulting from such intercourse belong to the husband. When a friend visits a man, hospitality requires that the host should abandon his wife to his guest in the early morning; and in her husband's absence a wife is bound to receive and grant her favours to a visitor. It is also customary to exchange wives; for instance, when a man and his wife visit a friend, the two men invariably exchange their wives during the visit.<sup>2</sup>

It is remarkable that the rare custom of fraternal polyandry, together with great laxity in matters of sexual morality, should be found in two purely pastoral tribes widely separated from each other, the Bahima in Central Africa and the Todas in Southern India.<sup>3</sup> The coincidence suggests that there is something in the pastoral life which favours the growth of abnormal relations between the sexes. In this connection we are reminded of the form of group marriage which is practised by the Herero, another pastoral people,<sup>4</sup> and of the late marriages and free intercourse of the unmarried among yet another pastoral people, the Masai.<sup>5</sup> A probable explanation of the prevalence of polyandry in a pastoral tribe has been acutely suggested by the Rev. John Roscoe. He points out that some pastoral tribes of Africa, such as the Bahima and the pastoral Banyoro, who live chiefly on the milk of their herds, care-

Loose sexual morality of the Bahima.

The custom of polyandry appears to be favoured by a pastoral life, perhaps because the absence or prohibition of a vegetable diet so far restricts the means of subsistence that many a man is unable to support a wife of his

own and  
hence is  
driven to  
share her  
with others.

fully abstain from a vegetable diet lest the contact of vegetables with milk in their stomachs should injure the milch kine and thereby endanger their principal means of subsistence. Accordingly in these tribes a man who marries must have cows enough to enable him to support a wife and family, since he cannot hope to eke out a livelihood by tilling the ground. But a poor man cannot afford to keep so many cows; hence he is under a strong temptation to club together with other poor men, whether his brothers or not, and putting their cattle into a common stock to purchase and keep one wife in common between them. Thus the superstition which debarb these people from a vegetable diet not only impoverishes them and retards economic progress by presenting a serious obstacle to the adoption of agriculture; it affects society in another and curious way by fostering a type of marriage which effectually checks the growth of population, and which can hardly fail to be injurious to the women and thereby to their offspring. Thus the baleful influence of superstition may reach far beyond those immediate and obvious consequences which directly flow from it; indirectly, like a foul exhalation from a marshy soil, it may poison unseen the whole life of a people.

### § 18. *Exogamy among the Gallas*

*The  
Gallas.*

To the south of Abyssinia dwell the Gallas or Oromos, as they call themselves, a numerous nation of the purest Ethiopian type, tall and slender in person, of a brown or reddish-brown complexion, with an elongated head, frizzly hair, oval face, and straight thin nose. The women are very handsome; they are much sought for as slaves and concubines, and fetch the highest prices.<sup>1</sup> Formerly the Gallas were, like the other tribes of this part of East Africa, a purely pastoral people, subsisting chiefly on the flesh, blood, and milk of their flocks and herds. Even now those of them who practise agriculture generally disdain to labour in the fields with their own hands and never allow their

<sup>1</sup> J. Deniker, *The Races of Man, Wanderings, and Labours in Eastern Africa* (London, 1873), p. 270.  
pp. 438 sq. ; Charles New, *Life,*

women to demean themselves by such toil. The work of tilling the ground is mostly left to slaves and hirelings. They will not eat the flesh of wild animals; fowls they reject as a species of vulture, and fish as a species of serpent.<sup>1</sup>

“In regard to marriage,” we are told, “they have a peculiar custom. They are divided into two tribes or classes, the Baretuma and the Harusi, and the men of each tribe have to select their wives from the other; the Baretumas marry the Harusi and *vice versa*. The marriage of their own tribespeople is considered highly improper, the relationship being too near. Herein the Gallas appear to advantage when compared with most other East Africans, who often marry over and over again into the same family; and perhaps this custom of the Gallas will account, in some measure, for their high physical development.”<sup>2</sup> This important statement appears to have been overlooked by subsequent writers on the Gallas.<sup>3</sup> If it is correct, it establishes the existence among the Gallas of exogamy based on the division of the community into two intermarrying classes. Marriages between near relations are unusual among the Gallas; yet in many cases they permit marriage between brothers and sisters.<sup>4</sup> If the latter state-

Exogamous classes among the Gallas.

Sister-marriages.

<sup>1</sup> Ph. Paulitschke, *Ethnographie Nordost-Afrikas, die Materielle Cultur der Danakil, Galla und Somäl* (Berlin, 1893), p. 211; Charles New, *Life, Wanderings, and Labours in Eastern Africa* (London, 1873), p. 272. Compare J. L. Krapf, *Travels, Researches, and Missionary Labours during an Eighteen Years' Residence in Eastern Africa* (London, 1860), p. 78.

<sup>2</sup> Charles New, *Life, Wanderings, and Labours in Eastern Africa*, pp. 273 sq.

<sup>3</sup> For example no notice of it, so far as I have observed, is taken by the author of the most systematic treatise on the Galla and Somali peoples, Dr. Philipp Paulitschke, in his valuable work *Ethnographie Nordost-Afrikas, die Materielle Cultur der Danakil, Galla und Somäl* (Berlin, 1893); *Die Geistige Cultur der Danakil, Galla und Somäl* (Berlin, 1896). Dr. Paulitschke speaks (*op. cit.*, *Die Materielle Cultur*, etc.,

p. 202) of two divisions of the Galla which are called respectively Luba (or Birmadu) and Wata, and which he appears to describe as endogamous, though his expression (“*Luba und Wata heiraten nur unter einander*”) is ambiguous and susceptible, so far as I understand the niceties of the German language, of the contrary interpretation, namely, that the divisions are exogamous. To these two classes he adds two others, the smiths and the sorcerers, “the members of which only marry among each other,” an expression equally ambiguous, but probably intended to convey that each of these professions is endogamous.

<sup>4</sup> Ph. Paulitschke, *Ethnographie Nordost-Afrikas, die Materielle Cultur der Danakil, Galla und Somäl* (Berlin, 1893), p. 196: “*Die Ehen unter nahen Verwandten sind bei 'Afar und Somäl unerhört und verboten, bei*

Absence of  
the classi-  
ficatory  
system of  
relation-  
ship among  
the Gallas  
and  
Somalis.

ment is correct, it bears out the view of the Rev. J. Roscoe that the royal families of the Baganda, the Banyoro, and the Bahima all belong to the Galla stock; since in the royal houses of these three tribes brothers are, or were till lately, allowed to mate with their sisters.<sup>1</sup> A man has a right to marry the widow of his deceased brother; if he does not exercise his right, she may not marry any one else without his consent.<sup>2</sup> Descent is traced in the male line; children belong to their father's family. No trace of mother-kin has been detected either among the Gallas or among the Somalis.<sup>3</sup> The Galla system of relationship appears not to be classificatory. The term for father (*abba*) is quite different from the term for father's brother (*wasilla*) as well as from the term for mother's brother (*gâja*). The term for mother (*hada*) is different from the term for mother's sister (*hadada*). Similarly the Somali system of relationship is also not classificatory. The term for father (*âba*) is different from the term for father's brother (*adêra*) as well as from the term for mother's brother (*apti*). The term for mother (*hojo*) is different from the term for mother's sister (*habr-jêr*) as well as from the term for father's sister (*eddo*).<sup>4</sup> Evidence for totemism appears to be totally lacking among the Gallas and Somalis, which so far confirms the observation that wherever totemism exists it is associated with the classificatory system of relationship.<sup>5</sup> The aversion which the Gallas entertain to fowls and fish and their refusal to eat them<sup>6</sup> are not totemic; for they are common to the whole people and are shared besides by many other African tribes quite independently of totemism.

*den Galla zwar auch ungebräuchlich, aber in manchen Fällen ist selbst die Schwesterehe erlaubt*"; compare *ibid.* p. 202. The expression *Schwesterehe* is ambiguous; lest I should have misunderstood the author, I quote his statement in full.

<sup>1</sup> See above, pp. 469, 523, 538.

<sup>2</sup> Ph. Paulitschke, *Ethnographie Nordost-Afrikas, die Materielle Cultur der Danakil, Galla und Somäl* (Berlin, 1893), p. 205.

<sup>4</sup> Ph. Paulitschke, *op. cit.* pp. 188 sq.

<sup>5</sup> This is not to be understood to imply the converse proposition, namely, that wherever the classificatory system of relation exists it is associated with totemism.

<sup>6</sup> See above, p. 541.

## CHAPTER XIV

### TOTEMISM IN WEST AFRICA

#### § I. *Totemism in Senegambia*

THE following accounts seem to shew that totemism prevails widely among the tribes of Senegambia, particularly among the Mandingoes; and its occurrence here is all the more remarkable because some of the tribes who practise it are professing Mohammedans. Thus Dr. Tautain, speaking of the Banmanas (Bammanas), writes as follows: "Here though I know neither its range nor its origin, I would call attention to the belief held by all the peoples of Senegambia, that every family has a relative among the animals. The flesh of this relative, if it is an edible animal, is forbidden; if it is a dangerous animal, the man can brave it with impunity and heal the injuries which it inflicts on others. A Wassooloonke, a kinsman of a kind of scorpion reputed to be very dangerous, told us that one of these animals could run all over his body without stinging him; a Laobe, a kinsman of a *triganocephalus*, related that if anybody chanced to be bitten by the serpent he prided himself on healing him by simple touches. The animal sparing the man, the man ought to spare the animal, and I have seen a Mandingo of Bambook, kinsman of a python, offer the whole of his month's pay to save one of these serpents, which another man wished to kill. We caused the serpent to be given to him; he undid the noose which was strangling it, and flung it into the Senegal to let it escape. If he had not prevented this murder, the whole of his family would have perished. The python used to come and visit every child

All the peoples of Senegambia believe that each family has a relative among the animals; the members of the family may not eat their animal kinsman, and it will not hurt them.

who was born in that family within eight days after birth; and my Mandingo acquaintance was resolved to kill all his children who did not receive such a visit. Before handing the serpent over to him they had hurt the animal a little by dragging it to right and left; and for eight days the Mallinké most carefully avoided stepping on the points traversed by the python, I suppose from fear of injuring it."<sup>1</sup>

Again, speaking of the Mandingoes of the Upper Senegal, Dr. Bellamy observes that "each race has an animal among its ancestors. Some have the hippopotamus, others the crocodile, etc."<sup>2</sup>

Dr.  
Rançon's  
evidence  
as to  
totemism  
in Senegambia.

Again, Dr. Rançon, another French explorer of the interior of Senegambia, relates an incident which shews, as he remarks, that though the Malinkés have been subjected to the influence of Islam they have not abandoned their old heathen superstitions. He was lodging at Dikhoy, a village near the Gambia River, inhabited by Malinké Keitas, and it chanced that his servant was playing with a small bird, a kind of pretty sparrow which he had caught that morning on the march. Seeing him do so, the chief of a neighbouring village begged Dr. Rançon to set the bird at liberty. "That," said he, "would give me great pleasure; for I am a relation of the bird. My family name (*diamou*) is Sidibe." The French traveller consented on condition that the chief would tell him how he came to be a relation of the bird. Accordingly the chief told him that once his grandfather, the first of the Sidibes, was out hunting elephants, and having lost his way in the forest was like to die of thirst, till one of these little birds, fluttering before him, led him to a stream of water. "From that time," said he, "the Sidibes have been relations of the bird, since but for it our father would certainly have died. Hence we are all forbidden to kill it, to eat its flesh, and to allow any one to hurt it in our presence." To this Dr. Rançon adds that

p. 545. Dr. Tautain's information was collected during a residence at Segu on the Niger.

<sup>2</sup> Dr. Bellamy, "Notes Ethnographiques recueillies dans le Haut-Sénégal," *Revue d'Ethnographie*, v. (1886) p. 81.

“similar legends are handed down among all the families of the Soudan, and each family is allied to some animal or another. Thus the Keitas are relations of the hippopotamus, no doubt because their ancestor Soun-Dyatta, according to the tradition, was one day turned into a hippopotamus while he was bathing at Koulicoro, on the Niger; the N'Diaye are relations of the lion, and the Dialo of the partridge. Others again are allied to the scorpion, and others to the leopard.”<sup>1</sup>

Fuller details as to the totemic clans of the Mandingoes are furnished by Captain Binger. He tells us that the Mandingo (Mandé) stock is divided into many branches, each with its own family name and its fetish (*tenné*) or totem. Of these he enumerates four principal families or, as we may call them, totemic clans, namely:—

Captain Binger's evidence as to totemism among the Mandingoes.

(1) The *Bammama* or Crocodile clan, so called from their fetish (*tenné*) or totem the crocodile (*bamba* or *banma*). In the French Soudan this clan is commonly but incorrectly called Bambara, a word which means “infidel.”

(2) The *Mali-nké* or Hippopotamus clan, so called from their fetish (*tenné*) or totem the hippopotamus (*mali*).

(3) The *Sama-nké* or Elephant clan, so called from their fetish (*tenné*) or totem the elephant (*sama*).

(4) The *Sa-mokho* or Serpent clan, so called from their fetish (*tenné*) or totem the serpent (*sa*).

These four great totemic clans are further grouped in tribes, each with its tribal name (*diamou*) and one or more fetishes (*tenné*) or totems. Some of these tribes have again split up, and their fractions have totems of their own by which they distinguish themselves from each other. Thus the Crocodile clan (*Bammama*) has divided into several branches, one of which has for its totems cracked calabashes and often the dog; another branch has for its totems the lion, the dog, and the milk of wild beasts; and a third branch, which comprises the family of the Smiths, has for its totems the condiment *bandougou*, a species of ape (*koban*), and the dog. Again, the Hippopotamus clan (*Malinké*) has divided into several branches, of which one has the palm rat and panther for its totems (*tenné*); another

The Crocodile clan and its subdivisions.

The Hippopotamus clan and its subdivisions

<sup>1</sup> Dr. André Rauçon, *Dans la Haute-Gambie, Voyage d'Exploration Scientifique* (Paris, 1894), pp. 443 445.

has for its totem (*tenné*) the iguana ; and a third has for its totems (*tenné*) the boa, the *trigonocephalus* serpent, and the field rat.<sup>1</sup>

Totemic  
clans  
among the  
Fofana.

Further, the Fofana, another Mandingo people, are also divided into totemic clans. These Fofana are not so much a tribe as a sort of caste, the members of which live mixed up with the other Mandingoes. They have no external mark of difference. Some of them are Mohammedans, some are heathen. They enjoy a high reputation for probity throughout the Soudan. Their subdivisions or clans have, like the other Mandingo clans, their fetishes (*tenné*) or totems, "the practices in regard to which are more or less respected." These subdivisions or clans are four in number, namely :

(1) The Fofana-Kagoro, whose totem (*tenné*) is the panther.

(2) The Fofana of Nouroukrou, whose totem (*tenné*) is the elephant.

(3) The Fofana of Nyamina, of Bakhounou, and of Worodougou, whose totems (*tenné*) are the lion, the panther, and a species of serpent.

(4) The Fofana Souransa, who have for their totem (*tenné*) the boa (*maninian*).<sup>2</sup>

From these accounts it appears that in spite of Mohammedan influence the Mandingoes retain a strong sense of their relationship to their totemic animals, which they will neither themselves injure nor suffer others to injure, if they can help it. Whether their totemic clans are exogamous is not mentioned by our authorities.

Totemic  
clans  
among the  
Fulahs of  
Gambia.

Again, the Fulahs of Gambia are divided into families or clans called *bulendas*, which appear to be totemic. Each clan abstains from eating animals of a certain species. They believe that to eat of the forbidden animal would make them blind, and that to touch or spill its blood would cause a severe disease of the skin. Thus the Kandis and Kahs, two branches of one clan (*bulenda*), may not eat

<sup>1</sup> Le Capitain Binger, *Du Niger au Golfe de Guinée* (Paris, 1892), ii. 375-377. Compare J. Deniker, *The Races of Man*, pp. 448 *sq.* I have to thank Mr. J. Deniker for referring me to

Captain Binger's evidence of Mandingo totemism.

<sup>2</sup> Le Capitain Binger, *Du Niger au Golfe de Guinée*, ii. 377.

partridges: the Baldehs, Bandens, and Bahs, three branches of another clan (*bulenda*), may not eat guinea-fowl; and so on with members of all the other clans. The head of a clan is always a man, and relationship is reckoned through males.<sup>1</sup>

### § 2. Totemism on the Ivory Coast

Viewed from the sea, the Ivory Coast has little to please the eye or attract the mariner. A long line of sands on which the great rollers break eternally in crawling, seething foam; beyond the sands a long narrow lagoon stretching parallel to the sea for miles on miles; and beyond the lagoon a low flat monotonous land relieved only by verdant groves of coco-nut palms, in which the native villages are embosomed:—these are the main features of this part of the African seaboard.<sup>2</sup> The French, who own this part of Africa, have extended the name of the Ivory Coast far into the interior, and among the inland population of this wide region totemism is found.

Thus in the district of Seguella we are told that "every family possesses a *tana*. The *tana* is the fetish which belongs to it, and its chief virtue is to cause the death of those who, for any reason, eat that which, when the fetish is an animal, ought to be sacred to them. According to tradition, the choice of the *tana* was determined by the intervention, whether beneficent or otherwise, of the particular animal in the family, so that through the principle of gratitude the creature has become sacred. That is why so many families have for their *tana* the lion, the panther, the hippopotamus, etc. Vegetable *tanans* are rare. However, Diorole and the people of Tieina have rice for their *tana* in a country which produces much of it; and the natives content themselves with maize and a soup of bananas."<sup>3</sup>

<sup>1</sup> Extract from a Report to the British Colonial Office by Mr. W. B. Stanley. I have to thank Mr. N. W. Thomas for sending me the extract and the authorities of the Colonial Office for their permission to make use of it.

<sup>2</sup> Rev. J. Leighton Wilson, *Western*

The Siena  
or Senofofo  
and their  
country.

Further, totemism is practised by the Siena, Senofofo, or Sienamana, a people who inhabit a great area in that portion of the French Soudan which lies between the Upper Niger and the Ivory Coast. Northward and westward their country does not reach to the valley of the Niger properly so called, though it approaches it in the direction of Segou a town situated on the great river. On the north the Siena territory borders on the district of Dienné, on the south-east it reaches the bend of the Black Volta River at Banda, while on the west it touches at one point the meridian which passes through Boogooni. The nature of the country is typical of the Soudan. It is a land where savannahs alternate with sparse woods, where brooks and rivers abound, their flood waters giving rise in the rainy season to vast marshes, which dry up with the growing heat of the sun from the month of January onwards. On the south the Siena do not encroach on the extreme northern limits of the great belt of tropical forests, which stretch away southward towards the Gulf of Guinea. Throughout this wide area the Siena form the great majority of the population, though dispersed among them dwell some alien peoples of the Mandingo stock, who have secured for themselves a dominant position either by force of arms or by their superior intelligence and civilisation. A certain number of Siena, especially members of the old native aristocracy, have aped the manners of the higher race in order to maintain their rank in the new order of society. These renegades have adopted the Mandingo language, the Mandingo costume, the Mandingo family names, and even the Mandingo religion, which is Mohammedanism. Many marriages have taken place between the aborigines and the newcomers, and the children born of such unions are sometimes tattooed with the mark of certain Siena tribes, which consists of three scars spread like a fan on each cheek. Hence some confusion has arisen in the minds of Europeans between the alien overlords and their native vassals; though in point of

The Siena  
and the  
Mandin-  
goes.

*tanan* (of which *tenné* is only another spelling, see above, pp. 545 sq.) is a Mandingo verb meaning "not to eat" or "not to drink." See M. Delafosse,

"Le Peuple Siéna ou Sénoufo," *Revue des Études Ethnographiques et Sociologiques*, i. (1908) p. 453.

fact, whether we consider their physical characteristics, their language, or their customs, the difference is profound between the Siena and the Mandingo. The Siena are in general tall and strong, though their muscles are not well developed. Their complexion varies from light to dark brown, but it is oftener dark than light. The hair is scanty; only the old men as a rule have beards. In many places persons may be seen with a light complexion and red hair. The head is commonly flat on the top, and the neck long and slender. The nose is fairly long but broad, and the lips are thick. Being better husbandmen than fighters, the Siena have always been the prey of slave-hunters, and having been sold and resold they are now found in great numbers in almost all the provinces of West Africa.<sup>1</sup> Agriculture is their chief occupation. They are diligent tillers of the soil. Everywhere, except where Mandingo influence is predominant, you see vast fields, regularly laid out and well kept, stretching away on the level and rising up the sides of the hills and mountains. Every spot of ground, except where the bare rock protrudes, is under cultivation. Even attempts at drainage and irrigation are to be met with, which are abundantly rewarded by the fine crops of the rice-fields. Other crops raised are yams, manioc, millet, and maize. Work at the fields goes on from year's end to year's end, men, women, and children all bearing a hand according to their several aptitudes. To prevent the impoverishment of the soil the crops are changed from season to season in the same field; and where the population is not too dense to admit of it the fields are suffered to lie fallow one year in three. But where the land does not suffice for this purpose, the natives do not hesitate to abandon their village and transport themselves and their belongings to a new village, perhaps ten or twelve miles away, in a region which is either wild or has been abandoned for many years. Indeed among some of

Physical appearance of the Siena.

The Siena are devoted to agriculture.

Shifting of the cultivation, when the land is exhausted.

<sup>1</sup> Maurice Delafosse (Côte d'Ivoire), "Le Peuple Siéna ou Sénoufo," *Revue des Études Ethnographiques et Sociologiques* i. (1908) pp. 16-18, 26. The same writer had previously contributed a notice of this people to the

volume entitled *Gouvernement Général de l'Afrique Occidentale Française, Notices publiées par le Gouvernement Général à l'occasion de l'Exposition Coloniale de Marseille, La Côte d'Ivoire* (Corbeil, S. et O., 1906), pp. 364, etc.

the Siena this shifting of cultivation has been carried to such a pitch that they may almost be regarded as nomads, for they often do not reside more than three years in the same place. Their migrations, rendered necessary by the nearly total absence of lime in the soil of this part of Africa, has not a little contributed to retard their civilisation by preventing the permanent establishment of large centres of population, which might in time have become cradles of culture. Yet large permanent villages, almost towns, do exist; but the families who dwell in them possess farms from five to twenty miles distant, on which some members of each family permanently reside. This dispersion of the population goes far to explain the political and social organisation of the Siena, who are split up into many tribes and subtribes as well as into totemic clans.<sup>1</sup>

Five  
totemic  
clans of  
the Siena.

The division of the Siena into totemic clans is independent of their division into tribes and subtribes. The number of the clans seems to be five. Each clan has its sacred animal or rather species of animal, and takes its name from the animal. The clan name is called *félé* in the Siena language; in the Mandingo language it is called *diamon* or more exactly *gyamû*. These five clan names are found indiscriminately among all the tribes and subtribes, though some names are commoner in certain tribes than in others. The five clan names (*félé*) of the Siena are as follows:—<sup>2</sup>

Leopard  
clan.

1. *Soroo*, *Sorouo*, or *Soro*, the name of the panther or leopard (*Felis pardus*). The Panther or Leopard clan seems to be considered the noblest.

Antelope  
clan.

2. *Yeo*, *Yio*, or *Yô*, the name of the red antelope with white stripes and spots (*Tragelaphus scriptus*). The Mandingoes call the animal *mina*.

Black Ape  
clan.

3. *Siluo* or *Silué*, the name of the black ape (*Colobus polycomus*). This clan has for its totem not only the black ape but a small black bird.

Earth-  
squirrel  
clan.

4. *Sekongo* or *Sekonho*, the name of the earth squirrel<sup>3</sup> (*Xerus erythropus*). There are many members of this clan

<sup>1</sup> Maurice Delafosse, "Le Peuple Siéna ou Sénoufo," *Revue des Études Ethnographiques et Sociologiques*, i. (1908) pp. 242 sq.; as to the Siena

tribes and subtribes, see *ibid.* pp. 22 sqq.

<sup>2</sup> Maurice Delafosse, *op. cit.* p. 451.

<sup>3</sup> "Écureuil de terre."

in the castes of artisans and smith; but the clan is distributed among other classes of society also, for the division into castes is independent of the division into totem clans.

5. *Tuô* or *Tiô*, the name of the wart hog (*Phacochoerus Africanus*), or perhaps of the "red boar" (*Potamochoerus penicillatus*). The identification is uncertain. Wart Hog  
clan.

The members of each clan are forbidden to eat not only their totemic animal, whose name they bear, but also a variety of other foods, both animal and vegetable. Thus members of the Leopard clan are prohibited from eating not only leopards but also pythons and several species of birds. The Mandingoes who live among the Siena are also divided into totemic clans. One Mandingo clan, for example, has for its sacred animal or totem the hippopotamus; another clan has the crocodile. The Mandingo name for one of their totemic clans is *diamon*, corresponding to the Siena term *félé*. Some of the Siena have given up their own clan names and adopted the corresponding clan names of the Mandingoes, or have even dubbed themselves by Mandingo clan names which have nothing to correspond to them among the Siena.<sup>1</sup> Totemic  
taboos.

The explanation which the Siena give of the origin of their totemic clans is simply that the ancestor of each clan was helped in some way by an animal; and that out of gratitude for its help and in order to commemorate it he took the name of the animal and forbade his descendants to kill or eat creatures of that species. The Siena believe that if a man kills his totemic animal, another member of his clan dies instantaneously. As each clan numbers thousands of people scattered over thousands of square miles, it is equally difficult to confirm and to refute this superstition. If a man eats the flesh of his totemic animal, a cancer will, sooner or later, eat away his own mouth. If he even by accident sets foot on the carcass, he will fall ill, unless he offers an expiatory sacrifice, according to prescribed rites, on the very spot where the sacrilege was committed. They say also that when a man dies, his soul passes into an Explanation  
which the Siena  
give of  
their  
totems.

<sup>1</sup> Maurice Delafosse, "Le Peuple *Ethnographiques et Sociologiques*, i. Siéna ou Sénoufo," *Revue des Études* (1908) pp. 451, 452. Supposed  
effects of  
killing or  
eating the  
totemic  
animal.

The souls of people at death are believed to transmigrate into their totemic animals, and afterwards to be reborn in human infants.

Thus on the Siena view there is a constant interchange of souls between a clan and its totemic animals.

Sympathetic bond between each individual and his or her totem.

animal of the totemic species which happens to be born at that moment; and that when the animal in turn dies, the soul returns into the body of a newborn infant of the clan which bears the animal's name. "This belief," we are told, "sufficiently explains the horror which the Siena manifest at killing or eating the animal whose name their family bears; they would think that they were eating or killing one of their kinsfolk."<sup>1</sup>

Thus on the Siena theory the link between a totemic clan and its totemic animal is very close indeed; since the animals of that species are thought to be animated by the souls of the dead clanspeople, and on the other hand the living clanspeople are supposed to be animated by the souls of the dead animals. There is thus imagined to be a constant interchange of souls, a sort of spiritual seesaw, between the human beings and the beasts. A different and perhaps inconsistent article of the Siena totemic creed is the notion that when an animal of the totemic species is killed a member of the corresponding totemic clan dies instantaneously. This belief seems to imply that a sympathetic bond exists between each man and an individual of his totemic species, so that to injure or kill the one is to injure or kill the other. To put it otherwise, we may perhaps say that every member of the clan has an external soul lodged in the body of one of the animals, so that when the beast perishes so does he. We shall presently see that this belief in external human souls lodged in the bodies of animals occurs on the coast of Guinea and in other parts of Africa.<sup>2</sup> It is interesting to find it on the Ivory Coast forming apparently an integral part of totemism and associated further with a theory both of transmigration and of reincarnation. Similarly among the tribes of Central Australia totemism goes hand in hand with a theory of reincarnation, though not of transmigration, and among these Australians too we find clear traces of a belief in external human souls lodged for safety outside of their bodies.<sup>3</sup> The independent occurrence of these various

<sup>1</sup> Maurice Delafosse, "Le Peuple Siéna ou Sénoufo," *Revue des Études Ethnographiques et Sociologiques*, i.

(1908) p. 452.

<sup>2</sup> See below, pp. 593 *sqq.*

<sup>3</sup> See above, vol. i. pp. 124 *sqq.*

elements in the totemic systems of tribes so widely separated suggests that their combination can hardly be fortuitous, and that accordingly any hypothesis which is adequately to explain totemism must take account of them all.

It deserves to be noticed that another people of the Ivory Coast, the Neyaux, who are divided into many tribes or rather families, appear to possess the classificatory system of relationship. For among them, we are told, "the degrees of relationship are very ill defined. Long periphrases are necessary to determine them. Cousins, even very distant cousins, call each other brothers. The uncle is called father and the aunt mother, so that it is impossible to know which is which. When you shew a man one of his young nephews, he will say, 'He is my son.' He will often say the same thing even of a friend's son. However, one can always ascertain whether the person in question is his real son, for in that case he declares '*Na mlé a yo ko*,' 'He is the son of my flesh.'"<sup>1</sup>

Traces of the classificatory system of relationship among the Neyaux.

In this passage the writer does not distinguish between paternal and maternal uncles and aunts, nor between nephews the sons of a brother and nephews the sons of a sister. On the analogy of the use of the classificatory terms elsewhere we may conjecture that it is the paternal uncle, the father's brother, who is called father; that it is the maternal aunt, the mother's sister, who is called mother; and that it is the sons of his brother, not the sons of his sister, whom a man calls his sons.

### § 3. Totemism on the Gold Coast

The system of totemism combined with exogamy appears to prevail among all the Tshi- or Twi-speaking tribes who inhabit the Gold Coast of West Africa. Of these tribes the best known are the Fantees on the coast and the powerful Ashantee nation in the interior. Less familiar to Europeans are the Ahantas on the coast, and the Wassaws, the Tshiforos or Tufels, the Assins, the Adansis, the Akims,

The Tshi-speaking tribes of the Gold Coast.

<sup>1</sup> *Gouvernement Général de l'Afrique Occidentale Française: Notices publiées par le Gouvernement Général à l'occasion de l'Exposition Coloniale de Marseille: La Côte d'Ivoire* (Corbeil, S. et O., 1906), pp. 558, 560.

the Akwapims, and the Akwamus, all inland tribes. The Tshi-speaking peoples, whatever tribe they belong to, are all true negroes as distinguished from the negroids in the Mohammedan States to the north and the Bantu tribes of the Congo region to the south-east.<sup>1</sup> The greater part of the Gold Coast consists of low hills and ranges covered with dense, almost impenetrable forest. To the east and west of the Gold Coast the nature of the country changes, and instead of wooded hills there runs a long line of lagoons parallel to the sea and separated from it only by sand dunes. The Tshi-speaking tribes are essentially people of the forest, and appear never to have spread over the open country of the lagoons. They live in insignificant villages and hamlets, built in small clearings of the woods, between which communication is kept up by narrow footpaths through the jungle. Coomassie and Djuabin are the only purely native assemblages of houses worthy the name of towns. In such a country, where men live scattered in half-isolated communities, mere specks in a vast tract of tangled forest, ideas permeate but slowly, and in spite of an intercourse with Europeans which has lasted for more than four hundred years the social and moral condition of the Tshi-speaking tribes has changed but little since they were first discovered by the Portuguese mariners. Not least among the causes which have retarded progress must be reckoned the languor of a hot, enervating, unhealthy climate, which depresses the vital energies and renders every effort a burden.<sup>2</sup> So unfavourable to the best interests of man is a country where nevertheless prolific nature supplies his material wants with profusion, and the landscape often wears an aspect of soft beauty and richness, the low green hills receding, range beyond range, to the horizon, their verdurous sides and hollows interspersed with smiling fields and variegated with

They live in small villages scattered amidst the dense forest.

Their isolation and the hot enervating climate have combined to retard their progress.

<sup>1</sup> A. B. Ellis, *The Tshi-speaking Peoples of the Gold Coast of West Africa* (London, 1887), pp. 2 sq. The language is commonly called *Tshi*, but the word is pronounced *Tchwi* (Ellis, *op. cit.* p. 2). Messrs. Connolly and ffoulkes call the language *Twi*. See R. M. Connolly, "Social Life in Fanti-land," *Journal of the Anthropol-*

*logical Institute*, xxvi. (1897) pp. 131, 134; A. ffoulkes, "The Fanti Family System," *Journal of the African Society*, vol. vii. No. 28 (July 1908), p. 394; E. Perregaux, *Chez les Achanti* (Neuchâtel, 1906), pp. 7 sq.

<sup>2</sup> A. B. Ellis, *The Tshi-speaking Peoples of the Gold Coast*, pp. 1-8.

graceful palms and umbrella-trees, on which the eye rests with pleasure.<sup>1</sup>

Yet the natives of these sweltering forests have advanced beyond the hunting stage and maintain themselves by the cultivation of the ground. But their agriculture is rude. The Fantee farmers do not occupy their lands permanently. They clear patches in the forest by burning down the trees, turn up the soil lightly with the hoe, and scatter the seed, which a few weeks' rain causes to spring up as if by magic. For three or at most five years they till the same plot, then abandon it to nature, which soon covers the fallow land with a rank tropical vegetation. Now, as in the days of Hanno, the ancient Carthaginian voyager, nothing is commoner in these regions than to see the column of smoke by day and of fire by night, which tells where the sable husbandmen are burning the forest to form their temporary fields. Among the crops which they raise are maize, cassava, yams, plantains, bananas, ground nuts, and palm oil.<sup>2</sup> The Fantees are also skilful canoe-builders and daring fishermen; they weave good native cloths, and make pottery of a simple kind. But the most honourable occupation with them is that of a goldsmith, and the delicacy of their filigree workmanship is surprising, when we consider the rudeness of their tools.<sup>3</sup>

The arts and industries of the Ashantees in the interior

<sup>1</sup> J. Leighton Wilson, *Western Africa* (London, 1856), p. 146.

<sup>2</sup> R. M. Connolly, "Social Life in Fanti-land," *Journal of the Anthropological Institute*, xxvi. (1897) pp. 129, 147 sq.; E. Perregaux, *Chez les Achanti*, pp. 27 sqq. The Carthaginian Hanno, who was one of the first navigators to explore the west coast of Africa, relates that at one place where they landed they could see nothing but forest by day and many fires at night. See *Geographi Græci Minores*, ed. C. Muller, i. 11 sqq. Mungo Park observes that "the burning the grass in Manding exhibits a scene of terrific grandeur. In the middle of the night I could see the plains and mountains, as far as my eye could reach, variegated with lines of fire; and the light reflected on the sky made the heavens appear in a blaze. In the day time, pillars of

smoke were seen in every direction: while the birds of prey were observed hovering round the conflagration, and pouncing down upon the snakes, lizards, and other reptiles which attempted to escape from the flames. This annual burning is soon followed by a fresh and sweet verdure, and the country is thereby rendered more healthful and pleasant" (*Travels in the Interior Districts of Africa*, London, 1807, pp. 387 sq.). There is reason to think that whole regions of Africa have been converted from forests into steppes by the custom of burning down the woods. See *The Geographical Journal*, xxxii. (1908) pp. 429 sq.

<sup>3</sup> R. M. Connolly, "Social Life in Fanti-land," *Journal of the Anthropological Institute*, xxvi. (1897) pp. 148 sq.

Arts and industries of the Ashantees.

are similar ; they cultivate maize, sugar-cane, yams, plantains, bananas, ground-nuts, cotton, indigo, and coffee ; they build houses with walls of clay, weave cotton cloths of beautiful patterns and substantial texture, which they dye a fine indigo blue ; and like the Fantees they are expert gold-smiths. The soil of the country is impregnated with gold ; the precious metal is procured both by digging and washing, and forms one of the principal exports. But the gold mines are very imperfectly worked, indeed some of them are not worked at all, because they are sacred to certain fetishes.<sup>1</sup> Like the Baganda of Central Africa, the Ashantees combine a system of totemism with a barbarous civilisation and a powerful, though not unlimited, monarchy.<sup>2</sup>

The soil impregnated with gold.

The totemic clans of the Tshi-speaking tribes.

The Tshi-speaking tribes of the Gold Coast are divided into twelve principal exogamous and totemic clans or septs. The following is the list of the clans, with their taboos, as they have been recorded by the late Colonel Sir A. B. Ellis, one of our principal authorities on these tribes.<sup>3</sup>

The Leopard clan.

1. The *Tchwiden-fo* or Leopard clan, the name of which is derived from *ehitchwi*, "a leopard." The leopard is the real sacred animal of this clan, but members of it now abstain from the flesh of all feline animals. Should a member of the Leopard clan chance to touch a dead leopard, he must scatter shreds of white cloth on it and anoint the muzzle of the beast with palm-oil in token of respect and sorrow. If he happens to kill a leopard, he will say, "I have killed my brother," and will anoint its wounds. When a dead leopard is brought into a town, members of the Leopard clan smear themselves with chalk and bury the beast. If a member of

<sup>2</sup> As to the Ashantee monarchy, see J. L. Wilson, *Western Africa*, pp. 175 sqq. ; A. B. Ellis, *The Tshi-speaking Peoples of the Gold Coast*, pp. 274 sqq. ; E. Perregaux, *Chez les Achanti*, pp. 139 sqq.

<sup>3</sup> A. B. Ellis, *The Tshi-speaking*

*Peoples of the Gold Coast*, pp. 206 sq. Compare T. E. Bowdich, *Mission from Cape Coast Castle to Ashantee* (London, 1873), pp. 180-182 ; R. M. Connolly, "Social Life in Fanti-land," *Journal of the Anthropological Institute*, xxvi. (1896) pp. 132 sq. ; C. H. Harper and others, "Notes on the Totemism of the Gold Coast," *Journal of the Anthropological Institute*, xxxvi. (1906) pp. 178-188 ; A. Ffoulkes, "The Fanti Family System," *Journal of the African Society*, vol. vii. No. 28 (July 1908), pp. 395 sqq.

the clan met a leopard on a journey, he would turn back.<sup>1</sup> Moreover, when a member of the Leopard clan dies, they scratch the picture of a leopard on the wall of the house and on the coffin, and the mourners make spots on their bodies with red, white, and black clay to represent a leopard. They also put spots on the neck of the corpse, for were this not done, the deceased would turn into a leopard. When the headman of the Leopard clan is dying, a leopard is heard crying in the forest.<sup>2</sup> To see or hear a leopard is unlucky; it portends the death of one of the Leopard clan. Sometimes members of the Leopard clan put out palm-oil mash in the forest and hang up a spotted cloth as an offering to the leopards.<sup>3</sup>

2. The *Unsünnna-fo* or Bush-cat clan. The bush-cat or civet cat is the sacred animal of this clan, members of which are bound to abstain from the flesh of the animal and of other animals akin to it, such as the genet. According to Mr. C. H. Harper, who calls this clan the *Nsonnafo*, members of it "respect the bush cat, the crow, and a red snake, *nson*, 'the terror of the Nsonnafo.' They would not hang a crow on their farms to scare birds. If they were to kill a crow or bush cat they would get sores on their bodies. In the old days if they were to find a crow or a bush cat dead they would bury a piece of white cloth with the crow and a piece of speckled cloth with the bush cat. Whenever the red snake appears it means certain death to one of the family."<sup>4</sup>

3. The *Kwonna-fo* or Buffalo clan. Members of the Buffalo clan abstain from the flesh of the buffalo.

4. The *Intchwa-fo* or Dog clan. The flesh of dogs is esteemed a delicacy by the natives, but members of the Dog

<sup>1</sup> C. H. Harper, "Notes on the Totemism of the Gold Coast," *Journal of the Anthropological Institute*, xxxvi. (1906) pp. 180 sq. Compare Mr. A. van Hieu, in *Journal of the Anthropological Institute*, xxxvi. (1906) p. 186, who tells us that, if a member of the Leopard clan has killed a leopard, women perform a funeral ceremony over the carcass, and the slayer has to observe a rite for the purpose of

appeasing the soul of the dead beast. The rite in question is probably that of anointing the leopard's wounds, as described in the text.

<sup>2</sup> C. H. Harper, "Notes on the Totemism of the Gold Coast," *Journal of the Anthropological Institute*, xxxvi. (1906) p. 183.

<sup>3</sup> C. H. Harper, *op. cit.* p. 184.

<sup>4</sup> C. H. Harper, *op. cit.* p. 181.

clan may not partake of it. Members of the Dog clan are forbidden to keep dogs as well as to eat them. They also respect a small bird and a small snake, and used to hang the small bird on the neck of a dog.<sup>1</sup>

The  
Parrot  
clan.

5. The *Annono-fo* or Parrot clan. Members of this clan may not kill or eat parrots.<sup>2</sup>

The  
Plantain  
clan.

6. The *Abradzi-fo* or Plantain clan. In the interior of the country members of the Plantain clan still abstain from eating plantains, but in the south such an abstention is no longer usual. This infringement of the totemic taboo may very well, as Ellis suggested, be due to the pressure of hunger; for the plantain is the staple article of food among the natives, so that an embargo laid on it naturally entails some inconvenience and hardship.

The Corn-  
stalk clan.

7. The *Abrutu-fo* or Corn-stalk clan.

The  
Servant  
clan.

8. The *Appiadi-fo* or Servant clan.

The Red-  
earth clan.

9. The *Yoko-fo* or Red-earth clan. *Yoko* is the native name for the red ochrous earth with which the northern tribes stain the lower part of the walls of their rooms and piazzas.

The  
Palm-oil  
Grove clan.

10. The *Agona-fo* or Palm-oil Grove clan.

The  
Abbahdzi-fo  
clan.

11. The *Abbahdzi-fo*. The etymology of the name is uncertain. It may perhaps mean "Cannibal clan" and be compounded of *abbah*, "child," and *dzi*, "to eat."

The  
Dumina-fo  
clan.

12. *Dumina-fo*. Colonel Ellis was unable to ascertain the meaning of this name.<sup>3</sup>

To this list of clans, recorded by Colonel A. B. Ellis, we may add on Mr. C. H. Harper's authority

The Bat  
clan.

13. The *Asini* or Bat clan; and

The  
Vulture  
clan.

14. The *Setchiri* or Vulture clan.<sup>4</sup>

Tradition says that the whole of the Tshi-speaking tribes are descended from the first twelve of these clans, and in point of fact members of the clans are found in tribes the most widely separated from each other. Indeed, these twelve

<sup>1</sup> C. H. Harper, "Notes on the Totemism of the Gold Coast," *Journal of the Anthropological Institute*, xxxvi. (1906) p. 181.

<sup>2</sup> C. H. Harper, *l.c.*

<sup>3</sup> The above is Colonel Ellis's list of totemic clans (*The Tshi-speaking Peoples of the Gold Coast*, pp. 206 sq.), but it

does not profess to be complete. For some variations and additions see C. H. Harper, "Notes on the Totemism of the Gold Coast," *Journal of the Anthropological Institute*, xxxvi. (1906) pp. 179 sqq.

<sup>4</sup> C. H. Harper, *op. cit.* pp. 179, 180.

divisions are common to each one of the Tshi-speaking tribes. The first four clans, namely the Leopard, Bush-cat, Buffalo, and Dog clans, are said to be the oldest, and the rest are believed to be offshoots of them and inferior in dignity.<sup>1</sup> Members of each clan are very loyal to each other, whatever the tribe may be to which they belong. Thus, when a member of a clan dies, all the other people of the clan are liable to share the funeral expenses, although among the Fantees it is now customary for only the near relatives to defray them. Yet cases still occur in which it is the clan and not the family which bears the cost of burial. For example, if a Bush-cat man of Akwapem comes to Axim and dies there away from his family, the Bush-cat people of Axim will bury him and share the funeral expenses among themselves. Hence, when a stranger comes to a place, he always announces the totem clan to which he belongs, and he is thereupon received by the local members of his clan as if he had been born among them, though in fact he may belong to a tribe whose name is scarcely known in the district.<sup>2</sup> The clans have common burial-grounds and common lands, but they do not live in separate parts of the town. Every member has a right to a share in the clan lands, and in some cases the members help to pay each other's debts. When a captive enemy was about to be sacrificed and there happened to be a man of the same totemic clan among his captors, he would save the captive from death by exchanging another prisoner for him.<sup>3</sup>

The Leopard, Bush-cat, Buffalo, and Dog clans are said to be the oldest. Social relations of the members of a totemic clan to each other.

The totemic animal is called Grandfather (*nana*), a title of respect which was also used in addressing the kings of Ashantee.<sup>4</sup> But we are told that though the members of a clan respect their totem they do not worship it as a god; for example, a Fantee of the Leopard clan does not hesitate to shoot a leopard if it devours his sheep, and a member of the Plantain clan does not mutter a prayer when he eats a

Respect shewn for the totemic animals.

animals.

plantain.<sup>1</sup> However, food is said to be offered to the totemic animal ;<sup>2</sup> we have seen that members of the Leopard clan sometimes place palm-oil mash in the forest and hang up a spotted cloth as an offering to a leopard.<sup>3</sup> The totemic animal is not slain sacrificially.<sup>4</sup> According to Mr. A. van Hieu, there is a belief that the members of a totemic clan transmigrate at death into their totems ; and further "each tribesman or clansman reveres all members of the totem species equally, the old folks, however, believe every member has his particular totem for his protection, and his fate is so bound up in it, that if it dies he must himself die also, though not at the same moment."<sup>5</sup> If this account is correct, it would seem that totemism is here, as apparently also on the Ivory Coast,<sup>6</sup> based upon the doctrines both of transmigration and of external human souls lodged in the bodies of animals. The doctrine of transmigration or of transformation seems to be held especially by the Leopard clan. They think that if any member of the clan eats a certain plant called *susua* he will turn into a leopard ; also that a dead man of the Leopard clan will be transformed into a leopard and destroy the farms of the clanspeople or otherwise plague them, if they have incurred his displeasure by performing his funeral ceremonies negligently or failing to respect his wishes.<sup>7</sup>

Divisions  
(*ntoro*)  
hereditary  
in the  
paternal  
line, with  
their  
taboos.

Apart from their totemic clans (*ebussia* or *abusua*) with their taboos, which they inherit from their mothers, the Tshi-speaking people are divided into a number of other divisions with taboos, which they inherit from their fathers. These divisions, descending in the paternal line, are called *ntoro*. The four principal *ntoro* are these :—

<sup>1</sup> A. Foulkes, "The Fanti Family System," *Journal of the African Society*, vol. vii. No. 28 (July 1908), pp. 398 sq.

<sup>2</sup> A. van Hieu, in *Journal of the Anthropological Institute*, xxxvi. (1906) p. 187.

<sup>3</sup> C. H. Harper, "Notes on the Totemism of the Gold Coast," *Journal of the Anthropological Institute*, xxxvi. (1906) p. 184. See above, p. 557.

<sup>4</sup> A. van Hieu, in *Journal of the Anthropological Institute*, xxxvi. (1906) p. 187. One person told Mr. C. H. Harper "that the totem animal or

in its place a sheep is slain yearly" (*Journal of the Anthropological Institute*, xxxvi. (1906) p. 184). But the statement cannot be accepted without further confirmation, though it is borne out by a reported similar practice of the Bini. See below, pp. 588 sq.

<sup>5</sup> A. van Hieu, in *Journal of the Anthropological Institute*, xxxvi. (1906) p. 187.

<sup>6</sup> See above, pp. 551 sq.

<sup>7</sup> C. H. Harper, "Notes on the Totemism of the Gold Coast," *Journal of the Anthropological Institute*, xxxvi. (1906) p. 182.

1. *Bosumprah*. Members of this division are forbidden to eat white fowls, Afasia yams, and to drink palm wine on Wednesdays. It is thought that leopards will not hurt members of this division, and that when a leopard is killed a human member of the division dies. These beliefs shew that the Bosumprah division is especially associated with leopards, and they seem further to indicate that each human member of the division is supposed to have an external soul, or at all events a vital part of him, in the body of a leopard.

2. *Bosumoru*. Members of this division are forbidden to eat the flesh of dogs and hyaenas.

3. *Bosumchwi*. Members of this division are forbidden to eat tortoise and deer and to drink palm wine on Sundays.

4. *Nketia*. Members of this division are forbidden to drink palm wine on Tuesdays.

If a member of any of these paternal divisions (*ntoro*) eats the forbidden food or drinks palm wine on the forbidden days, it is believed that he will fall sick, and in such cases a fowl and eggs must be sacrificed to the man's soul (*okra*) to make him well again. The prohibitions are passed on by a man to his children, so that he himself is rid of them. The maternal totemic clans (*ebussia* or *abusua*) and the paternal divisions (*ntoro*) with their prohibitions exist side by side and independently of each other, the *ntoro* being especially connected with fetish. The natives say that "you take your father's fetish and your mother's family."<sup>1</sup> Thus these two sets of social groups, the maternal *ebussia* and the paternal *ntoro*, are exactly analogous to what I have called the maternal clans and the paternal clans, the *omaanda* and the *otuzo*, of the Herero; and the analogy serves to confirm the view, which has been doubted or denied,<sup>2</sup> that the maternal *omaanda* of the Herero are really totemic clans with totemic taboos like the *otuzo*. However, the exact nature of the kinship group denominated by *ntoro* is uncertain. It comprises, apparently, the near blood relations

<sup>1</sup> C. H. Harper, "Notes on the Totemism of the Gold Coast," *Journal of the Anthropological Institute*, xxxvi. (1906) pp. 184 sq. Mr. Harper calls the maternal clans *abusua*. Mr.

foulkes calls them *ebussia* (*Journal of the African Society*, vol. vii. No. 28, July 1908, p. 395).

<sup>2</sup> By Mr. E. Dannert. See above, p. 360.

Thus, like the Herero, the Tshi-speaking peoples of the Gold Coast combine clans hereditary in the female line with taboos hereditary in the male line.

of the father, especially his cousins.<sup>1</sup> Mr. Harper, to whom we are indebted for the information about these paternal divisions (*ntoro*), did not ascertain whether they have any influence on marriage, in other words, whether they are exogamous or not. If they are not exogamous, this would apparently add to their resemblance to the *otuzo* of the Herero, which in like manner are reported to impose no restrictions on the marriage of their members.<sup>2</sup> We shall find a little later on that a similar system of clans inherited from the mother and taboos inherited from the father occurs also among some Bantu peoples of the Lower Congo.

The totemic clans of the Gold Coast are exogamous; a breach of the exogamous rule was formerly punished with death or slavery.

The totemic clans of the Gold Coast are exogamous; a man may neither marry nor have sexual intercourse with a woman of the same totemic clan as himself. In old days transgressors of these rules used to be beheaded or sold into slavery. At the present time, if such a breach of morality were committed, the case would be investigated by the head of the clan or the chief of the town; the guilty parties would be divorced and the man fined; moreover a sheep would be killed and the male culprit would have to walk in its blood, apparently as a mode of purification. Were a chief to have anything to do with a woman of the same clan as himself, he would be deposed. It is sometimes difficult to ascertain whom a man may marry, because the same clan is known by different names in different places. In case of doubt it is customary to consult an old man of the town. King Tachie of Accra, being appealed to in many matrimonial cases, is said to have given the matter up in despair and to have ruled that when people came from the forest and married people on the coast, an investigation of their clans was needless. And amongst the coast people, in point of fact, the exogamous laws of the clans are not strictly enforced, though there is a prejudice against marriage within the clan.<sup>3</sup> A man is free to marry a woman

<sup>1</sup> C. H. Harper, "Notes on the Totemism of the Gold Coast," *Journal of the Anthropological Institute*, xxxvi. (1906) pp. 184 *sq.*

<sup>2</sup> See above, p. 360.

<sup>3</sup> C. H. Harper, "Notes on the

Totemism of the Gold Coast," *Journal of the Anthropological Institute*, xxxvi. (1906) pp. 182 *sq.* The statement that a man should neither marry nor have sexual intercourse with a woman of his own clan is confirmed by Mr.

of any totem clan except his own.<sup>1</sup> The Fantees attribute the institution of the clans to a wise seer of old, and they are said to consider the practice of exogamy as very beneficial for the improvement of the species.<sup>2</sup> On the other hand the children of parents who both belong to the same clan are thought not to live long.<sup>3</sup>

Children belong to the totemic clan of their mother.<sup>4</sup> In fact, "the custom, so prevalent among the lower races, of tracing descent through the mother and not through the father, also prevails among the Tshi-speaking tribes."<sup>5</sup> The Fantees apply the same name *ebussia* both to the totemic clan and to the family,<sup>6</sup> and "each family includes members on the mother's side only; thus the mother, and all her children, male and female, belong to her family; so do her mother and maternal uncles and aunts; but her father and all his relatives are nothing at all to her, nor are her husband nor any of his relatives; her daughters' children, male and female, are members of her family, but her son's children are not, as they belong to the family of the son's wife."<sup>7</sup> Every child bears the name of his mother's family as a cognomen in addition to the name given to him at birth by his father, while a person's first name is invariably taken from the day

Children belong to the totemic clan of their mother.

A. van Hieu and a negro informant (*Journal of the Anthropological Institute*, xxxvi. (1906) pp. 186, 188). Mr. A. Foulkes tells us that marriages within the clan (sept) do sometimes occur but are not countenanced (*Journal of the African Society*, vol. vii. No. 28 (July 1908), p. 399). Colonel A. B. Ellis does not mention the rule of exogamy.

<sup>1</sup> A. van Hieu, in *Journal of the Anthropological Institute*, xxxvi. (1906) p. 186. Mr. R. M. Connolly, in speaking of the exogamy of the clans, says that a Buffalo man may only marry a Bush-cat woman "and vice versa, and so with the others" ("Social Life in Fanti-land," *Journal of the Anthropological Institute*, xxvi. (1897) p. 133). This implies that the men of any clan are restricted in the choice of their wives to the women of one other clan only; but probably the statement is not to be pressed to mean more than that a man

may not marry a woman of his own clan. According to a negro informant "a man may not marry twice in each totem" (*Journal of the Anthropological Institute*, xxxvi. (1906) p. 188).

Women as  
chiefs or  
queens.

A man's  
heirs are his  
brothers  
and the  
sons of his  
sisters.

The throne  
of Ashantee  
also de-  
scends to  
brothers  
and the  
sons of  
sisters.

of the week on which he was born. The eldest living ancestor in the maternal line is the head of the family, but when the head is a woman she generally delegates her authority to her eldest son or to the eldest male of the family, especially when the family is a royal one. Women have, however, been known to occupy the stool or throne as reigning chiefs.<sup>1</sup> One such queen reigned some years ago in Daboasi, the chief town of an important district on the Lower Prah; she owned large tracts of mahogany-bearing land and exercised power through her elders and interpreter.<sup>2</sup> However, among all the Tshi-speaking tribes a man's heir is regularly his brother, born of the same mother, and, in default of such, his eldest sister's eldest son. Should these fail, the nephew next in order of descent is the heir, and in default of nephews the son inherits. But should there be neither nephew nor son, the principal native-born slave of the family succeeds to the property. Among the Fantees there is a variation of this general rule, for with them the slave succeeds to the exclusion of the son, who only inherits his mother's property.<sup>3</sup> Under native law a man may chastise his sister's children and sell or pawn them for his own debts, but under no circumstances may he do so to his own children, since they do not belong to his family, but to their mother's; and for a like reason he may neither punish nor pawn his brother's children.<sup>4</sup> The same rule of female descent which regulates the inheritance of private property determines the succession to the throne of Ashantee; the order of succession is the brother, the sister's son, the son, the chief vassal or slave to the stool. "This extraordinary

Connolly, "Social Life in Fanti-land," *Journal of the Anthropological Institute*, xxvi. (1897) p. 146: "The rightful heir in

native law is the eldest nephew, *i.e.* the eldest sister's eldest son, who *invariably* succeeds to all the property and position of his uncle, including wives, children, slaves, if there be any, and who thus becomes liable for the debts of the deceased. In default of such an heir, the principal relatives of the deceased select one of their number to succeed, and the man so selected becomes the legal heir, just as if he had been the nephew."

<sup>4</sup> A. Ffoulkes, "The Fanti Family System," *Journal of the African Society*, vol. vii. No. 27 (July 1908), p. 405.

rule of succession," wrote Bowdich at a time when the wide prevalence of similar rules was unknown, "excluding all children but those of a sister, is founded on the argument, that if the wives of the sons are faithless, the blood of the family is entirely lost in the offspring, but should the daughters deceive their husbands it is still preserved."<sup>1</sup>

In Ashantee "the sisters of the king may marry or intrigue with whom they please, provided he be an eminently strong or personable man; that the heirs of the stool may be, at least, personably superior to the generality of their countrymen."<sup>2</sup> The same licence is or was granted all women of royal blood in Ashantee, but leave had first to be obtained before they might gratify their passions, otherwise their lovers and all who had abetted them were put to death. When one of the king's sisters had married, with his permission, a man of low rank, the baseborn churl was expected to kill himself when either his wife or his only male child departed this life. Should the poltroon dare to survive his noble wife or noble son, a significant hint would be dropped which generally induced him to anticipate the knife of the executioner.<sup>3</sup>

Besides the twelve principal totemic clans there are several other family divisions among the Tshi-speaking tribes; but these are all local, include comparatively few members, and are apparently of much more recent origin. Sometimes these more recent divisions preserve traditions of their origin, and in such traditions the founder of the family, from whom the name is derived, always figures as an actual animal, bird, or fish, who, however, possessed the power of assuming human shape at will. For example, in the town of Chama, at the mouth of the River Prah, there lives a family called *Sarfu-n'ennam*, which is a name compounded of *sarfu*, "horse-mackerel," *n'*, a negative, and *ennam*, "fish," that is, "the flesh of fishes," and means literally "no *sarfu* flesh." The foundress of this family is

The king's sisters and women of the blood royal in Ashantee are allowed to marry or intrigue with whom they please.

Other and more recent totemic clans or families.

The Horse-mackerel family.

believed to have been a horse-mackerel (*sarfu*), and the following tale is told about her.<sup>1</sup>

Tale of the origin of the Horse-mackerel family. It is descended from a man who married a horse-mackerel wife, till they quarrelled and she returned to her kinsfolk the horse-mackerels in the sea.

A man of Chama, whose wife had lately died, was walking disconsolately by the seashore when he met a young woman, who asked him why he walked alone and looked so sad. He told her why, and at last, captivated by her beauty, he begged her to be his wife. She consented, and lived with him in his house. All went well for a time, but after some months she grew restless and uneasy and told her husband she must go away to see her folk at home. He made no objection, only stipulating that he should go with her. To this at first she would by no means agree, saying that alone she came and alone she must return. But he pressed her. They were walking on the seashore and she said, "I will not let you go with me, because you would laugh at me when we came back." But when he vowed and swore that never would he laugh at her or speak of her home and her folk, at long and at last she told him that her home was in the sea, and that her folk were fishes and she herself a fish. If he would go with her, he must count the breakers, as they burst in foam on the strand, and dive with her under the third. He did so and together they passed under the water to the home of her people the fishes. They welcomed her joyfully, and she told her tale, and made known her husband to them. A house was prepared for him, and he was warned not to stray outside of it. For a time he kept to the house, but one day he ventured out and as he rose towards the surface, some fishermen spied him shimmering with a phosphorescent light through the green water. They took him for a fish and speared him and would have dragged him out of the sea if a shark had not bitten the line and released him. His friends the fishes took him back to the house, and drew out the spear, and healed his wound. But when he was made whole again, fearing that some worse thing might befall him, they sent him and his wife away, giving him as a parting gift the spear, which they charged him to keep carefully hidden. So the two went back to their old house on the land, and the man hid the spear in the thatch of the roof. They

<sup>1</sup> A. B. Ellis, *The Tshi-speaking Peoples of the Gold Coast*, pp. 207 sqq.

lived together for some years, till the owner of the house, renewing the thatch of the roof, in an ill hour discovered the spear. He knew it for his own, which he had lost years before by throwing it into the sea at a fish. Being pressed to tell how he had come into possession of it, the husband of the fish-wife reluctantly told the secret of his strange adventure. No harm came at once of his broken promise to his wife; but he had lately taken a second wife and she, having one day quarrelled with the first wife, taunted her with being a fish. Sore at heart, the fish-wife resolved to return to her home in the sea and to be a fish again. Bitterly she upbraided her husband for betraying her secret, and said she would leave him to return no more. In vain he tried to dissuade her; she would not listen to his entreaties, but ran to the shore and bidding him a last farewell plunged into the sea with her youngest child in her arms. But her two elder children were left behind with her husband, and from them is descended the Horse-mackerel family, none of whom may ever eat a horse-mackerel; for the lost wife and mother was a fish of that sort.<sup>1</sup>

A family called Appei, belonging to the town of Appam, tell a similar story of their origin. They say that a man named Insanna, the last of his race, was fishing with a casting-net among the rocks at night, bewailing his solitary lot and his inability to buy a wife, when he caught a fine fish of the kind called *appei*. He was about to kill it when the fish said, "Do not kill me. I will be your wife and you my husband." So he carried it home and left it there, while he returned to the beach to fish. When he came back again to his house, he found a handsome young woman busy with the household work; she told him that she was the fish he had caught, and that she had been sent by his dead parents to be his wife. Further, she warned him that neither they nor their descendants might eat *appei* fish, or else they would have to return at once to the sea. So the family strictly observed the prohibition and multiplied till

The Appei family is said to have sprung from an *appei* fish, who was married to a man and bore him children.

<sup>1</sup> A. B. Ellis, *The Tshi-speaking Peoples of the Gold Coast*, pp. 208-211. The story is repeated, with merely verbal differences, in *Journal of the African Society*, No. 17 (October 1905), pp. 104-107.

they occupied the whole country, which after them became known as Appei m' or Appam.<sup>1</sup>

Duala  
story of a  
hunter who  
married a  
palm-  
squirrel.

Stories of the same type are reported from other parts of West Africa. The following is a Duala tale from Cameroon. A hunter once killed a palm-squirrel, brought it home, and gave it to his wife, who hung it up over the hearth. Soon after she died, and in the hunter's absence the palm-squirrel turned into a woman, dressed his meal for him, and then changed back into a squirrel. It puzzled the hunter on his return from the chase to find his meals ready for him until, by the spider's advice, he hid in a corner and saw the squirrel turn into a woman. He caught it, stroked it on the head with his hand, and said, "Beast that now standest as a human being before me, to-day I saw everything. Be not a beast again. I love thee. Be from to-day my wife." The palm-squirrel said to him, "I give thee a command. Thou must never say to me that I was once a beast, and am now a human being. If thou sayest so, it is all over with our marriage." The two married and lived together till now.<sup>2</sup> Another Duala story

Duala  
story of  
a hunter  
whose wife  
came forth  
from a  
*mpondo*  
fruit.

from the same region relates how a hunter clove a hard brown fruit called a *mpondo* and a woman came forth from it. He asked her to marry him and she consented, but warned him that he must never say she had come from a *mpondo* or she would go back to the fruit and he would see her no more. So they married; but one day when he was out hunting, his mother twitted the wife with having come from a *mpondo* fruit. She was very angry and said, "From a *mpondo* I came and to a *mpondo* I return." At these words the absent husband felt his body quake. He returned home heavy at heart and asked his mother where his wife was. She told him what had happened. Crying "Woe! woe! woe!" he hastened away to seek his lost wife. Wherever he went he called her and she answered him, but from far away, oh so far away. He said to her, "Come back. I have just returned from the hunt."

<sup>1</sup> A. B. Ellis, *The Tshi-speaking Peoples of the Gold Coast*, pp. 211 sq.

<sup>2</sup> W. Lederbogen, "Duala - Mär -

chen," *Mittheilungen des Seminars für orientalische Sprachen zu Berlin*, v. (1902), dritte Abtheilung, pp. 139-142.

But she answered, "I will not come back." She conjured up a great sea between them, and she stood on one side of it and he on the other. He began to weep and said again to her, "Oh make the sea to vanish away." But she replied, "No, I will never, never have you for my husband again, because your mother said I came from a *mpondo*." Then she went away. Her husband also went away. He went home and drove his mother from his house. A solitary man he lived and a solitary man he died. He never married again.<sup>1</sup>

Another West African story sets forth how a fairy woman took compassion on a solitary hunter and turned herself into a forest-rat (*ntori*), which the hunter shot and brought back to his camp. Next day, when he was out hunting, the fairy crept out of the dead forest-rat, tidied up the camp, and cooked a dinner ready for the hunter. On his return from the chase the hunter was surprised to find the table spread for dinner. The same thing happened on three successive days, and the man was puzzled. He consulted a prophet, by whose advice he lay in wait for the fairy woman, seized her at her kindly labours when she was about to turn back into a rat, and throwing a magic powder over her body he persuaded her, struggling, murmuring, and sobbing, to be his wife. They married and the world went very well with him, for ships came and brought him wealth, and his wife bore him children; now the children of a fairy mother thrive and are very wise. But one day, when ships had come in and he had been drinking with the sailors, the heart of the hunter was lifted up and he reproached his wife with having come out of a rat. Next morning, when he was sober, she told him she was about to leave him for ever. He pleaded with her, and the two elder children pleaded for him, but all in vain. She took the two younger children and walked away down the path from the town. Her husband and the two elder children watched them receding in the distance, till they came to the bank of the river and wading into the water disappeared in the depths.<sup>2</sup>

<sup>2</sup> R. H. Nassau, *Fetichism in West*

West African story of a hunter who married a fairy wife in the shape of a forest-rat; how they lived happily together, and how they parted for ever.

Such stories belong to the same class as the tales of the Swan Maiden and Beauty and the Beast. Probably they all originated in totemism.

Similar tales have met us among the Dyaks of Borneo.<sup>1</sup> All such stories belong to the class of which the tales of the Swan Maiden and of Beauty and the Beast are typical examples.<sup>2</sup> Finding narratives of this sort told by totemic peoples to explain their totemic taboos we may conjecture that they all sprang, directly or indirectly, from the cycle of ideas and customs which centre round the institution of totemism. In some of these tales the husband, in others the wife is a fairy who shifts his or her shape from bestial or vegetable to human, and who will leave his or her sorrowing partner for ever to return to the beasts or the plants if a particular taboo relating to his or her animal or vegetable nature be infringed. Such stories are explained naturally and simply on the supposition that they referred originally to husbands and wives who, under a system of totemism and exogamy, would claim kindred with animals or plants of different kinds, the husband assimilating himself to one sort of creature and the wife to another. In such households husband and wife would naturally resent any injury done to their animal kinsfolk as a wrong done to themselves; and domestic jars would easily arise whenever one of the couple failed to respect the humble relations of the other. Among some totemic tribes, as we have seen,<sup>3</sup> the danger of these intestine feuds is to some extent obviated by the rule that

*Africa* (London, 1904), pp. 351-358. The writer says nothing as to the people or place from which this story was obtained.

<sup>1</sup> See above, pp. 205 *sq.*

<sup>2</sup> On stories of this sort, especially in the folklore of civilised peoples, see Th. Benfey, *Pantashantra* (Leipsic, 1859), i. 254 *sqq.*; W. R. S. Ralston, Introduction to F. A. von Schiefner's *Tibetan Tales* (London, 1882), pp. xxxvii.-xxxix.; A. Lang, *Custom and Myth* (London, 1884), pp. 64 *sqq.*; S. Baring-Gould, *Curious Myths of the Middle Ages* (London, 1884), pp. 561-578; E. Cosquin, *Contes populaires de la Lorraine*, ii. 215-230; W. A. Clouston, *Popular Tales and Fictions* (Edinburgh and London, 1887), i. 182-191; Miss

M. Roalfe Cox, *Introduction to Folklore* (London, 1895), pp. 120-123. The classical fable of Cupid and Psyche (Apuleius, *Metamorph.* iv. 28-vi. 24) belongs to the same class of tales. Such stories have been rightly explained by Mr. Andrew Lang (*op. cit.*) as based on savage taboos, but so far as I know he does not definitely connect them with totemism. One of the oldest and most beautiful tales of this kind is the ancient Indian story of Pururavas and the nymph Urvasi. See the *Satapatha Brahmana*, translated by J. Eggeling, Part v. pp. 68 *sqq.* (*Sacred Books of the East*, vol. xlv.). I shall recur to these stories and illustrate them further in the third edition of *The Golden Bough*.

<sup>3</sup> See above, pp. 27, 30, 53.

husband and wife must each pay due respect to the totem of the other, but such mutual obligations appear to be rare ; so far as we can judge from the accounts, the usual custom of totemic peoples is that men and women revere each their own totem, but are not bound to shew any reverence for the totems of their spouses. In these circumstances husband and wife are constantly liable to quarrel over their totems, and it would be natural enough that such bickerings should often result in a permanent separation. Totemism may have embittered many lives and broken many hearts. A reminiscence of such quarrels and estrangements is apparently preserved in the sad story of the fairy wife or the fairy husband who lives happily for a time with a human spouse, but only in the end to be parted for ever.

A story of a somewhat different type is told by the Parrot clan of the Fantees to explain why they revere parrots. The original ancestor of the clan is said to have been a woman who went to a far country and was there married. But she quarrelled with her husband and left him to return to her own land. On her way home she met a man who would have killed her if a parrot had not screamed at the moment, and her assailant, mistaking the cry of the bird for the voice of people coming to the rescue, fled and left her. Hence all the descendants of that woman respect parrots, because a parrot saved their ancestress from death.<sup>1</sup> In this narrative the reverence for the totem is explained, as often happens, by a service which the totemic animal is said to have rendered to the ancestor of the clan ; yet a reminiscence of the other and probably more primitive explanation appears to be contained in the quarrel of the wife with her husband.

The totemic system of the Fantees, one of the principal tribes of the Tshi- or Twi-speaking peoples, has been examined by Mr. Arthur ffoulkes, District Commissioner of the Gold Coast Colony. He finds seven principal totemic

Legendary origin of the Parrot clan among the Fantees.

Seven principal totemic clans among the Fantees.

<sup>1</sup> A. ffoulkes, "The Fanti Family System," *Journal of the African Society*, vol. vii. No. 28 (July 1908), p. 397. The name of the Parrot clan is here given as Agona. But elsewhere (p. 395) the writer, in agreement with

A. B. Ellis, gives Annona as the name of the Parrot clan and Agona as the name of the Palm-oil clan. Perhaps in the present passage Agona is a mistake for Annona or Annono, as Ellis spells the name.

clans or septs, as he calls them, namely, the Bush-cat, the Parrot, the Leopard, the Buffalo, the Plantain, the Dog, and the Silurus (*Adwinadzi*). Each of these principal clans, he tells us, has its branch or branches, and in some tribes the branch is regarded as the principal clan. For example, the Bush-cat clan is the principal one at Cape Coast Castle, Denkera, and Fanti Yankumase, and at Cape Coast Castle it has a branch called *Dwimina*, the name of which is derived from a plant. The Parrot clan has a Red-earth branch and a Palm-oil branch at Cape Coast Castle; but at Fanti Yankumase the Red-earth clan is the principal one and the Parrot clan and the Palm-oil clan are both subordinate. Further, at Fanti Yankumase there is another branch, namely, the Kite or Hawk (*Osansa*) clan. At Denkera, again, the Palm-oil clan is the principal one, and the Red-earth clan and the Parrot clan are both subordinate. At Cape Coast Castle the Leopard clan has a branch called the Corn-stalk (*Eburutu*) clan.<sup>1</sup>

The fetishes of the negroes are not always clearly distinguishable from their totems, especially when the fetishes are hereditary.

Amongst the negroes of Guinea, with whom we are here concerned, there exist many other superstitious practices and beliefs concerned with plants and animals which do not strictly fall under the head of totemism. Such customs and beliefs are commonly classed under the vague name of fetishism. How precisely the fetishes of the negroes are related, if indeed they are related, to their totems is by no means clear, nor is it always easy to draw a sharp line of distinction between them. On the one hand, totems commonly give their names to exogamous groups or clans of people and have been hereditarily revered by them time out of mind. On the other hand, fetishes do not give their names to persons or families, need not be hereditary, and do not regulate the marriage of the people who revere them. Yet these distinctions are not universally present; for many things, which seem entitled to be called totems, do not give their names to groups or clans of people and do not regulate marriage. The relation of totemism to fetishism in West Africa is one which requires further investigation. To discuss it here might lead me too far from my immediate subject.

<sup>1</sup> A. Houlkes, "The Fanti Family System," *Journal of the African Society*, vol. vii. No. 28 (July 1908), pp. 395 sq.

I must content myself with briefly noticing those hereditary fetishes of families or of districts which most nearly resemble totems. Among the negroes of the Gold Coast the common names for a fetish seem to be *bossum* (*bohsum*, *bosoum*, *boossum*, *busum*) and *suhman* (*souman*, *sumang*), the distinction between them apparently being, that whereas a *suhman* is the fetish of an individual, the *bossum* is the fetish of a family, district, or town.<sup>1</sup> Yet when a *bossum* or fetish becomes hereditary in a family, it is obvious that, superficially at least, it approximates to a totem. Amongst the Tshi-speaking peoples of the Gold Coast such hereditary fetishes are often deliberately adopted as a mode of maintaining the tie of kinship between members of a family who are about to part from each other. The mode in which the bond is in such cases cemented has been thus described by Colonel A. B. Ellis:—<sup>2</sup>

Hereditary fetishes adopted as a means of maintaining the bond of kinship.

“Besides the abstention from the flesh of certain animals, birds, fish, etc., by different families, such as has been already described, and which is a complete abstention at all times, one also finds upon the Gold Coast amongst certain families a fixed occasional abstention, as for instance, on one day of the week from a particular kind of food. This abstention originates in quite a different manner to the foregoing. When a family finds it necessary to separate, and perhaps to become split up into two or three sections, as the tutelary deity of the family can only remain with one section, and that the one to which the head of the family belongs, it is usual for all the members to assemble together, and a priest, after rinsing the tutelary deity in water in which he has placed some herbs, gives each member some of the fluid to drink. While they are so doing, the priest announces that it is the will of the god, that henceforth no one of the family shall ever partake of a certain article of food on a certain day or days, so that in years to

Mode in which an hereditary fetish of a family is instituted.

Bosman, “Description of the Coast of Guinea,” in Pinkerton’s *Voyages and Travels*, xvi. 348, 420; Brodie Cruickshank, *Eighteen Years on the Gold Coast of Africa* (London, 1853), ii. 129 *sqq.*; A. B. Ellis, *The Tshi-speaking Peoples of the Gold Coast*, pp. 17 *sqq.*, 79 *sqq.*, 176

*sqq.*; R. M. Connolly, “Social Life in Fanti-land,” *Journal of the Anthropological Institute*, xxvi. (1897) p. 150; E. Perregaux, *Chez les Achanti*, pp. 270, 275.

<sup>2</sup> A. B. Ellis, *The Tshi-speaking Peoples of the Gold Coast*, pp. 212 *sq.*

come, the remembrance of their being under his protection shall not be lost. Usually it is only on one day out of the seven that the article of food mentioned by the priest is prohibited, and the ordinary day for such an abstinence is Tuesday. Thus one continually meets persons, some of whom will not on Tuesday eat eggs, others fowls, others plantains, and so on. In some cases, though but rarely, people are found who have to abstain from two kinds of food or more. This is due to a second family separation; but more generally, with the adoption of the second variety of abstinence, the first is discontinued."<sup>1</sup>

Fetish animals on the Gold Coast, as hyaenas at Accra, crocodiles at Dix Cove, and vultures at Coomassie.

Amongst the *bossums* or hereditary fetishes which approximate to totems and might easily be confused with them, a conspicuous place on the Gold Coast, as in other parts of Guinea, is held by the sacred animals which are revered in particular districts. Thus, for example, hyaenas are sacred at Accra and crocodiles at Dix Cove. A native who should kill a hyaena at Accra would incur a serious penalty.<sup>2</sup> At Coomassie vultures are sacred to the royal family; in former days they might not be molested under pain of death. Hence the birds grew so bold that they would pounce upon the fish or meat which people carried

<sup>1</sup> It may be worth while to compare B. Cruickshank's account of this deliberate institution of an hereditary fetish. He says: "There is one peculiar form, which the Fetish worship of a family about to be separated takes, which deserves to be recorded, as in it we have no external representation of an idol. In view of a separation which will most probably prevent them from ever again worshipping the Boossum, to which they have made their devotions hitherto, they repair to the priest, or sofoo, and having explained their wants, he pounds up some Souman or Fetish substance, and mixes it with water into a drink, which the whole family swallow together. While partaking of this strange communion, the priest declares to them that his Boossum commands that none of this family shall ever after partake of such and such an article of food, naming, perhaps, fowl, mutton, beef, pork,

eggs, milk, or anything which he may choose to mention at the time. The Fetish edict, once pronounced against a particular article of food under such circumstances, no one of the family ever tastes it more; and thus we find one who will not taste a bit of chicken, another an egg, a turkey, and so on; and this abstinence from a particular species of food descends to the children, who are under the necessity of observing a similar abstinence. In this case the parties are supposed to have swallowed their idol, and to have him existing in their own persons, and the abstinence prescribed forms a continued act of worship" (B. Cruickshank, *Eighteen Years on the Gold Coast*, ii. 133 sq.).

<sup>2</sup> E. T. Bowdich, *Mission from Cape Coast Castle to Ashantee* (London, 1873), p. 216 note<sup>4</sup>; J. L. Wilson, *Western Africa* (London, 1856), p. 210.

on their heads.<sup>1</sup> These instances and others of the same sort<sup>2</sup> should warn us of the danger of hastily assuming that the hereditary worship of certain sacred animals in particular districts is identical with totemism. It is premature, for example, to conclude that the ancient Egyptian reverence for different animals in different towns and districts was necessarily totemic.

So far as I know, we have no exact account of the system of relationship prevalent among the Tshi-speaking tribes of the Gold Coast, but there are some slight indications that the system is classificatory. For the term "father" (*egya*) is applied also to the father's brothers;<sup>3</sup> and the following notice of the family system, though loose and vague, points in the same direction. "On the Gold Coast," says a Catholic missionary, "now as in the time of the patriarchs, the word family is understood in a much wider sense than that which is generally current in Europe. At Elmina the family is not composed only of the father, the mother, and the children; included in it are also the cousins, often very distant cousins, the uncles, the nephews, and even the slaves. You will hear all male cousins calling each other brothers, sometimes also the uncle and the nephew if they are about the same age, and more than that the children of the master and those of the slave. If there is too great a disparity of age between uncle and nephew, the latter calls the other his father. Similarly a Fantee applies the name of mother to his aunt, his grand-aunt, and his old female cousins. At first sight one is rather surprised on learning that a single man has so many children, and especially that a child can have so many fathers and so many mothers. If you would know of any one who is his father and who is his mother, you must put the question to him in these terms: 'Who is the father that begot you? Who is the mother that bore you?' If you ask him simply, 'What is the name of your father? What is the name of your mother?' it may be that he will give you

Indications of the classificatory system of relationship among the Tshi-speaking peoples of the Gold Coast.

System," *Journal of the African Society*, vol. vii. No. 28 (July 1908), p. 405.

successively four or five fathers and as many mothers without including the authors of his being in the number. Those whom he will give you as his fathers will be his uncles and his old male cousins who live in the same house with him, and his mothers will similarly be his aunts and old female cousins.”<sup>1</sup>

#### § 4. Totemism on the Slave Coast

The Slave  
Coast of  
West  
Africa.

The Slave Coast of West Africa extends from the Volta River on the west to the delta of the Niger on the east. Unlike the hilly and densely wooded region of the Gold Coast, the country is low, flat, and open, with but little true forest. Along the coast stretches a line of broad, shallow lagoons divided from the sea by a ridge of sand, which varies in breadth from a few yards to two or three miles. The valleys of the rivers are wooded, and the mangrove flourishes along the shores of the lagoons, but the prevailing feature of the landscape is a sandy grassy plain, dotted with clumps of trees and euphorbia. The climate is damp, hot, and very unhealthy.<sup>2</sup>

The Ewe-  
speaking  
peoples of  
the Slave  
Coast.

For a distance of some hundred and fifty miles along the coast and some two hundred miles or more inland the country is inhabited by negroes who speak a copious and expressive language called the Ewe, which differs both from the Tshi language spoken by their western neighbours and from the Yoruba language spoken by their eastern neighbours the Yorubas. The best known and most powerful of the tribes speaking the Ewe tongue are the people of Dahomey, till lately a warlike and aggressive kingdom, which acquired an infamous notoriety from its system of human sacrifices. That kingdom has now passed under the dominion of France; and the Togos, another Ewe-speaking tribe of the Slave Coast, have given their name to the German colony of Togo-land. According to native traditions the Ewe-speaking peoples

<sup>1</sup> Father Gallaud, “A la Côte d’or,” *Les Missions catholiques*, xxv. (1893) p. 284.

<sup>2</sup> A. B. Ellis, *The Ewe-speaking Peoples of the Slave Coast of West*

*Africa* (London, 1890), pp. 1-5. Compare P. Bouche, *La Côte des Esclaves et le Dahomey* (Paris, 1885), pp. 2 sqq.; J. Spieth, *Die Ewe-Stämme, Material zur Kunde des Ewe-Volkes in Deutsch-Togo* (Berlin, 1906), pp. 12\* sqq.

are not aborigines, but migrated into their present territory from the north-east at no very distant period.<sup>1</sup> They support themselves chiefly by agriculture, raising crops of maize, yams, sweet potatoes, manioc, rice, beans, earth-nuts, and cotton. The staple food is maize. Men, women, and children share the labour of the fields. They turn up the soil with hoes, for the use of the plough is unknown. As a preparation for the crops the grass is burned every year, and the ashes serve to manure the ground. But the cultivation is shifted annually from place to place; and ten or twelve years commonly elapse before the same field is again planted and reaped. The oil-palm also plays an important part in the life of the natives; large tracts of country are covered with groves of this useful tree, and the natives turn every one of its products to account. They make pottery without the use of the wheel, spin cotton thread, weave excellent hanging mats of grey stuff shot with blue or red threads, and work iron, copper, and gold with a skill which is remarkable when we consider the rudeness of their tools. The people, both men and women, are keen traders and haggle over every penny.<sup>2</sup>

Their agriculture and arts.

The government of a Ewe-speaking tribe is in general aristocratic, resting in the hands of chiefs and a king. The chiefs acknowledge the supremacy of the king; but he is controlled by them, and can neither make peace nor war nor enter into any engagements or negotiations which affect the interests of the tribe without their consent. Such matters are always debated by the king and chiefs in council. The populace have no voice at all in the government. Each chief is a petty king in his own domain. But the government of Dahomey differed from that of other Ewe-speaking tribes in being an absolute monarchy. The king was a despot; his will was law; he was subject to no control whatever. Property of every kind, including land, belonged theoretically to him, and he might lawfully confiscate it to

Government of the Ewe-speaking tribes.

his own use. Whatever a man had he had only on sufferance so long as the king chose to let him remain in possession. The theory was pushed so far that parents were held to have no right to their own children; these, like everything else, belonged to the king, and their fathers and mothers were permitted to retain them only during his pleasure. All the women of the country, both native-born and captives, were his absolute property, to be disposed of by him at his discretion. No man might have a wife unless she was purchased from the king or conferred upon him as a reward of bravery. The king's person was sacred; his subjects affected to believe that he neither ate nor slept; it was criminal to say the contrary. He always ate in secret, and any man who was so rash or unfortunate as to see him in the act was put to death. When he drank in public, which he did on extraordinary occasions, every one turned his head aside and the women held up cloths to screen the monarch from the gaze of his subjects. In his presence there was no distinction of ranks: all were slaves before him. Even the highest chiefs had to prostrate themselves and grovel on the earth at his feet. For centuries the kings of Dahomey waged wars of aggression on their neighbours for the purpose of capturing slaves and human victims for sacrifice. The surrounding countries were desolated and exhausted by their ravages. In these wars a conspicuous part was taken by regiments of stalwart Amazons, armed and disciplined like regular soldiers, who fought with desperate valour. These viragos were considered to be the king's wives and were sworn to celibacy. Any one who proved to be frail was put to death with her paramour.<sup>1</sup>

Wars of  
Dahomey.

Totemic  
clans of  
the Ewe-  
speaking  
tribes of  
the Slave  
Coast.

The Ewe-speaking tribes of the Slave Coast, like the Tshi-speaking tribes of the Gold Coast, are divided into exogamous and totemic clans, and every community is heterogeneous, comprising members of several or even of all the various clans. Unfortunately our information on the subject is scanty; for Colonel A. B. Ellis, almost the

<sup>1</sup> J. L. Wilson, *Western Africa*, pp. 202-206; P. Bouche, *La Côte des Esclaves*, pp. 343 *sqq.*, 353 *sqq.*, 360 *sqq.*; A. B. Ellis, *The Ewe-speaking Peoples of the Slave Coast*, pp. 161 *sqq.*, 182 *sqq.*

only writer who appears to have observed and recorded Ewe totemism, lost a portion of his notes. The following are all the totem clans which he was able to remember:—

(1) The Leopard clan (*Kpo-do*, compounded of *kpo*, "leopard," and *do*, "people, clan, or tribe").

(2) The Snake clan (*Ordanh-do*, from *ordanh*, "snake").

(3) The Lion clan (*Dzata-do* or *Jahnta-do*, from *dzata* or *jahnta*, "lion").

(4) The Yam clan (*Tehvi-do*, from *tehvi*, a variety of yam).

(5) The Crocodile clan (*Elo-do*, from *elo*, "crocodile").

(6) The Monkey clan (*Eddu-do*, from *eddu*, a monkey with long black hair).

"The usual reverence is paid by the members of a clan to the animal or plant from which the clan takes its name. It may not be used as food, or molested in any way; but must always be treated with veneration and respect. The general notion is that the members of the clan are directly descended from the animal or plant—eponymous."<sup>1</sup>

Respect shown for the totems.

The Anglos are a Ewe tribe who inhabit the country between the delta of the Volta River and the Keta lagoon. One of the twelve subdivisions of the tribe is named Adsoviawo, after a species of fish (*adsovia*), which is never eaten by its namesakes, because they think that a fish of that sort once stuck in the throat of one of their ancestors and choked him. The Adsoviawo people are mostly fishermen.<sup>2</sup>

Totemism among the Anglos.

The totemic clans of the Ewe tribes are exogamous and the descent appears, at least among the common people, to be reckoned in the female line; that is, a man may not marry a woman of his own totem clan and the children belong to the clan of their mother, not to that of their father. But our information on this subject is scanty. The late Colonel Sir A. B. Ellis says: "As is usual with people who are divided into totem-clans, the Ewe tribes are exogamous; marriage between members of the same clan being forbidden. This restriction is, however, not now always scrupulously observed by the sea-board tribes. Kinship is

The totemic clans of the Ewe tribes are exogamous with descent in the female line.

<sup>1</sup> A. B. Ellis, *The Ewe-speaking Peoples of the Slave Coast*, p. 100.

<sup>2</sup> H. Seidel, "Der Fischfang in Togo," *Globus*, lxxxii. (1902), p. 112.

traced through females, and the order of succession to property, etc., is brother, sister's son. The eldest brother is the head of the family, and his heir is the brother next in age to himself; if he has no brother, his heir is the eldest son of his eldest sister."<sup>1</sup> However, in default of brothers and of sisters' sons the firstborn son succeeds to his father's property.<sup>2</sup> "In all cases of separation the children accompany the wife, who pays to the husband a sum to reimburse him for what he has paid for their maintenance. The general custom of regarding children as related to the mother and not to the father, does not apply, it must be observed, to the upper classes of Dahomi, in which the father is regarded as having the greater claim."<sup>3</sup>

But amongst the upper classes of Dahomey descent is traced in the male line.

The same writer suggests that among the Ewe tribes the transition from mother-kin to father-kin, so far as it has taken place among the higher classes, may have originated in an example set by the despotic kings of Dahomey, whose power enabled them to guard their wives so closely that they could be fairly sure of the paternity of their children. "Amongst the upper classes of Dahomi we find, as has already been stated, a different system of kinship existing, it being there traced through males. This, which carries with it a proprietorship of a father in his children not recognized elsewhere, has very probably been brought about by the exercise of arbitrary power. Owing to the manner in which the actual wives of the king are immured in palaces, hedged in by various restrictions, and guarded by women soldiers who are the king's wives in name, the paternity of the children borne by the king's wives would no longer be doubtful; and an autocratic ruler might well set aside custom and declare that his son should be his heir and successor, instead of his brother or nephew. The upper classes might follow his example, but, unless the new system were imposed by law, the masses would hardly do so; and in Dahomi we find that this system is confined to the upper classes, the

<sup>1</sup> A. B. Ellis, *The Ewe-speaking Peoples of the Slave Coast of West Africa*, p. 207.

<sup>2</sup> G. Zündel, "Land und Volk der Eweer auf der Sclavenküste in West-

afrika," *Zeitschrift der Gesellschaft für Erdkunde zu Berlin*, xii. (1877) p. 390.

<sup>3</sup> A. B. Ellis, *The Ewe-speaking Peoples of the Slave Coast of West Africa*, p. 206.

masses still retaining kinship through females only. That universally in Dahomi descent used formerly to be traced through females, the existence of such words as *no-vi-nutsu*, 'brother,' literally 'mother's son,' and *no-vi-nyonyu*, 'sister,' literally 'mother's daughter,' seems to show. The fact that the king's sons have no rank during the lifetime of their father may also be a survival of such a system."<sup>1</sup>

Amongst the Ewe people first cousins, the children of two brothers or of two sisters, may not marry each other; but on the other hand marriage is allowed between two first cousins who are the children of a brother and of a sister respectively.<sup>2</sup>

"When a man dies, his widows devolve upon his heir, whose wives they become, in name at all events, for it is not incumbent upon him to consummate the union. When a brother succeeds a brother it is more usual for the union to be consummated than when a nephew succeeds an uncle."<sup>3</sup> It appears to be only a younger brother who is entitled to marry his deceased brother's widow.<sup>4</sup> But while a man may marry his deceased brother's wife, he is not allowed to marry his deceased wife's sister.<sup>5</sup>

Amongst some of the Hos, a Ewe tribe in German territory, when a woman lives in her husband's house, he may not eat in the house of her parents and they may not eat in his. A breach of this rule is shameful; many people say it would prevent the wife from bearing children.<sup>6</sup>

In former times the women of the blood-royal of Dahomey were permitted to intrigue with any man they pleased; but in the latter half of the nineteenth century this custom was put down by King Galele on account of the scandals which it caused; since his reign women of the blood-royal have contracted ordinary marriages.<sup>7</sup> Similarly among the Yoruba-

<sup>7</sup> A. B. Ellis, *The Ewe-speaking Peoples of the Slave Coast of West Africa*, pp. 204, 211 sq.

speaking peoples of the Slave Coast the daughters of kings or chiefs are free to live with or marry whom they like, and they may change their partners as often as the whim takes them.<sup>1</sup> The license thus accorded to princesses in many African kingdoms, including Ashantee, Uganda, and Unyoro<sup>2</sup> as well as Dahomey and Yoruba-land, may possibly be a relic of sexual communism, which survived in royal families after it had become extinct among the common people.

Traces of communism in land among the Ewe tribes.

Traces of a primitive communism may perhaps be detected among the Ewe tribes in other departments of social life than in the relations of the sexes. "By native law and custom there is no private property in land, but a family in occupation of land cannot be disturbed; and land so occupied only practically reverts to the community when it is abandoned or thrown out of cultivation. When once land has been allotted to a family, the usufruct belongs to that family for as long as it chooses to cultivate it; but the land cannot be sold by the occupiers or assigned to any third party. Amongst the inhabitants of the sea-board towns, however, the decisions of the colonial law-courts have fostered the notion of individual property in land, in so far as the land on which houses are built is concerned, and there are indications of its extending still further."<sup>3</sup>

A family responsible for the misdeeds of its members.

Again, the common responsibility of a whole family for the misdeeds of any of its members is almost certainly among the Ewe peoples a survival of a former time when the rights and interests of the individual were merged still more completely in the rights and interests of the community. On this subject we read: "The family collectively is responsible for all crimes and injuries to person or property committed by any one of its members, and each member is assessable for a share of the compensation to be paid. On the other hand, each member of the family receives a share of the compensation paid to it for any crime or injury committed against the person or property of any one of its

<sup>1</sup> A. B. Ellis, *The Yoruba-speaking Peoples of the Slave Coast of West Africa* (London, 1894), p. 187.

<sup>2</sup> See above, pp. 471 sq., 523 sq.,

565.

<sup>3</sup> A. B. Ellis, *The Ewe-speaking Peoples of the Slave Coast of West Africa*, pp. 217 sq.

members. Compensation is always demanded from the family instead of from the individual wrong-doer, and is paid to the family instead of to the individual wronged. In respect to this custom of collective responsibility and indemnification, the Ewe family resembles the old Welsh 'kindred': the practice in Wales, however, has generally been regarded as being connected with the tenure of the family lands, whilst, amongst the Ewe-speaking peoples there is no private property in land, which all belongs to the tribe.

"It seems that this system of family responsibility was, amongst the Ewe and Tshi-speaking peoples, preceded by one of community responsibility; under which each member of a village, or other community, was assessable for a share of the fine to be paid in compensation of injuries committed by one of the community upon others not belonging to it. This wider responsibility only now survives amongst the Ewe tribes in the liability of any member of a village or town to be seized and held as a hostage for the payment of a debt owing by another member of the same community; and amongst the Tshi-speaking peoples in the right which every creditor has to seize, in payment of a debt, the goods or person of any third party who belongs to the same community as the debtor. This custom seems to show that the community preceded the family, which one would certainly expect to be the case, when it is remembered that men must have dwelt together in groups, long before any such notion as that of kinship had been formed."<sup>1</sup>

Trace of the responsibility of a whole community for the deeds of its members.

Distinct, apparently, from the totems of the clans are the local sacred animals which are revered in different districts of the country; for it would seem that while a totemic animal is respected only by the members of its particular clan, who form merely a fraction of the population of any one district, the local sacred animals in question are respected by all the inhabitants of the district without exception. Yet the local sacred animal is sometimes a beast of the same species as the totemic. Thus in Dahomey the leopard is regarded as sacred and is especially worshipped by the royal family. Theoretically a man who killed a

Local sacred animals on the Slave Coast.

Leopards sacred in Dahomey.

<sup>1</sup> A. B. Ellis, *The Ewe-speaking Peoples of the Slave Coast of West Africa*, pp. 208 sq.

leopard was put to death; according to Forbes, he was sacrificed to the offended deity, but in reality the culprit escapes by paying a fine and performing certain ceremonies to propitiate the god. The leopard is thought to be animated by an indwelling spirit, so that he who slays one of these beasts does not destroy the object of his worship, he merely deprives the spirit of its bodily tabernacle, a serious offence which calls for a costly atonement. Shrines containing rude effigies and drawings of leopards are common in Dahomey, and at these the people pray and sacrifice to the leopard-god. Leopard's claws are deemed amulets and are highly prized. At the court of Dahomey some of the king's wives, usually the youngest and handsomest, bear the honourable title of Leopard Wives (*kpo-si*), and on state occasions wear striped cloths.<sup>1</sup>

Crocodiles  
sacred at  
Whydah,  
Porto  
Novo, etc.

The crocodile is worshipped at Bageida, Porto Seguro, Savi, Porto Novo, and Badagry. In the days of the former kingdom of Whydah there were two pools near the royal palace at Savi where crocodiles were bred, and a numerous priesthood was set apart for their service. But nowadays offerings to the crocodiles are as a rule made only by members of the Crocodile clan, or by persons whose business obliges them to sail on the lagoons. There are no longer temples and priests dedicated to the worship of crocodiles. The native notion seems to be that a crocodile is the abode of a spirit who, in default of a human body, has taken up his abode in the carcase of the reptile. Spirits in these reduced circumstances are believed to be generally malignant and to vent their spite on mankind by entering beasts of prey. However, opinions differ on the subject, and there is no well-established standard of crocodile orthodoxy. In districts where the animal is worshipped it may not be molested.<sup>2</sup>

<sup>1</sup> A. B. Ellis, *The Ewe-speaking Peoples of the Slave Coast*, pp. 74 sq. Compare F. E. Forbes, *Dahomey and the Dahomans* (London, 1851), i. 160 sq., 171-174. A Ewe hunter who kills a leopard has to observe many curious ceremonies. He is painted with red and white earth on the left side of his body in imitation of a leopard's spots, and he has, amongst

other things, to make a funeral feast for the animal and to tie up its head carefully; for the upward look of its eyes is believed to retard the rain. See H. Spieth, in *Mittheilungen der Geographischen Gesellschaft zu Jena*, ix. (1890) pp. 17-19; J. Spieth, *Die Ewe-Stämme*, p. 29\*.

<sup>2</sup> A. B. Ellis, *The Ewe-speaking Peoples of the Slave Coast*, pp. 71-74.

Again, the python is worshipped as a sacred animal in Dahomey, especially at Whydah, also at Agweh, at Great and Little Popo, and in the kingdom of Porto Novo. Its Ewe name is *dangbe*, which means "life-giving snake" (*dan* "snake," *gbe* "life").<sup>1</sup> The worship of the serpent appears to have originated at Whydah, and thence to have spread over Dahomey. The python is esteemed the god of wisdom and of earthly bliss. He it was that opened the eyes of the first man and woman who came into the world; for our first parents, like puppies, were born blind. The temple or house of the python at Whydah is a round hut thatched with grass; it stands in a small oblong enclosure near the middle of the town. Inside the fence are a few sacred trees, a small round hut containing an image of Legba, the Priapus of these negroes, and on the ground calabashes and earthen vessels full of water, maize flour, palm-wine, cowries, and other offerings made by the worshippers. Holes are left in the walls of the temple to let the serpents crawl out and in. The sacred reptiles are free to range the town and the neighbourhood. When one of them has strayed into the house of a European, a priest goes to fetch the errant god, and having purified himself by rubbing certain fresh green leaves between the palms of his hands, he prostrates himself before the serpent, takes it up gently in his arms, and carries it home. A native of Whydah who meets a python in the path prostrates himself before it, rubs his forehead on the earth, and covers himself with dust in token of humiliation. "You are my master," he cries, "you are my father, you are my mother; my head belongs to you; be propitious to me." Amongst the Ewe tribes who worship the python, a native who kills a python, even by accident, is by custom liable to be burned alive, and formerly the punishment was invariably inflicted. But now, though a pretence is made of burning the culprit, he is allowed to escape with his life from a blazing hut, on condition of paying a heavy fine and of running the gauntlet of the python-worshippers, who belabour him with cudgels till he has purified himself by plunging into running water. In old days even Europeans have been put to death for killing a

Worship of the python at Whydah.

The temple of the python.

Respect shewn for the serpents.

Formerly any person who killed a python was burned alive; but the penalty has been mitigated.

<sup>1</sup> Father Baudin, in *Les Missions Catholiques*, No. 779, May 9, 1884, p. 232.

The sacred serpent has his human wives.

python. The sacred serpent has many human wives, whom he marries secretly in the temple; but it is the priests who consummate the union. The wives bring water for the pythons, and make grass mats; at festivals they decorate the temple and offer sacrifices. The festivities are usually kept up all night, and degenerate into unbridled orgies of lust, in which the wives of the god play their part. It is the serpent god, they say, who possesses them and makes them act thus; it is he, too, who gets them with child.

Schools of the python-god.

Opposite the temple are schools or seminaries of the python-god, in which any child who may happen to touch or be touched by one of the reptiles must be kept for a year at the expense of the parents and taught the songs and dances peculiar to the worship. Formerly adults, especially women, were liable to be similarly treated if they had the misfortune to touch a python; even the wives and daughters of powerful chiefs were not exempt from the penalty. But the scandalous abuses of the custom, together with the decline of the priestly power, have caused it to fall into desuetude. Common offerings to the serpent-god are iron rods bent to imitate the coils of a serpent. These represent the male animal, and a bell-shaped image of iron represents the female. They may be seen in sacred groves near lagoons and springs of water; and beside them are placed calabashes or covered earthen vessels containing water and other offerings for the serpents.<sup>1</sup>

Offerings to the python.

The local worship of sacred animals on the coast of Guinea

It is possible that the local worship of sacred animals on the Slave Coast, as on the Gold Coast and in the delta of the Niger,<sup>2</sup> has been developed out of totemism, but there is no positive evidence of such a derivation, and it would be

<sup>1</sup> P. Bouche, *La Côte des Esclaves*, pp. 385-397; A. B. Ellis, *The Ewe-speaking Peoples of the Slave Coast*, pp. 54-63. As Whydah is a seaport which has long been inhabited by European traders, the worship of the serpent there has often been described. For earlier accounts of it see W. Bosman, "Description of the Coast of Guinea," in Pinkerton's *Voyages and Travels*, xvi. 494-500; Labat, *Voyage du chevalier Des Marchais en Guinée, Isles Voisines, et à Cayenne* (Amsterdam, 1731), ii. 133-161; Astley's

*New General Collection of Voyages and Travels*, iii. (London, 1746) pp. 28-37; J. Duncan, *Travels in Western Africa* (London, 1847), pp. 126 sq., 195 sq.; F. E. Forbes, *Dahomey and the Dahomans* (London, 1851), i. 107. Whydah is called Fida by Bosman, and Juda by Des Marchais. As to the human wives of the serpent-god at Whydah, see further my *Adonis, Attis, Osiris*,<sup>2</sup> pp. 57 sqq.

<sup>2</sup> See above, pp. 574 sq., and below, pp. 590 sqq.

rash to assume it. In the absence of proof to the contrary it is, therefore, better to treat as distinct, on the one hand, the worship paid to a species of animals by all the inhabitants of a district, and, on the other hand, the respect shewn for their totemic animal by all the members of a totem clan. In both cases we see a community bound together by a common reverence for a species of animals, but whereas in the former case the community is a local group, in the latter it is a kin.

### § 5. Totemism in Southern Nigeria

No unambiguous evidence of totemism, in the strict sense of the word, appears to have been as yet discovered among the pagan tribes who inhabit the delta of the Niger, a dreary land of fetid pestilential swamps and impenetrable forests, intersected by a vast network of turbid, sluggish streams and creeks.<sup>1</sup>

But a regular system of totemism and exogamy prevails among the Bini, the tribe which has given its name to the great city of Benin. The system has lately been investigated by Mr. N. W. Thomas, Government Anthropologist for West Africa, to whose courtesy I am obliged for the following particulars.<sup>2</sup> The name which the Bini use for

<sup>1</sup> Lieut.-Col. A. F. Mockler-Ferryman, *British Nigeria* (London, 1902), p. 4. For descriptions of the dismal scenery of the Niger delta, see (Sir) H. H. Johnston, "The Niger Delta," *Proceedings of the R. Geographical Society*, x. (1888) pp. 749 *sqq.*; Major A. G. Leonard, *The Lower Niger and its Tribes* (London, 1906), pp. 13 *sqq.* The last of these writers observes: "Yet although in many localities animals and reptiles represent the ancestral or protecting deities of the clan or community, no tribe or clan that I know of is named after any particular animal or reptile" (Major A. G. Leonard, *The Lower Niger and its Tribes*, p. 318). Lieut.-Colonel Mockler-Ferryman calls attention to "the very marked traces of totemism which are found in West Africa"; but the list of totemic clans which he gives is not said to be drawn from Nigeria,

and as it coincides, or nearly so, with the lists given by the late Colonel A. B. Ellis (see above, pp. 556 *sqq.*, 579), we may surmise that he was thinking rather of the natives of the Gold Coast and the Slave Coast than of the tribes of Nigeria. See Lieut.-Col. A. F. Mockler-Ferryman, *British Nigeria* (London, 1902), pp. 266 *sq.*

<sup>2</sup> Some indications of totemism among the Bini had previously been given by Mr. R. E. Dennett, from whose account we gather that certain animals and plants are tabooed as food to certain families, that these taboos (*awa* or *agwa*) are inherited by children both from their father and their mother, and, further, that in some cases, at least, a man may not marry a woman who has the same taboos as his father. Among animals thus tabooed to some people are snakes, antelopes, monkeys, and elephants; among plants are yams and

may perhaps have been developed out of totemism.

The delta of the Niger.

Totemism and exogamy among the Bini.

a totem or totemic taboo is *awa* (plural *awaiḡbe*). Each family or clan has one or more totems (*awaiḡbe*), which are generally animals or plants. As a rule no one may kill or eat his or her totemic animal nor use his or her totemic plant. Even food which has been touched by the totemic animal is occasionally prohibited to members of the clan. The totemic families or clans are also exogamous; that is, no man may marry a woman who has the same totem (*awa*) as himself. However, this rule is falling into desuetude. A woman may not cook nor eat her husband's totem if he is in the house; she may not even eat it after his death, so long as she is suckling his child. Descent of the totem is in the male line; that is, children belong to their father's totemic family or clan and observe his totemic taboo or taboos. Some clans tell stories to account for the origin of their totems. One clan, for example, says that the boa is their totem because it helped one of their members; another clan says that black seeds are their totem and are therefore tabooed to them, because black seeds brought disgrace on the clan. To the rule that the totemic animal or plant may not be killed, eaten, or used by members of the clan there are certain interesting exceptions, especially in connection with burial ceremonies. On the first day of the burial ceremonies some families make soup out of their totemic plant or animal with which to sacrifice to the feet of the dead man. Afterwards the soup which has been so made and sacrificed, or more usually the portion of it which remains over from the sacrifice, is either thrown away, or eaten by the family, or consumed by strangers. The sacrificed portion may also be put to the lips of members of the family and then thrown away. Further, the totemic leaf or rope may be used in various ways at the burial rites of a member of the family. Thus it may be employed to wrap or tie the body, or to wrap the yams brought by the sons-in-law; or it may be set at the feet of the corpse. If the burial rites are not properly performed, the Bini believe that the deceased will not get to heaven

A wife may not cook or eat her husband's totem while he is in the house.

Sacrifice of the totems at funerals.

a small fruit called *ihihihī*. See R. E. Dennett, *At the Back of the Black Man's Mind* (London, 1906), p. 231.

Mr. Dennett's brief account has in general been confirmed by Mr. N. W. Thomas's researches.

(*Elimi*); or that if he does, his sojourn in the realms of bliss will be brief, for his sainted relatives will expel him and appropriate to themselves the yams which were offered for his benefit at the funeral. "Very rarely the forbidden animal is sacrificed on occasions other than burial rites, instead of in the death customs; it is then (1) eaten by the family or (2) by strangers. The sacrifice is annual."<sup>1</sup>

The following is a list of Bini totems which have been discovered by Mr. N. W. Thomas:—

## BINI TOTEMS

- |                                                      |                                |                                                               |
|------------------------------------------------------|--------------------------------|---------------------------------------------------------------|
| 1. Calabash seed.                                    | 16. Boa.                       | 31. Food touched by fowl<br>or over which fowl<br>has jumped. |
| 2. Antelope ( <i>eruhe</i> ).                        | 17. All snakes.                | 32. Black bean.                                               |
| 3. Tortoise.                                         | 18. Monkey with white<br>spot. | 33. Bush cat.                                                 |
| 4. Leopard.                                          | 19. Mashed yam.                | 34. <i>Emile</i> (wild yam?).                                 |
| 5. Bush cow.                                         | 20. Pumpkin.                   | 35. <i>Erhumoyi</i> bird (African<br>pheasant?).              |
| 6. <i>Osan</i> leaf.                                 | 21. <i>Ibugwache</i> leaf.     | 36. <i>Iyege</i> leaf for soup.                               |
| 7. <i>Umeche</i> leaf.                               | 22. Porcupine.                 | 37. <i>Oton</i> (squirrel).                                   |
| 8. Coco yam.                                         | 23. Calabash top.              | 38. Animals with heads<br>cut off.                            |
| 9. <i>Fufu</i> (pudding) cooked<br>on preceding day. | 24. Palm wine.                 | 39. Rat.                                                      |
| 10. Ants' nest as pot rest.                          | 25. Bush rat.                  | 40. <i>Ochwe</i> tree.                                        |
| 11. Fish.                                            | 26. Calabash spoon.            | 41. Kneeling on one knee.                                     |
| 12. <i>Irhieo</i> rope.                              | 27. <i>Arhumoto</i> snake.     | 42. Snail.                                                    |
| 13. <i>Eboso</i> leaf.                               | 28. Fowl.                      | 43. Kite.                                                     |
| 14. Dog.                                             | 29. <i>Oliwu</i> leaf.         |                                                               |
| 15. Eating in squatting<br>position.                 | 30. <i>Oho</i> fruit.          |                                                               |

The foregoing account of Bini totemism, which we owe to the researches of Mr. N. W. Thomas, suggests some observations. In the first place the prohibition laid on a wife to cook or eat her husband's totem while he is in the house seems to be a precaution to prevent domestic brawls from arising between husband and wife over their different totems, and so far the rule confirms my theory of the totemic origin of the widely diffused group of tales which conform to the type of the Swan Maiden, or Beauty and the Beast, or Cupid and Psyche.<sup>2</sup>

In the second place the annual sacrifice of the totem is the first example of such a custom which we have met with in our survey of totemism; for the catching and killing of their totems by the Arunta and other tribes of Central

<sup>1</sup> From Mr. N. W. Thomas's manuscripts.

<sup>2</sup> See above, pp. 570 *sq.*

W. Robert-  
son Smith's  
theory.

Australia is not strictly speaking a sacrifice at all.<sup>1</sup> Further, the sacrifice of the totemic animal or plant to a dead member of the clan, and the eating of it by his kinsfolk, or the touching of their lips with the sacrificed portion of it at a funeral, seems to be plainly sacramental; it is to all appearance a solemn communion with the totemic animal or plant, which is effected both by eating a portion of the sacred and at other times tabooed food, and also by offering it at the same time to the corpse, in order that the dead as well as the living members of the clan may partake of its blessed influence. Thus these sacrifices and this form of communion with the totem furnish a strong confirmation of the theories which the late W. Robertson Smith, with the acumen of genius, propounded as to the nature and purpose of a totemic sacrament long before any actual example of such a rite had been discovered.<sup>2</sup> It seems probable that further researches in this part of Africa would bring many more instances of such sacraments to light.

Totemism  
in Fugar.

The territory of Fugar, which forms part of the Idah District in Southern Nigeria, contains twenty compounds, each with its prohibited animal or plant. In only one case is the prohibited animal sacrificed; a dog is killed in the family of Ebozua, the head chief. In the Wepa country, opposite Idah, on the west side of the Niger, there are two great exogamous divisions named Ego and Atzikia.<sup>3</sup>

Local  
worship of  
sacred  
animals in  
Southern  
Nigeria.  
The sacred  
leopard of  
Idah.

Apart from the existence of regular totemism among the Bini, the inhabitants of certain districts of Southern Nigeria revere particular species of sacred animals. Thus the leopard is held in great veneration by the Igaras of Idah, who call it "father" (*atta*), though they do not object to kill it in the chase. When a dead leopard is brought into Idah, it is dressed up in white and borne on the heads of four men from house to house, with singing and the beating of drums. Each householder gives a present of cowries or cloth to the owner of the leopard, and at last the carcase is buried with

<sup>3</sup> Mr. N. W. Thomas, in a letter to me dated Benin City, October 25th, 1909.

great ceremony and firing of guns. Were this custom neglected the people think that the beast's spirit would punish them. The kings (*Attas*) of Idah are buried in a place called the Grave of the Leopard.<sup>1</sup> Again, we are told that in the delta of the Niger "each little community had its 'totem,' or sacred animal, in whose species the ancestral spirit—the soul of the tribe, so to speak—was supposed to dwell. Thus, in Brass, they worshipped the python snake; in Bonny, the monitor lizard. Only nine or ten years ago this animal worship was so real that the British authorities in the Oil Rivers were compelled to afford it a certain amount of recognition. Europeans were forbidden to kill the sacred lizard of Bonny, or the still more sacred serpent of Brass, and were heavily fined by their consul if they infringed this prohibition. . . . At Bonny the monitor lizards became a sickening nuisance. They devoured the Europeans' fowls, turkeys, ducks, and geese with impunity; they might lie across the road or the doorways of houses with their six feet of length, and savagely lash the shins of people who attempted to pass them with their whip-like serrated tails, and if you wounded or killed one of them then there was no end of a to-do. You were assaulted or robbed by the natives, harangued by the Consul on board a man-of-war, and possibly fined into the bargain. In other parts of the delta it might be the shark, or the crocodile, or some water-bird that was worshipped, but nowhere was this zoolatry carried to greater lengths than at Bonny and Brass. For its effectual abolishment, which has been of the greatest benefit to the well-being of Europeans and natives alike, we owe our thanks, not to the intervention of naval or consular officials, nor to the bluff remonstrances of traders, but to the quiet, unceasing labours of the Church Missionary Society, who, by winning the natives from these absurd practices, have brought about such a change of affairs that now the python is promptly killed at Brass whenever it makes its appearance, and the monitor lizard is relegated to the woods and swamps. . . . Before that time, if a python seized a child in the streets in its coils, and slavered it with its viscous saliva, the mother—so far

python.

Sacred  
fish-hawks.

Possible  
traces of  
totemism  
among the  
Cross River  
natives.

Down to the year 1894 Fishtown, a town of the Brass tribe, was overrun with sacred pythons, but in that year a fire broke out which not only demolished all the houses, but destroyed so many of the divine reptiles that the new town has been comparatively free of them ever since. Formerly the penalty for killing a sacred python, or any other of the local sacred animals, was death; and even powerful and wealthy chiefs could not escape condign punishment for so heinous an offence. At present any person who by accident or design destroys one of these reptiles must report the affair to the high priest, who sits in judgment on him and imposes a fine. Moreover, the culprit must purify himself by daubing his body with sacred chalk or mud, which is afterwards washed off with water. When a python died a natural death it used to be customary to levy contributions and bury it with the funeral rites and honours accorded to a chief. A similar custom is said to be still observed in other parts of the country when any sacred animal has given up the ghost.<sup>2</sup> All the coast tribes are reported to revere the fish-hawk and to observe towards it all the usages which are customary in regard to sacred pythons, monkeys, and the rest of the divine menagerie. Hence these hawks have grown almost tame and allow the natives to go close up to them.<sup>3</sup>

Among the pagan negroes of the Cross River, in the interior of the Niger delta, the Assistant District Commissioner, Mr. C. Partridge, has noted some customs and beliefs which may possibly be connected with totemism. At Nkimboma, a village of the Eshupum tribe, on the right

<sup>1</sup> H. H. Johnston, H.M. Vice-Consul for the Oil Rivers, “The Niger Delta,” *Proceedings of the Royal Geographical Society*, x. (1888) pp. 760 sq.

<sup>2</sup> Major A. G. Leonard, *The Lower Niger and its Tribes*, pp. 328-332. The writer’s account is general and does not apply to Fishtown only.

The custom of daubing the body of the python-killer with chalk may be intended to ward off the angry ghost of the dead serpent; for we are told that in Benin “evil spirits are all kept off by bedaubing oneself with chalk” (H. Ling Roth, *Great Benin*, p. 61).

<sup>3</sup> Major A. G. Leonard, *The Lower Niger and its Tribes*, p. 322.

bank of the Aweyong River, the head-chief's hut contains a painted board with three figures in relief representing a man, a woman, and a lizard. In answer to Mr. Partridge's questions the chiefs said: "Our forefathers said the lizard was their forefather, and they would not kill or eat it, but we do not now pay regard to that law. No, we don't punish a man who kills a lizard. Yes, we still give drink and *fufu* (yam pudding) to this juju. It is the juju of the town, not of the Eshupum tribe."<sup>1</sup> Further, in some of the towns of the Cross River there may be seen carved wooden poles, which Mr. Partridge compares to the totem-posts of North American Indians. These poles are carved with figures of men, women, and animals, such as crocodiles, dogs, snakes, and lizards; they may be twelve or fifteen feet high, and are sometimes surmounted by a human skull and surrounded by a circle of stones. One such great post will stand in the open square of a town. The one at Ogada, in the Eshupum tribe, is said to be the chief fetish of the place. Figures of animals are also carved on the big drums which some Cross River towns possess.<sup>2</sup> But there is no proof that any of these carvings are totemic.

Sacred lizards in the Eshupum tribe of the Cross River.

Carvings of crocodiles, dogs, snakes, and lizards among the Cross River natives.

In discussing the question whether totemism exists among the tribes of Nigeria, it is well to notice a remarkable belief which some of them cherish as to an intimate relation between the souls of men and the bodies of animals. They think that the souls of living people may be lodged temporarily or permanently in the bodies of animals, so that any injury done to the beast is felt by the man or woman whose soul is housed in its carcase, and the death of the one entails the death of the other. Thus among several tribes on the banks of the Niger, between Lokoja and the delta, there exists "a belief in the possibility of a man possessing an *alter ego* in the form of some animal, such as a crocodile or a hippopotamus. It is believed that such a person's life is

Belief among the tribes of Nigeria that a man may have an animal double, on which his life depends.

<sup>1</sup> C. Partridge, *Cross River Natives* (London, 1905), pp. 217 *sq.* Juju is the native term for fetish.

<sup>2</sup> C. Partridge, *Cross River Natives*, pp. 219-224. Mr. Partridge inclines to regard as totemic also the clay figures of men and animals modelled in low

relief, which may be seen on the walls of houses and verandahs in the Cross River district. Among the animals so represented are the leopard, serpent, crocodile, lizard, dog, iguana, and rat, but never the elephant. See C. Partridge, *op. cit.* p. 176.

The hippopotamus woman.

bound up with that of the animal to such an extent that whatever affects the one produces a corresponding impression upon the other, and that if one dies the other must speedily do so too. It happened not very long ago that an Englishman shot a hippopotamus close to a native village; the friends of a woman who died the same night in the village demanded and eventually obtained five pounds as compensation for the murder of the woman."<sup>1</sup>

Belief in external or bush-souls among the Calabar negroes. A man's bush-soul is supposed to exist in a wild animal, such as a leopard or a tortoise; and if the animal is hurt or killed, the man will fall ill or die.

In like manner every Calabar negro believes that he has four souls, one of which always lives outside of his body in the form of a wild beast of the forest. This external or bush soul, as Miss Kingsley calls it, may be almost any animal, for example, a leopard, a fish, or a tortoise; but it is never a domestic animal, and never a plant. Sometimes when a man sickens, it is believed to be because his bush-soul is angry at being neglected, and a witch-doctor being called in will advise him to make an offering to the offended soul. Wandering in the Calabar forests you will often see little dwarf huts with these offerings in them. They are made wherever the bush-soul was last seen by the witch-doctor; for a man cannot see his own bush-soul unless he possesses the second-sight. If the angry soul is appeased by the offering, the man recovers; but if not, he dies. When a man learns from a diviner what sort of creature his bush-soul is, he will thereafter be careful not to kill any animal of that species, and he will strongly object to any one else doing so; for if the animal is killed or injured he himself will die or be ill. Conversely, when the man dies, his bush-soul can no longer find a good place, but goes mad and rushes into the fire or charges people and is killed, and that is the end of it, for the bush-soul is not immortal. A man and his sons have usually the same sort of animals for their bush-souls, and so with a mother and her daughters. But sometimes all the children of a family take after the bush-soul of their father; for example, if his external soul is a leopard, all his sons and daughters will have leopards for their external souls. And, on the other hand, sometimes they all take after their mother; for instance, if her external

<sup>1</sup> C. H. Robinson, *Hausaland* (London, 1896), pp. 36 sq.

soul is a tortoise, all the external souls of her sons and daughters will be tortoises too. Such is the account which Miss Kingsley gives of the bush-souls of the Calabar negroes.<sup>1</sup> Some additional particulars on the subject are furnished by Mr. Richard Henshaw, Agent for Native Affairs at Calabar. He tells us that a man may only marry a woman who has the same sort of bush-soul as himself; for example, if his bush-soul is a leopard, his wife also must have a leopard for her bush-soul. Thus it would seem that endogamy rather than exogamy is the marriage rule in regard to bush-souls. Further, we learn from Mr. Henshaw that a person's bush-soul need not be that either of his father or of his mother. For example, a child with a hippopotamus for his bush-soul may be born into a family all of whom have wild pigs for their bush-souls; this happens when the child is the reincarnation of a man whose external soul was a hippopotamus. In such a case, if the parents object to the intrusion of the alien soul, they may call in a medicine-man to check its growth and finally abolish it altogether, after which they will give the child their own bush-soul. Or they may leave the matter over till the child comes of age, when he will choose a bush-soul for himself with the aid of a medicine-man, who will also select the piece of bush or water in which the chosen animal lives. When a man dies, then the animal which contains his external soul "becomes insensible and quite unconscious of the approach of danger. Thus a hunter can capture or kill him with perfect ease." Sacrifices are often offered to prevent other people from killing the animal in which a man's bush-soul resides. The tribes of Calabar which hold these beliefs as to the bush-soul are the Efik and Ekoi.<sup>2</sup>

A man may only marry a woman who has the same sort of bush-soul as himself.

<sup>1</sup> Miss Mary H. Kingsley, *Travels in West Africa* (London, 1897), pp. 459-461. My lamented friend the authoress was kind enough to give me in conversation (1st June 1897) some details which do not appear in her book; among these are the statements, which I have embodied in the text, that the bush-soul is never a domestic animal, and that when a man knows what kind of animal his bush-soul is,

he will not kill an animal of that species, and will strongly object to any one else doing so. Miss Kingsley could not say whether persons who have the same sort of bush-soul are allowed or forbidden to marry each other.

<sup>2</sup> John Parkinson, "Notes on the Efik Belief in 'Bush-soul,'" *Man*, vi. (1906), pp. 121 *sq.* This belief of the Calabar negroes has been briefly re-

The Ibos also think that a man's soul may during his life take up its abode temporarily in the body of an animal, and that if the animal is killed the man dies.

A similar belief in the external souls of living people is entertained by the Ibos, an important tribe of the Niger delta, who inhabit a country west of the Cross River. They think that a man's spirit can leave his body for a time during life and take up its abode in an animal. This is called *ishi anu*, "to turn animal." A man who wishes to acquire this power procures a certain drug from a wise man and mixes it with his food. After that his soul goes out and enters into the animal. If it should happen that the animal is killed while the man's soul is lodged in it, he dies; and if the animal be wounded, his body will presently be covered with boils. This belief instigates to many deeds of darkness; for a cunning fellow will sometimes surreptitiously administer the magical drug to his enemy in his food, and having thus smuggled the other's soul into an animal will destroy the animal and with it the man whose soul is in it.<sup>1</sup> A like belief is reported to prevail among the tribes of the Obubura Hill district on the Cross River. Once when Mr. Partridge's canoe-men wished to catch fish near a town of the Assiga tribe, the people objected, saying, "Our souls live in those fish, and if you kill them we shall die."<sup>2</sup>

Similarly the Cross River natives in German territory believe themselves to be so

Similar beliefs are entertained by the natives of the Cross River valley within the German province of Cameroon. Groups of people, generally the inhabitants of a village, have chosen various animals, with which they believe themselves to stand on a footing of intimate friendship or relationship. Amongst such animals are hippopotamuses,

corded by a missionary, the Rev. Hugh Goldie. He says: "*Ukpong* is the native word we have taken to translate our word *soul*. It primarily signifies the shadow of a person. It also signifies that which dwells within a man, on which his life depends, but which may detach itself from the body, and visiting places and persons here and there, again return to its abode in the man. . . . Besides all this, the word is used to designate an animal possessed of an *ukpong*, so connected with a person's *ukpong* that they mutually act upon each other. When the leopard, or crocodile, or whatever

animal may be a man's *ukpong*, gets sick or dies, the like thing happens to him. Many individuals, it is believed, have the power of changing themselves into the animals which are their *ukpong*" (Rev. Hugh Goldie, *Catobar and its Mission*, new edition, Edinburgh and London, 1901, pp. 51 sq.). Compare Major A. G. Leonard, *The Lower Niger and its Tribes*, p. 217.

<sup>1</sup> John Parkinson, "Note on the Asaba People (Ibos) of the Niger," *Journal of the Anthropological Institute*, xxxvi. (1906) pp. 314 sq.

<sup>2</sup> C. Partridge, *Cross River Natives*, pp. 225 sq.

elephants, leopards, crocodiles, gorillas, fish, and serpents, all of them animals which are either very strong or can easily hide themselves in the water or a thicket. This power of concealing themselves is said to be an indispensable condition of the choice of the creatures for the purpose, since the animal friend or helper is expected to damage an enemy by stealth ; for example, if he is a hippopotamus, he should pop up suddenly out of the water and capsize the enemy's canoe. Between the animals and their human friends or kinsfolk a sympathetic relation is supposed to exist such that the moment the animal dies the man dies also, and similarly the moment the man perishes so does the beast. From this it follows that the animal kinsfolk must never be shot at or molested for fear of injuring or killing the persons whose lives are bound up with the lives of the brutes. This does not, however, prevent the people of a village, who have elephants for their animal friends, from hunting elephants. For they distinguish between human-elephants and elephant-elephants, and while they take great care not to injure the former they have no objection, but rather the contrary, to killing the latter. They say that a hunter who has the elephant for his friend always knows a human-elephant when he meets him ; indeed the recognition is mutual, and animal and man go their several ways without harming each other. And to avoid mistakes the hunter regularly sacrifices to the elephant-fetish before he sets out for the chase ; after that if he meets a human-elephant, the beast will lift up one of its fore-feet and hold it before its face, which is as much as to say, "Don't shoot." This belief in the sympathetic relation between animals and men, whose lives are inseparably bound up with each other, is said to be nowhere so strongly held as among the natives of the upper Cross River, particularly in the German district of Ossidinge. This is a land of hills, covered in parts with virgin forest and dense underwood, and cleft by many deep ravines and romantic mountain glens, affording ample cover to the wild beasts with which the simple natives imagine their fortunes to be linked. Some of these shy creatures, having not been molested by man for ages, have ceased to fear him and even

sympathetically related to certain animals (hippopotamuses, elephants, leopards, crocodiles, gorillas, fish, serpents) that when the animal dies the man dies and vice versa.

live on a certain footing of intimacy with their human brethren. At least we are told that the inhabitants of one little village are on very friendly terms with a herd of sacred hippopotamuses which have their abode in a stream not far off. A German official, on promising not to kill any of the beasts nor to reveal their lair to others, was privileged to witness the unwieldy monsters disporting themselves in a pool, after the beams of the morning sun, striking down over the tree-tops, had dispelled the mist which lay on the surface of the water. The chief who acted as guide called to the animals, and they seemed to answer to the call and followed him as he moved along the bank like a flock of sheep following their shepherd.<sup>1</sup>

Similar beliefs as to animal doubles or human souls existing in animal bodies are found in other parts of Africa.

Nor are such notions confined to the tribes of the Niger delta. At the town of Paha, in the northern territories of the Gold Coast, there are pools inhabited by crocodiles which are worshipped by the people. The natives believe that for every death or birth in the town a similar event takes place among the crocodiles.<sup>2</sup> Among the Angass, of the Kanna District in Northern Nigeria, "when a man is born, he is endowed with two distinct entities, life and a *kurua* (Arabic *rin*). . . . When the *rin* enters a man, its counterpart enters some beast or snake at the same time, and if either dies, so also does the body containing the counterpart. This, however, in no wise prevents a man from killing any game, etc., he may see, though he knows full well that he is causing thereby the death of some man or woman. When a man dies, his life and *rin* both leave him, though the latter is asserted sometimes to linger near the place of death for a day or two."<sup>3</sup> The Balong of Cameroon, in German West Africa, like the Calabar negroes, think that every man has several souls, of which one is in his body and another in an animal, such as an elephant, a wild pig, a leopard, and so forth. When a man

<sup>3</sup> Extract from a Report by Captain Foulkes to the British Colonial Office. My thanks are due to Mr. N. W. Thomas for sending me this extract and to the authorities of the Colonial Office for their permission to publish it.

comes home, feeling ill, and says, "I shall soon die," and is as good as his word, the people aver that one of his souls has been killed by a hunter in a wild pig or a leopard, and that the death of his external soul has caused the death of the soul in his body. Hence the corpse is cut open, and a diviner determines, by an inspection of the inwards, whether the popular surmise is correct or not.<sup>1</sup> In the Congo region some chiefs link their destiny with that of an animal. Thus the chief Bankwa of Ndolo, on the Moeko River, had conferred this distinction on a certain hippopotamus of the neighbourhood, at which he would suffer no one to shoot.<sup>2</sup> At the village of Ougek, in the Gaboon, a French missionary slept in the hut of an old Fang chief. Awaking in the middle of the night he saw a huge black serpent of the most dangerous sort ready to dart at him. He was about to shoot it when the chief stopped him, saying, "In killing the serpent, it is me that you would kill. Fear nothing. The serpent is my *elangela*."<sup>3</sup>

What is the relation of such beliefs and practices to totemism? When a whole family—parents, children, and children's children—believe that their external souls are in a certain species of animals, and for that reason abstain from killing, eating, or injuring the creatures, it is obvious that the relation in which the family stands to the species of animals bears at least a superficial resemblance to totemism. Elsewhere I have conjectured that the origin of totemism is to be sought in the belief of the possibility of thus depositing the soul for safety in an external object;<sup>4</sup> and we have seen that among the Sienas of the Ivory Coast the belief in human souls lodged in the sacred animals appears to form an integral part of totemism.<sup>5</sup> To that question we shall return later on. Meanwhile I will observe that probably superstitions of this sort are much more widely diffused than the evidence to hand would lead us to suppose. In particular the widespread belief in were-

Were-wolves, were-tigers, etc.

wolves, were-tigers, and other animals of that sort, may perhaps on analysis be found to resolve itself into a belief in the external soul. For it should be noticed that, at least in some cases, the owner of a bush-soul is thought to be able to turn himself temporarily into an animal of the kind in which his bush-soul is lodged.<sup>1</sup> Now this faith in the temporary transformation of a man into a beast is the essence of the were-wolf superstition.<sup>2</sup>

### § 6. Totemism in Northern Nigeria

Traces of totemism among the Hausas and Fulani of Northern Nigeria.

In recent years enquiries pursued by Mr. H. R. Palmer, Resident in Charge of Katsina, among the Hausas and Fulani of Northern Nigeria have elicited a good deal of evidence tending to shew that, despite the spread of Mohammedanism in this part of Africa, many of the natives still entertain beliefs and observe customs like those which we have found widely diffused over Western Africa from Senegambia to Cameroon. With regard to these customs and beliefs a doubt may indeed be raised as to whether they should be classed under the head of totemism or not; but in many points they resemble true totemism so closely that it seems desirable to take account of them in the present work. A system of superstition like totemism is founded on modes of thought so loose and vague that any attempt to lay down its boundaries with rigorous precision would necessarily be futile; and if we wish to penetrate to its inner meaning and ultimate source, we must not circumscribe the scope of our enquiry by rigid definitions, which, however appropriate to a philosophical treatise, are out of place in the exploration of a region so hazy and indefinite

<sup>1</sup> See above, p. 596, with the Rev. H. Goldie's account in the footnote.

as the mind of a savage. In researches of this sort it is safer to take too wide than too narrow a view of the matter in hand, since it often happens that light is thrown on the dark recesses of the subject by something which at first sight might seem to lie wholly outside of its boundaries.

For the following account of indications of totemism among the Hausas and Fulani I am indebted to the courtesy of Mr. H. R. Palmer, who has very liberally placed his manuscript materials at my disposal.

From the earliest times apparently the northern portion of Hausaland has been inhabited by two distinct races, a nomadic people of Berber blood and a settled people of negro or negroid blood. The nomadic Berbers are now known as Fulani, the settled negroes as Hausas. Yet the Hausas themselves appear to be a cross produced by the fusion of Berber invaders with the aboriginal negro or negroid population of the country. The *lingua franca* of Hausaland is Hausa. At the present day almost all the peoples called Hausas are Mohammedans, but nevertheless there exist among them some communities which have not yet been converted to the dominant faith and still retain to a certain degree the customs of their forefathers. These communities are known as Maguzawa, a word which seems to mean "idolaters." Though they do not profess Islam, the Maguzawa have been so far influenced by their Moslem rulers and conquerors that they have abandoned many of their old ways, and what they retain of them is in fact, though not in name, a crude monotheism with some local spirit in the place of Allah. However, enough of their ancient paganism lingers to indicate roughly the nature of the beliefs which Islam has displaced and is steadily displacing. Besides these Maguzawa there are a certain number of pagan Fulani and other heathen peoples of Berber affinity, who have migrated into Hausaland at various times in the past.

In manners and customs as well as in race the Fulani and Hausas differ from each other. The Hausa is polygamous and exogamous; the Fulani is monogamous and endogamous. The Hausa buys his wife and takes her to his own house; the nomadic Fulani does not expect his wife

The Fulani are Berbers; the Hausas are negroes or negroids. Most of the Hausas are now Mohammedans, but some communities of heathens remain.

Different marriage customs of the Fulani and Hausas.

to come and live with him until two years have elapsed after the wedding. Indeed the sexual relations among these nomads closely resemble those which are observed by the Tuaregs, among whom the husband goes to live with his wife, not the wife with her husband. In both peoples there is the same loose morality before marriage and the same strict morality after it. The first-born son of a Fulani always lives with his mother's kinsfolk till his father dies. He is called his father's shame (*kunya*). Among some of the pagan Fulani marriage between half brothers and sisters is allowed, provided that the common parent is the father ; but marriage between half brothers and sisters, the children of the same mother, is forbidden. Precisely the same rule was followed by the ancient Athenians.<sup>1</sup> Such a custom is probably a relic of mother-kin, that is, of the mode of tracing relationship through the mother and not through the father ; for under that system in its rigid form the children of the same father but not of the same mother are not related by blood and are therefore free to marry each other. At the present day, however, the practice of tracing descent in the female line hardly exists south of the country occupied by the Kelgeres. But in Mr. H. R. Palmer's opinion it is certain that mother-kin anciently prevailed alike among the Hausas, the Fulani, and the Tuaregs. According to him, the evidence available in the Soudan tends to shew that the custom of reckoning descent on the female side only was particularly characteristic of the Berber or Hamitic peoples.

Both the heathen Fulani and the heathen Hausas practise a rite, probably very ancient, which savours of sexual communism and is intended, if Mr. Palmer is right, to ensure the fecundity of the clan. Among the Fulani the ceremony is called *Girêwali* ; it is held at the end of the year. The youths and maidens gather in the forest. When the young men have formed a line, the girls come up to them and each chooses her partner. Food is cooked and eaten and the couples pass the night together. The observance of this custom is deemed of great importance for

Marriage of half brothers and sisters.

Mother-kin formerly prevalent among the Hausas, Fulani, and Tuaregs.

Traces of sexual communism among the Fulani and Hausas. The Fulani ceremony called *Girêwali*.

the prosperity of the clan. Any father who prevented his children from taking part in the orgy would be expelled from the community.

Among the pagan Hausas the custom is similar in substance though different in details. It is called *Fitā Furra*. In the autumn several girls and as many boys are shut up together in an enclosure and left there for a month. Food is brought them by an attendant called a dog (*karre*). The whole expense is borne by some rich man, who thinks he thereby confers a benefit on the community. A long upright pole called *jigo* or *gansami* is set up inside of the enclosure, and sacrifices of goats, sheep, fowls, and so on are offered to the spirits Kuri and Uwagona. Of these spirits Kuri is the Hausa Pan, a woodland deity who wears a goat's skin and barks like a dog in the forest. Uwagona is a female divinity who has been compared to Cybele or Demeter. At the end of the month any of the girls who are found to be with child are considered to be the wives of their youthful partners.

The Hausa custom called *Fitā Furra*.

Traces of totemism or of something like it occur both among the heathen Fulani and among the heathen Hausas. There is only one equivalent in the Hausa language for the words totem and taboo, which we have borrowed from the savages of North America and Polynesia. It is *kan-gidda* and means "head of the house" or "that which is upon the house." The totems, if we may call them so, of such pagan Fulani as are to be found in the northern portion of Hausaland appear to be chiefly birds, as for example the partridge and the dove, but some people have an animal totem in addition to a bird. Among the animal totems is the iguana. All the Fulani believe that if they were to kill their totemic birds or animals, they would die.

Totems of the pagan Fulani.

All the pagan Hausas confess to having at least one totem or taboo. Persons who have the same totem or taboo constitute a clan, but these totemic clans bear no fixed relation to the political divisions of the country, as these divisions exist and have existed for five or six hundred years. Each political division has its badge, which is tattooed on the faces of the children without regard to their totemic clan.

Totems of the pagan Hausas.

The following examples of Hausa clans with their

totems and taboos have been collected by Mr. H. R. Palmer.

The black  
snake  
totem.

1. *The Mahalbawa, a Katsina Hausa hunter community.*—Their totem is a short black snake called *kwakia*. They believe that they are descended from the snake and that if they killed it they would die. The clan is exogamous with descent in the male line; in other words, no man may marry a woman who has the black snake *kwakia* for her totem, and children take their totem from their father, not from their mother. If the snake is friendly, it lives among the rafters, and when a boy is born, the reptile crawls down to the floor of the hut. Should the snake kill an animal, the flesh of the animal may not be eaten by any member of the clan. Thus the Mahalbawa seem to be a typical totemic clan; for the totem is hereditary, they believe themselves to be descended from the totemic animal, they will not kill it, and they will not marry women who have the same totem as themselves.

The hippo-  
potamus  
totem.

2. *The Yan Dorina Hausas*, "children of a hippopotamus."—Their totem is the hippopotamus, and they sacrifice to the beast on the banks of a stream a hen which is coloured like an ostrich.

The  
featherless  
fowl totem.

3. *The Biritchi Hausas, Maguzawa called "kai na fara."*—Their totem is a featherless fowl. Mr. Palmer's informant said that this fowl (*kuduku kaza*) is sacrificed on very special occasions once a year. Members of the clan may not eat food which has been touched by iron. If fire has burnt the town, they will not eat what is left of the corn. They do not carry fire in a calabash (*kworia*) but only in an earthenware dish (*akwoshi*). These Hausas do not work on Sunday, but offer sacrifice on that day.

The frog  
totem.

4. *The Garubawa of Keffindukuduku, Katsina.*—They say they are of Berber origin. Their totem is a frog (*kwado*), which they will not touch. They think that after death a bad soul wanders about, but that a good soul is born again of a woman in the family, generally reappearing as a grandson of the deceased. There is a village pole at which wrestling matches take place. They say that so long as the pole stands the powers of the village youth remain unshaken. If the pole should be blown down, it will not

be set up till the next generation. The name of the pole is *gansami*, which means "son of the Queen."

5. *The Kutumbawa, Hausas of Kuzauri and Kano.*—The blackthorn, tamarind, and large green snake totems. Their totems are two trees, the black thorn (*dashi*) and tamarind (*tsamia*). They may not cut nor burn these trees. Another totem of theirs is a large green snake (*dau magurji*), which they will not kill nor touch. They sacrifice on the top of a crag near by to "the spirit that turns bones white" (*dodo ba farin kasshi*). Their prosperity was believed to be bound up with a black rock poised on the top of the crag. The rock used to warn them of coming war by shrieking thrice; when it fell, they were conquered.

6. *The Baawa.*—By race and religion they are Fulani pagans, by profession they are nomadic herdsmen. They do not kill their cattle except for a feast, and then the animals must be slaughtered at the foot of a tree which has little sap. But on the contrary trees with much sap are given to cattle to eat as a medicine. In contrast to the Biritchi, they may only take up fire in a calabash (*kworia*); if a woman with child should be so imprudent as to take up fire in an earthen vessel, she would have a miscarriage. The totem of Mr. Palmer's informant was a fox (*yanyawa*).

7. *The Baban Dammo.*—These are Hausas of the earliest Katsina stock. Their totem is an iguana (*dammo*), and they believe themselves to be descended from the animal. They will not eat hot food out of a calabash and they will not use a calabash to carry fire in. They think that souls live after death and kill the living, if they are not placated. In order to prevent the soul from getting out of its earthly tabernacle and doing a mischief, they lay thorns on a corpse. Unable to escape through the prickly barrier without scratching its tender substance, the poor soul perforce remains quiet in the rotting body.

8. *The Romawa, Hausas of Kano.*—Their totem is a snake (*dan bida*). It descends in the male line from father to children. A woman keeps her own totem after marriage. They will not marry women who have the same totem as themselves; in other words, the clan is exogamous.

9. *The Kiawa, Hausas of Kano.*—Their totem is an

Elephant totem. elephant. They sacrifice at the foot of a tamarind tree (*tsamia*) to Kuri and Uwadawa.

Iguana totem. 10. *The Darbawa Hausas of Baurenia in Katsina.*—Their totem is an iguana (*dammo*). They now marry within the clan, but say that formerly they did not do so. They think that the soul of a dead man enters into a woman and is reborn in a grandson.

*Kamuchi* totem. 11. *The Yan Tugamma, Hausas of Maradi.*—Their totem is *kamuchi* (?). They will not wear any clothes of a light blue colour, believing that if they did they would grow poor.

Lion totem. 12. *The Berawa, Hausas of the district of Yaudaka (Katsina).*—Their totem is a lion, which they dare not touch. They kill all snakes. They will not burn a silk cotton tree nor carry fire in a calabash.

Black snake totem. 13. *The Geauaskawa, Hausas of Dan Gani Katsina.*—Their totem is a black snake (*kwakia*), and they think that the soul of the snake dwells in their king.

Lion, tree, and hawk totems. 14. *The Dubawa of Wawalkaza, Katsina Hausas.*—Their totems are a lion, a tree (*kiria*), and a hawk (*shirua*). They will not take up fire in an earthen pot (*kasko*), believing that to do so would cause headache. So they carry fire on two sticks.

Partridge totem. 15. *The Sarikin Machira* (Chief of the Blacksmiths) has for his totem the partridge (*makorua*) and thinks he would die if he killed the bird. One of his ancestors killed a partridge, took it home, ate it, and died the very same night. Not only so, but the whole family were burnt to ashes in a fire soon afterwards, all but one woman, who never would eat partridge again. When people asked her why she would not eat partridge, she replied, "It is the totem (*kangidda*) of my grandfather. He ate it, and see what happened!" The blacksmiths, potters, and other industrial clans seem to have been originally servile Berber peoples. They are commonly called "slaves of the Fulani."

Python totem. 16. *The Yan Gido, Katsina Hausas.*—Their totem is the python (*kasa*). At the beginning of the year, which falls in autumn, they hold a great feast, at which they sacrifice to Kuri, the woodland deity who wears a goat's skin, and also to Uwardawa, who causes men to go sideways

like a crab. Children take their totem from their father. A man prefers to marry a woman who has the same totem as his mother; in other words, the men of this clan prefer to intermarry with the women of one particular clan only. In regard to the marriage of cousins, children of sisters or of half-sisters may not marry each other; children of brothers or of half-brothers may not marry each other; but the child of a brother or of a half-brother may marry the child of a sister or of a half-sister.

Other Hausa and Fulani clans with their totems, as ascertained by Mr. H. R. Palmer, are as follows:—

Other  
totemic  
clans.

#### HAUSA AND FULANI CLANS AND TOTEMS<sup>1</sup>

Clans.	Districts.	Totems.
17. Yan Maisa .	Metazu in Katsina	a snake ( <i>dan bida</i> )
18. Tannawa .	Kano	crocodile
19. Yan Tuga .	Kano	lion
20. Ba Daffawa .	Katsina	black snake ( <i>kwakia</i> )
21. Dásawa .	Katsina	black snake ( <i>kwakia</i> )
22. Dogarawa .	Remin Gado in Kano	crocodile ( <i>kadda</i> ) and black snake ( <i>kwakia</i> )
23. Kimbawa (probably Fulani mixed with Hausas) .	...	crow ( <i>hankaka</i> ) and black snake ( <i>kwakia</i> )
24. Tosawa .	Jikamshi Katsina	black snake ( <i>kwakia</i> )
25. Damfawa (Fulani)	Zamfara	crested crane ( <i>gamraka</i> ) and crow ( <i>haukaka</i> )
26. Sulibawa (Fulani)	Katsina	a dove ( <i>kurchia</i> )
27. Rungumawa .	Katsina	black snake ( <i>kwakia</i> ) and tamarind tree
28. Arawa .	Daura	snake ( <i>dan magurji</i> )

In the preceding list the number of clans which have snakes, especially the black snake (*kwakia*), for their totems is remarkable. Mr. Palmer is of opinion that these snake people represent the negroid element in the population.

Many  
black snake  
totems.

The Hausa states are seven in number, each of them ruled by a king. Down to the nineteenth century the daughters of the king of Daura were always married to slaves, and the king

Seven  
Hausa  
kingdoms.

<sup>1</sup> In this list all the clans are Hausa except Nos. 23, 25, and 26, which are Fulani.

Marriage  
of king's  
daughters  
to slaves.

was always chosen from their children, not from the children of the late king. The Queen Mother was always a most powerful personage. This shews that in Daura, as in Ashantee, royal blood was traced only in the maternal line, and that the lineage of the king's father was deemed a matter of no consequence.<sup>1</sup>

Death and  
burial of  
Hausa  
kings.

The manner of the death and burial of Hausa kings is worthy of notice. In three of the kingdoms, namely Gobir, Katsina, and Daura, the customs observed on such occasions were these. On the first signs that a king was failing in health or becoming infirm, an official who bore the title of Killer of the Elephant (*Kariagiwa*) appeared and throttled him by holding his windpipe. The entrails of the dead king were then removed and his body was smoked over a slow fire for seven days. By that time the election of a successor was complete. The king elect was conducted to the centre of the town, called Head of the Elephant (*kan giwa*), and was there made to lie down on a bed. A black ox was next brought and slaughtered over the prostrate prince, the blood being made to run all over his body. Then the ox was flayed, and the dead king, being wrapped up in the hide, was dragged along the ground to the place of burial, which was a circular pit, where he was buried in a sitting posture. After his bath of ox blood the new king had to reside for seven days in his mother's house, where he was washed daily. On the eighth day he was conducted in state to the palace. In Daura the new king had besides to cross over the body of the dead king.<sup>2</sup>

New Year's  
festival  
among the  
Hausas.

At the New Year's feast (*Wasan Worwo*) among the Hausas it is still the custom for a man to put on a mask with the horns of an ox fixed above his head and to dance in this costume. The Hausas believe that the dance promotes a good crop of corn.<sup>3</sup> This custom suggests that the Hausas imagine the spirit of the corn to be incarnate in an ox or a bull. A similar belief has been held by many other peoples.<sup>4</sup> It seems to be quite independent of totemism.

<sup>1</sup> As to the rule of succession to the throne of Ashantee, see above, pp. 564 sq.; and my *Lectures on the Early History of the Kingship*, p. 235.

<sup>2</sup> These particulars as to the death and burial of Hausa kings are derived

from Mr. H. R. Palmer's manuscript.

## § 7. Totemism in Congo and Angola

The Bakalai or Bakele are a large Bantu tribe inhabiting the lower valley of the Ogowe River in French Congo, who swarmed down from some unknown part of the interior about eighty years ago. Formerly nomads, they have now become carriers and merchants. Their settlements are widely scattered; communities of them are often found living in independent towns surrounded by other tribes. They cultivate the soil to a certain extent, possess a few goats and chickens, and subsist in part by hunting and fishing.<sup>1</sup> Like many other Bantu peoples, the Bakalai appear to be divided into clans which are both totemic and exogamous. At least this seems to follow from an account given of their customs by Du Chaillu, who spent some time among them. His testimony is all the more valuable because, writing at a time when neither totemism nor exogamy was commonly known, he records his discovery of totemism with evident surprise. The passage runs thus: "This day I had a glimpse at another curious superstition of these people. One of the hunters had shot a wild bull, and when the carcass was brought in the good fellow sent me an abundant supply of the best portions. The meat is tough, but was most welcome for a change. I had a great piece boiled for dinner, and expected Quengueza to eat as much as would make several hungry white men sick. Judge of my surprise, when, coming to the table and seeing only the meat, he refused to touch it. I asked why? 'It is *roondah* for me,' he replied. And then, in answer to my question, explained that the meat of the *Bos brachicheros* was forbidden to his family, and was an abomination to them, for the reason that many generations ago one of their women gave birth to a calf instead of a child. I laughed; but the king replied very soberly that he could show me a woman of another family whose grandmother had given birth to a crocodile—for which reason the crocodile was *roondah* to that family. Quengueza would never touch my salt-beef, nor

The Bakalai of French Congo.

Du Chaillu's evidence as to totemism and exogamy among the Bakalai.

Belief of the Bakalai that women have given birth and can still give birth to animals of the totemic species.

<sup>1</sup> J. L. Wilson, *Western Africa*, pp. 300 sq.; P. B. du Chaillu, *Explorations and Adventures in Equatorial Africa* (London, 1861), p. 383; J. Deniker, *The Races of Man*, p. 459.

even the pork, fearing lest it had been in contact with the beef. Indeed, they are all religiously scrupulous in this matter; and I found, on inquiry afterwards, that scarce a man can be found to whom some article of food is not *roondah*. Some dare not taste crocodile, some hippopotamus, some monkey, some boa, some wild pig, and all from this same belief. They will literally suffer the pangs of starvation rather than break through this prejudice; and they very firmly believe that if one of a family should eat of such forbidden food, the women of the same family would surely miscarry and give birth to monstrosities in the shape of the animal which is *roondah*, or else die of an awful disease. Sometimes I find that the fetich-man forbids an individual to touch certain kinds of food for some reason, or no reason rather. In this case the prohibition extends only to the man, and not to his family. It is astonishing how strictly such gross feeders as they are adhere to their scruples. It shows the power a superstitious faith has even over a lawless people as these are. I am certain nothing in the world would have induced the old king to eat the flesh of the wild bull, or even to eat out of a dish in which that had been cooked or otherwise contained.”<sup>1</sup>

The  
Bakalai  
taboos  
(*roondah*)  
are totemic.

In this passage Du Chaillu clearly distinguishes purely personal taboos, arbitrarily imposed on individuals, from the hereditary taboos (*roondah*) which have been observed by whole families for many generations. These hereditary taboos appear to be strictly totemic. The term *roondah*, which Du Chaillu applies to them, is plainly identical with *orunda*, the form of the word employed by Dr. Nassau and Miss Kingsley. The word means “prohibited,” and has been adopted by the missionaries as the nearest native equivalent they could find for “sacred” or “holy.”<sup>2</sup> Further, the totemic families or clans of the Bakalai appear to be exogamous; for, speaking of this tribe, Du Chaillu observes again with surprise: “It is a curious fact, that, though they will take

<sup>1</sup> Paul B. Du Chaillu, *Explorations in West Africa*, pp. 456 sq.; R. H. Nassau, *Fetichism in West Africa* (London, 1861), pp. 308 sq.

their brother's or father's wives in marriage, they will not marry a woman of the same *family* or clan with themselves. This is the case also among other tribes." <sup>1</sup> As he indicates in this last sentence, Du Chaillu found the rule of exogamy observed by other tribes of the Gaboon region besides the Bakalai. Elsewhere he says: "Tribes and clans intermarry with each other, and this brings about a friendly feeling among the people. People of the same clan cannot marry with each other. The least consanguinity is considered an abomination; nevertheless, the nephew has not the slightest objection to take his uncle's wives, and, as among the Bakalai, the son to take his father's wives, except his own mother." <sup>2</sup>

Exogamy among the tribes of the Gaboon region.

From all this we may conclude that the Bakalai have totemism of the common type; that is, that they are divided into clans, and that the members of each clan are forbidden to marry each other and to eat the flesh of a particular species of animal. With regard to the descent of the Bakalai clans we have not definite information, but since in this tribe the son inherits his father's property, <sup>3</sup> we may perhaps infer that the clan also is inherited by children from their father and not from their mother. In this respect the Bakalai differ from their neighbours; for among the surrounding tribes all clans are considered to descend on the female side, and a man's heirs are first his brothers and next his nephew, the eldest son of the eldest sister. Among these tribes, moreover, the headship of the clan is hereditary, and descends like property in the female line from a man to his brothers and his sisters' sons. <sup>4</sup> In short, the tribes among whom the Bakalai live have the system of mother-kin as opposed to father-kin.

Thus the Bakalai have totemism of the ordinary type. Descent among them seems to be in the paternal line.

The explanation which the Bakalai give of the origin of their totemic clans deserves our particular attention, for it has all the appearance of being primitive. In substance it agrees with the system of conceptional totemism which

The explanation which the Bakalai give of their totems

appears to be primitive and agrees in principle with the beliefs of the Banks' Islanders as to their conceptional totems.

prevails among the Banks' Islanders.<sup>1</sup> In both of these widely-separated regions it is believed that a woman can be impregnated by and bring forth an animal or plant. Among the Banks' Islanders the imaginary animal or plant so born is identified with the real child whom the woman gives birth to, and henceforth animals or plants of that sort become tabooed or sacred to the child; they are his personal or individual totem, being peculiar to him and not transmitted by him to his descendants. This is, if I am right, the absolutely primitive stage of totemism. The Bakalai have advanced beyond that stage, for among them the totems have become hereditary; but the tribe still retains the primitive belief that women can give birth to animals of the totemic species, and that they would surely do so if they ate of the totemic animal. This again confirms the view, which a consideration of the Central Australian evidence led me to suggest, that conception may often have been thought to be caused by the animal or plant which a woman has eaten of, and which accordingly becomes the totem of her child when it is born.<sup>2</sup>

The Fans, or Fangs, of French Congo.

The Fans, or Fangs, are a large and vigorous tribe or nation who occupy a vast region of French Congo from Cameroon on the north to about the fourth parallel of South latitude. They are estimated to number many millions, and are said to be multiplying fast. Their language, which comprises many dialects, belongs to the Bantu family, but differs considerably from other languages of that stock. It is believed that the Fans, or Pahouins as they are called by the negroes of the Gaboon, are recent immigrants into the country. Their habits are nomadic, for though they build villages they shift the sites of them from time to time. They collect ivory, make pottery and baskets, and are skilful workers in iron.<sup>3</sup> They possess an elaborate system of taboos or *eki*, as they call them, some of which appear to be totemic. For we are told that some

The Fans have a system of taboos

individuals and some tribes bear the names of animals, such as Elephant, Panther, Gorilla, Crocodile, Eagle, and so forth; and that a man may not eat the animal whose name he bears, it is taboo (*eki*) to him. Such taboos may be common to a whole tribe, the members of which pay particular respect to a certain animal and will not kill it.<sup>1</sup> But details of their totemic system, if such it is, are lacking. The Fan villages are exogamous; in other words, a man may not marry a woman of the same village, she is taboo (*eki*) to him. It happens, indeed, that such marriages sometimes take place when the village is large and the relationship between the couple is distant; but persons contracting these unions are looked at askance, and any misfortune which befalls them is regarded as a punishment of their misdeed.<sup>2</sup> The marriage of cousins, apparently both on the father's and the mother's side, is also forbidden among the Fans.<sup>3</sup>

(*eki*), some of which seem to be totemic.

Marriage with cousins forbidden.

Another people of this region among whom totemism or traces of it may perhaps be detected are the Bantu tribes, which once composed the great native kingdom or empire of Congo, with its several provinces, including the provinces of Loango, Cacongo, and Ngoio to the north of the river Congo, and the province of Songo, Sonio, or Sonho to the south of it.<sup>4</sup> The general name which these Bantu tribes apply to themselves is Ba-fioti or the Dark-skinned People; the special name applied to the inhabitants of the Loango coast is Bavili.<sup>5</sup> As all these tribes were for centuries

subject to Portugal and professed the Catholic faith,<sup>1</sup> it is almost inevitable that their native customs and beliefs should be tinctured by European influence. However, they still possess an elaborate system of taboos (*bina*, singular *xina*), some of which may perhaps be totemic in origin. Thus the several tribes, provinces, and districts have their tabooed or sacred animals. The whole tribe of Congo has for its sacred animal the leopard; and the three subtribes of Sonio, Cacongo, and Loango have for their sacred animals respectively the cricket, the eel, and the wild ox or bull. Further, each province under the rule of its chief (*fumu*) has two sacred animals; for example, the province of Xibanga has for its sacred animals the fowl and the duiker, or gazelle. Again, each district under its headman (*Kongo Zovo*) has its sacred animal; for example, the chief district of the Xibanga province has for its sacred animal the chimpanzee. Further, families have also their sacred animals, which are forbidden to them as food. Every person with any pretensions to good birth should have four sacred animals, namely, that of his father, that of his mother, and those of two grandparents. For example, one man has the antelope and the chimpanzee as the sacred animals of his father and mother respectively, and the pig and otter as the sacred animals of two grandparents. Another has the antelope and partridge as the sacred animals of his father and mother respectively, and the pig as the sacred animal of his grandparents.<sup>2</sup> Sickness is often attributed to the patient's rashness in partaking of the flesh of the animal

The several tribes, provinces, and districts have their sacred animals, such as leopards, wild bulls, gazelles, and chimpanzees.

Families! have also their sacred animals, such as antelopes, chimpanzees, otters, pigs, and partridges.

One of our chief informants on these tribes is Mr. R. E. Dennett, who resided for many years on the coast of Loango. He gives the tribal or national name as Fjort, Fioti, or Fiote.

<sup>1</sup> J. L. Wilson, *Western Africa*, pp. 313 sqq.

<sup>2</sup> R. E. Dennett, "Bavili Notes," *Folk-lore*, xvi. (1905) pp. 390, 395-397; *id.*, *At the Back of the Black Man's Mind*, pp. 144, 152-154. The writer's statements lack clearness and precision, and I cannot feel sure that I have interpreted them aright. He does not define the terms tribe, sub-tribe, province, and district; and he does not know whether the grandparents in question are the two grandfathers or the two grandmothers, or one grandfather and one grandmother.

which is forbidden to his family.<sup>1</sup> A man belongs to his mother's family, and he may not marry any woman who has the same sacred animal as his mother. It is believed that the deity punishes breaches of this marriage law by withholding the rains in due season.<sup>2</sup> Hence it would seem that the Fiot families are totemic, exogamous, and hereditary in the maternal line. A man's heirs are, first, his brothers; next, his sister's son; third, his mother's relations; and failing all these his own children.<sup>3</sup> The mother alone has the right to pawn her children, but she must first consult the father; he cannot himself pawn his children.<sup>4</sup> A man may not marry his first cousins, the daughters of his father's brothers; but he may marry his first cousins, the daughters of his father's sisters.<sup>5</sup> Apparently, the Ba-fioti have the classificatory system of relationship; for a man applies the same term, *tata*, to his father and to his father's brothers, and the same term, *mama*, to his mother and to his mother's sisters.<sup>6</sup> Besides the taboos which appear to be totemic, the Ba-fioti observe many others of various sorts. Some of these are associated with certain offices, others with sacred groves (*bibila*, singular *xibila*), others with the possession of certain sacred fetishes. Others, again, are purely individual or personal, being arbitrarily imposed on sick people by the priest or medicine-man (*ganga*), or on children at birth by the priest or the parents.<sup>7</sup>

A man may not marry any woman who has the same sacred animal as his mother.

Mother-kin.

Cousin-marriages.

"mpangu."

parents or the wizards give certain rules to be inviolably observed by the young people, and which they call *chegilla*; these are to abstain from eating either some sorts of poultry, the flesh of some kinds of wild beasts, such and such fruits, roots either raw or boiled after this or another manner, with several other ridiculous injunctions of the like nature, too many to be enumerated here. You would wonder with what religious observance these commands are obeyed. These young people would sooner chuse to fast several days together, than to taste the least bit of what has been forbidden them; and if it sometimes happen that the *chegilla* has been neglected to have been given them by their parents, they think they shall presently die unless they go immediately to receive it from the wizards." To illustrate the superstitious respect with which these taboos are observed the missionary tells us of a young negro who, on discovering that he had unwittingly partaken of his forbidden animal (in this case a wild hen) four years before, at once fell atrembling and died within four-and-twenty hours.<sup>1</sup> Even such necessities of life as manioc and bananas may be included among the tabooed foods, though the burden is sometimes considerably lightened by restricting the prohibition, for example, to certain kinds of bananas, or to bananas cooked in one particular way, as roasted or boiled, or to the eating bananas on one day of the week but not on the others, and so forth. But the range of these taboos is not limited to foods; it extends to other things, such as colours and articles of dress, or to actions of various kinds. One man, for example, may be forbidden to travel on a certain day of the week; another man may not smoke anywhere but in his hut, or he may not smoke in the presence of strangers; another man may be forbidden to see his newborn infant until the child can stand by itself; and so on.<sup>2</sup> It is possible that these and similar prohibitions laid on children from infancy may be ultimately derived

<sup>1</sup> Merolla, "Voyage to Congo," in Pinkerton's *Voyages and Travels*, xvi. 237 sq.

<sup>2</sup> A. Bastian, *Die deutsche Expedition an der Loango-Küste*, i. 183-185.

According to Bastian, these superstitious prohibitions are called *xina* on the Loango coast, but *quixilles* further south. *Quixilles* is no doubt the same with *chegilla*, the form of the word used by Merolla.

from totemism of the conceptional kind, though the link which perhaps once united them appears now to be broken. But the evidence does not warrant us in assuming this derivation.

On this subject the Rev. J. H. Weeks, who has lived as a missionary for twenty-seven years among the Bantu peoples of the Lower Congo, especially in the neighbourhood of San Salvador, writes as follows: "As regards totemism, after very careful enquiries I have come to the conclusion that, while it may very probably have been at one time in vogue in this region, the only indication of such prevalence still surviving is to be found in certain tribal names, of which up to the present I have been able to procure the following:—

The Rev. J. H. Weeks on traces of totemism among the peoples of the Lower Congo.

"*Esi kia ntu mia nzenze*, or the people belonging to the heads of the mole-cricket (*nzenze*). The people are proud of the name, because the *nzenze* always sticks its head up, even when being cooked; but they hunt, cook, and eat the mole-cricket.

"*Esi kimfulu*, or the tortoise people, who catch and eat tortoises.

"*Esi kinanga*, or the cowrie people, who live in a town near Kitovola."<sup>1</sup>

Such names certainly do not of themselves afford any proof or even presumption of totemism. Traces of, or perhaps rather analogies to, totemism are to be found in the hereditary taboos (*mpangu*) observed by the people. These taboos are transmitted from a father to his sons; daughters observe them so long as they are in their father's house, but when a daughter marries she generally drops her father's taboo and adopts that of her husband. "In one family the inherited tabu was not to eat any wild animal or fish with spots on it, such as the striped antelope, certain gazelles, civet cats, leopards, shrimps, etc., and the penalty for breaking this tabu was a very bad skin disease—a form of leprosy. The idea here was simply to avoid any flesh food that had a spotted skin. The *mpangu* of another lad was not to eat hippopotamus flesh or yams, the penalty being elephantiasis; not to eat crayfish, the

Hereditary taboos (*mpangu*) transmitted from a father to his children.

<sup>1</sup> Rev. J. H. Weeks, "Notes on some Customs of the Lower Congo People," *Folk-lore*, xx. (1909) p. 63.

penalty being a skin disease on the hand ; not to eat raw palm nuts, the penalty being an outbreak of scald head ; not to eat a spotted fish called *nlumbu*, the penalty being ophthalmia and loss of eyelashes ; not to eat the *ezunda* or great bull frog, the penalty being that the eyes will bulge out like the frog's. Here the penalties are in accord with the broken prohibitions ;—eating hippopotamus will cause elephantiasis or a leg like the legs of a hippopotamus ; eating the *nlumbu*, a fish with opal eyes, causes ophthalmia, and eating the frog causes bulging eyes.”<sup>1</sup>

If Mr. Weeks is right, as he seems to be, in his explanations of these taboos, they are based on the now familiar tenet of sympathetic magic that a man partakes of the qualities of the animal whose flesh he eats. When these qualities are undesirable, as in the cases cited by Mr. Weeks, the flesh of the animal in question is naturally avoided, and such avoidance may be wholly unconnected with totemism. Yet the restriction of each of these taboos to a particular family and its hereditary transmission in the family are totemic in principle. However, it is somewhat remarkable that among these peoples, while hereditary taboos are inherited from the father alone, according to the custom of the country children belong to their mother's family, not to their father's, and inherit the property of their maternal uncle, not the property of their father. Hence when a lad grows up, his maternal uncle will one day bring a calabash of palm wine to the town and claim him, and the father has no power to prevent his son from going away with his uncle. However, the lad himself may refuse to go and may remain under the tutelage of his father as long as he likes. But if he elects to go with his uncle, the father's responsibility for him is at an end.<sup>2</sup> Moreover, the people are divided into clans called *ekandas*, which appear to be hereditary in the maternal line. “The difference between *ekanda* (clan) and *vumu* (family or dynasty, lit. stomach, womb) is that *ekanda* is the name for all the *vumu* of a clan. The tree is the *ekanda* and the branches are the *vumu*. The clan does not

But while taboos are inherited from the father only, children belong to their mother's family and inherit the property of their maternal uncle.

Moreover, the clans (*ekandas*) are hereditary in the maternal line.

<sup>1</sup> Rev. J. H. Weeks, “Notes on some Customs of the Lower Congo People,” *Folk-lore*, xx. (1909) pp.

307 *sq.*

<sup>2</sup> Rev. J. H. Weeks, *op. cit.* xix. (1908) pp. 414, 415, 423, 425, 427.

originate with the man, but has its origin in the woman only; and it is the same with the subdivisions of the clan into families, each division or subdivision starts from a woman. . . . Every woman with children, grandchildren, and great-grandchildren would be the originator of a *vumu*, as all her descendants would be considered as coming from her womb."<sup>1</sup> With regard to marriages between members of different clans "it is not a hard and fast rule, but it is a rule very generally followed, for the sons and daughters of one clan to marry only the daughters and sons of one other clan, and not to intermarry with several different clans. By thus intermarrying within the limits of one clan they think better treatment is ensured for the women of each clan."<sup>2</sup>

Similarly we have seen that a Python clan of the Hausas prefers to intermarry with one other clan only.<sup>3</sup> Among the Australian aborigines also we have met with tribes in which men of any one totemic clan are restricted in their choice of wives to the women either of a few clans or of one only,<sup>4</sup> and a like restriction is observed by the Kondayamkottai Maravans of Southern India.<sup>5</sup> Parallel to these restrictions on marriage is "the curious way Kulin Brahmins have of marrying into only a *pālṭi* or 'corresponding' family. Hence if there are many girls in one family and only one marriageable male in the *pālṭi* family, he must marry all the girls. If there are no males in the *pālṭi* family, the girls can never be married. This has actually happened within my own experience in Jessore. The other occurrence (of only a few *pālṭi* males) is the cause of Kulin polygamy, the existence of which was angrily denied by several correspondents of the *Times* not long ago. If ever polygamy was excusable, it was this. It is a sin to allow a Kulin maid to remain unmarried, and if there is only one *pālṭi* male available, why, he has to do his duty like a man."<sup>6</sup>

<sup>1</sup> Rev. J. H. Weeks, "Notes on some Customs of the Lower Congo People," *Folk-lore*, xix. (1908) pp. 425, 426.

<sup>2</sup> Rev. J. H. Weeks, *op. cit.* p. 410. Mr. Weeks omits to say whether a man may marry a woman of his own clan, that is, he does not tell us whether the clans are strictly exogamous, but he

implies that exogamy is the general custom.

<sup>3</sup> See above, p. 607.

<sup>4</sup> See above, vol. i. pp. 176, 177 note<sup>1</sup>, 374, 387, 388, 407 *sq.*

<sup>5</sup> See above, p. 249.

<sup>6</sup> Mr. J. D. Anderson, Teacher of Bengali in the University of Cambridge, formerly Magistrate and Collector of

Such restrictions are probably late rather than primitive. This seems to be true of the marriage customs of Kulin Brahmans.

It seems probable that all such extreme restrictions on intermarriage between clans or families are late rather than primitive. There is positive evidence that this is so in regard to the marriage of Kulin Brahmans: the rule which allows a Kulin family to intermarry only with one or two corresponding families appears to have been adopted as an extension of a reform instituted in the fourteenth century of our era. On this subject Sir Herbert Risley writes as follows: "The reforms undertaken in the fourteenth century by Devi Vara, a *ghatak* or genealogist of Jessore, extended only to the Kulins. These were divided into three grades:—(1) Swabháva, or original Kulins, (2) Bhanga, (3) Bansaja. The Swabháva grade was further subdivided into 36 *mels*, or endogamous groups, each bearing the name of the original ancestor of the clan or of his village. This restriction of the marriage of Kulins to their own *mel* was the leading feature of Devi Vara's reform. Its principle was adopted and extended, it is believed, by the Kulins themselves, in the singular arrangement known as *Pálti-Prakriti*, or preservation of the type, by which families of equal rank were formed into triple groups as it were, for matrimonial purposes, and bound to observe a sort of reciprocity. Thus Mukhuti families were bound to marry their sons to the daughters of the Chatterji and Banerji families, and *vice versa*. All kinds of complications are said to have arisen from this understanding. If, for example, the Mukhuti had only one marriageable son and the Chatterji or Banerji ten daughters approaching puberty, the former must marry all ten, or all must remain spinsters. . . . With the spread of education among the upper classes of Bengal an advance in social, morality has been made and the grosser forms of polygamy have fallen into disrepute. But the artificial

Chittagong, in a letter to me dated 22nd December 1909. In another letter (26th December 1909) Mr. Anderson says that "the custom is, or should be, known to all Bengal civilians," and for native authority he quotes Śyāmā Carañ Sirkar's *Introduction to the Bengali Language* (1861), pp. 406 sq. The correspondence in the *Times* and the Report of a Com-

mittee appointed by the Government of Bengal on the subject of Kulin polygamy are reprinted by Sir Herbert Risley in his book *The People of India* (Calcutta, 1908), Appendix VII. pp. cxxxix. sq. No impartial reader who glances over the correspondence and the Report of the Government Committee can doubt on which side truth lies.

organization of the caste still presses hard on a Kulin father who is unlucky enough to have a large family of daughters. These must be married before they attain puberty, or disgrace will fall on the family, and three generations of ancestors will be dishonoured."<sup>1</sup> But to return to Africa.

From the foregoing account we gather that the social system of the Bantu people of the Lower Congo presents some analogies to the social system of the Herero, a Bantu tribe of South-West Africa.<sup>2</sup> For both the Congo people and the Herero are divided into clans which descend in the maternal line; both sets of clans appear, though this is not quite certain, to be exogamous; and they bear names (Congo *ekanda*, Herero *eanda*) which closely resemble each other. Further, both the Congo people and the Herero have, quite independently of their maternal clans, a number of hereditary taboos which, unlike the clans, descend in the paternal line from a father to his children, and which are apparently not subject to a rule of exogamy; in other words, so far as the evidence goes, there is no objection to the marriage of a man and woman who have inherited the same taboo from their respective fathers.<sup>3</sup> Further, the two sets of taboos resemble each other in this, that both among the Congo people and among the Herero a woman regularly adopts the hereditary taboo of her husband at marriage.<sup>4</sup> These resemblances between the social systems of two Bantu peoples so widely separated from each other as the Herero of South-West Africa and the tribes of the Lower Congo can hardly be accidental; they point to a fundamental community of institutions, which further research may prove to be shared by many other Bantu tribes. This curious double system of clans inherited from the mother and taboos inherited from the father deserves to be studied with more attention than it has yet received. We have seen that it occurs also among the Tshi-speaking peoples of the Gold Coast.<sup>5</sup>

Thus in respect of clans inherited from the mother and taboos inherited from the father the people of the Lower Congo resemble the Herero. A similar double system occurs also among the people of the Gold Coast.

<sup>1</sup> (Sir) H. H. Risley, *Tribes and Castes of Bengal, Ethnographic Glossary* (Calcutta, 1892), i. 147 *sq.*

<sup>2</sup> See above, pp. 357 *sqq.*

<sup>3</sup> I was perhaps wrong in doubting this for the Herero (above, p. 364).

<sup>4</sup> As to this rule among the Herero, see above, p. 364.

<sup>5</sup> See above, pp. 560 *sqq.* Amongst the Wagogo, also, there are two sets of taboos, one of which attaches to the clan and the other is inherited from the father. See above, p. 404.

Individual  
or personal  
taboos  
among the  
Congo  
people.

In addition to the hereditary taboos (*mpangu*) which descend in families through the males, the Congo people observe a number of individual or personal taboos, to which they apply quite a different name (*nlongo*), which seems to mean "medicine" or "poison." When a person is ill, the medicine-man is called in and forbids the patient to eat a certain food for the rest of his life. Thus one man will be debarred from eating cassava, another from eating pig or the snout of a pig, another from eating goat or the head of a goat, another from eating a certain kind of fish, and another from eating a certain kind of vegetable. The forbidden food is the person's *nlongo*. Sometimes the prohibition lasts only a certain time, say six months. Sometimes it is put on an unborn child and remains in force until the child's hair is cut and his nails trimmed, or until he or she marries, or until the first child is born to him or her. The choice of the forbidden thing appears to be purely arbitrary; it is determined by the whim of the medicine-man and bears little or no relation to the nature of the malady. Nevertheless to violate the taboo would, the natives think, be sure to cause the sickness to return.<sup>1</sup>

Club-  
houses for  
lads and  
unmarried  
men.

Down to about twenty-five years ago there were club-houses for lads and unmarried men in all important villages; on reaching the age of twelve years every boy had to take up his abode in the bachelors' club-house of the village or town. Unbetrothed girls visited the house in the dark by arrangement with the young men, but they might not reveal the secrets of the place. Their parents encouraged the girls to resort thither, believing that if they did not go they would be barren.<sup>2</sup>

The  
levirate.

These people practise the levirate; that is, when a man dies, his widow is married by one of his surviving brothers.<sup>3</sup>

Avoidance  
of a wife's  
mother.

A man may not speak to his mother-in-law. If it is necessary for him to communicate with her, he must employ a messenger. If he meets her on the road by accident, no fine is inflicted; but if he sees her coming and does not slink out of her way, public opinion will condemn him so strongly

<sup>1</sup> Rev. J. H. Weeks, "Notes on some Customs of the Lower Congo People," *Folk-lore*, xx. (1909) p. 309.

<sup>2</sup> Rev. J. H. Weeks, *op. cit.* xix. (1908) p. 418, xx. (1909) p. 201.

The name for such a club-house is *nzo* a *mbongi* or *nzo* a *toko*.

<sup>3</sup> Rev. J. H. Weeks, *op. cit.* xix. (1908) p. 413.

that he will be compelled to send her a goat as a peace-offering and to beg her pardon. Mr. Weeks is probably right in thinking that this custom of avoidance was instituted, and is enforced, for the purpose of preventing incest.<sup>1</sup>

The Ovakumbi are a pastoral tribe in the extreme south of the Portuguese colony of Angola. Their country, known as Humbe, is a plateau about three thousand feet high on the right bank of the Kunene River. The language of the tribe belongs to the Bantu family. The wealth of the people is in their herds, to which they are fondly attached. Their villages, like those of many other pastoral Bantu tribes, consist of round huts arranged in a circle about the cattle pen and surrounded by a fortification of thorns and pales. The government is in the hands of a king (*sobba*) assisted by a council of nobles; his powers are very extensive, and he transmits his dignity, not to his own son, but to the eldest son of his uterine sister or, in default of such a nephew, to his uterine brother. The veneration paid to him amounts almost to worship. He is supposed to possess the power of making rain; and his subjects imagine that a breach of chastity committed by the unmarried youth would, if left unpunished, entail the king's death within the year. Hence all such offences are capital crimes. However, of late years the rigour of the law has been relaxed, and the culprits are now suffered to escape with the payment of a fine in cattle. Among the Ovakumbi all families which trace their descent from a common ancestor are dedicated to a bird or beast, which they may neither kill nor injure. Any breach of this law is rigorously punished. The sacred bird of the royal family is revered by the whole tribe. A white trader who dared to kill one of these birds was brought to trial and had to atone for his crime by forfeiting almost all his stock-in-trade.<sup>2</sup> These facts seem to indicate that the Ovakumbi, like many other Bantu tribes, are divided into totemic clans.

The  
Baluba,  
a Bantu  
people in  
the Congo  
Free State.

Traces of  
totemism  
among the  
Baluba.

The Baluba are an important nation in the southern part of the Congo Free State.<sup>1</sup> Their territory lies between the Sankuru and Kasai rivers. The language which they speak belongs to the Bantu family.<sup>2</sup> Apparently some of the Baluba tribes or clans have totemism. At least this seems to follow from the account which the missionary-traveller, Mr. F. S. Arnot, gives of their tribal divisions. He says: "Not far distant from these parts many of the Luba people have the combination *bashila* in their family name. For instance, the Ba-shilange (Kalamba's people), Ba-shilambwa, Ba-shilanzefu. M. Le Marinel and I were talking over the probable meaning of the combination. We knew that *Ba* was a plural prefix, but it was not until after some thought that I remembered that the word *shila* (sometimes *chila* or *jila*) is that which the Luba people use for 'antipathy.' If I were to ask the Yeke people why they do not eat zebra flesh, they would reply, '*Chijila*,' i.e. 'It is a thing to which we have an antipathy'; or perhaps better, 'It is one of the things which our fathers taught us not to eat.' The Biheans use the word *chi-kola* to express the same thing. The words *nge*, *mbwa*, *nzefu* in the above combination mean respectively leopard, dog, elephant. So it seems as though the word *Ba-shilange* means 'The people who have an antipathy to the leopard'; the *Ba-shilambwa*, 'Those who have an antipathy to the dog'; the *Ba-shilanzefu*, 'Those who have an antipathy to the elephant.'<sup>3</sup> We called a native, and after a great deal of questioning he understood what we were driving at, and we found our conclusion to be correct. He then told us how the Ba-shilambwa and Ba-shilanzefu got their names. At one time they were only known as the Ba-shilambwa because they considered it was wrong to eat the dog. But one day a number of them went across the Lubi River to hunt elephants and stayed many days, during which rains had fallen, the river became much swollen, and when the hunters returned they could not cross. While they were wondering what to do an elephant came

<sup>1</sup> J. Deniker, *The Races of Man*, p. 462.

<sup>2</sup> Sir Harry Johnston, *George Grenfell and the Congo* (London, 1908),

ii. 830.

<sup>3</sup> "An alternative translation might be, 'Those who hold the elephant sacred'—F. S. A."

past, and seeing that they were troubled, asked what was the matter. They were all much surprised, of course, to hear the elephant speak. But it went on, saying they must not be surprised, for it was a human being like themselves; *they* could not cross the river, but *it* could very easily, and advised them to get on its back, which they did, and reached the other side in safety. Ever since that time they have refused to eat the flesh of the elephant, and are now known as the Ba-shilanzefu."<sup>1</sup> In this passage the word *shila*, *chila*, or *jila*, seems only another form of *kissille*, *keshila*, or *kesila*, which, like *xina*, means "taboo" in the Fiot language;<sup>2</sup> and the account points to the existence among the Baluba of at least three clans, which have for their totems respectively the leopard, the dog, and the elephant.

To the north of the Baluba nation is the Bakuba or Bushongo tribe, occupying the valley of the Sankuru River, the waters of which find their way to the Congo. An anthropological expedition organised by Messrs. E. Torday and T. A. Joyce has lately investigated the Bambala subtribe of the Bushongo or Bakuba tribe, and has discovered among them a rather decayed form of totemism. In this subtribe the totems are hereditary, and persons who have the same totem may not marry each other, though in the present generation the prohibition is being disregarded. The institution is said to be very old and to have been instituted by the Creator, the first of the hundred and twenty-three chiefs who have ruled over the nation.<sup>3</sup>

Totemism among the Bambala subtribe of the Bushongo or Bakuba tribe.

Still further to the north, in the region of the Upper Congo and its northern tributaries, a system of exogamy and of something very like totemism is reported to prevail among the Ababua, the Mabinza, the Basoko and Mougelima, the Mogbwandi, the Maele, the Bakere, the Balesa, the Upoto, the Bangala, the N'Gombe, and the

Bobangi. Each of these ethnical groups or nations is divided into a number of independent tribes, which live quite apart from each other in spite of the resemblances of language and customs which may be observed between them. Every tribe again is subdivided into exogamous subtribes or clans, each of which occupies its own well-marked geographical district, and traces its descent from a common ancestor, whose name it bears. Among these peoples every man believes that after death he will be reincarnated in the body of an animal, the kind of animal being that into which the soul of his father transmigrated at his decease; for the totems, as we may call them, are inherited by children from their fathers. The particular kind of animal is the same for all members of a tribe, though they belong to different exogamous clans. For example, the Moganzulu tribe of the Ababua nation has for its sacred animal or totem the hippopotamus; and the Molisi tribe of the same nation has for its totem the chimpanzee. The relation between a man and his totem is one of mutual help and protection. The totemic animal will not hurt the tribesman, and on his side the tribesman will not kill, eat, or touch his totemic animal nor even pass the spot where one of the species has died. The animals which serve as totems are sometimes imaginary; for the natives conceive certain natural phenomena, such as thunder, the rainbow, and the echo, to exist in the form of animals, and these fanciful beings are totems of some tribes. Sometimes, but rarely, the totem is a plant. Among the totems of the Ababua tribes are the leopard, hippopotamus, yellow-backed *Cephalophus* antelope, spiny ant-eater (pangolin *tricuspis*), jerboa, small white-bellied rat, black swallow, plant called *nsâbi*, thunder, and echo. In the Azande nation the totems of tribes include the lion, leopard, serpent, and thunder personified as an animal. In the Mogbwandi nation the totems of tribes include the leopard, elephant, wart-hog, and black serpent. Sometimes a subtribe or clan will allow fugitives from another tribe to settle on their land; and as these fugitives continue to respect their old totemic animal, it follows that two different totems may be found coexisting in the same local subtribe

or clan. Much more rarely the protector or totem of the women differs from that of the men. It seems to do so, for example, among the Bawenza and Moodungwale, two Ababua tribes, and also among the Bakango. In such cases apparently the protectors of the men and women respectively are sex totems or sex patrons, such as we have hitherto met with only in South-East Australia.<sup>1</sup> But details as to these African sex totems or sex patrons, if such they be, are wanting. Further, it appears that individual men or women sometimes have animal-guardians of their own, which generally differ from the totemic animal of the tribe. And apart from the prohibition to eat the flesh of the animal-guardian there exist many taboos on food which might easily be confused with totemic taboos.<sup>2</sup>

The same region in the north-east of the Congo Free State was investigated in the years 1907 and 1908 by an anthropological expedition which was sent out by the Duke of Mecklenburg and led by Mr. J. Czekanowski. The object of the expedition was to explore the tribes which occupy the territory between the head-waters of the Congo and the Nile. Roughly speaking, the region in question forms a vast triangle bounded on the east by the great lakes and the Upper Nile, on the north by the Uele River, and on the south-west by the Upper Congo. Among the tribes which it embraces are (1) the small tribes of the Babembo, Babwari, Bagoma and Bahororo on the western shore of Lake Tanganyika; (2) the Bakondjo in the mountains about the western shore of Lake Albert Edward; (3) the Bakusu, Manyema, and Bakumu on the Upper Congo; (4) the Mabudu, Malika, Banyari, Mubali, Bapaye, Turumbu, and Basoko, scattered over the country which is intersected by the fourth parallel of North latitude and stretches from the great bend of the Congo eastward to near Lake Albert Nyanza. All these tribes speak languages belonging to the great Bantu family. North of them dwells (5) the group of tribes known under the general name of Mangbetu

<sup>1</sup> See above, vol. i. pp. 47 *sq.*, 390 *sq.*, 456 *sq.*, etc.

<sup>2</sup> A. de Calonne Beaufaict, "La Zoolatrie chez les peuplades septen-

trionales du Congo," *Le Mouvement Géographique*, 13 juin 1909, coll. 277-280; *id.* in *Revue des Études Ethnographiques et Sociologiques*, ii. (1909) pp. 193-195.

(Monbutto) and comprising the Balele, Bakere, Niapu, Medje, Maberu, and Mangbele. The little-known Barumbi (Urumbui) tribe, between the Tshopo and Lubila rivers, speaks a language of the Mangbetu family. The Mangbetu are the traders and fishermen of the Uele River valley. Akin to the Mangbetu in material culture, though otherwise isolated, is (6) a group of tribes including the Bangba, Mabudu, Mayogu, Mundu, Abarambo, and Madyo; also (7) another group of tribes to the eastward, which comprises the Momvu, Balese, Bambuba, and Mombutu. (8) The Azande occupy the northern part of the Congo basin and part of the basin of the Bahr-el-Ghazal. Lastly, in the extreme north-east, the coal-black Nilotic negroes of the Upper Nile fall into three groups, namely (9) the Madi group, (10) the Bari group, and (11) the Acholi group, and each of these groups includes a number of separate tribes. Thus the Madi group comprises the Madi in the narrower sense, the Kaliko, Logo, Avokaya, Moru, Lugware, and Lendu; the Bari group includes the Bari, Fadjulu, Yambara, Kuku, and Kakwa; and the Acholi group comprises, amongst others, the Lur or Alur, whose country lies immediately to the north of Lake Albert Nyanza.<sup>1</sup>

These tribes are divided into totemic and exogamous clans with paternal descent.

So far as these tribes were investigated by the Duke of Mecklenburg's Expedition they were found to be divided into totemic and, with very few exceptions, exogamous clans, variously known in different tribes as *enganda*, *ekihanda*, *tunga*, *muliango*, etc., with descent in the paternal line. The single exception to the rule of exogamy is presented by some of the Azande clans, including the Avungura clan, which is the royal clan of the reigning dynasty. In this as in so many royal African clans endogamy is customary, and sexual intercourse between fathers and daughters appears to be not uncommon. With these few exceptions the rule of clan exogamy prevails throughout the entire area visited by the expedition; and nowhere was descent found to be traced in the maternal line. Each clan possesses its own lands and is held together mainly by the law of the blood-feud; wherever that law is suppressed, the clan falls to pieces. If the

Law of the blood-feud.

Zeitraum vom 1 Juni 1907 bis 1 August 1908," *Zeitschrift für Ethnologie*, xli. (1909) pp. 591-611, with the map.

clans live mixed up together, blood revenge assumes the form of secret murder ; if the clans live apart, it takes the character of open war. Further, every clan has an object which it reveres, that is, a totem. The totem is often an animal or plant, and in such cases it may not be eaten and the animal may not be killed by members of its totemic clan. One tribe (the Balera) seems even to take blood revenge for the killing of their totems. In some tribes, such as the Azande, Abarambo, Mayogu, and Bangba, the dead are believed to turn into their totems ; for example, some of the Azande fancy that at death they are transformed into Colobus monkeys, water-snakes, leopards, shrew-mice, lizards, and lightning, according to the particular totemic clan to which they belong. This belief in the transformation or transmigration of the dead into their totems was repeatedly assigned as the reason for not eating the totemic animal ; in eating its flesh the people do not know but that they may be eating one of their deceased relations. The number of clans composing a tribe varies greatly ; among the Bakondjo twelve or fourteen clans were ascertained by the expedition ; among the Banyoro seventy.<sup>1</sup>

Respect  
shewn  
for the  
totem.

Trans-  
formation  
of the  
dead into  
their  
totems.

Thus one result of the Duke of Mecklenburg's Expedition has been greatly to extend the area of Central Africa over which totemism and exogamy are reported to prevail. It is to be hoped that full details as to the totemic systems of these tribes may soon be published.

Of their other marriage customs we know very little. Among the Babembo or Wabemba and the Wahorohoro, two tribes to the west of Lake Tanganyika, even the most distant cousinship forms a bar to marriage. More than that, among the Wahorohoro a man is bound to avoid his female cousin. He may not speak to her nor remain in her company. If she enters a house where he chances to be, he will at once depart.<sup>2</sup> Yet among the Wabemba a man may marry his paternal aunt (*mama ngazi*), though never his

Cousin-  
marriages  
forbidden.

Mutual  
avoidance  
of cousins.

<sup>1</sup> J. Czekanowski, "Die anthropologisch-ethnographischen Arbeiten der Expedition S. H. des Herzogs Adolf Friedrich zu Mecklenburg für den Zeitraum vom 1 Juni 1907 bis 1 August 1908," *Zeitschrift für Ethnologie*, xli.

(1909) pp. 596-598. The number of Banyoro clans ascertained by Mr. Roscoe was forty-six. See above, pp. 516-518.

maternal aunt.<sup>1</sup> Among the Watumbwes and Watabwas, two other tribes of Lake Tanganyika, there is said to be a curious limitation of time set to marriage. When a wife has borne two children, her husband deserts her and takes a new wife, but only to abandon her in turn as soon as he has had two children by her; and so on.<sup>2</sup> Both the Wabemba and the Wahorohoro practise the levirate; when a man dies, his oldest brother marries the widow.<sup>3</sup> On the other hand, among the Wabemba when a man's wife dies he has the right to marry her younger sister, if she is still unmarried. But if all his deceased wife's sisters are married, the widower sends through his father-in-law a present to the husband of his late wife's younger sister, and the woman is ceded to him by her husband for a single day; were that not done, the widower could not get any other woman to marry him. Afterwards the widower restores his deceased wife's sister to her husband and looks out for another wife for himself.<sup>4</sup>

The  
levirate.

Right  
to marry  
a wife's  
younger  
sister.

Avoidance  
of wife's  
mother.

Among the Upoto, who inhabit the banks of the Congo between 20° and 22° East longitude, a man may never look at his mother-in-law, and she may not look at him. If he meets her by chance, he must turn his head away. Were he to look at her, he would have to pay her a fine.<sup>5</sup> Of this common rule there is a curious variation among the Ba-Huana, one of the principal peoples inhabiting the banks of the Kwilu, a tributary of the Kasai, which in its turn flows into the Congo from the south-east. In this tribe a man must avoid both his wife's parents. He may never enter their house, and if he meets them on the road, he must turn aside into the bush to avoid them. On the other hand, the wife may visit her husband's parents, and indeed is expected to show them great respect; but she is bound to avoid her husband's maternal uncle in the same way as her husband avoids her parents.<sup>6</sup>

Avoidance  
of hus-  
band's  
maternal  
uncle.

## CHAPTER XV

### ANALOGIES TO TOTEMISM IN MADAGASCAR

THE question whether totemism exists among the Malagasy, or inhabitants of Madagascar, has been carefully discussed by Mr. A. van Gennep in a learned monograph.<sup>1</sup> After fully considering the evidence he comes to the conclusion that totemism in the strict sense of the word has not yet been found in Madagascar.<sup>2</sup> With that conclusion I agree, and, accordingly, in a treatise on totemism I might dismiss the subject without further remark. Yet if, nevertheless, I have decided to notice some of the Malagasy facts which might be interpreted as totemic, it is because a good deal of uncertainty still exists as to the distinction which is to be drawn between totemism and other systems of superstition which resemble it; and, accordingly, light may be thrown on the line of demarcation by observing some of the cases which lie on the border and, so to say, simulate totemism without really being identical with it. For a similar reason, in dealing with West African totemism I have called attention to the local worship of sacred animals and to the conception of the bush-soul, because these superstitions might easily be confounded with totemism, and may indeed be more or less remotely connected with it, though in practice it is desirable to treat them as different.<sup>3</sup>

Nowhere, perhaps, in the world at the present day are systems of taboo more rife and more elaborate than in Madagascar,<sup>4</sup> and as these taboos (*fady*) are often laid on

Mr. A. van Gennep on the question of totemism in Madagascar.

Systems of taboo (*fady*) prevalent in Madagascar.

<sup>1</sup> Arnold van Gennep, *Tabou et Totémisme à Madagascar* (Paris, 1904). 590 sqq., 593 sqq.

<sup>2</sup> A. van Gennep, *op. cit.* pp. 314 sqq. <sup>4</sup> The common Malagasy word for taboo is *fady*. See W. Ellis, *History of Madagascar* (London, n.d., preface

<sup>3</sup> See above, pp. 574 sq., 583 sqq.,

All Malagasy families seem to have their sacred species of animal which they will not eat.

Sacred animals among the Sakalava.

Sacred animals among the Betsimisaraka.

animals and plants, it is no wonder that some of them should pass at first sight for evidence of totemism. Thus we are told that "all the Malagasy in general regard as sacred (*fadinrazana*) some animal which varies with the family. They do not worship the animal, but they do not eat it from fear of death, because their ancestors (*razana*) never ate of it, and this *fady* is transmitted from father to son. Whence comes this belief? The most intelligent natives among the Malagasy cannot explain it. Among the sacred animals are mentioned the pig, the eel, the babacoote (a species of lemur), the dolphin, the green pigeon, the sheep, the kid, etc. But what is sacred for one family is not so for another. So when a Malagasy is invited to a strange house, he begins by asking his host whether his *fadinrazana* is in the house, in order that he may not approach it and much less eat it."<sup>1</sup> Among the Sakalava of Northern and Western Madagascar "each tribe, each village, each family has adopted a special *fady*; for some it is fowls, for others fish; some will never kill a crocodile, or a wild boar, or a scorpion, or a centipede; in fact, they have gone so far as to live only on rice and fresh or dried beef, and to allow all noxious animals to swarm about them."<sup>2</sup> Again, among the Betsimisaraka, "owing to some connection with their ancestors, certain animals are revered by various tribes: *e.g.* one family claims to be descended from a woman who was born of a cow, and therefore does not eat beef; another shews the greatest respect for the *babakoto* (*Lichanotus brevicaudatus*), the largest species of lemur, because one was said to have saved

dated 1838), i. 402 *sq.*; H. F. Standing, "Malagasy *fady*," *The Antananarivo Annual and Madagascar Magazine*, vol. ii. (Antananarivo, 1896), pp. 252-265 (reprint of the first four numbers); and especially A. van Gennep, *Tabou et Totémisme à Madagascar*, pp. 12 *sqq.*

<sup>1</sup> L. Crémazy, quoted by A. van Gennep, *Tabou et Totémisme à Madagascar*, p. 209.

<sup>2</sup> M. Faucon, quoted by A. van Gennep, *Tabou et Totémisme à Madagascar*, p. 210. Similarly, speaking of the Sakalava, the Rev. A. Walen

observes: "Each family regards certain things as forbidden to itself only, for things forbidden to one family may be allowed in another. Great differences exist in this matter; even in the self-same tribe the things forbidden to each family may be totally different. Yet there are rules regarding this that pertain to the whole clan, and even to the whole tribe, which all must obey, lest the wrath of the ancestors be excited and vengeance come upon them" (A. Walen, "The Sakalava," *Antananarivo Annual and Madagascar Magazine*, vol. ii. (Antananarivo, 1896), p. 241).

an ancestor from a severe fall ; the dead body of this lemur they bury with the honours paid to a human being, and any person having shot one would find it hard to get a night's lodging in one of the villages of the tribe." <sup>1</sup> In one village of this tribe Dr. Catat, who had killed a babacoote, was accused by the inhabitants of having killed "one of their grandfathers in the forest," and he had to promise not to skin the animal in the village. <sup>2</sup> The Betsileo also revere the babacoote as an ancestor of their own, and accord it a solemn funeral, digging a grave for it, wrapping its body in a shroud, weeping and sobbing over it, and making it offerings of their hair. <sup>3</sup> The Betanimena tribe likewise believe the babacoote to be an embodiment of the spirits of their ancestors, and they look with horror on the slaughter of one of these pretty and engaging animals. <sup>4</sup> Hence both they and the Betsimisarakas ransom the animals, alive or dead, in order to set them at liberty or give them an honourable burial. <sup>5</sup> The name *babacoote* means "the old man"; and the grave aspect and sedate manners of the creature, which is found only in the densest parts of the forest, give him a venerable appearance. <sup>6</sup>

The babacoote (a large lemur) is regarded as an ancestor by several tribes.

Again, some tribes in the south of Madagascar claim to be descended from wild boars and will not kill or eat these animals. Accordingly wild boars swarm in their country and ravage the crops without any attempt being made to destroy them. Every man prefers to watch his fields day and night rather than assassinate his grandfather the wild boar. <sup>7</sup> Others of the Malagasy boast of being

Some tribes claim to be descended from wild boars, and others from sheep.

akin to sheep, and they have a horror of eating mutton. They say that all their illnesses and misfortunes come through inadvertently touching the flesh or fat of sheep, or treading on the wool which has fallen from the backs of their woolly fathers. The missionary who reports this tells us that once at a picnic which he gave to his pupils, some sly youths dressed up a stew of mutton and called it veal to amuse themselves at the expense of one of their companions, who was descended from a sheep. The sheepish victim of this practical joke ate heartily of his kinsman and sported about for an hour afterwards, but on being told what he had eaten he broke out into a cold sweat, fell down, vomited, and had to be carried back to the village, where he was sick for three days.<sup>1</sup> Again, "the serpent is honoured by the people in some parts of the island with a superstitious awe, founded upon the extraordinary belief that the spirits of their fathers often inhabit the forms of the reptiles after they leave the body. This horrible idea is very strong among the Betsileo. . . . Many of the Betsileo families have small enclosures near their dwellings, where they maintain numbers of these reptiles, and regard them still as being in a way family connections." One of these serpents used to come daily from the forest to be fed with milk by a family who addressed it by name and treated it as one of themselves. A Catholic priest killed it and had to flee for his life; the whole country rose against him.<sup>2</sup> The Betsileo, we are told, believe in the transmigration of souls, and think that dead Hovas change into a harmless and beautifully marked species of serpent which they call *fangany*. When one of these serpents is found, the people assemble and ask if it is the serpent of So-and-So, mentioning in succession the names of various chiefs who are dead, and the reptile is said to nod its head when the right name is mentioned. The relations of the deceased chief then carry the reptile carefully to his house, where oxen are killed and a funeral feast given. A little of the blood is

Belief of the Betsileo that serpents contain the spirits of the human dead.

presented to the serpent, after which the creature is set free near the chief's grave. Chiefs of lower rank are thought to turn into crocodiles.<sup>1</sup> In one Betsileo town the eel is tabooed (*fady*). Once when a stranger had caught an eel and cooked it in the town, the natives threw away the cooking-pot and all the spoons and plates which had come into contact with the animal.<sup>2</sup> According to Father Abinal, the souls of plebeian Betsileo are supposed to transmigrate into eels, and in order to facilitate this spiritual transformation they open the corpse, extract the inwards, and throw them into a sacred lake; the eel which swallows the first mouthful becomes the domicile of the soul of the departed, and it may not be eaten by the Betsileo.<sup>3</sup> Again, the curious nocturnal animal called the aye-aye (*Cheiromys madagascariensis*) is supposed by many Betsimisaraka to be an embodiment of their forefathers; hence they will not touch it, much less do it an injury. It is said that when they find one of the creatures dead in the forest, they make a tomb for it and bury it with all the forms of a regular funeral. They believe that if they tried to trap it they would die.<sup>4</sup> Again, a species of falcon (*Tinnunculus Newtonii Gurm.*) is deemed sacred by certain families in the neighbourhood of Anorotsangana; a naturalist having killed one of these birds was told by a native that he had committed a sacrilege, and was asked to give up the body that it might be buried in a sacred place.<sup>5</sup> Another species of falcon (*Falco minor*) gives its name (*Voromahery*, "powerful bird") to a tribe which inhabits Antananarivo and its neighbourhood; hence the Malagasy Government has adopted this bird as its crest. They stamp its image on the seals and affix it to the pinnacle of the great

Souls of the dead in eels.

palace.<sup>1</sup> Lastly, the dolphin is deemed sacred by the inhabitants of the Isle Sainte Marie, off the eastern coast of Madagascar. They never chase the dolphin, kill it, or eat its flesh, because a dolphin is believed to have rendered a service to one of their ancestors.<sup>2</sup>

Mr. van  
Gennep  
thinks  
that the  
character-  
istics  
of true  
totemism  
are lacking  
in Mada-  
gascar.

Evidence of the same sort could be multiplied, but the foregoing examples may suffice. Their superficial resemblance to totemism is obvious; yet various considerations seem to shew that the facts do not suffice to prove the existence of totemism proper in Madagascar. Among the considerations which have weighed with Mr. van Gennep in coming to this conclusion are the following:—

(1) The Malagasy have no general word like *totem*, *kobong*, and *siboko* for a tabooed animal.

(2) Apparently the group of people to whom a species of animals or plants is tabooed do not as a rule among the Malagasy bear the name of the forbidden animal or plant.

(3) The tabooed animal is not regarded as the protector of the family or clan who are bound to respect it.

(4) Whereas totemic clans are generally exogamous, among the Malagasy, on the contrary the clans are in the immense majority of cases endogamous.

(5) Among really totemic peoples rites of initiation commonly play a great part; but such rites apparently are and have always been unknown among the Malagasy.<sup>3</sup>

Rather we  
should say  
that some  
of the

For these and other reasons Mr. van Gennep concludes that "none of the characteristics of true totemism are to be found in Madagascar."<sup>4</sup> I should prefer to say that, while

<sup>1</sup> A. van Gennep, *Tabou et Totémisme à Madagascar*, p. 261.

<sup>2</sup> G. Ferrand, *Contes populaires Malgaches* (Paris, 1893), pp. 145 sq.; A. van Gennep, *Tabou et Totémisme à Madagascar*, p. 257.

<sup>3</sup> A. van Gennep, *op. cit.* pp. 306 sqq. With regard to endogamy, the Malagasy in general are divided into three social classes, the nobles (Andrians), the commoners (Hovas), and the slaves (Andevos); and these three classes do not marry with each other. Further, the nobles and commoners are again subdivided into clans, each of which as a rule marries within itself and

not with another clan. See J. Sibreé, "Relationships and the Names used for them among the Peoples of Madagascar, chiefly the Hovas," *Journal of the Anthropological Institute*, ix. (1880) pp. 47 sq.; *id.*, *The Great African Island*, pp. 180-185; A. van Gennep, *Tabou et Totémisme à Madagascar*, pp. 125 sqq., 130, 136 sq., 160 sqq. The rule that totemic peoples practise rites of initiation is subject to large exceptions. Such rites are not found, for example, among the Baganda in Africa, nor among many tribes of North American Indians.

<sup>4</sup> A. van Gennep, *op. cit.* p. 314.

some characteristic features of totemism, such as the hereditary respect for certain species of animals, together with traditions of descent from them, or of help given by them to their human kinsmen, are certainly found among the Malagasy, other characteristic features are apparently lacking, and that in their absence it is safer not to assume the existence of totemism in Madagascar.

characteristics are present, but not all.

While marriage in Madagascar is regulated by endogamy rather than exogamy, certain degrees of kinship are nevertheless commonly recognised as bars to marriage. Thus among the Betsimisaraka we are told that marriage is only permitted between persons of entirely different stocks; the union of even ninth or tenth cousins with each other would create a scandal.<sup>1</sup> With regard to first cousins the general Malagasy rule is that the children of two brothers or of a brother and a sister may marry each other, but that the children of two sisters may not. The rule is thus stated by Mr. Sibree: "Marriage between brothers' children is exceedingly common, and is looked upon as the most proper kind of connection, as keeping property together in the same family (the marriage of two persons nearly related to each other is called *lova-tsi-mifindra*, i.e. 'inheritance not removing'); and there does not seem to result from such marriages any of those consequences in idiocy and mental disorder of the offspring which are frequently seen in European nations as arising from the marriages of first cousins. . . . Marriage between brothers' and sisters' children is also allowable on the performance of a slight prescribed ceremony, supposed to remove any impediment from consanguinity; but that of sisters' children, when the sisters have the same mother, is regarded with horror as incest, being emphatically *fady* or tabooed, and not allowable down to the fifth generation, that is, to the great-great-grand-children of such two sisters."<sup>2</sup> Among the Sakalava of the south and the Mahafaly the children of two sisters

Certain degrees of kinship are recognised as bars to marriage.

Cousin-marriages. The children of two brothers, or of a brother and a sister, may marry each other, but not the children of two sisters.

Avoidance of cousins.

and sons.

may not even sit together on the same mat, much less marry each other.<sup>1</sup> Among the Betsimisaraka, with whom, as we have seen, any degree of kinship is a bar to marriage, a brother may not speak with his sister alone in the house nor sit beside her; and the same rule of avoidance applies to a mother and her son.<sup>2</sup> We have met with similar rules of avoidance between brother and sister, mother and son, in other parts of the world;<sup>3</sup> and, as I have already pointed out, it is probable that all such customs of avoidance have been adopted in order to prevent incest between near relations. The instinct, superstition, or whatever it was which led men to observe these rules, lies at the root of exogamy. It is interesting to observe that instinct, superstition, or whatever it is, operating among a people like the Malagasy, who have not applied the rule of exogamy to their clans.

Incest  
between  
brothers  
and sisters  
among the  
Antambahoaka.

On the other hand, the incest of brother with sister is said to be common among the Antambahoaka, a tribe of cruel and savage manners in South-eastern Madagascar; indeed, such criminal intercourse is believed by the people to lead to fortune. But, apparently, it is nevertheless illicit and practised only in secret.<sup>4</sup> We cannot, therefore, infer from its frequent occurrence that there was a time in the history of the tribe when the marriage of brothers with sisters was legitimate, as it was, for example, in ancient Egypt.<sup>5</sup> But a trace of an older custom of sexual promiscuity, or of something like it, may perhaps be detected in the orgies of shameless licentiousness which formerly celebrated the birth of a child in the royal family. On such an occasion, we are told, the streets and lanes of the Malagasy capital resembled one vast brothel, and the days during which the debauchery lasted were called *andro-tsi-*

tells us, the sorcerer often declares that the expectant mother cannot be delivered unless she confesses any frailty of which she may have been guilty; and in one such case the woman, after a long silence, confessed at last to an intrigue with her brother. This anecdote clearly implies that commerce with a brother is criminal.

<sup>5</sup> See my *Adonis, Attis, Osiris*, Second Edition, pp. 395 *sqq.*

maty, literally "days not dead," by which was meant that the law could not condemn nor the penalty of death be inflicted for any offence committed at this time. The practice was abolished in the reign of King Radama at the earnest remonstrance of Mr. Hastie, the British agent in the capital, who threatened to expose the king and his government to the disgust and contempt of England if similar scenes should be repeated.<sup>1</sup>

The custom of the levirate is observed by the Malagasy. To die without posterity is reckoned by them as a great calamity; so when a man dies childless, his next brother must marry his widow in order to keep the deceased in remembrance. The children of such a marriage are counted the heirs and descendants of the dead elder brother.<sup>2</sup>

The levirate among the Malagasy.

There are some indications that the Malagasy have the classificatory system of relationships. Thus we are told that among them "the words for 'father,' *ray*, and 'mother,' *rény*, are used with a very wide signification, and are applied not only to the actual father and mother, but also to step-father and step-mother (who are also called *raikély* and *rénikély*, 'little father,' and 'little mother'), and to uncles and aunts, with their wives and husbands; so that it is almost impossible to get to know the exact relationship people bear to one another without asking, 'Is he the father who begat him?' or, 'Is she the mother who bore him?' (It may not be unworthy of remark here that the same word, *mitéraka*, is used both for begetting and for bearing children.) Consequently there are no single words in Malagasy corresponding to our 'uncle' and 'aunt'; one must say 'father's brother,' or 'sister,' or 'mother's brother,' or 'sister,' as the case may be. And so it naturally follows that there are also no single words for 'nephew' or 'niece'; these are all *sànaka*, 'children,' and if more minutely described are distinguished as children of their father's or mother's brothers or sisters. . . . Then the word for 'child,' *sànaka* or *ànaka* (the latter is a more affectionate and

AN ETHNOGRAPHICAL SURVEY  
OF TOTEMISM (*Concluded*)

## CHAPTER XVI

### TOTEMISM IN THE UNITED STATES AND CANADA

#### § 1. *Distribution of the Totemic Tribes*

THE institution of totemism was first observed and described by Europeans among the Indian tribes of North America, and it is known to have prevailed widely, though by no means universally, among them. Within the great area now covered by the United States and Canada the system was most highly developed by the tribes to the east of the Mississippi, who lived in settled villages and cultivated the soil; it was practised by some but not all of the hunting tribes, who roamed the great western prairies,<sup>1</sup> and it was wholly unknown to the Californian Indians, the rudest representatives of the Redskin race in North America, who had

Totemism prevailed among the tribes to the east of the Mississippi, who lived in settled villages and tilled the soil; it was practised by some, but not all, of the

<sup>1</sup> On this subject Mr. James Mooney, speaking of the Arapahoes, the most westerly of the Algonkin tribes, observes: "There seems to be no possible trace of a clan or gentile system among the Arapaho, and the same remark holds good of the Cheyenne, Kiowa, and Comanche. It was once assumed that all Indian tribes had the clan system, but later research shows that it is lacking over wide areas in the western territory. It is very doubtful if it exists at all among the prairie tribes generally. Mr. Ben Clark, who has known and studied the Cheyenne for half a lifetime, states positively that they have no clans, as the term is usually understood. This agrees with the result of personal investigations and the testimony of George Bent, a

Cheyenne half-blood, and the best living authority on all that relates to his tribe. With the eastern tribes, however, and those who have removed from the east or the timbered country, as the Caddo, the gentile system is so much a part of their daily life that it is one of the first things to attract the attention of the observer" (J. Mooney, "The Ghost-dance Religion," *Fourteenth Annual Report of the Bureau of Ethnology*, Part ii. (Washington, 1896), p. 956). The absence of totemic clans among the Arapahoes is confirmed by another investigator. See A. L. Kroeber, "The Arapaho," *Bulletin of the American Museum of Natural History*, vol. xviii. Part i. (New York, 1902) p. 8.

made little progress in the arts of life and in particular were wholly ignorant of agriculture. Again, totemism flourishes among the Pueblo Indians of the South-West, who live in massively-built and fortified towns of brick or hewn stone and diligently till the soil, raising abundant crops of cereals and fruits, and whose ancestors even constructed canals on a large scale to irrigate and fertilise the thirsty land under the torrid skies of Arizona and New Mexico.<sup>1</sup> It is certainly remarkable that over this immense region, extending across America from the Atlantic to the Pacific, the institution of totemism should be found to exist and flourish among tribes which have made some progress in culture, while it is wholly absent from others which have lagged behind at a lower level of savagery. As it appears unlikely that these rude savages should have lost all traces of totemism if they had once practised it, while the system survives among their more cultured brethren, we seem driven to conclude that

<sup>1</sup> *Handbook of American Indians North of Mexico*, i. (Washington, 1907) pp. 24-26, 80, 191, 809. As to the Pueblo Indians, their architecture, agriculture, and other arts of life, see H. H. Bancroft, *The Native Races of the Pacific States*, i. 526 sqq.; and below, pp. 195 sqq. Totemism appears to have been unknown among all the Indian tribes who inhabited the Pacific slope of the Rocky Mountains within the area of the United States. "The Indians west of the Rocky Mountains seem to be, on the whole, inferior to those east of that chain. In stature, strength, and activity, they are much below them. Their social organization is more imperfect. The two classes of chiefs, those who preside in time of peace, and those who direct the operations of war,—the ceremony of initiation for the young men,—the distinction of clans or totems,—and the various important festivals which exist among the eastern tribes, are unknown to those of Oregon. Their conceptions on religious subjects are of a lower cast" (H. Hale, *United States Exploring Expedition, Ethnography and Philology* (Philadelphia, 1846), p. 199). Again, George Gibbs, speaking of the tribes of Western Washington

and North-western Oregon, observes: "No division of tribes into clans is observable, nor any organization similar to the eastern tribes, neither have the Indians of this Territory emblematical distinctions resembling the totem" (*Contributions to North American Ethnology*, i. (Washington, 1877) p. 184). Again, Mr. A. S. Gatschet says that the Klamath Indians of South-western Oregon "are absolutely ignorant of the gentile or clan system as prevalent among the Haida, Tlingit, and the Eastern Indians of North America" (*The Klamath Indians of South-western Oregon* (Washington, 1890), p. cvi.) (*Contributions to North American Ethnology*, vol. ii. Part i.). As to the absence of totemism among the Californian Indians, see S. Powers, *Tribes of California* (Washington, 1877), p. 5 (*Contributions to North American Ethnology*, vol. iii.); *Handbook of American Indians North of Mexico*, i. 191. As to the Maidu, a Californian tribe, Mr. R. B. Dixon says: "No trace has been found of any gentile or totemic grouping" ("The Northern Maidu," *Bulletin of the American Museum of Natural History*, vol. xvii. Part iii. May 1905, p. 223).

among the Indians of North America totemism marks a degree of social and intellectual progress to which the more backward members of the Redskin family have not yet attained.

### § 2. *Totemism among the Iroquois*

At the time when America was discovered and for centuries afterwards the Confederacy of the Iroquois was the most powerful Indian nation to the north of Mexico. The six tribes which composed the League were perhaps inferior in the arts of life to some of the southern tribes who dwelt towards the Gulf of Mexico; but they were second to none in political organisation, statecraft, and military prowess. While they waged war, if necessary, with relentless cruelty, the aim of their confederacy was wise and statesmanlike; it was to establish a widespread peace among the surrounding tribes, extinguishing war and substituting the regular forms of civil government for the uncertainties and excesses of private feuds. According to native tradition the League was founded about the middle of the fifteenth century by the sage and benevolent chief Hiawatha, the hero of Longfellow's poem. It reached the height of its power towards the latter end of the seventeenth century, when its dominion extended over the greater parts of the present States of New York, Pennsylvania, and Ohio, together with portions of Canada to the north of Lake Ontario. All the Iroquois tribes were sedentary and agricultural, depending on the chase for only a small part of their subsistence. Their staple food was maize. At intervals varying from ten to twenty years they shifted the sites of their towns, when the supply of fuel in the neighbourhood was exhausted and the diminished crops under their primitive mode of agriculture shewed the need of fresher soil. The use of metals was unknown to the Iroquois; they felled trees and hewed timber by means of fire and stone chisels. Their language belongs to what is called the Huron-Iroquois family, the tribes of which in historical times have occupied a long irregular area of inland territory stretching from Canada to North Carolina. The speech of all these tribes, including the Hurons, the Attiwandaronks or Neutral

Nation, the Eries, and the Andastes or Conestogas, as well as the Iroquois, shewed a close affinity, and there can be little doubt that the ancestors of the tribes once dwelt together in a common home. That home, according to the traditions of all the surviving tribes, the Hurons, the Iroquois, and the Tuscaroras, was the lower valley of the St. Lawrence River.<sup>1</sup>

The land  
of the  
Iroquois.

The Iroquois were first discovered by the Dutch in 1609. Till then they had dwelt enshrouded in the great forests which in those days overspread the country now comprised within the State of New York. At the time of their discovery and for about a century later the confederacy was composed of five tribes, namely the Mohawks or Caniengas, as they should properly be called, the Oneidas, the Onondagas, the Cayugas, and the Senecas or rather Sonontowanas. Of these tribes, the Mohawks possessed the Mohawk River and covered Lake George and Lake Champlain with their flotillas of large canoes, which they handled with the boldness and skill of practised boatmen. West of them the Oneidas held the small river and lake which bear their name, the first in a series of beautiful lakes joined by interlacing streams like fish immeshed in nets of silver. Still further west the Onondagas, the central and in some respects the ruling tribe of the league, owned the two lakes of Onondaga and Skeneateles, together with the common outlet of this inland lake system, the Oswego River, to its issue into Lake Ontario. Still moving westward, the lines of trail and river led to the long winding reaches of Lake Cayuga, about which were clustered the towns of the tribe who gave their name to the sheet of

water ; and beyond them, over the wide expanse of hill and dale surrounding Lakes Seneca and Canandaigua, were scattered the populous villages of the Senecas. The whole of this territory between the Hudson River and Lake Eyrie, embracing the best parts of the modern State of New York, was the home country of the Iroquois as distinguished from the vast territories to north, south, east, and west which they held by the slender tenure of Indian conquest and occupied only in the season of the hunt. But New York was their hereditary country, the centre of their power, and the seat of their council-fires. Here amid the silence of the virgin forests were their villages, their fields of maize and tobacco, their fishing and hunting grounds, and the burial-places of their fathers. The Long House, to which they likened their confederacy, opened its eastern door upon the beautiful Hudson River and its western on the roar of Niagara. It was a noble patrimony, nor were they insensible of its natural and political advantages. It was their boast that they occupied the highest part of the continent. Situated on the head-waters of the Hudson, the Delaware, the Susquehanna, the Ohio, and the St. Lawrence, flowing in every direction to the sea, they held in their hands the gates of the country and could through them swoop down on any point at will ; while valleys, divided by no mountain barriers, and short portages between the upper waters of the rivers, afforded them the means of easy communication among themselves.<sup>1</sup>

arts.

discovered by Europeans has been concisely described by L. H. Morgan, our chief modern authority on the nation. He says: "When discovered the Iroquois were in the Lower Status of barbarism, and well advanced in the arts of life pertaining to this condition. They manufactured nets, twine, and rope from filaments of bark; wove belts and burden straps, with warp and woof, from the same materials; they manufactured earthen vessels and pipes from clay mixed with siliceous materials and hardened by fire, some of which were ornamented with rude medallions; they cultivated maize, beans, squashes, and tobacco, in garden beds, and made unleavened bread from pounded maize which they boiled in earthen vessels; they tanned skins into leather with which they manufactured kilts, leggins and moccasins; they used the bow and arrow and war-club as their principal weapons; used flint stone and bone implements, wore skin garments, and were expert hunters and fishermen. They constructed long joint-tenement houses large enough to accommodate five, ten, and twenty families, and each household practised communism in living; but they were unacquainted with the use of stone or adobe-brick in house architecture, and with the use of the native metals. In mental capacity and in general advancement they were the representative branch of the Indian family north of New Mexico."<sup>1</sup>

The large  
communal  
houses  
of the  
Iroquois.

The large communal houses of the Iroquois were constructed of bark boards fastened on a framework of wooden poles and rafters. A single house was generally from fifty to a hundred and thirty feet long by about sixteen wide, with partitions at intervals of about ten or twelve feet. Each apartment served as a separate house, having a fire in the middle and accommodating two families, one on each side of the fire. Thus a house one hundred and twenty feet long would contain ten fires and twenty families. However long the house, it never had more or less than two doors, one at each of the narrow ends. Over one of these doors was carved the totemic device or crest of the head of the family; which seems to imply, though we are not expressly told so, that only families of the same totem clan dwelt

<sup>1</sup> L. H. Morgan, *Ancient Society*, pp. 69 *sq.*

together in a communal house. The largest villages numbered from eighty to a hundred and fifty houses with a population which, according to Morgan, probably numbered as much as three thousand souls. In ancient times the village was surrounded by a stockade, sometimes by a double or even triple palisade erected on low mounds. But as the power of the Iroquois grew, the need of fortifying their villages decreased and with it the custom.<sup>1</sup>

Each of the six tribes which composed the Iroquois confederacy was subdivided into a number of totemic and exogamous clans. But these clans were not the same in all six tribes. Every tribe had indeed the three clans of the Wolf, the Turtle (Tortoise), and the Bear; and two tribes, namely the Mohawks (Caniengas) and Oneidas, had these three clans and no others. But the other four tribes had each eight clans, which bore different names in the different tribes. Thus the Onondagas had, in addition to the three clans already named, five other clans, namely those of the Deer, Eel, Beaver, Ball and Snipe. The Cayugas and Senecas had also eight clans, which were similar to those of the Onondagas, except that among the Cayugas the Ball clan was replaced by the Hawk clan, while among the Senecas both the Ball and the Eel clans disappear and are replaced by the Hawk clan and the Heron clan. The Tuscaroras had also eight clans, but among them the Hawk, the Heron, and the Ball clans had no place. Instead of them the Wolf clan was subdivided into two, namely the Gray Wolf and the Yellow Wolf; and the Turtle clan in like manner was subdivided into two, the Great Turtle and the Little Turtle. The Bear, Beaver, Eel, and Snipe

The totemic and exogamous clans of the six Iroquois tribes.

<sup>1</sup> L. H. Morgan, *League of the Iroquois*, pp. 313-319; *id.*, *Systems of Consanguinity and Affinity*, p. 153 note<sup>4</sup>. As to the crest carved on the house, Morgan's statement is that "over one of these doors was cut the tribal device of the head of the family" (*League of the Iroquois*, p. 318). By "tribal device" Morgan must mean the totem, since in this early work, as well as in his *Systems of Consanguinity and Affinity*, he regularly uses the terms *tribe* and *tribal* in the sense in

which he afterwards used *gens* and *gentile* to designate what in this work I call the totem clan. It is to be observed that Morgan in all his writings hardly ever uses the word totem, though he very frequently referred to the thing, with which indeed probably no one was more familiar than he. This would suffice to prove how unsafe it is to argue from the absence of the word to the absence of the institution. Compare vol. ii. p. 151 note<sup>1</sup>.

clans were found among the Tuscaroras as among the Onondagas, the Cayugas, and the Senecas. To put this in tabular form:—<sup>1</sup>

## IROQUOIS TRIBES AND CLANS

Tribes.	Clans.
Mohawks (Caniengas)	Bear, Wolf, Turtle (Tortoise).
Oneidas . . . .	Bear, Wolf, Turtle.
Onondagas . . . .	Bear, Wolf, Turtle, Deer, Beaver, Eel, Snipe, Ball.
Cayugas . . . .	Bear, Wolf, Turtle, Deer, Beaver, Eel, Snipe, Hawk.
Senecas . . . .	Bear, Wolf, Turtle, Deer, Beaver, Heron, Snipe, Hawk.
Tuscaroras . . . .	Bear, Gray Wolf, Yellow Wolf, Great Turtle, Little Turtle, Beaver, Eel, Snipe.

Whereas all the other Iroquois tribes have eight clans each, the Mohawks and Oneidas have only three, namely the Bear, the Wolf, and the Turtle. It is uncertain whether the Mohawks and the Oneidas have lost five clans, or whether the other Iroquois tribes have gained them.

The question naturally arises, Why have the Mohawks and the Oneidas only three clans each, while all the other tribes have eight? Have the Mohawks and Oneidas lost five clans or have the other tribes gained them? The eminent ethnologist, L. H. Morgan, inclined to the former view: he thought that among the Mohawks and Oneidas five clans must have become extinct.<sup>2</sup> On the other hand the descendants of the ancient Mohawks and Oneidas affirm that their ancestors never had but three clans, the Bear, the Wolf, and the Turtle (Tortoise); and their statement is corroborated by old treaties, now in the archives of the United States, in which these clans only are mentioned. Further confirmation is supplied by the Book of Rites, a native work compiled and written in the Mohawk language about the middle of the eighteenth century; for in this book also only three clans are recognised as existing in the whole Iroquois nation at the time when the league was formed. Apparently all the towns of the nation were distributed among the three

<sup>1</sup> L. H. Morgan, *Ancient Society*, p. 70; H. Hale, *The Iroquois Book of Rites*, p. 53. Compare H. R. Schoolcraft, *Notes on the Iroquois*, pp. 128 sqq.; L. H. Morgan, *League of the*

*Iroquois*, pp. 79 sqq.

<sup>2</sup> L. H. Morgan, *League of the Iroquois*, p. 81; *id.*, *Ancient Society*, pp. 70, 92.

primary clans of the Bear, the Wolf, and the Turtle (Tortoise); if the other clans existed at all, it would seem that they did so merely as septs or subdivisions of the other three.<sup>1</sup> That the Iroquois clans have a tendency to split up appears to be shewn by the clans of the Tuscaroras, of which the Gray Wolf and the Yellow Wolf seem clearly to be subdivisions of an original Wolf clan, and the Great Turtle and the Little Turtle to be in like manner subdivisions of an original Turtle clan. And one of the subdivisions which has actually taken place among the Tuscaroras appears to be nascent among the Onondagas; for with them the Turtle clan includes two septs called respectively the Great Turtle and the Little Turtle, though as yet these septs are reckoned to form but one clan.<sup>2</sup> On this analogy we should infer that in the Iroquois tribes which have more than three clans the additional clans have been produced, not by amalgamation but by segmentation. According to a tradition of the Seneca Iroquois, the Bear and the Deer were their original clans, and all the rest were subdivisions of them.<sup>3</sup> However, it is quite possible, as Horatio Hale inclined to think, that the additional clans were imported by captive members of foreign tribes, whom the Iroquois incorporated among themselves, either adopting them directly into their own families and clans or more commonly allowing them for a time to remain in separate towns, but treating them as Iroquois. In such cases constant intercourse and frequent intermarriage would soon obliterate all traces of alien origin, while the distinction of clanship might survive.<sup>4</sup>

It is no longer possible to attribute the institution of these totemic clans to the sagacity of savage law-givers who devised and created them for the purpose of knitting

The totemic clans, being

<sup>1</sup> H. Hale, *The Iroquois Book of Rites*, p. 54; as to the history of the "Book of Rites" see *id.* pp. 39 sqq. Early French writers seem to mention only the clans of the Bear, the Wolf, and the Turtle among the Iroquois. See *Relations des Jésuites*, 1647, p. 38 (Canadian reprint, Quebec, 1858); Lafitau, *Mœurs des Sauvages Américains* (Paris, 1724), i. 94, 464; Charlevoix, *Histoire de la Nouvelle France* (Paris, 1744), v. 393 sq. The

last of these writers says that the clan of the Turtle was divided into two, the Great Turtle and the Little Turtle.

<sup>3</sup> L. H. Morgan, *League of the Iroquois*, p. 80; *id.*, *Ancient Society*, p. 91.

<sup>4</sup> H. Hale, *The Iroquois Book of Rites*, pp. 54 sq.

distributed between the various tribes of the League, formed a bond of union between them.

together the various tribes by the ties of marriage and consanguinity. Yet that the subdivision of the whole community into clans had this effect is undeniable. For the members of any one clan, to whatever tribe they belonged, looked upon each other as brothers, and thus all the clans were linked together by bonds of real or imaginary kinship. For example, a Mohawk of the Wolf clan regarded a Seneca of the Wolf clan as his brother; and similarly an Oneida of the Turtle clan welcomed as a brother a Turtle man of the Cayuga or the Onondaga tribe. When a man of one tribe visited a village of another, he was entitled to be received by members of his clan with the same rites of hospitality which he might expect at home. If he was a Bear man, he went to a hut which bore the badge of the Bear, and there he was hailed as a brother. And similarly with members of all the other totem clans. In the eyes of an Iroquois, we are told, every member of his own totem clan, in whatever tribe he might be found, was as much his brother or his sister as if they had been born of the same mother. This cross-relationship between members of the same clan in different tribes was, if possible, even stronger than the relationship between members of the same tribe.<sup>1</sup>

Exogamy of the Iroquois clans.

Regarding all the women of his own clan as his sisters, a man was naturally forbidden to marry any of them. In other words the Iroquois clans were exogamous. "Theory at this time," says Schoolcraft, "founded doubtless on actual consanguinity in their inceptive age, makes these clans brothers. It is contrary to their usages that near kindred should intermarry, and the ancient rule interdicts all intermarriage between persons of the same clan. They must marry into a clan whose totem is different from their own. A wolf or turtle male cannot marry a wolf or turtle female. There is an interdict of consanguinity. By this custom the purity of blood is preserved, while the tie of relationship between the clan themselves is strengthened or enlarged."<sup>2</sup>

<sup>1</sup> L. H. Morgan, *League of the Iroquois*, pp. 81 sq.; H. R. Schoolcraft, *Notes on the Iroquois*, pp. 128, 130 sq.; H. Hale, *The Iroquois Book of Rites*, pp. 52 sq.

<sup>2</sup> H. R. Schoolcraft, *Notes on the Iroquois*, p. 128. How "the purity of blood is preserved" by insisting that it must always be mixed with another, is not perfectly clear.

But marriage among the Iroquois was not regulated merely by the simple rule that a man might not marry a woman of his own clan but might marry a woman of any other. In tribes which were subdivided into eight clans, these clans were distributed in two groups, and the rule was that no man might marry a woman of any of the clans in his own group; but he might marry a woman of any clan in the other group. Thus the two groups of clans formed what among the Australian aborigines we are accustomed to call exogamous classes or phratries. Morgan's original account of these Iroquois classes or phratries is as follows. He says that in each tribe or, as he calls it, nation there were eight clans or, as he at first called them, tribes, arranged in two divisions and named as follows:—

- |         |       |        |         |
|---------|-------|--------|---------|
| 1. Wolf | Bear  | Beaver | Turtle. |
| 2. Deer | Snipe | Heron  | Hawk.   |

Originally, he tells us, the four clans of the first division, namely the Wolf, Bear, Beaver, and Turtle (Tortoise), being brothers, were not allowed to marry among themselves. For a similar reason the four clans of the second division, namely the Deer, Snipe, Heron, and Hawk, were in like manner forbidden to marry among themselves. Any of the first four clans, however, was free to intermarry with any of the second four, "the relation between them being that of cousins. Thus Hawk could intermarry with Bear or Beaver, Heron with Turtle; but not Beaver and Turtle, nor Deer and Deer. Whoever violated these laws of marriage incurred the deepest detestation and disgrace." In process of time, however, says Morgan, the rigour of the system was relaxed, until finally the prohibition was confined to the clan of the individual, which, among the residue of the Iroquois is still religiously observed. They may now marry into any clan but their own. Under the original as well as modern regulation the husband and wife were of different clans. The children always belonged to the clan of their mother.<sup>1</sup>

But we have seen that the number and names of the Iroquois clans varied in the tribes, and accordingly the

<sup>1</sup> L. H. Morgan, *League of the Iroquois*, pp. 79, 83.

Further, the Iroquois clans were grouped in two exogamous phratries.

List of the phratries and clans in the various Iroquois tribes.

grouping of the clans in exogamous classes or phratries within the tribe varied also. These variations have been recorded by Morgan in his later work, *Ancient Society*. From it we learn that in the different tribes the phratries or classes were composed as follows:—<sup>1</sup>

Tribes.	Phratries and Clans.	
Seneca	First Phratry	{ 1. Bear 2. Wolf 3. Beaver 4. Turtle (Tortoise)
	Second Phratry	{ 5. Deer 6. Snipe 7. Heron 8. Hawk
Cayuga	First Phratry	{ 1. Bear 2. Wolf 3. Turtle (Tortoise) 4. Snipe 5. Eel
	Second Phratry	{ 6. Deer 7. Beaver 8. Hawk
Onondaga	First Phratry	{ 1. Wolf 2. Turtle (Tortoise) 3. Snipe 4. Beaver 5. Ball
	Second Phratry	{ 6. Deer 7. Eel 8. Bear
Tuscarora	First Phratry	{ 1. Bear 2. Beaver 3. Great Turtle (Tortoise) 4. Eel
	Second Phratry	{ 5. Gray Wolf 6. Yellow Wolf 7. Little Turtle (Tortoise) 8. Snipe

<sup>1</sup> L. H. Morgan, *Ancient Society*, pp. 90-93.

The two remaining Iroquois tribes, the Mohawks and Oneidas, had only three clans (the Bear, the Wolf, and the Turtle or Tortoise) and no phratries. It is doubtful, as we saw,<sup>1</sup> whether these tribes once had other clans and have lost them or whether they never had more than three. If the original organisation of the Mohawks and Oneidas resembled that of the other Iroquois tribes and consisted of eight clans arranged in two phratries, we must conclude that in the course of time the Mohawks and Oneidas have both lost a whole phratry and one clan of the remaining phratry besides. If on the other hand the Mohawks and Oneidas never had more than the three clans which are common to all the other four Iroquois tribes, it would seem to follow that in these four other tribes the five additional clans and their arrangement in two phratries are later modifications of the original tribal constitution. Which of these two views is the true one, the evidence at our disposal seems insufficient to decide.<sup>2</sup>

Each Iroquois clan, and apparently as a rule each clan of any Indian tribe, had personal names for its members which were its special property and might not be used by other clans of the same tribe. These names either proclaimed by their significance the clan to which they belonged or were known by common reputation to belong to such and such a clan. When a child was born, the mother chose its name, with the concurrence of her nearest relations, from the list of names belonging to the clan which happened at the time not to be in use. But the child was not deemed to be fully named until its birth and name, together with the name and clan of its mother and the name of its father, had been announced at the next ensuing council of the tribe. When a person died, his name could not be used again in the lifetime of his oldest surviving son without the consent of the latter. Two classes of names were in use, one adapted to childhood, and the other to adult life, and the two names were exchanged at the proper period in the same formal manner, one being taken away, to use the Indian expression, and the other bestowed in its place. This exchange of names took place at the age of sixteen or eighteen, the

The Mohawks and Oneidas have no phratries.

Each Iroquois clan had personal names for its members, which were the property of the clan. There were two classes of names, the childhood names and the adult names.

<sup>1</sup> Above, pp. 8 sq.

<sup>2</sup> L. H. Morgan, *Ancient Society*, p. 92.

ceremony being performed by the chief of the clan. At the next council meeting of the tribe the change of names was publicly proclaimed; and if the person was a male he thereupon entered on the duties of manhood. A person who had the control of a particular name, as, for example, the eldest son controlled the name of his deceased father, might lend the name to a friend in another clan; but after the death of the friend the name reverted to the clan to which it properly belonged.<sup>1</sup>

Among the Iroquois the totemic clan, property, titles, and rights of every sort were inherited in the female line by children from their mother, not from their father. Influence of women.

Among the Iroquois the totemic clan, as well as property, titles, and rights of every sort, passed by inheritance in the female line from the mother, not from the father, to the children. Speaking of the Indians of Canada, particularly, it would seem, of the Iroquois and Hurons, Charlevoix observes that "children belong only to the mother and recognise none but her. The father is always like a stranger with regard to them, but so that if he is not considered as father he is nevertheless respected as the master of the hut."<sup>2</sup> Still more emphatically and perhaps with some exaggeration Lafitau writes that "nothing is more real than this superiority of the women. It is in the women that properly consists the nation, the nobility of blood, the genealogical tree, the order of the generations, the preservation of the families. It is in them that all real authority resides; the country, the fields, and all their crops belong to them. They are the soul of the councils, the arbiters of peace and war; they keep the purse or public treasury: it is to them that slaves are given: they make the marriages: the children are in their domain, and it is in their blood that the order of succession is founded. The men, on the contrary, are entirely isolated and limited to themselves, their children are strangers to them, with them everything perishes, it is only the woman who raises up the house; whereas if there are only men in the house, however numerous they may be, and however numerous their children, their family is extinguished. . . . Marriages are contracted in such a way that husband and wife never quit their own family and their own house to make one family and one house by themselves. Each

Husband and wife did not live together.

<sup>1</sup> L. H. Morgan, *Ancient Society*, pp. 78 sq.

<sup>2</sup> Charlevoix, *Histoire de la Nouvelle France* (Paris, 1744), v. 424.

remains in his or her own home, and the children born of these marriages belong to the women who bore them; they are reckoned to the house and family of the wife and not to those of the husband. The husband's goods do not pass to his wife's house, to which he is himself a stranger; and in the wife's house the daughters are reckoned the heiresses in preference to the males, because the males have nothing there but their subsistence."<sup>1</sup> Hence among the Iroquois a man's son was perpetually disinherited: he belonged to his mother's clan and tribe: he could never succeed to his father's property, titles, or office. If, for example, an Onondaga man of the Wolf clan married an Onondaga woman of the Deer clan, their children were all Deer, not Wolves. If a Seneca man of the Bear clan married a Cayuga woman of the Beaver clan, the children were all Cayugas and Beavers, not Senecas and Bears. The same rule regulated the hereditary transmission of the sachemship or office of high chief. When the League of the Iroquois was at its height, it was governed by fifty sachems or high chiefs, whose office was hereditary, whose powers and dignities were equal, and whose jurisdiction was not limited territorially but was coextensive with the League. Of these fifty sachems the Onondagas contributed fourteen, the Cayugas ten, the Mohawks nine, the Oneidas nine, and the Senecas eight. On account of the prevalence of mother-kin among the Iroquois the sachemship was inherited not by the sachem's son but by his brother, or by the son of his sister. According to Schoolcraft, the brother inherited first, and only in default of brothers did the sister's son succeed. According to L. H. Morgan, a better authority, there was no preference for a brother over a sister's son nor any rule of primogeniture either among brothers or among the sons of sisters. Any brother or sister's son might succeed to the sachemship, but he had to be elected or "raised up," as the phrase was, to the office from among the eligible kinsmen by the council of all the other sachems. Thus the office of

The fifty sachemships (the principal chieftainships) of the Iroquois descended in the female line from a man to his brothers and to his sisters' children.

<sup>1</sup> Lafitau, *Mœurs des Sauvages Américains* (Paris, 1724), i. 71-73. The writer seems here to refer especially to the Iroquois and Hurons.

We may compare a similar state of things in some parts of Sumatra. See above, vol. ii. pp. 193 *sqq.*

sachem was both hereditary and elective; yet the rule of heredity was absolute. Once a sachemship had been assigned to a particular totem clan, it might never pass out of it but with the extinction of the clan itself. Hence if, for example, a sachemship had been assigned to the Deer clan of the Cayuga tribe at the original distribution of these offices, it would descend from Deer to Deer in the female line for ever, so long as the Deer clan existed; but the son of a Deer sachem could never inherit his father's office, since he was never of his father's but always of his mother's totem. The descent of property was similar. Whatever a woman acquired or inherited she could dispose of at her pleasure in her lifetime, and at her death it was inherited by her children. What a man acquired or inherited he might in like manner dispose of in his lifetime; if he thus bestowed land or property on his wife or children in the presence of a witness, she or they were allowed to hold it. But if he did not dispose of his property in his lifetime, it could not be inherited by his children at his death; for his children were not of his totem, and it was a law of the Iroquois that property could not pass by descent out of the totem clan.<sup>1</sup>

Property in like manner descended in the female line.

The Iroquois phratry existed for social and religious purposes.

Among the Iroquois, we are told, the phratry existed partly for social and partly for religious objects. In the game of ball, for example, the Senecas played by phratries, one phratry against the other, and they betted against each other upon the result of the game.<sup>2</sup> At a council of the tribe the sachems and lower chiefs in each phratry seated themselves on opposite sides of an imaginary council-fire, and the speakers addressed the two opposite bodies as representatives of the phratries.<sup>3</sup> Again, when a man of one clan had murdered a man of another clan, the clan of the victim used to meet in council to concert measures for avenging his death; while the clan of the murderer also met in council in order to procure a condonation of the crime. But if the two clans belonged to opposite phratries, then the clan to which the slayer belonged might call on the other clans of its

Function of the phratries in cases of homicide.

<sup>1</sup> L. H. Morgan, *League of the Iroquois*, pp. 62 sq., 83-85, 87 sq., 90 sq., 325 sqq.; H. R. Schoolcraft, *Notes on the Iroquois*, pp. 128 sq.

<sup>2</sup> L. H. Morgan, *Ancient Society*, p. 94.

<sup>3</sup> L. H. Morgan, *op. cit.* p. 95.

phratry to unite with it in its efforts to effect a peaceful settlement. For that purpose the phratry would meet in council and send delegates with a belt of white wampum to the council of the victim's phratry requesting them to use their good offices in the cause of peace, and offering apologies and compensation to the family and clan of the murdered man. These negotiations between the councils of the two phratries continued until a decision one way or another was arrived at.<sup>1</sup> Again, at the funerals of eminent persons the organisation in phratries played an important part. For while the phratry of the deceased in a body were the mourners, the ceremonies were conducted by members of the opposite phratry. If it was a sachem who had died, it was usual for the opposite phratry to send, immediately after the funeral, the official wampum belt of the deceased ruler to the central council fire at Onondaga as a notification of his death. There the belt remained till the successor was installed, when it was bestowed on him as a badge of office. When the Seneca sachem Handsome Lake died, the customary address to the dead body and the other addresses before the removal of the corpse were delivered by members of the phratry to which the dead chief did not belong; and it was by men chosen from that phratry, and not from his own, that his mortal remains were borne to their last resting-place.<sup>2</sup> Further, the phratry was directly concerned in the election both of sachems and of the inferior chiefs. After the clan of a deceased sachem or of an inferior chief had elected his successor, it was necessary that their choice should be accepted and ratified by both phratries. It was expected that the other clans of the same phratry would confirm the choice almost as a matter of course; but the other phratry must also assent. Accordingly a council of each phratry met; and if either of them rejected the nomination of the clan, that nomination was set aside, and the clan had to make a fresh one. Even after the choice of the clan had been accepted by both phratries, it was still necessary that the new sachem or the new chief should be inducted into his sachemship or his chieftainship by the

Medicine  
Lodges  
of the  
phratries.

council of the whole confederacy, which alone had power to invest with office. This federal council was composed of the fifty hereditary and elective sachems.<sup>1</sup> Lastly, the Seneca Iroquois used to have two Medicine Lodges, as they were called, one in each phratry. To hold a Medicine Lodge was to observe their highest religious rites and to practise their deepest religious mysteries. But very little is now known concerning these lodges and their ceremonies. Each was a brotherhood, into which new members were admitted by a formal initiation.<sup>2</sup>

Little is  
known  
of the  
religious  
aspect of  
totemism  
among the  
Iroquois.

While we thus possess some authentic information as to the social aspect of totemism among the Iroquois, very little is known of its religious or superstitious side. So far as I know, we are not even told whether people might or might not kill and eat their totem animals. According to L. H. Morgan, it can scarcely be said that any Indian clan had special religious rites; the six annual religious festivals of the Iroquois which he mentions were common to all the clans of the tribe, and were therefore not totemic but tribal.<sup>3</sup> According to one account, the Iroquois professed to be descended from their three great totems, the turtle or tortoise, the bear, and the wolf; and of these animal ancestors the turtle was deemed the most honourable.<sup>4</sup>

The Turtle  
or Tortoise  
clan is said  
to be  
descended  
from a real  
turtle.

The mode in which the Turtle or Tortoise clan originated is said to have been as follows. In early days many mud turtles lived in a pool, but one hot summer the pool dried up, so the turtles had to set out to find another. One very fat turtle waddling in the great heat was much incommoded by his shell, which blistered his shoulders as he walked. At

<sup>1</sup> L. H. Morgan, *Ancient Society*, pp. 97, 129. The federal council, consisting of the fifty sachems, assembled periodically, usually in autumn, at Onondaga, which was in effect the seat of government, to legislate for the commonweal. It declared war and made peace, sent and received embassies, entered into treaties of alliance, regulated the affairs of subject nations, and in a word took all needful measures to promote the prosperity and enlarge the dominion of the League. See L. H. Morgan, *League of the Iroquois*, pp. 62-67.

<sup>2</sup> L. H. Morgan, *Ancient Society*, p. 97.

<sup>3</sup> L. H. Morgan, *op. cit.* pp. 81 sq. The six festivals were the Maple festival, the Planting festival, the Strawberry festival, the Green Corn festival, the Harvest festival, and the New Year's festival. For a description of these festivals, see L. H. Morgan, *The League of the Iroquois*, pp. 182 sqq.

<sup>4</sup> Timothy Dwight, *Travels in New England and New York* (London, 1823), iv. 184, 185.

t by a convulsive effort he made a shift to heave it off together, after which he developed into a man and became progenitor of the Turtle clan.<sup>1</sup>

The Iroquois, like their kindred the Hurons, were very upulous with regard to the prohibited degrees of kinship: among them only those persons might marry each other between whom no relationship could be traced; even the official relationship created by adoption constituted a bar to marriage.<sup>2</sup> In these respects they resemble the greater part of the tribes of American Indians, among whom the rules barring the intermarriage of blood relations are very stringent.<sup>3</sup> On the other hand there are no such restrictions placed on relatives by marriage after the death of a husband or wife.<sup>4</sup> On the contrary, when a husband died, his brother was bound to marry the widow; and conversely, when his wife died, a man was bound to marry either her brother or, in default of a sister, such other woman as the family of his deceased wife might provide for him. The intention of these customs, we are told, was to raise up an heir to the dead. A man who should refuse to marry

the deceased wife's sister would, we are told, expose himself to all the abuse and vituperation which the insulted woman would use to heap upon his devoted head; and this torrent of reprobation, conscious of his delinquency, he had to submit to in silence and with as good a grace as he could command.<sup>5</sup>

The Iroquois, like many, if not all the other nations of North American Indians, possess the classificatory system of kinship. Indeed the existence of that system, which is now known to prevail among so many races, was detected for the first time by the great American ethnologist Lewis H. Morgan in the Seneca tribe of Iroquois, with whom he lived as an adopted member of the tribe. At first he regarded the system as an invention of the Iroquois and

The rules forbidding marriage between persons near of kin were strictly observed by the Iroquois. But a woman was bound to marry her deceased husband's brother, and a man was bound to marry his deceased wife's sister.

The classificatory system of relationship was first discovered by L. H. Morgan in the Seneca tribe of Iroquois.

*sanguinity and Affinity of the Human Family* (Washington, 1871), p. 164 (*Smithsonian Contributions to Knowledge*, vol. xvii.).

<sup>4</sup> L. H. Morgan, *l.c.*

<sup>5</sup> Charlevoix, *Histoire de la Nouvelle France*, v. 419; compare Lafitau, *Mœurs des sauvages américains*, i. 560.

Afterwards Morgan found the classificatory system among many other tribes of North American Indians and among many other peoples of the world.

peculiar to them ; but afterwards to his surprise he found the same elaborate and complicated classification of kindred among the Ojibways, a tribe of Indians of the Algonkin stock, who differ both in blood and language from the Iroquois. The discovery led him to extend his enquiries, chiefly by personal investigation, among the other Indian tribes from the Atlantic to the Rocky Mountains and from the Arctic Sea to the Gulf of Mexico ; and the result was to prove that the many Indian nations scattered over this wide area, and speaking different languages or different dialects of the same language, all possess the classificatory system of relationship in fundamentally the same form, though the terms designating the various relationships differ with the language or the dialect of the tribe. Still further extending the scope of the enquiry, Morgan collected by means of printed circulars a large body of information as to the systems of relationship prevalent in Asia and the islands of the Pacific ; and he was thus able to demonstrate that the classificatory system is still in use at the present day certainly among a very large part, and perhaps among the largest part, of the population of the globe. It is true that his enquiries elicited little or no response from Mexico, Central America, South America, and Africa ; but subsequent research has made it probable that in Africa at least the same system is widespread among the many nations of the great Bantu stock.<sup>1</sup> As the classificatory system of relationship is intimately bound up with, if it did not originate in, the custom of exogamy, with which we are concerned in this work, it may be well to describe the Iroquois form of the system somewhat fully ; both because the Iroquois form is typical of that which prevails among all the other American Indian tribes whose systems of relationship have been examined, and also because it possesses a special interest in having been the first example of the

Account of the classificatory system of relationship among the Iroquois.

<sup>1</sup> L. H. Morgan, *Systems of Consanguinity and Affinity of the Human Family*, pp. 3 sqq. As to the evidence for the prevalence of the classificatory system in Africa, see above, vol. ii. pp. 386 sqq., 401, 416 sq., 444 sq., 509 sqq., 575 sq., 615, 639 sq. It is to be observed that Morgan appears to have

collected no evidence of the prevalence of the classificatory system among the Indian tribes of California ; and, as we have seen (p. 2, note), among these tribes totemism also is apparently absent. The coincidence, if it is such, can hardly be accidental. But to this subject we shall return later on.

stitution which attracted the attention of scientific quirkers. In describing it I shall reproduce the exposition of its discoverer, L. H. Morgan, to some extent in his own words. The terms of relationship here given are those in use among the Seneca tribe of the Iroquois. They differ for the most part only dialectically from those in use among the other tribes of the confederacy.<sup>1</sup>

It is characteristic of the Iroquois as of most other forms of the classificatory system that it has separate terms for elder brother and younger brother, for elder sister and younger sister, but no term for brother in general or for sister in general, though there is a compound term in the plural number and in the common gender for brothers and sisters in general.<sup>2</sup> This careful discrimination of elder brother from younger brother, and of elder sister from younger sister, proves that the distinction between the senior and the junior branches of the family must have been deemed very important at the time when the classificatory system was instituted or took shape. A suggestion as to the origin of the distinction has already been offered.<sup>3</sup>

Different terms for elder and younger brother and sister.

In the classificatory system Morgan distinguishes certain features which he calls indicative. They are those, he says, which determine the character of the system, and to which the rest may be regarded as subordinate. In the Iroquois form of the system the following are the indicative features :—

Indicative features of the classificatory system.

L. H. Morgan, *Systems of Consanguinity and Affinity of the Human Family*, pp. 154 sqq.; *id.*, *Ancient Society*, pp. 436 sqq. A brief notice of the system had been given by the author in his early book, *League of the Iroquois* (Rochester, 1851), pp. 85-87, where he was aware of the wide prevalence and far-reaching importance of the institution.

L. H. Morgan, *Systems of Consanguinity and Affinity of the Human Family*, pp. 154 sq.; *id.*, *Ancient Society*, p. 437. The terms in question are these :—

My elder brother . . . *Há'-je*  
 My younger brother . . . *Há'-gá*  
 My elder sister . . . *Ah'-jē*  
 My younger sister . . . *Ká'-gá*.  
 In all these terms the first syllable

(*Há*, *Há'*, *Ah'*, *Ká'*) appears to be the possessive pronoun "my." See L. H. Morgan, *Systems of Consanguinity and Affinity*, pp. 132, 137. If that is so, it would seem that the word for younger brother (*gá*) is also the word for younger sister, and that the word for elder brother (*je*) differs but little from the word for elder sister (*jē*). In not a few forms of the classificatory system, whereas there are different terms for elder brother and elder sister, there is only one term for younger brother and younger sister. Examples have met us in the course of this work. In the spelling of Indian terms of relationship *á* is the long *a* as in *father*. Morgan represents it by *ä*, which I have altered throughout. The *a* has the sound of *a* in *ale*, *mate*.

<sup>3</sup> See above, vol. i. pp. 179 sqq.

1. I, being a male, call my brother's children my children.

1. In the male branch of the first collateral line, myself being a male, I call my brother's son and daughter my son and daughter, *Ha-ah'-wuk* and *Ka-ah'-wuk*; and each of them calls me father, *Hâ'-nih*. This is the first indicative feature of the system. It places my brother's children in the same category with my own children. Each of their sons and daughters I call severally my grandson and granddaughter, *Ha-yâ'-da* and *Ka-yâ'-da*, and they call me grandfather, *Hoc-sote*. The relationships here given are those which are actually recognised; the terms of relationship are those which are actually applied: no others are known.<sup>1</sup>

2. I, being a male, call my sister's children my nephews and nieces.

2. In the female branch of the first collateral line, myself being still a male, I call my sister's son and daughter my nephew and niece, *Ha-yâ'-wan-da* and *Ka-yâ'-wan-da*; and each of them calls me uncle, *Hoc-no'-seh*. This is the second indicative feature. It restricts the relationships of nephew and niece to the children of a man's sisters, to the exclusion of the children of his brothers. The son and daughter of this nephew and of this niece are not, as might have been expected, my grand-nephew and grand-niece; they are my grandson and granddaughter; and they call me grandfather. This, however we may explain it, is characteristic of the classificatory system; under it the several collateral lines, in their several branches, are ultimately merged in the lineal line.<sup>2</sup>

I, being a female, call my brother's children my nephews and nieces, and I call my sister's children my children.

If now the speaker is a female, then in the male branch of the first collateral line I call my brother's son and daughter my nephew and niece, *Ha-soh'-neh* and *Ka-soh'-neh*; and each of them calls me aunt, *Ah-ga'-huc*. It will be noticed that the terms for nephew and niece which are used by females are quite different from those which are used by males. The son and daughter of this nephew and niece are not, as might have been expected, my grand-nephew and grand-niece; they are my grandson and granddaughter, *Ha-yâ'-da* and *Ka-yâ'-da*; and each of them calls me grandmother, *Oc'-Sote*.

Again, the speaker being still a female, in the female

<sup>1</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, p. 155; *id.*, *Ancient Society*, p. 437.

<sup>2</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, pp. 145, 156; *id.*, *Ancient Society*, p. 438.

branch of the first collateral line I call my sister's son and daughter my son and daughter, *Ha-ah'-wuk* and *Ka-ah'-wuk*; and each of them calls me mother, *No-yeh'*. The children of this son and daughter are my grandchildren; and each of them calls me grandmother, *O'-sote*.<sup>1</sup>

3. In the male branch of the second collateral line, on the father's side, myself being a male, I call my father's brother my father, *Hd'-nih*; and he calls me his son. This is the third indicative feature of the system. It places all of several brothers in the relation of a father to the children of each other.<sup>2</sup>

4. My father's brother's son is my elder or younger brother; if he is older than myself I call him my elder brother, *Hd'-je*, and he calls me his younger brother, *Hd'-gä*; if he is younger than me, these terms are reversed. Similarly, my father's brother's daughter is my elder or younger sister; if she is older than myself I call her my elder sister, *Ah'-je*, and she calls me her younger brother, *Hd'-gä*; if she is younger than me, I call her my younger sister, *Ka'-gä*, and she calls me her elder brother. This is the fourth indicative feature. It creates the relationship of brother and sister amongst the children of several brothers. Such brothers and sisters, to distinguish them from own brothers and sisters, may conveniently be called collateral brothers and sisters. The children of these collateral brothers, myself being a male, are my sons and daughters (*Ha-ah'-wuk* and *Ka-ah'-wuk*), and they call me father; their children are my grandchildren, and they call me grandfather. On the other hand, the children of my collateral sisters are not my children but my nephews and nieces (*Ha-yä'-wan-da* and *Ka-yä'-wan-da*), and they call me uncle; but the children of these nephews and nieces are my grandchildren, and they call me grandfather. It is thus that the classificatory system by its nomenclature brings back the divergent collateral lines into the direct lineal line. If I the speaker am a female, then the children of my collateral brothers are my nephews and nieces, and the children of my collateral sisters are my sons and daughters;

3. I call my father's brother my father.

4. I call my father's brother's children my brothers and sisters.

<sup>1</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, p. 156; *id.*, *Ancient Society*, p. 438.

<sup>2</sup> L. H. Morgan, *ll. c.*

but the children of these nephews and nieces and of these sons and daughters are all alike my grandchildren, the classificatory system merging as usual all these collateral relations in the direct lineal line.<sup>1</sup>

5. I call  
my father's  
sister my  
aunt.

5. In the female branch of the second collateral line, myself being a male, my father's sister is my aunt (*Ah-ga'-huc*), and she calls me her nephew. This is the fifth indicative feature of the system. It restricts the relationship of aunt to the sisters of my father and to the sisters of such other persons as stand to me in the relation of a father, to the exclusion of my mother's sisters. My father's sister's children are my cousins (*Ah-gare'-seh*, singular), and they call me cousin. With myself a male, the children of my male cousins are my sons and daughters, and they call me father, but the children of my female cousins are my nephews and nieces, and they call me uncle. With myself a female, these relationships are reversed: the children of my male cousins are my nephews and nieces, and they call me aunt, but the children of my female cousins are my sons and daughters, and they call me mother. All the children of these sons and daughters and nephews and nieces are alike my grandchildren, whether I am a male or a female, the classificatory system as usual bringing back the divergent collateral lines into the direct lineal line.<sup>2</sup>

6. I call my  
mother's  
brother my  
uncle.

6. On the mother's side in the second collateral line, myself a male, my mother's brother is my uncle (*Hoc-no-seh*), and he calls me his nephew. This is the sixth indicative feature. It restricts the relationship of uncle to my mother's brothers, own and collateral, to the exclusion of my father's brothers; but it at the same time includes the brothers of all other women who stand to me in the relation of a mother. With myself a male, the children of my mother's brother are my cousins (*Ah-gäre'-seh*); the children of my male cousins are my sons and daughters, and they call me father, but the children of my female cousins are my nephews and nieces, and they call me uncle. With myself a female, these last relationships are reversed: the children of my

<sup>1</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, pp. 156 sq.; *id.*, *Ancient Society*, pp. 438 sq.

<sup>2</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, pp. 157 sq.; *id.*, *Ancient Society*, p. 439.

male cousins are my nephews and nieces, and they call me aunt, but the children of my female cousins are my sons and daughters, and they call me mother. The children of all these sons and daughters and nephews and nieces, whether I am a male or a female, are alike my grandchildren, the classificatory system as usual bringing back the divergent collateral lines into the direct lineal line.<sup>1</sup>

The relationship of uncle, that is, of the mother's brother, is in some respects the most important in Indian society, for the uncle is invested with authority over his nephews and nieces, the children of his sister. For practical purposes, indeed, he has more authority over them than their own father. For example, among the Choctaws, if a boy is to be placed at school, it is his uncle and not his father who takes him to the school and makes the arrangements. Among the Winnebagoes, a maternal uncle may require services of a nephew or administer correction, which the boy's own father would neither ask nor attempt. Similarly with the Iowas and Ottoes an uncle may appropriate to his own use his nephew's horse or gun or other personal property without being questioned, which the sufferer's own father would have no recognised right to do. Over his nieces the authority of the uncle, we are told, is still more significant on account of his participation in their marriage contracts, which in many Indian nations carry with them presents. In America, as in many other parts of the world, this authority of the maternal uncle over his nephews and nieces is founded on the principle of female kinship, in accordance with which a man's heirs are not his own but his sister's children.<sup>2</sup>

7. In the female branch of the second collateral line my mother's sister is my mother, *Noh-yeh'*, and she calls me her son. This is the seventh indicative feature of the system. It places all of several sisters, own and collateral, in the relation of a mother to the children of each other.<sup>3</sup>

8. My mother's sister's children are my brothers and

Importance of the mother's brother in Indian society; his authority over his sister's children is greater than that of their father.

7. I call my mother's sister my mother.

<sup>1</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, p. 158; *id.*, *Ancient Society*, p. 439.

<sup>2</sup> L. H. Morgan, *Systems of Con-*

*sanguinity and Affinity*, p. 158.

<sup>3</sup> L. H. Morgan, *op. cit.* p. 158; *id.*, *Ancient Society*, p. 439.

8. I call my mother's sister's children my brothers and sisters. sisters, elder or younger. This is the eighth indicative feature. It establishes the relationship of brother and sister among the children of sisters. The children of these collateral brothers are my sons and daughters, *Ha-ah'-wuk* and *Ka-ah'-wuk*, and they call me father; their children are my grandchildren, and they call me grandfather. But the children of these collateral sisters are my nephews and nieces (*Ha-yá'-wan-da* and *Ka-yá'-wan-da*), and they call me uncle; nevertheless their children are not my grand-nephew and grand-niece, but my grandchildren, and they call me grandfather. It is thus that the classificatory system merges the collateral lines in the direct lineal line. With myself a female, the relationships of the children of collateral brothers and sisters are reversed, as in previous cases: that is, the children of my collateral brothers are my nephews and nieces; the children of my collateral sisters are my children; and the grandchildren of both my collateral brothers and my collateral sisters are all alike my grandchildren, the classificatory system as usual merging the collateral lines in the direct lineal line.<sup>1</sup>

9. I call my father's father's brother my grandfather, and he calls me his grandson. 9. In the third collateral line my father's father's brother is my grandfather (*Hoc'-sote*), and calls me his grandson. This is the ninth and last indicative feature. It places these brothers of my paternal grandfather in the relation of grandfathers to me, and thus prevents collateral ascendants from passing beyond this relationship. The principle which merges the collateral lines in the lineal line works upward as well as downward. The son of such a collateral grandfather is my father (*Há'-nih*), and calls me his son; the children of this collateral father are my brothers and sisters; the children of these collateral brothers are my sons and daughters; the children of these collateral sisters are my nephews and nieces; and the children of these collateral sons and daughters, nephews and nieces are all alike my grandchildren, the classificatory system as usual merging the collateral lines in the direct lineal line. With myself a female, my relations to the children of my collateral brothers and sisters are reversed as in previous cases: that

<sup>1</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, pp. 158 sq.; *id.*, *Ancient Society*, pp. 439 sq.

is, the children of my collateral brothers are my nephews and nieces; the children of my collateral sisters are my sons and daughters; but the children of these collateral sons and daughters, nephews and nieces, are all alike my grandchildren.<sup>1</sup> "These relationships," says their discoverer, L. H. Morgan, "so novel and original, did not exist simply in theory, but were actual, and of constant recognition, and lay at the foundation of their political, as well as social organization."<sup>2</sup>

To recapitulate some of the cardinal relationships in the Seneca-Iroquois form of the classificatory system. In the generation above his own a man applies the same term *Hâ-nih*, "my father," to his own father and to his father's brothers; and he applies the same term *No-yeh*, "my mother," to his own mother and to his mother's sisters. In his own generation he applies the same term *Hâ-je*, "my elder brother," to his own elder brothers and to his elder male cousins, the sons either of his father's brothers or of his mother's sisters; and he applies the same term *Hd'gă*, "my younger brother," to his own younger brothers and to his younger male cousins, the sons either of his father's brothers or of his mother's sisters. Similarly, in his own generation he applies the same term *Ah'-je*, "my elder sister," to his own elder sisters and to his elder female cousins, the daughters either of his father's brothers or of his mother's sisters; and he applies the same term *Kd'-gă*, "my younger sister," to his own younger sisters and to his younger female cousins, the daughters either of his father's brothers or of his mother's sisters. In the generation below his own he applies the same term *Ha-ah'-wuk*, "my son," to his own sons, to his brothers' sons, and also to certain of his cousins' sons, namely, to the sons either of his father's brothers' sons or of his mother's sisters' sons. Similarly,

Recapitulation of the cardinal relationships in the Seneca-Iroquois form of the classificatory system.

<sup>1</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, p. 161; *id.*, *Ancient Society*, p. 440. In the former of these works Morgan stated as the ninth indicative feature that "the first collateral line in its two branches, and the second in its four branches, are finally brought into and merged in the lineal line; and the

same will hereafter be found to be the case with each of the remaining collateral lines as far as the fact of consanguinity can be traced" (*Systems of Consanguinity and Affinity*, pp. 159 sq.). But this he omitted in his later work *Ancient Society*.

<sup>2</sup> L. H. Morgan, *League of the Iroquois*, p. 87.

in the generation below his own he applies the same term *Ka-ah'-wuk*, "my daughter," to his own daughters, to his brothers' daughters, and also to certain of his cousins' daughters, namely, to the daughters either of his father's brothers' sons or of his mother's sisters' sons. On the other hand, he calls his father's sister, not "my mother," but "my aunt" (*Ah-ga'-huc*); and he calls his mother's brother, not "my father," but "my uncle" (*Hoc-no'-seh*). He calls his male cousin, the son either of his father's sister or of his mother's brother, not "my brother," but "my cousin" (*Ah-gäre'-seh*); and, similarly, he calls his female cousin, the daughter either of his father's sister or of his mother's brother, not "my sister," but "my cousin" (*Ah-gäre'-seh*).<sup>1</sup> Thus, as usually happens under the classificatory system, a sharp distinction is drawn between cousins, according as they are the children, on the one hand, of two brothers or of two sisters, or, on the other hand, of a brother and a sister respectively; for whereas the children of two brothers or of two sisters are brothers and sisters to each other, the children of a brother and a sister respectively are only cousins.

Sharp distinction drawn between consins under the classificatory system.

The Seneca-Iroquois form of the classificatory system has no classificatory terms for husband and wife. Herein it marks an advance on the more primitive Australian form of the system, which possesses classificatory terms for husband and wife.

If we compare the classificatory system of the Seneca-Iroquois with the classificatory system of the Australian aborigines, we are struck by the absence from the former of classificatory terms for husband and wife. Amongst the Australians, as we have seen, a man calls his wife's sisters, whether own or tribal, also his wives; and a woman calls her husband's brothers, whether own or tribal, also her husbands.<sup>2</sup> But among the Seneca-Iroquois a man has a different name for his wife and for his wife's sister; he calls his wife *da-yake'-ne*, "my wife," but his wife's sister he calls *ka-yä'-o*, "my sister-in-law." Similarly, among the Seneca-Iroquois a woman has a different name for her husband and for her husband's brothers; she calls her husband *da-yake'-ne*, "my husband," but her husband's brother she calls *ha-yä'-o*, "my brother-in-law."<sup>3</sup> Thus the classificatory system of the Seneca-Iroquois does not assign to every husband a number

<sup>1</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, pp. 167 sq., and Table II., pp. 293 sqq.; *id.*, *Ancient Society*, pp. 447 sqq.

<sup>2</sup> See above, vol. i. pp. 299, 300,

301, 302, 303, 362, 375 sq., 380, 384, 405, 420, 441, 461, 500.

<sup>3</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, p. 169; *id.*, *Ancient Society*, pp. 451, 452.

of wives, and to every wife a number of husbands ; in other words, so far as the terms for husband and wife are concerned, it does not, like the Australian system, point to the marriage of a group of men to a group of women. But if we are right in supposing that the classificatory system in general is based on group marriage,<sup>1</sup> it appears to follow that the Seneca-Iroquois form of the system is less primitive than the Australian form, since, on this hypothesis, it has lost the cardinal feature of the whole system, namely, the recognition of the marital rights of a group of men over a group of women. That the Iroquois form of the system is less primitive than the Australian form seems perfectly natural, when we consider the great advance in culture which the Iroquois had made by comparison with the aborigines of Australia.

### § 3. *Totemism among the Hurons or Wyandots*

The Hurons were an Indian nation inhabiting that portion of Canada which lies to the north of Lake Ontario and the Saint Lawrence River. Their principal villages were along the Georgian Bay and around Lake Simcoe. Toronto is said to take its name from a Huron word meaning "plenty"; for this neighbourhood was once a favourite settlement of these Indians. But their traditions seem to shew that they had migrated southward to this happier land from the bleak region which stretches from Hudson's Bay to the coast of Labrador. By blood and language the Hurons belonged to the same stock as the Iroquois ; indeed their language, or at all events the language of their descendants the modern Wyandots, is said to be almost identical with that of the Seneca-Iroquois. The various tribes composing the nation were united in a confederacy down to 1650, when they were broken up, conquered, or dispersed by their kinsmen but deadly enemies the Iroquois, who had waged with them a savage and relentless warfare. A remnant afterwards established themselves near Quebec ; but by far the largest portion, after several changes, settled near Sandusky in Ohio, from

The Hurons or Wyandots, an Indian nation of Canada closely related by blood and language to the Iroquois.

Conquest of the Hurons by the Iroquois.

<sup>1</sup> See vol. i. pp. 303 *sqq.*

Great communal houses of the Hurons.

which towards the middle of the nineteenth century they were finally removed to Kansas. The name by which the Hurons called themselves was Wendat, and this, corrupted into the form Wyandot, is the name still borne by their descendants.<sup>1</sup> The Hurons subsisted by hunting, fishing, and agriculture. They raised crops of maize, which they baked into bread. Like the Iroquois, they lived in great communal houses from a hundred and fifty to two hundred feet long, each with a passage running down the middle. Such a house might accommodate from sixteen to twenty-four families, every family occupying its own compartment on one side of the central passage, while every pair of families shared a fire between them. The chief town of the Hurons is said to have contained two hundred such large communal houses. In some places they changed the sites of their villages or towns at intervals of ten, fifteen or thirty years, more or less, when the wood in the neighbourhood was exhausted.<sup>2</sup>

The Wyandots divided into totemic and exogamous clans with descent in the female line.

The Wyandots are divided into totemic and exogamous clans with descent in the female line. A list of eight of these clans was published by L. H. Morgan;<sup>3</sup> but subsequent research has extended the list of clans to twelve, though five of them are now extinct. Mr. William E. Connelly, who has studied the Wyandot language and traditions for many years and is an adopted member of the tribe, gives the following list of Wyandot clans on the authority of a trustworthy witness, George Wright, whose evidence agrees in all main points with that of another witness, Matthias Splitlog:—<sup>4</sup>

<sup>1</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, pp. 151 sq.; H. Hale, *The Iroquois Book of Rites*, pp. 10 sq., 15 sq.; W. E. Connelly, "The Wyandots," *Archæological Report*, 1899 (Toronto, 1900), pp. 92 sqq.; *Handbook of American Indians North of Mexico*, Part i. (Washington, 1907), pp. 584 sqq. According to L. H. Morgan (*op. cit.* p. 283) the original form of the name Wyandot is *wane-dote*, "calf of the leg," a name given to these Indians by the Iroquois and adopted by themselves. It refers,

says Morgan, to their manner of stringing buffalo-meat.

<sup>2</sup> F. Gabriel Sagard, *Le Grand Voyage du pays des Hurons*, Nouvelle Edition (Paris, 1865), pp. 80-83, 92 sqq.

<sup>3</sup> L. H. Morgan, *Ancient Society*, p. 153. The eight which he mentions are the clans of the Wolf, Bear, Beaver, Turtle, Deer, Snake, Porcupine, and Hawk.

<sup>4</sup> William E. Connelly, "The Wyandots," *Archæological Report*, 1899 (Toronto, 1900), pp. 100 sq. Major J. W. Powell had previously given a

1. Big Turtle (Mossy Back). *Tēhn-gyowh'-wīshh-hīh-yōōh-wah'-nēh-rōh-nōh*. The people of the Big (or Great) Turtle.
2. Little Turtle (Little Water Turtle, sometimes called Speckled Turtle). *Tēhn-yēh-rōh-nōh*. The people of the Little Turtle.
3. Mud Turtle. *Yah'-nēhs-tēh'-rōh-nōh*. The people of the Mud Turtle.
4. Wolf. *Tēhn-ah'-rēh-squāh'-rōh-nōh*. The people of the Wolf, or the clan that smells a bone.
5. Bear. *Tēhn'-yoh-yēh<sup>nu</sup>-rōh-nōh*. The people of the Bear, or the clan of the Claws.
6. Beaver. *Tsooh-tih-hah-tēh-zhūh'-tōōh-tēh-rōh-nōh*. The people of the Beaver, or the clan of the House-Builders.
7. Deer. *Tēhn-dāh'-āh-rāh-rōh-nōh*. The people of the Deer, or the clan of the Horns.
8. Porcupine. *Yēh-rēh'-hēhseh'-rōh-nōh*. The people of the Porcupine, or the clan of the Quills.
9. Striped Turtle. *Māh-nōh-hōōh'-kah-shēh-rōh-nōh*. The people of the Striped Turtle, or the clan that carries the Stripes (or colors).
10. Highland Turtle, or Prairie Turtle. *Yēh-tōh-zhōōh'-rōh-nōh*. The people of the Prairie Turtle, or the clan that carries the House.
11. Snake. *Tēhn-goh<sup>nu</sup>-rōh-nōh*. The people of the Snake, or the clan that carries the Trail. Sometimes called the Little Clan of the Horns.
12. Hawk. *Tēhn-dēh-sōh'-rōh-nōh*. The people of the Hawk, or the clan of the Wings.

The order in which the clans are here mentioned is that of their precedence. Their camp was formed "on the shell of the Big Turtle." It began at the right fore-leg and continued round the shell to the right to the left fore-leg in the order of precedence, except that the Wolf clan could be either in the centre of the encampment or at "the head of the Turtle." The march was under the direction of the Wolf clan and was commanded by the chief of the Wolf clan.<sup>1</sup>

It will be observed that of these twelve clans no less than five have for their totems various sorts of turtles (tortoises). "The Turtle clans," says Mr. Connelly, "were always considered the most ancient and most honorable of the tribal subdivisions, and the order of precedence and encampment was according to the 'shell of the Big Turtle.'" The turtle

list of eleven Wyandot clans as follows:—Deer, Bear, Highland Turtle (striped), Highland Turtle (black), Mud Turtle, Smooth Large Turtle, Hawk, Beaver, Wolf, Sea Snake, and Porcupine. See J. W. Powell, "Wyandot

Government," *First Annual Report of the Bureau of Ethnology* (Washington, 1881), p. 59.

<sup>1</sup> W. E. Connelly, "The Wyandots," *Archaeological Report*, 1899 (Toronto, 1900), pp. 101 sq.

Order of precedence of the clans and their positions in camp.

Of the twelve Wyandot clans five have for their totems various kinds of turtles or tortoises.

The twelve Wyandot clans are supposed to have been produced by the subdivision of three original clans, the Big Turtle, the Little Turtle, and the Mud Turtle.

idea was interwoven with the whole social and political fabric of ancient Tionnontate institutions."<sup>1</sup> The multiplicity of the clans, in Mr. Connelly's opinion, was the effect of a long development, some of them being added later or produced by a subdivision of the original clans. These original clans he conjectures to have been only three in number, namely, (1) Big Turtle, (2) Little Turtle, (3) Mud Turtle. He believes that the Wolf, Bear, Beaver, Deer, Porcupine, and Hawk clans were subsequently added in this order as the tribe increased in numbers. Next, if he is right, the Mud Turtle clan split into two, the seceding party taking the name of Prairie Turtle, or Highland Turtle, or Box Turtle. And after that the Big Turtle clan also split up, the seceding party taking the name of Striped Turtle. Lastly, the Deer clan subdivided, the seceding party taking the name of Snake.<sup>2</sup> This snake, which the seceders took for their totem, was a purely mythical animal, at least he is unknown to zoologists of the present day; for he is said to have had four legs and the horns of a stag. These limbs and antlers the serpent was doubtless enriched with for the sake of indicating the relationship in which the Snake clan stood to the Deer clan; and for the same reason the Snake clan was sometimes called the Little Clan of the Horns. In the absence of the fabulous snake the members of the Wyandot clan revered the rattlesnake as a wise kinsman of their first ancestor.<sup>3</sup> According to tradition, the origin of the clan was as follows. A fair young woman went into the woods to receive the addresses of all the animals and to choose one

Legends of the descent of the Wyandot clans from their totemic animals.

<sup>1</sup> W. E. Connelly, "The Wyandots," *Archæological Report*, 1899 (Toronto, 1900), p. 98. The Tionnontates, according to Mr. Connelly, were the progenitors of the Wyandots (*op. cit.* pp. 92 *sqq.*).

<sup>2</sup> W. E. Connelly, *op. cit.* p. 98. The French Jesuit Charlevoix, writing in 1721, gives a different account of the clans or, as he calls them, the tribes of the Hurons. He says that the Hurons were the nation of the Porcupine, and that they were subdivided into three tribes named respectively after the Bear (or, according to others, the Roebuck, *chevreuil*), the

Wolf, and the Turtle. He adds that the Tionnontates, who formed part of the Hurons, ordinarily called themselves the Tobacco Nation. And of the Indians in general he writes: "Each tribe bears the name of an animal, and the whole nation has also its animal, whose name it assumes and whose figure is its badge or, if you will, its coat of arms. The only way in which they sign treaties is by drawing these figures, unless special reasons induce them to substitute others." See Charlevoix, *Histoire de la Nouvelle France* (Paris, 1744), v. 393.

<sup>3</sup> W. E. Connelly, *op. cit.* pp. 103 *sq.*

of them for a husband ; their offspring was to form a new clan, which was to take its name from the animal-spouse. The snake, by assuming the guise of a handsome young man, won her heart and her hand. But after their marriage he could not keep his human form long ; and when his bride saw him in his true serpent-shape, she fled in terror, and he pursued her, calling on her to return. She escaped, but gave birth to a brood of snakes, who were the progenitors of the Snake clan.<sup>1</sup> Like the Snake, the original totemic Hawk was to a great extent mythical ; for he is spoken of sometimes as a hawk, sometimes as an eagle, and often simply as the big bird or the chief of birds. However, unlike the mythical Snake, he has left real descendants, who appear to be the species of bird known as Cooper's hawk or possibly the sparrow hawk.<sup>2</sup> The origin of the Hawk clan is said to have resembled that of the Snake clan. The bird assumed the form of a young man and married a young woman, who lived with him in his nest. She bore him a number of hawks, who became the ancestors of the Hawk clan.<sup>3</sup> The other Wyandot clans appear similarly to have believed that they were descended from their respective totems.<sup>4</sup>

According to Major J. W. Powell the totemic clans of the Wyandots were grouped in four phratries or exogamous classes as follows : —<sup>5</sup>

The distribution of the Wyandot clans in phratries.

*First Phratry* : 1. Bear ; 2. Deer ; 3. Striped Turtle.

*Second Phratry* : 1. Highland Turtle ; 2. Black Turtle ; 3. Smooth Large Turtle.

*Third Phratry* : 1. Hawk ; 2. Beaver ; 3. Wolf.

*Fourth Phratry* : 1. Sea Snake ; 2. Porcupine.

But according to Mr. W. E. Connelly there were never more than two phratries or exogamous classes in the Wyandot tribe, while the Wolf clan always stood between them, belonging to neither, but bearing the relation of cousin to both of them, and acting as mediator or umpire

<sup>1</sup> W. E. Connelly, "The Wyandots," *Archaeological Report*, 1899 (Toronto, 1900), pp. 117 sq.

<sup>2</sup> W. E. Connelly, *op. cit.* p. 104.

<sup>3</sup> W. E. Connelly, *op. cit.* pp. 118 sq.

<sup>4</sup> This is apparently implied by Mr.

W. E. Connelly (*op. cit.* pp. 107 sq., 114).

<sup>5</sup> J. W. Powell, "Wyandot Government," *First Annual Report of the Bureau of Ethnology* (Washington, 1881), p. 60.

both between the phratries and between the clans. The two phratries according to Mr. Connelly were these:—<sup>1</sup>

*First Phratry*: 1. Bear; 2. Deer; 3. Snake; 4. Hawk.

*Second Phratry*: 1. Big Turtle; 2. Little Turtle; 3. Mud Turtle; 4. Beaver; 5. Porcupine; 6. Striped Turtle; 7. Highland Turtle or Prairie Turtle.

*Mediator, executive power, umpire*: the Wolf clan.

The Wyandot phratries were formerly exogamous as well as the clans.

In former times marriage was prohibited within the phratry as well as within the totem clan; for the clans grouped together in a phratry were regarded as brothers to each other, whereas they were only cousins to the clans of the other phratry. Hence, for example, a Bear man was forbidden to marry not only a Bear woman but also a Deer woman, a Snake woman, and a Hawk woman. But at a later time, before the Methodist missionaries came among the Wyandots, the rule prohibiting marriage within the phratry was abolished, and the prohibition was restricted to the totemic clan; in other words, the clan continued to be exogamous after the phratry had ceased to be so.<sup>2</sup>

Every member of a Wyandot clan bears a personal name, which has some reference to his totem.

Every individual in a Wyandot clan bears a personal name which has some reference to his totem. Each clan possesses a list of such names, which are its peculiar property and may not be used by any other clan. The names are formed by rules in accordance with immemorial custom and may not be changed. They must be derived from some part, habit, action, or peculiarity of the totemic animal, from some myth connected with it, or from some property, law, or peculiarity of the element in which the animal lived. Thus a personal name was always a clan badge; a man disclosed his clan by mentioning his name.<sup>3</sup> The following are examples of these names:—<sup>4</sup>

<sup>1</sup> W. E. Connelly, "The Wyandots," *Archæological Report*, 1899 (Toronto, 1900), p. 106.

<sup>2</sup> W. E. Connelly, *l.c.*

<sup>3</sup> W. E. Connelly, *op. cit.* pp. 107 sq., 109; J. W. Powell, "Wyandot

Government," *First Annual Report of the Bureau of Ethnology* (Washington, 1881), pp. 59 sq.

<sup>4</sup> J. W. Powell, *op. cit.* p. 60; W. E. Connelly, "The Wyandots," *Archæological Report*, 1899 (Toronto, 1900), pp. 109 sqq.

Clan.	Personal Names.
Deer . . . .	Lean Deer (man), Spotted Fawn (woman), Old Deer, Old Doe.
Bear . . . .	Long Claws (man), Grunting for her Young (woman).
Striped Turtle . . . .	Going round the Lake (man), Gone from the Water (woman).
Mud Turtle . . . .	Hard Skull (man), Finding Sand Beach (woman).
Smooth Large Turtle	Throwing Sand (man), Slow Walker (woman).
Wolf . . . .	One who goes in the Dark (man), Footprint of Wolf, Always Hungry (woman).
Snake . . . .	Sitting in a curled Position (man).
Porcupine . . . .	The one who puts up Quills (man), Tree-climber.

Parents were not allowed to name their child. The name was bestowed by the clan, and until about fifty years ago the ceremony of name-giving took place only once a year and always at the ancient anniversary of the Green Corn Feast. The name was formally bestowed by the chief of the clan, a civil officer chosen by the Council-women of the clan. These Council-women, we are told, "stood at the head of the clan and regulated its internal affairs." At the ceremony of name-giving the clan chief took up an assigned position, and the parents of the clan, who had children to be named, filed before him, while the Council-women stood beside him and announced to him the name of each child. The chief then bestowed it on the infant, either by merely declaring it to the parents or by taking the child in his arms and addressing it by its name.<sup>1</sup>

The naming of children among the Wyandots.

These clan names, strangely enough, were responsible for much of the fierce warfare which one tribe waged upon another. For it was a religious duty to keep every one of the clan names in use; in ancient times none of the names was allowed to become obsolete. The animal from which the clan claimed descent was always angry when the names

These clan names were a source of tribal warfare.

<sup>1</sup> W. E. Connelly, "The Wyandots," *Archaeological Report, 1899* (Toronto, 1900), p. 108; J. W. Powell, "Wyandot Government," *First Annual Report of the Bureau of Ethnology* (Washington, 1881), p. 64.

referring to him were not in use. To suffer a clan to become extinct was a reproach to the nation or tribe. Hence war was often undertaken to replenish the depleted ranks of a decaying clan by incorporating in it the captured women and children.<sup>1</sup>

Each clan has its distinctive ornaments. Each clan has a distinctive mode of painting the face and distinctive ornaments to be used by the members at festivals and religious ceremonies. The chief of the clan and the Council-women wear distinctive chaplets at their inauguration.<sup>2</sup>

Descent of the clan is in the female line; in other words, all children, whether male or female, belong to the clan of their mother, not of their father.<sup>3</sup> Property also descends in the female line. The head of the family and of the household is the woman; the hut and all household articles belong to her, and at her death they are inherited by her eldest daughter or nearest kinswoman. When the husband dies, his property goes, not to his children, but to his brother or to his sister's son.<sup>4</sup>

Each clan has its own lands, which it cultivates; and within these lands each household has its own patch. It is the Women-Councillors who partition the clan lands among the households; and the partition takes place every two years. But while each household has its own patch of ground, cultivation is communal; that is, all the able-bodied women of the clan take a share in cultivating every patch; every clan has a right to the services of all its women in the cultivation of the soil.<sup>5</sup>

According to one account the Wyandots were governed by a council composed of four women and one man, the chief of the clan. The women councillors are elected by the civil government of the Wyandot clans, as it is described for us by the American ethnologist, Major J. W. Powell, is very remarkable. According to him, each clan is governed by a council composed of four women and one man, the chief of the clan. The women councillors are elected by

the heads of households, who are themselves women ; and chiefly of women ; they in turn elect the chief of the clan.<sup>1</sup> We have seen that women ; but this it is the women councillors who biennially partition the clan is stoutly denied by lands among the householders and decide on the names members of the tribe. which are to be given to all the children of the clan.<sup>2</sup> Further, if Major Powell is right, the whole tribe is governed by a council which consists of all the councils of the clans united ; so that in the tribal council there are four times as many women as men.<sup>3</sup> This statement, however, is doubted by a good authority, Mr. W. E. Connelly, according to whom the Wyandots deny that it ever was true. "All that I have been able to learn on this subject," says Mr. Connelly, "leads me to believe that the tribal council was composed of the hereditary chief of the tribe, the chief of each clan, and such additional warriors of ability and courage as the hereditary chief and council chose to 'call to the council-fire.' Women were not excluded from the deliberations of the council in certain contingencies, and were often called upon to give an opinion. The oldest Wyandots say that women were never recognised as members of the tribal council. This is the more probable, as the tribal council possessed only delegated and limited authority. The government of the Wyandots, in its functions, was a pure democracy. Questions affecting the interests of the whole tribe were determined by it in general convention, and men and women alike were heard, and voted, the majority ruling."<sup>4</sup> According to Mr. Connelly, the office of tribal chief was hereditary in the Deer clan from the remotest times to which tradition extends down to a great battle in which all the chiefs of that clan except one perished. After that the tribal council transferred the office to the Porcupine clan ; but many Wyandots still regard the hereditary chief of the Deer clan as the true head of the tribe.<sup>5</sup> According to L. H. Morgan, the office of sachem or

The office of tribal chief is hereditary in the female line, passing from a chief to his brother or to his sister's son.

<sup>1</sup> J. W. Powell, "Wyandot Government," *First Annual Report of the Bureau of Ethnology* (Washington, 1881), p. 61.

1881), p. 61.

<sup>4</sup> W. E. Connelly, "The Wyandots," *Archaeological Report, 1899* (Toronto, 1900), p. 120.

<sup>2</sup> Above, pp. 35, 36.

<sup>3</sup> J. W. Powell, "Wyandot Government," *First Annual Report of the Bureau of Ethnology* (Washington,

<sup>5</sup> W. E. Connelly, *op. cit.* pp. 120 sq. The battle referred to in the text seems to have been fought about the end of the eighteenth century.

civil chief is hereditary in the clan, but elective among its members. Yet he adds that "the office of sachem passes from brother to brother, or from uncle to nephew; but that of war-chief was bestowed in reward of merit, and was not hereditary." In Morgan's time there were seven Wyandot sachems, one for each existing clan.<sup>1</sup> That hereditary chieftainships among the Hurons passed in the female line from the chief to his sister's son was long ago observed by the Jesuit missionaries.<sup>2</sup>

Blood  
revenge.

When a man of one clan has been murdered by a man of another, the aggrieved relatives appeal for justice to the council of the murderer's clan; if they fail to obtain compensation, it becomes the duty of the victim's nearest kinsman to avenge his death.<sup>3</sup>

Little is  
known  
of the  
religious  
side of  
totemism  
among the  
Wyandots.

With regard to the religious or superstitious aspect of totemism among the Wyandots, as among most other tribes of American Indians, our information is exceedingly scanty. Major Powell says that each phratry "has the right to certain religious ceremonies and the preparation of certain medicines"; and that each clan "has the exclusive right to worship its tutelary god, and each individual has the exclusive right to the possession and use of a particular amulet."<sup>4</sup> By "tutelary god" he means the totem of the clan, but he adduces no evidence which justifies such a description of the totem, nor does he tell us in what the alleged worship and amulets consist.

Classifica-  
tory system  
of relation-  
ship  
among the  
Wyandots.

Lastly, it may be observed that the Wyandots possess the classificatory system of relationship in the same form as the Iroquois, though the terms of relationship differ verbally with the difference of the language. The terms are fully recorded by L. H. Morgan.<sup>5</sup>

#### § 4. Totemism among the Algonkin Tribes on the Atlantic

The Delaware Indians or Lenape, as they call themselves, were a branch of the widely-spread Algonkin stock. When they were discovered, their home country was the region around and north of Delaware Bay.<sup>1</sup> They tilled the ground, made pottery, and were skilful in manufacturing bead work and feather mantles, and in dressing deer skins. Though their weapons and tools were mostly of stone, they had a considerable supply of native copper, which they made into arrow-heads, pipes, and ornaments. Their houses were not communal; each family had its separate hut. Maize was their staple food; but they had also large fields of squashes, beans, and sweet potatoes.<sup>2</sup>

The Delawares or Lenapes were divided into three exogamous clans, or perhaps rather phratries, which had for their totems respectively the Turtle (Tortoise), the Turkey, and the Wolf. Early writers such as Loskiel and Heckewelder speak of these divisions as tribes. In referring to their totems the Delawares did not use the ordinary names for the animals; they spoke of the wolf as Round Foot, of the turtle as Crawler, and of the turkey as Not-chewing. The Turtle clan claimed and was allowed a superiority and ascendancy over the other two because their relation the turtle was not the common animal of that name, but the great original tortoise which, according to Indian mythology, bears the earth on its back.<sup>3</sup> The wolf was honoured

because according to their traditions he was their benefactor, having helped their ancestors to issue from the bowels of the earth. As to the turkey, the totem of the third tribe, his merits were "that he is stationary, and always remains with or about them." Such is the account of the origin of the totems which was given by an old Indian to the missionary J. Heckewelder, who resided among or near the Delawares for more than thirty years. Heckewelder adds: "They are as proud of their origin from the tortoise, the turkey, and the wolf, as the nobles of Europe are of their descent from the feudal barons of ancient times, and when children spring from intermarriages between different tribes, their genealogy is carefully preserved by tradition in the family, that they may know to which tribe they belong."<sup>1</sup>

The Delawares used the figures of their totems as badges or crests.

The Delawares used the figures of their totems as badges or crests to distinguish the tribal subdivision to which they belonged. On this subject Heckewelder says: "The Turtle warrior draws either with a coal or paint here and there on the trees along the war path the whole animals carrying a gun with the muzzle projecting forward, and if he leaves a mark at the place where he has made a stroke on his enemy, it will be the picture of a tortoise. Those of the Turkey tribe paint only one foot of a turkey, and the Wolf tribe, sometimes a wolf at large with one leg and foot raised up to serve as a hand, in which the animal also carries a gun with the muzzle forward. . . . The Indians, in their hours of leisure, paint their different marks or badges on the doors of their respective houses, that those who pass by may know to which tribe the inhabitants belong. Those marks also serve them for signatures to treaties and other documents."<sup>2</sup>

The three divisions of the Delawares, whether they are to be called clans, phratries, or subtribes, were originally

p. 39; *Handbook of American Indians north of Mexico*, i. 386. The fable that the earth rests on the back of a turtle or tortoise was told by the Hurons and Iroquois as well as by the Delawares. <sup>2</sup> J. Heckewelder, *op. cit.* pp. 246 sq.

exogamous ; no man might marry a woman of the same subdivision as himself. The Delawares and Iroquois, says Loskiel, "never marry near relations. According to their own account, the Indian nations were divided into tribes, for no other purpose, than that no one might ever, either through temptation or mistake, marry a near relation, which at present is scarcely possible, for whoever intends to marry, must take a person of a different tribe."<sup>1</sup> In this passage the writer means by tribes what we now commonly call totemic clans or phratries.

The three clans or phratries of the Delawares were exogamous.

While the three Delaware divisions of the Turtle, the Turkey, and the Wolf may have been originally totemic clans of the ordinary type, they seem in course of time to have passed into something like phratries through subdividing themselves into twelve subclans, each of which had some of the attributes of a clan. When this segmentation had taken place, the prohibition to marry within the clan ceased to apply to the three original clans and was restricted to the new subclans. Some of the names of these subclans point clearly to their origin in the segmentation of the old clans ; for example, three subclans of the Turtle clan are called Smallest Turtle, Little Turtle, and Snapping Turtle respectively. Three of the subclans of the Turkey clan are called Big Bird, Red Face, and Ground Scratcher respectively. And two of the Wolf clan are called Big Feet and Long Body respectively. The names of all these subclans are personal and feminine.<sup>2</sup>

The Turtle, Turkey, and Wolf clans seem to have become phratries through subdivision into exogamous subclans.

According to another American ethnologist, the late D. G. Brinton, the three Delaware divisions of the Turtle, the Turkey, and the Wolf were neither clans nor phratries, but local subtribes, each inhabiting a territory of its own. He identifies them with the Unamis, the Unalachtigos (Wunalachtikos), and the Minsis (Monsys, Munsees), which are mentioned by Loskiel as the three tribes of the Delawares ; the Unamis, according to Brinton, are the Turtle people and inhabited the right bank of the Delaware

According to Brinton, the three divisions of the Delawares were neither clans nor phratries, but local subtribes.

<sup>1</sup> G. H. Loskiel, *History of the Mission of the United Brethren among the Indians in North America*, Part i. p. 56.

<sup>2</sup> L. H. Morgan, *Ancient Society*,

pp. 171 sq., who gives a complete list of the subclans. He obtained it at the Delaware reservation in Kansas in 1860 with the aid of William Adams, an educated Delaware.

River ; the Unalachtigos or Wunalachtikos were the Turkey people and had their principal seat on the affluents of the Delaware near where Wilmington now stands ; and the Minsis, Monsys, or Munsees were the Wolf people and dwelt in the mountains at the head-waters of the Delaware.<sup>1</sup> It is quite possible that three original totemic clans of the ordinary type may in time have segregated themselves from each other, and occupying each a territory of its own have assumed the character of local subtribes. Such changes have already been noted in Australia.<sup>2</sup> But it is to be observed that whereas the passage from kinship groups to local groups appears generally to take place under the influence of male descent,<sup>3</sup> the Delawares to the last retained their female descent both of the clan and of property,<sup>4</sup> which so far tells against Brinton's theory. Yet on the other hand, the Delawares had a practice of sometimes naming a child into its father's clan ; and a son who thus received one of the names peculiar to his father's clan became thereby a member of the clan with the right to succeed to his father. This remarkable custom, which we shall meet with again among the Shawnees,<sup>5</sup> may very well, as L. H. Morgan points out, have served to initiate a change of descent from the female to the male line ; once it had been invented the device could hardly fail to grow in favour and be adopted more and more, since it possessed the great advantage of readily enabling children to succeed to the rank and property of their fathers.<sup>6</sup> With this easy instrument for converting maternal into paternal descent, the old maternal

The Delawares had the practice of sometimes naming a child into its father's clan. This practice may have served as a stepping-stone from maternal to paternal descent.

<sup>1</sup> D. G. Brinton, *The Lénape and their Legends*, pp. 36-40. For the mention of the three Delaware tribes of the Unamis, Wunalachtikos, and Monsys, see G. H. Loskiel, *History of the Mission of the United Brethren*, Part i. p. 2. According to L. H. Morgan (*Ancient Society*, p. 173) the Munsees were an offshoot of the Delawares with the same three totemic and exogamous clans of the Turtle, the Turkey, and the Wolf, with descent in the female line. All statements of Morgan as to the internal organisation of the Indian tribes deserve to be treated with great respect, as he was

a man of an accurate scientific mind, who had made very extensive personal investigations on this subject among the Indians. As to the Munsees, see *Handbook of American Indians north of Mexico*, i. 957.

clans of the Delawares may possibly have settled down, as Brinton held, into local subtribes.

The Delawares have the classificatory system of relationship, though their form of the system differs in some points from that of the Iroquois. Thus in the generation above his own a man calls his father's brother "my little father" (*Noh'-tut*), not "my father" (*Noh'-h'*); and similarly he calls his mother's sister "my little mother" (*N'-gâ-hâ'-tut*), not "my mother" (*N'-gâ'-hase*). In his own generation he has, as usually happens under the classificatory system, no single words for "brother" and "sister" in general, but has separate words for "my elder brother" (*Nah'-hâns'*) and "my younger brother" (*Nah'-eese'-u-miss*), for "my elder sister" (*Na-mese'*) and "my younger sister" (*Nah'-eese-u-miss*). But he does not, as under the Iroquois form of the system, apply the terms "my elder brother," "my younger brother," "my elder sister," "my younger sister" to certain of his cousins, namely, the children either of his father's brother or of his mother's sister; on the contrary he distinguishes these cousins from his brothers and sisters by applying to them different terms which may be translated "my step-brother" (*Nee-mâ'-tus*) and "my step-sister" (*N'-do-kwâ-yome'*). Moreover, he applies the very same terms to his other cousins, the children either of his father's sister or of his mother's brother; so that with the Delawares the sharp discrimination which under the classificatory system is usually made between cousins, according as they are the children, on the one hand, of two brothers or of two sisters, or, on the other hand, of a brother and a sister, has been wholly obliterated. In the generation below his own a man applies the same term "my son" (*N'-kweese'*) to his own son and to his brother's son, and the same term "my daughter" (*N'-dâ-nuss'*) to his own daughter and to his brother's daughter.<sup>1</sup> Thus the Delaware form of the classificatory system marks a distinct advance upon the Iroquois form; since it distinguishes the father's brother from the father and the mother's sister from the mother, and has ceased to treat certain cousins as brothers and sisters.

<sup>1</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, pp. 220 sq., and Table II. pp. 293 sqq.

The classificatory system of relationship among the Delawares.

The Delaware form of the system marks an advance upon the Iroquois form.

Totemism among the Mohicans or Mohegans, another Algonkin tribe on the Atlantic slope.

Another Algonkin tribe on the Atlantic slope which possessed totemism were the Mohicans, Mahicans, or Mohegans, who have been immortalised by Fenimore Cooper. They occupied the upper valley of the Hudson River in New York, but their territory extended eastward into Massachusetts. They lived, like the Iroquois, in long communal houses. Their villages and towns were stockaded, with a stretch of woodland on one side and of cornland on the other.<sup>1</sup> Like the Delawares, they were divided into three sections which had for their totems the Turtle, the Turkey, and the Wolf respectively. And among the Mohicans, as among the Delawares, these original clans had developed through subdivision into phratries. It is rare, as Morgan justly says, to find among the American Indians the evidence of the segmentation of original clans preserved so clearly as it is among the Mohicans. For the three phratries bore the names of the three totemic animals, the Turtle, the Turkey, and the Wolf, and each of them included one or more clans whose totem was identical with that of its phratry; so that the evolution of these clans by segmentation of the three original clans, now changed into phratries, seems to be highly probable.<sup>2</sup> The Mohican phratries and clans are as follows:—<sup>3</sup>

Among the Mohicans the three original clans (the Turtle, the Turkey, and the Wolf) have become phratries by subdivision.

Phratries.	Clans.
I. Wolf .	1. Wolf. 2. Bear. 3. Dog. 4. Opossum.
II. Turtle .	1. Little Turtle. 2. Mud Turtle. 3. Great Turtle. 4. Yellow Eel.
III. Turkey .	1. Turkey. 2. Crane. 3. Chicken.

Exogamy and female descent of the clans.

Marriage within the clan is forbidden; descent is in the female line. The office of sachem is hereditary in the clan, passing either from brother to brother or from uncle to nephew.<sup>4</sup>

The Mohicans had the classificatory system of relationship,

<sup>1</sup> *Handbook of American Indians north of Mexico*, i. 786-788, 926. p. 173.

<sup>3</sup> L. H. Morgan, *op. cit.* p. 174.

<sup>2</sup> L. H. Morgan, *Ancient Society*,

<sup>4</sup> L. H. Morgan, *op. cit.* p. 174.

but in some points their form of it differed curiously both from that of the Delawares and from that of the Iroquois. Thus in the generation above his own a man applied the same term "my mother" (*N'-guk'*) to his own mother and to his mother's sisters. But on the other hand he did not call his father's brother "my father" (*Noh.*). He called him by a different term, which may be translated "my step-father" (*Nâ-jâ'-ku'*). In his own generation he had, as usually happens under the classificatory system, separate terms for "elder brother" and "younger brother," for "elder sister" and "younger sister." In the generation below her own a woman applied the same terms "my son" (*N'-di-ome'*) and "my daughter" (*Ne-chund'*) to her own son and daughter and to the sons and daughters of her sisters. But on the other hand a man did not call his brother's son and daughter "my son" and "my daughter"; he called them both by a different term, which may be translated "my step-child" (*Nâ-kun'*).<sup>1</sup> Thus under the Mohican system, whereas a man distinguished between his real father and his father's brothers, he did not distinguish between his real mother and his mother's sisters; and whereas a man discriminated his own sons from his brother's sons, a mother did not discriminate her own children from her sister's children. In other words, so far as the terms of relationship go, paternity among the Mohicans was more certain than maternity. This is just the reverse of what on general grounds we might have anticipated. It tends to confirm the view which I have already advocated that the relationships which the classificatory system has primarily in view are not physical but social.<sup>2</sup>

The classificatory system of relationship among the Mohicans.

It is a peculiarity of the Mohican system that it defines paternity more exactly than maternity.

Another Algonkin tribe or confederacy of New England which had totemism and exogamy were the Abenakis or Abnakis. The confederacy so named had its centre in the present state of Maine. They lived in communal houses of a conical shape and tilled the soil, using fish as manure.

Totemism and exogamy among the Abenakis or Abnakis.

<sup>1</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, p. 222, and Table II. pp. 293 sqq. On p. 222 Morgan says that under the Mohican system "my mother's sister is my

step-mother." But this seems to be a mistake, for it contradicts the table on p. 339. In the text I follow the table.

<sup>2</sup> See above, vol. i. pp. 303 sqq.

Maize was an important article of their diet, but they depended for their subsistence partly on hunting and still more on fishing. Each tribe had a civil chief and a war chief. A general council of the whole tribe, including women as well as men, decided on questions of peace and war.<sup>1</sup> The Abenakis were divided into fourteen clans named after the following animals :—

- |                  |                      |                   |
|------------------|----------------------|-------------------|
| 1. Wolf.         | 2. Wild Cat (Black). | 3. Bear.          |
| 4. Snake.        | 5. Spotted Animal.   | 6. Beaver.        |
| 7. Cariboo.      | 8. Sturgeon.         | 9. Muskrat.       |
| 10. Pigeon Hawk. | 11. Squirrel.        | 12. Spotted Frog. |
| 13. Crane.       | 14. Porcupine.       |                   |

Descent of the clan is now in the male line. Inter-marriage in the clan was anciently prohibited, but the prohibition has now lost much of its force. The office of sachem was hereditary in the clan.<sup>2</sup>

### § 5. Totemism among the Ojibways

The Ojibways or, as their name is popularly corrupted, the Chippeways, are one of the largest Indian tribes to the north of Mexico. They ranged over a region a thousand miles long from east to west, comprising both shores of Lake Huron and Lake Superior and extending westward across Minnesota to the Turtle Mountains in Northern Dakota. At present they number about thirty thousand and are nearly equally distributed between Canada and the United States.<sup>3</sup> The Ojibways belong to the great Algonkin stock, who at the date of the discovery of America occupied an immense area from the Rocky Mountains on the west to Hudson's Bay, Labrador, and the St. Lawrence River on the east; while southward their territory extended along the Atlantic coast to Carolina, and down the east bank of the Mississippi in Wisconsin and Illinois to Kentucky. But the Algonkins were essentially a northern people; their home country was along the chain of the great lakes and the valley of the St. Lawrence. All Canada belonged to them, except a narrow

Exogamy and paternal descent of the clans.

The Ojibways or Chippeways are a great Algonkin tribe who ranged over a vast territory about the great lakes and westward.

fringe on the north held by the Eskimo and the peninsula between Lakes Huron, Erie, and Ontario, which was occupied by the Hurons and the Neutral Nation.<sup>1</sup> The Ojibways were in the main a race of hunters and fishers, roving their native forests on foot or paddling their light birch-bark canoes in search of game and fish. Theirs is a land of fine lakes, murmuring streams, and deep interminable woods, where the tall pines are intermingled with oak, ash, elm, beech, birch, and the sugar-maple, as well as with many kinds of wild-fruit trees, such as the wild plum, the crab apple, the elder, and the cherry; while the underwood abounds with blackberries, huckleberries, strawberries, raspberries, wild grapes, and marsh cranberries. In summer the woodlands and glades are gay with a profusion of beautiful flowers, brilliant in colour but scentless. The climate is in general pure and dry and the sky clear; but the extremes of summer heat and winter cold are great. Spring sets in suddenly and under the burning summer sun vegetation shoots up rapidly. The autumns are lovely; the foliage then assumes hues of almost unimaginable variety and splendour.<sup>2</sup> But while the Ojibways in their native state were essentially a race of hunters and fishermen, they subsisted to a great extent on the wild rice which grows in rank luxuriance in the rivers and lakes of their country. They collected the grain in canoes, paddling or punting through the rice swamps, beating down the long stalks into the canoe, and threshing out the grain with poles. In this way they would collect from twenty to thirty bushels a day. The rice so obtained was dried over a fire, husked, and made into soup. Rivalry for the possession of the rice-swamps was one of the chief causes of the wars which the Ojibways waged with the Dacotas, Foxes, and other Indian tribes. Some of them also cultivated maize; they thought that the knowledge of Indian corn and of its cultivation had been imparted to their forefathers by the Great Spirit.<sup>3</sup>

The land of the Ojibways.

The Ojibways subsisted to some extent on wild rice, which grows plentifully in their country.

Though copper abounds in some parts of their country, the Ojibways made no use of it except to decorate their medicine-bags ; for they deemed it sacred. The principal town of the tribe was situated on an island in Lake Superior, where a perpetual fire is said to have been maintained as a symbol of tribal unity.<sup>1</sup>

Totemism among the Ojibways. Dr. Edwin James on the totems of the Algonkins in general.

The Ojibways were divided into a large number of totemic clans. Indeed, totemism appears to have been common to the whole Algonkin stock of which the Ojibways formed part. On this subject a well-informed writer, Dr. Edwin James, observes : " Among the Indians of the Algonkin stock, every man receives from his father a *totem*, or family name. They affirm that no man is, by their customs, allowed to change his totem ; and as this distinctive mark descends to all the children a man may have, as well as to all the prisoners he may take and adopt, it is manifest that, like the genealogies of the Hebrews, these totems should afford a complete enumeration of the stocks from which all the families have been derived. It differs not from our institution of surnames, except that the obligations of friendship and hospitality, and the restraint upon intermarriage, which it imposes, are more scrupulously regarded. They profess to consider it highly criminal for a man to marry a woman whose totem is the same as his own ; and they relate instances where young men, for a violation of this rule, have been put to death by their nearest relatives. They say, also, that those having the

Marriage with a woman of the same totem punished with death.

*craft's Indian Tribes of the United States*, ii. 138. As to the superstitious veneration of the Indians for copper, which they found in Lake Superior and treasured as heirlooms or family deities, see *Relations des Jésuites*, 1667, p. 8 (Canadian reprint, Quebec, 1858). As to the abundance of copper ore in the neighbourhood of Lake Superior, see J. Carver, *Travels through the Interior Parts of North America*, Third Edition (London, 1781), pp. 138 sq. ; W. H. Holmes, " Aboriginal Copper Mines of Isle Royale, Lake Superior," *American Anthropologist*, New Series, iii. (1901) pp. 684 sqq.

same totem are bound, under whatever circumstances, as they meet, even though they should be of different and hostile bands, to treat each other not only as friends, but as brethren, sisters, and relatives of the same family. Of the origin of this institution, and of the obligation to its strict observance, the Indians profess to know nothing. They say they suppose the totem was given them in the beginning, by their creator. Like surnames among us, these marks are now numerous; and, as in the case of our surnames, it is difficult to account for their multiplicity, without supposing a time when they might have been changed, or new ones adopted, more easily than at present. . . . It may be observed, that the Algonkins believe all other Indians to have totems, though, from the necessity they are in general under, of remaining ignorant of those of hostile bands, the omission of the totem in their picture writing, serves to designate an enemy. Thus, those bands of Ojibbeways who border on the country of the Dahcotah, or Sioux, always understand the figure of a man without totem, to mean one of that people."<sup>1</sup> "The word *totem* is of the Ojibbeway language, and, like almost all others, is readily moulded into the form of a verb."<sup>2</sup>

Social obligations imposed on persons of the same totem.

Totem is an Ojibway word.

Similarly, the historian of the Ojibway tribe, W. W. Warren, tells us that the Algonkins or, as he chooses to call them, the Algics, "as a body are divided into several grand families or clans, each of which is known and perpetuated by a symbol of some bird, animal, fish, or reptile, which they denominate the Totem or Do-daim (as the Ojibways pronounce it), and which is equivalent, in some respects, to the coat of arms of the European nobility. The Totem descends invariably in the male line, and inter-marriages never take place between persons of the same symbol or family, even should they belong to different and distinct tribes, as they consider one another related by the closest ties of blood and call one another by the nearest terms of consanguinity."<sup>3</sup>

W. W. Warren on the totems of the Algonkins.

<sup>2</sup> *Ibid.* p. 316.

<sup>3</sup> William W. Warren, "History of the Ojibways, based upon Traditions and Oral Statements," *Collections of the Minnesota Historical Society*, v. (Saint Paul, Minn., 1885) pp. 34 *sq.*

The word totem, which has now passed into the languages of most civilised nations, is borrowed, as we have seen,<sup>1</sup> from the language of the Ojibways, who used it in the same sense in which we employ the term. Thus L. H. Morgan, one of the best authorities on the American Indians, says that "in the Ojibwa dialect the word *totem*, quite as often pronounced *dodaim*, signifies the symbol or device of a gens; thus the figure of a Wolf was the totem of the Wolf gens,"<sup>2</sup> where by "gens" Morgan as usual means what we call a clan. Again, H. R. Schoolcraft, another of the best authorities on the American Indians, speaking of the Iroquois, says that "nothing is more fully under the cognizance of observers of the manners and customs of this people, than the fact of the entire mass of a canton or tribe being separated into distinct clans, each of them distinguished by the name and device of some quadruped, bird, or other object in the animal kingdom. This device is called, among the Algonquins (where the same separation into families or clans exists), *totem*."<sup>3</sup> Again, Schoolcraft tells us with respect to the Chippewas (Ojibways) that "the most striking trait in their moral history is the institution of the Totem—a sign manual, by which the affiliation of families is traced, agreeing, more exactly, perhaps, than has been supposed, with the armorial bearings of the feudal ages. And this institution is kept up, with a feeling of importance, which it is difficult to account for. An Indian, as is well known, will tell his specific name with great reluctance, but his generic or family name—in other words, his *Totem*, he will declare without hesitation, and with an evident feeling of pride."<sup>4</sup> Again, the Rev. Peter Jones, one of our principal authorities on the Ojibways, writes that "their belief concerning their divisions into tribes is, that many years ago the Great Spirit gave his red children their toodaims, or tribes, in order that they might never forget that they were all related to each other, and that in time of distress or war they were bound to help each other. When an Indian, in travelling, meets with a

strange band of Indians, all he has to do is to seek for those bearing the same emblem as his tribe; and having made it known that he belongs to their toodaim, he is sure to be treated as a relative. Formerly it was considered unlawful for parties of the same tribe to intermarry, but of late years this custom is not observed. I have remarked that when the English speak of the different *nations* of Indians they generally call them *tribes*; which term is quite erroneous, as each *nation* is subdivided into a number of tribes or clans, called 'toodaims,' bearing some resemblance to the divisions of the twelve tribes of Israel mentioned in Scripture; and each tribe is distinguished by certain animals or things, as, for instance, the Ojibway nations have the following toodaims:—the Eagle, Reindeer, Otter, Bear, Buffalo, Beaver, Catfish, Pike, Birch-bark, White Oak Tree, Bear's Liver, etc., etc. The Mohawk nation have only three divisions, or tribes—the Turtle, the Bear, and the Wolf."<sup>1</sup>

It is perfectly clear that the writers whom I have just quoted—James, Warren, Morgan, Schoolcraft, and Jones—all employ the word *totem* to designate what we call the clan totem and not what is sometimes called the individual totem or *manitoo*; and, further, we have the express testimony of several of them that *totem* (*dodaim*, or *toodaim*) is an Algonkin and in particular an Ojibway word. When we remember, further, that of these writers Jones was a full-blooded Ojibway, that Warren was nearly a half-blood Ojibway, that Schoolcraft was married to an Ojibway wife and was intimately acquainted with the tribe,<sup>2</sup> and that Morgan spent years among the Indians, and was adopted by them, we may feel fairly confident that they could not be mistaken as to the meaning of a word in such common use as totem, and that therefore we are right in following them in their application of the term to the totem or sacred emblem of the clan. It is desirable to make this plain, because the first writer who introduced the term totem or, as he spelled it, *totam* to the notice of Europeans appears to have applied it incorrectly, not to the clan totem, but to the *manitoo* or guardian spirit of the individual. The

All these writers applied the term totem to the clan totem, not to the individual totem or *manitoo*.

<sup>1</sup> Rev. Peter Jones, *History of the Ojibway Indians*, p. 138.

<sup>2</sup> *Handbook of American Indians north of Mexico*, i. 278.

But the Indian interpreter, J. Long, seems to have confused the guardian spirit (*manitoo*) with the clan totem.

writer in question was the Indian interpreter, J. Long, who published an account of the Indians in 1791. He tells us that "one part of the religious superstition of the savages consists in each having his *totam*, or favourite spirit, which he believes watches over him. This *totam* they conceive assumes the shape of some beast or other, and therefore they never kill, hunt, or eat the animal whose form they think this *totam* bears." To illustrate this superstition Long relates how a Chippeway (Ojibway), whose *totam* was a bear, accidentally shot a bear and was thereafter filled with remorse and sorrow, believing that he had highly offended the Master of Life, that his *totam* was angry, and that he would never be able to hunt any more.<sup>1</sup> From this account it is clear that Long has confused the *manitoo* or guardian spirit of the individual with the totem of the clan, and has applied to the former (the guardian spirit) the term totem, which strictly speaking is applicable only to the latter (the clan totem). His mistake was first pointed out by Professor E. B. Tylor.<sup>2</sup> I am the more concerned to call attention to the blunder because, misled by it, I formerly stated that the Ojibways abstained from killing, hunting, and eating their totems.<sup>3</sup> Whether they did so or not, we cannot say; as usual we have no information as to the relation of the American Indians to their totems. All that we can infer from Long's account is that each man abstained from killing, hunting, and eating the animals in which he believed his own particular guardian spirit (*manitoo*) to be lodged. To these guardian spirits we shall return later on.

Totemic clans of the Ojibways. Warren's list.

The Ojibways were divided into at least forty totemic and exogamous clans, of which the following list of twenty-one clans is given by William W. Warren, the historian of the tribe:—<sup>4</sup>

<sup>1</sup> J. Long, *Voyages and Travels of an Indian Interpreter and Trader* (London, 1791), pp. 86 sq. Long also coined the word totemism ("The idea of destiny, or, if I may be allowed the phrase, '*totamism*,' however strange, is not confined to the savages, many instances might be adduced from history," etc.).

<sup>2</sup> E. B. Tylor, "Remarks on Totem-

ism," *Journal of the Anthropological Institute*, xxviii. (1898) pp. 139 sq.

<sup>3</sup> J. G. Frazer, *Totemism* (Edinburgh, 1887), pp. 8 sq. (reprinted above, vol. i. pp. 9 sq.).

<sup>4</sup> William W. Warren, "History of the Ojibways," *Collections of the Minnesota Historical Society*, v. (1885) pp. 44 sq.

- |                                             |                                                          |
|---------------------------------------------|----------------------------------------------------------|
| 1. Cranc ( <i>Uj-e-jauk</i> ). <sup>1</sup> | 2. Catfish ( <i>Man-um-aig</i> ). <sup>2</sup>           |
| 3. Loon ( <i>Mong</i> ). <sup>3</sup>       | 4. Bear ( <i>Muk-wah</i> ). <sup>4</sup>                 |
| 5. Marten ( <i>Waub-ish-ash-e</i> ).        | 6. Reindeer ( <i>Addick</i> ).                           |
| 7. Wolf ( <i>Mah-een-gun</i> ).             | 8. Merman ( <i>Ne-baun-aub-ay</i> ).                     |
| 9. Pike ( <i>Ke-noushay</i> ).              | 10. Lynx ( <i>Be-sheu</i> ).                             |
| 11. Eagle ( <i>Me-gizzee</i> ).             | 12. Rattlesnake ( <i>Che-she-gwa</i> ).                  |
| 13. Moose ( <i>Mous</i> ).                  | 14. Black Duck or Cormorant<br>( <i>Muk-ud-a-shib</i> ). |
| 15. Goose ( <i>Ne-kah</i> ).                | 16. Sucker ( <i>Numa-bin</i> ).                          |
| 17. Sturgeon ( <i>Numa</i> ).               | 18. White Fish ( <i>Ude-kumaig</i> ).                    |
| 19. Beaver ( <i>Amik</i> ).                 | 20. Gull ( <i>Gy-aushk</i> ).                            |
| 21. Hawk ( <i>Ka-kaik</i> ).                |                                                          |

The foregoing list of Ojibway clans agrees for the most part with the lists given by our other authorities, but it may be supplemented from them. Thus L. H. Morgan also gives a list of twenty-one clans, "without being certain that they include the whole number"; and while he omits several of those mentioned by Warren, to whom he does not refer, he adds the following:—<sup>5</sup>

- |                                               |                                            |
|-----------------------------------------------|--------------------------------------------|
| 22. Mud Turtle ( <i>Me-she'-kã</i> ).         | 23. Snapping Turtle ( <i>Mik-o-noh'</i> ). |
| 24. Little Turtle ( <i>Me-skwa'-da'-re</i> ). | 25. Snipe ( <i>Chu-e-skwe'-ske-wã</i> ).   |
| 26. Duck ( <i>Ah-ah'-weh</i> ).               | 27. Duck ( <i>She-Shebe'</i> ).            |
| 28. Snake ( <i>Ke-na'-big</i> ).              | 29. Muskrat ( <i>Wa-zhush'</i> ).          |
| 30. Heron ( <i>Moosh-kã-oo-ze'</i> ).         | 31. Bull-head ( <i>Ah-wah-sis'-sa</i> ).   |

Again, Dr. Edwin James gives a list of eighteen totemic clans which he tells us were common to the Ojibways and

<sup>1</sup> Elsewhere (p. 46, compare p. 44) Warren gives *Bus-in-as-see* as the native name of the Crane clan. \* But *Uj-e-jauk* agrees closely with the *Adj-e-jauk*, "crane," of Edwin James (*Narrative of the Captivity and Adventures of John Tanner*, p. 315) and the *O-jee-jok*, "crane," of L. H. Morgan (*Ancient Society*, p. 166).

<sup>2</sup> Elsewhere (p. 46, compare p. 44) Warren appears to give *A-wause* as the native name of the Catfish clan, and this agrees with the "*Ah-wa-sis-se*, Small cat fish" of Edwin James (*l.c.*). L. H. Morgan also mentions an Ojibway totem named *Ah-wah-sis'-sa*, but he gives as its English equivalent "bull-head"; he mentions the Catfish totem, but without giving its native name (*Ancient Society*, p. 166). Apparent discrepancies in the names of totems are perhaps sometimes to be

explained by the Indian custom of designating their totems and totemic clans by a variety of different names, some of which are descriptive phrases.

<sup>3</sup> Elsewhere (p. 48, compare p. 44) Warren gives *Ah-ah-wauk* as the native name of the Loon clan; and this resembles the *Ah-ah-weh* which Morgan (*Ancient Society*, p. 166) gives as the native name of a Duck totem. On the other hand *Mong*, "loon," is supported by Morgan (*l.c.*) and agrees closely with the *Mahng*, "loon," of Edwin James (*op. cit.* p. 314).

<sup>4</sup> Elsewhere (p. 49, compare p. 44) Warren gives *Noka* as the native name of the Bear clan. The form *Muk-wah* is supported by the *Muk-kwaw*, "bear," of Edwin James (*l.c.*) and the *Mã-kwã* of Morgan (*l.c.*).

<sup>5</sup> L. H. Morgan, *Ancient Society*, pp. 165 sq.

Ottawas (Ottawwaws); but he is careful to add that many more might be enumerated. For the most part his list agrees with the lists of Warren and Morgan, but it supplements them by adding the following clans:—<sup>1</sup>

- |                                                 |                                            |
|-------------------------------------------------|--------------------------------------------|
| 32. Sparrow hawk ( <i>Pe-pe-ge-wiz-zains</i> ). | 33. Water-snake ( <i>Mus-sun-dum-mo</i> ). |
| 34. Forked tree.                                | 35. Wild cat ( <i>Pe-zhe-w</i> ).          |

Jones's list.

Finally, the Ojibway Indian, Peter Jones, gives as specimens, not as complete, a list of eleven Ojibway totemic clans including five which are not mentioned by Warren, Morgan, and James. These are as follows:—<sup>2</sup>

- |                     |                   |                 |
|---------------------|-------------------|-----------------|
| 36. Otter.          | 37. Buffalo.      | 38. Birch-bark. |
| 39. White Oak Tree. | 40. Bear's Liver. |                 |

Most of the Ojibway clans are said to have arisen through subdivision of five original clans, the Crane, Catfish, Loon, Bear, and Marten.

According to Warren, the Crane, Catfish, Loon, Bear, Marten, and Wolf were the principal clans, "not only in a civil point of view, but in numbers, as they comprise eight-tenths of the whole tribe." Indeed, many of the totems were not known to the tribe in general, and Warren ascertained them only through close enquiry. Among them he includes the Goose, Beaver, Sucker, Sturgeon, Gull, Hawk, Cormorant, and White Fish totems, which were known only in the remotest northern part of the Ojibway country. Old Ojibway men, whom Warren particularly questioned on this subject, affirmed that all the totemic clans were only subdivisions of five great original totemic clans, namely, the Crane, Catfish, Loon, Bear, and Marten clans; according to these old men the new clans, formed by subdivision of the five original clans, "have assumed separate minor badges, without losing sight or remembrance of the main stock or family to which they belong. These divisions have been gradually taking place, caused in the same manner as the division into distinct tribes. They are easily classed under the five great heads, the names of which we have given."<sup>3</sup>

<sup>1</sup> *Narrative of the Captivity and Adventures of John Tanner*, prepared for the press by Edwin James, M.D. (London, 1830), pp. 314 sq. This, so far as I know, was the first published list of Ojibway clans.

<sup>2</sup> Rev. Peter Jones, *History of the*

*Ojebway Indians*, p. 138.

<sup>3</sup> W. W. Warren, "History of the Ojibways," *Collections of the Minnesota Historical Society*, v. (1885) p. 45; compare *id.* pp. 43 sq., for the five great original "clans or totems."

This is valuable testimony to the tendency of totemic clans to split into new clans, leaving the original clans in the position of phratries. The same tendency has met us repeatedly in our survey of the evidence. The ancestors of the five original Ojibway clans are said to have appeared suddenly in human form from the bosom of a great salt sea.<sup>1</sup>

The following, according to Warren, are the subdivisions of the five great original totemic clans of the Ojibways:—<sup>2</sup>

Subdivisions of the original Ojibway clans.

Primary Clans (now ranking as phratries).	Secondary Clans (formed by subdivision of the primary clans).
1. Catfish ( <i>A-waus-e</i> ) <sup>3</sup> . . .	Catfish, Merman, Sturgeon, Pike, Whitefish, Sucker, and all other fish totems.
2. Crane ( <i>Bus-in-as-see</i> ) <sup>4</sup> . . .	Crane, Eagle.
3. Loon ( <i>Ah-ah-wauk</i> ) <sup>5</sup> . . .	Loon, Goose, Cormorant.
4. Bear ( <i>Noka</i> ) <sup>6</sup> . . . . .	Common Bear, Grizzly Bear, Bear's head, Bear's foot, Bear's ribs, etc.
5. Marten ( <i>Waub-ish-a-she</i> ) . . .	Marten, Moose, Reindeer.

Like the Torres Straits Islanders,<sup>7</sup> some of the Ojibways are supposed to resemble in various respects their totem animals. Thus "it is a general saying, and an observable fact, amongst their fellows, that the Bear clan resemble the animal that forms their totem in disposition." For they are surly and pugnacious and have constantly embroiled their tribe in war with other tribes, though, to do them justice, they have always been ready, when it came to the rub, to give and take hard knocks. They are the acknowledged war chiefs and fighting men of the community; the war-pipe and the war-club are committed to their custody; and they have often been called the bulwarks of the tribe.<sup>8</sup> Again, the numerous and important Crane clan takes its

The Ojibways are supposed to resemble their totemic animals in character.

clan to rank  
highest.

name of *Bus-in-as-see* or "Echo-maker" from the loud, clear, far-ringing cry of the crane; and accordingly members of this clan are thought to possess naturally a loud, ringing voice, and they are the acknowledged orators of the tribe; in former times, when different tribes met in council, the Crane men acted as interpreters of the wishes of their tribe. They claim, says Warren, with some apparent justice the chieftainship over the other clans of the Ojibways.<sup>1</sup> A half-blood who spoke French and had the honour and happiness of being the husband of a Crane wife, assured a German traveller that "the badge of the Crane is the noblest and greatest badge among the Ojibways. The Cranes," said he, "go as far back as the Deluge. Their names are to be found in the books of the Romans." When the traveller seemed apt to smile, "No, no, sir," pursued the half-blood eagerly, "seriously, all the names at present among us were to be found already at the destruction of the tower of Babel. I am quite serious, sir. The Cranes took possession of these countries after the Deluge. It is well known. For ages the Cranes had the highest name. They are recorded in the greatest and oldest books. My mother was a Crane. My wife is a Crane. In these latter times they have come down a little. But there are still Cranes at La Pointe, at Saut de Ste. Marie, at La Folle Avoine, near Detroit, and at Hudson's Bay. In short, sir, the Cranes have been and are still everywhere the most remarkable men in the world."<sup>2</sup> However, when the same traveller conversed with a man of the Loon clan, he received the impression that the Loons were the oldest and noblest family in the whole country.<sup>3</sup> And certainly they held their heads very high; for they claimed to be the chief or royal family, supporting their claim by a reference to the collar which nature has placed round the neck of a Loon and which clearly resembles the wampum necklace of a chief. But this appeal to natural history was disallowed by the Cranes and the members of the other totem clans, who stuck to it that the Loon chiefs derived any authority they

possessed, not from the Creator, but only from the French at Quebec.<sup>1</sup>

The subdivision of the Bear clan, the most numerous of all the clans of the Ojibways, furnishes a good example of the splitting of a totem clan into segments, each of which takes for its totem either a species or a part of the original animal. Such totems I have called split totems.<sup>2</sup> However, we are told that after the old Bear clan had broken up into a number of new clans with the Bear's head, the Bear's foot, the Bear's ribs, etc., for their totems, these new totemic clans coalesced again partially into two, namely, the Common Bear and the Grizzly Bear.<sup>3</sup>

According to Warren, members of the same totem clan among the Ojibways were strictly forbidden to marry each other. Marriage between two persons of the same totem, says he, "is one of the greatest sins that can be committed in the Ojibway code of moral laws, and tradition says that in former times it was punishable with death. In the present somewhat degenerate times, when persons of the same totem intermarry (which even now very seldom occurs), they become objects of reproach. It is an offence equivalent among the whites to the sin of a man marrying his own sister."<sup>4</sup>

Persons of the same totem are deemed to be closely related to each other, even though they may belong to different tribes. "An individual," says Warren, "of any one of the several totems belonging to a distinct tribe, as for instance the Ojibway, is a close blood relation to all other Indians of the same totem, both in his own and all other tribes, though he may be divided from them by a long vista of years, interminable miles, and knows not even of their existence."<sup>5</sup>

<sup>1</sup> W. W. Warren, "The History of the Ojibways," *Collections of the Minnesota Historical Society*, v. (1885) p. 48.

<sup>2</sup> Above, vol. i. p. 10; vol. ii. pp. 536 *sqq.*

<sup>3</sup> W. W. Warren, "History of the Ojibways," *Collections of the Minnesota Historical Society*, v. (1885) p. 49.

<sup>4</sup> W. W. Warren, *op. cit.* p. 42. Though Warren's *History of the Ojibways* was not published until 1885, it

was completed in manuscript in the winter of 1852-53 (*op. cit.* p. 18). Since then the rule of exogamy has probably been still further relaxed. See on this subject the testimony of the Rev. Peter Jones, quoted above, p. 51. The rule which forbids marriage within the gens (clan) is mentioned without remark by L. H. Morgan (*Ancient Society*, p. 167).

<sup>5</sup> W. W. Warren, *op. cit.* pp. 42 *sq.*

The Bear clan furnishes an example of the splitting of a totem.

Exogamy of the Ojibway clans; breach of it formerly punishable with death.

The totem bond extends beyond the limit of the tribe.

Among the Ojibways the descent of the totem is in the male line ; but there are grounds for thinking that descent was formerly in the female line.

Among the Ojibways, unlike most of the other Indian tribes thus far dealt with, descent of the totem is in the male line ; children always belong to their father's totemic clan.<sup>1</sup> But there are several reasons for thinking that descent was originally in the female line, and that the change to the male line has been comparatively recent. For several tribes of the Algonkin stock, to which the Ojibways belong, retain the rule of female descent, and among these are the Delawares, who are universally recognised by the Algonkins as one of the oldest of their tribes, and are styled Grandfathers by them all. As we cannot suppose that these tribes have exchanged male descent for female, a certain presumption is raised that the other Algonkin tribes, which now have male, formerly had female descent. Further, there is some positive evidence that three or four generations ago the office of chief descended in the female line. For an Ojibway sachem who died in 1840 at the age of ninety, being asked why he did not retire from office in favour of his son, replied that his son could not succeed him, for the right of succession belonged, not to his son, but to his sister's son. This proves that down to a comparatively recent time the sachemship passed in the female line. We should remember, too, that missionaries to the Indians, trained in different habits of thought, have generally opposed the custom of female descent, because they consider it unjust and unreasonable to disinherit a man's own sons in favour of his nephews. It is therefore not improbable that among some tribes, the Ojibways perhaps included, the change from female to male descent has been brought about, or at least accelerated, by missionary influence.<sup>2</sup>

Office and property are also hereditary in the male line.

However that may have been, office and property are now hereditary in the clan and therefore pass in the male line. Children at present get most of their father's property, to the exclusion of the rest of the clan kindred. A woman's property goes to her children and in default of them to her sisters, own or collateral. A son may succeed his father as

<sup>1</sup> W. W. Warren, "History of the Ojibways," *Collections of the Minnesota Historical Society*, v. (1885)

p. 42 ; L. H. Morgan, *Ancient Society*, p. 166.

<sup>2</sup> L. H. Morgan, *op. cit.* pp. 166 sq.

sachem; but when there are several sons, the clan chooses among them.<sup>1</sup>

While a man's personal name might be, and often was, changed, for example when he went to war or any remarkable event had happened, the totem was never changed. "It is not true," says Edwin James, "that they have, in all instances, the figure of whatever may be their totem always tattooed on some part of their body, nor that they carry about them a skin, or any other mark, by which it may be immediately recognised. Though they may sometimes do this, they are, in other instances, when they meet as strangers, compelled to inquire of each other their respective totems."<sup>2</sup>

Members of totemic clans were not always distinguished by outward marks.

The Ojibways observed the law of the levirate: a man was held bound to marry the wife of his deceased brother, but not till a year of her widowhood had elapsed. He was also under an obligation to provide for his brother's children.<sup>3</sup>

The levirate.

The Ojibways, like the rest of the Indian tribes now under consideration, possess the classificatory system of relationship, but in some points their form of the system differs from that of the Iroquois. Thus among the Ojibways of Lake Superior, in the generation above his own a man calls his father's brother, not "my father" (*Nōss*), but "my step-father" (*Nž-nž-shō'-mč*); and, similarly, he calls his mother's sister, not "my mother" (*Nin'-gah*), but "my step-mother" (*Nž-no'-shč*). In his own generation, as usually happens under the classificatory system, he has no single words for "brother" and "sister" in general, but has separate words for "elder brother" and "younger brother," for "elder sister" and "younger sister"; but, as often happens under the classificatory system, the word for "younger brother" and "younger sister" is the same (*Nž-shž-mč*). A man calls his male cousins, the sons either of his father's brother or of his mother's sister, "my elder brother" (*Nis-sč'-yč*), or "my younger brother" (*Nž-shž-mč*), according

The classificatory system of relationship among the Ojibways.

for the press by Edwin James, M.D., p. 315.

<sup>2</sup> *Narrative of the Captivity and Adventures of John Tanner*, prepared

<sup>3</sup> W. H. Keating, *Narrative of an Expedition to the Source of St. Peter's River* (London, 1825), ii. 166 sq.

as they are older or younger than himself; and similarly he calls his female cousins, the daughters either of his father's brother or of his mother's sister, "my elder sister" (*Ni-mis'sě*) or "my younger sister" (*Ni-shi-mě*), according as they are older or younger than himself.<sup>1</sup> But his male cousins, the sons either of his father's sister or of his mother's brother, he calls "my cousins," not "my brothers"; and similarly his female cousins, the daughters either of his father's sister or of his mother's brother, he calls "my cousins," not "my sisters." In the generation below his own a man calls his brother's sons and daughters "my stepsons" and my "step-daughters," not "my sons" and "my daughters." Similarly a woman calls her sister's children "my step-children," not "my sons" and "my daughters."<sup>2</sup> Thus by discriminating the father's brother from the father, the mother's sister from the mother, a man's own children from his brother's children, and a woman's own children from her sister's children, the Ojibway form of the classificatory system marks a distinct advance on the Iroquois form, which confounds the father's brother with the father, the mother's sister with the mother, a man's own children with his brother's children, and a woman's own children with her sister's children. It is possible that this advance may be associated with the change of descent from the female to the male line.

The Ojibway form of the classificatory system shews an advance upon the Iroquois form.

The story of Otter-heart and his beaver wife.

We have seen that among the clans of the Ojibway there is one that has for its totem the otter and another that has for its totem the beaver. The following story, taken down from the lips of an old Ojibway woman, refers to these two clans. There was a man of the Otter clan and his name was Otter-heart. Once upon a time he went to

<sup>1</sup> But among the Ojibways of Lake Michigan, Lake Huron, and Kansas he calls these relations, not "my elder or younger brother," "my elder or younger sister," but "my step-brother" (*Ne-ká'-na* or *Ne-ká'-nis*), "my step-sister" (*Nin-dá-wa'-má* or *N'-do-wa-má*), except that among the Ojibways of Lake Huron and Kansas a mother's sister's daughter, younger than the speaker, is called his younger sister (*Ne-shé'-má*). See L. H. Morgan,

*Systems of Consanguinity and Affinity*, Table II. pp. 314, 316, 340, 342. In his general remarks on the Ojibway system (pp. 204 *sq.*) Morgan seems to leave the Lake Superior form of it out of account.

<sup>2</sup> L. H. Morgan, *op. cit.* pp. 204 *sq.*, and Table II. pp. 295, 296, 298, 299, 300, 302, 303, 310, 311, 313, 314, 316, 322, 323, 324, 325, 331, 332, 333, 334, 339, 340, 342.

catch beavers at a beaver-dam. But first he laid down his robe under a tree on a spot where he proposed to camp. Then he went to the dam, pierced it, and let all the water run out, so that the beavers were left high and dry, and he killed three of them. After that he returned to the place where he had left his robe ; but what was his surprise to find in its place a cozy hut, and to see the smoke curling up and the form of a woman busy at the fire. He went in, and there sure enough was his robe, beside the deer-skin which the woman had spread for him. "Good," said he to himself, "she is my wife." She was small, but very pretty and dainty, and she moved about so briskly in the hut, yet so neatly and tidily that it was a joy to see her. She dressed him an excellent supper of the beavers and set the tit-bits before him. It tasted very good, and he asked her to share it with him. "No," said she, shyly ; "I have plenty of time. I will eat afterwards what I am wont to eat." He urged her, but still she refused, saying that she would eat afterwards what she was wont to eat. So he let her be. But in the night he was wakened by a rasping sound, as if mice or beavers were nibbling at wood. By the flickering light of the fire he fancied he saw his wife gnawing the birchen twigs with which he had tied up the beavers in a bundle. But he thought it must be a dream, and so fell asleep again till morning. When he awoke, his breakfast was ready, and his little wife stood before him and handed it to him. He told her his dream, but she did not laugh so much at it as he had expected. "Hold," thought he to himself, "perhaps it was no dream after all, but a waking reality. Come and tell me," said he to her, "yesterday when I brought you the beavers, you looked at them so earnestly, and when you cut them up you considered them so curiously and examined every limb. Say, why did you do that ?" "Oh," said she and sighed, "have I not cause to look at them so earnestly ? I know them all. They are my kinsfolk. One was my cousin, another my aunt, and the third my grand-uncle." "What," said he, "are you of the beaver clan ?" "Yes," said she, "that is my family." Then Otter-heart was glad, for the Otters and the Beavers have been allied clans from of old. His beaver-wife pleased

How Otter-heart found the beaver-woman and made her his wife.

him very much, she was so simple and modest and so attentive to him; and the best proof that she loved him was that she had sacrificed her own kinsfolk for his sake. But to spare her natural feelings he promised that henceforth he would kill only birds and deer and other beasts and would let the beavers alone, that he and she might eat their meals together. And for her part she did not meddle any more with the birchen twigs, and did not wake him of nights with her nibbling and gnawing, but she accustomed herself to eat meat like human folk.

How in the  
spring amid  
the maple  
trees she  
bore him  
a son.

So they lived the whole winter through very pleasantly. He was a bold hunter, and she a quiet, careful housewife, diligent and peaceable like the beavers. They were a happy pair. When the spring came and with it the joyous time of the sugar-making, they went out to their sugar-camp among the maple-trees,<sup>1</sup> and there in the sugar-camp she bore him a son. The very next day the father began to make bows and arrows for the little one. But his wife laughed at him and said it would be long before the child could use them. "Perhaps you are right," said he, and broke what he had made. But it was not long before he had made another set of bows and arrows. So impatient was he to see his son grow up to be a good hunter. He pictured to himself how one day he would go out to the chase with him, how he would teach the little one all his woodland craft, and how the lad would be a great and famous huntsman. He built castles on castles in the air. Alas, alas, how seldom happy dreams come true! How little is enough to shatter the most perfect bliss! A breath of envious fate, the tiniest mistake, and all is gone for ever.

Otter-heart and his beaver-wife had lived their happiest

<sup>1</sup> In the old days, before the introduction of cane sugar, the Indians used to make great quantities of sugar from the maple. The season of sugar-making began in March, when the crows migrated from the south. Then each family went out with the necessary equipage and utensils, to camp in its own sugar-grove among the maple-woods. See W. J. Hoffman, "The Menomini Indians," *Fourteenth Annual Report of the Bureau of Ethnology* (1892-

93), Part i. (Washington, 1896) pp. 287-290. As to the Indian manufacture of maple-sugar, see Lafitau, *Mœurs des sauvages américains* (Paris, 1724), ii. 153 sqq.; H. W. Henshaw, "Indian Origin of Maple Sugar," *American Anthropologist*, iii. (1890) pp. 341 sqq.; A. F. Chamberlain, in *American Anthropologist*, iv. (1891) pp. 39 sqq., 381 sqq.; *Handbook of American Indians north of Mexico*, i. 803 sq.

day. Destiny overtook them on the way home from the sugar-camp. Spring was now fully come, all the ice was melted, and every river and every brook ran high. So the wife asked her husband to build a bridge for her over every river and every little brook, that she might cross them dryshod. And he had to promise her solemnly to do so. "For," said she, "if my feet should be wetted, it will prove a great sorrow for you." Otter-heart did what he had promised. At every rivulet, at every trickling spring he built a bridge for his wife. At last he came to a little runlet only six inches wide. Now whether he was weary of always building bridges or whether he was lost in thought and day-dreams, I cannot say, but certain it is he strode over the tiny brook and forgot all about a bridge. But when he had gone on a bit and his wife and his little son did not come after him, he turned back to the brook, which now to his horror had swollen to a mighty rushing torrent. A foreboding of what had happened struck him like a flash of lightning, and too late he rued his forgetfulness. His little wife with her little son on her back had tripped after him with little steps. When she came to the runlet six inches wide, and found no bridge, she stopped and called her husband to help her. But her cry was unheard, and in the anguish of her heart she made the leap. But she fell short with a splash into the water and when her foot was wet, it was all over with her. Immediately she turned into a beaver and her little son into a little beaver, and both swam with the stream, which suddenly swelled high, away down to the beavers' pool. In despair Otter-heart followed down the bank of the wild raging torrent and after three days' long and weary journey he came to the beavers' pool at last. There he saw a beaver-house, and sitting on the roof his own little wife. She was plaiting a bag out of the bark of the white-wood, and she had her little beaver fastened by a string of white-wood bark at her side. Otter-heart was beside himself at the sight. He begged her from the bank to come back to him, but she answered that she could not now. "I sacrificed my kinsfolk and all for you, and I only asked that you would build me bridges and help me dryshod over the waters. You cruelly disregarded my

How Otter-heart lost his beaver wife.

request. Now I must remain for ever with my folk." Her husband prayed her at least to undo the white-wood string and let his little son come to him, that he might kiss him. But even that she felt bound to refuse. She remained where she was. And—here the old woman suddenly broke off the tale, and nothing would induce her to say what became of Otter-heart, whether he turned into an otter and lived in the water near his beaver-wife, or whether, as the years slipped by, he forgot her and married again, or whether he went home to grow old in solitude, brooding till death over his vanished dream of bliss.<sup>1</sup>

The story belongs to the class of the Swan Maiden.

This story belongs to the class of tales of which the Swan Maiden, Beauty and the Beast, and Cupid and Psyche are well-known examples. Stories of the same type have already met us among the totemic people of the Gold Coast in Africa ; and I have already pointed out that they may all have originated in totemism.<sup>2</sup>

### § 6. Totemism among other Algonkin Tribes of the Great Lakes

The Potawattamies, an Algonkin tribe.

Another totemic tribe of the Algonkin stock, whose country was in the region of the Great Lakes, were the Potawattamies. They bordered on the Dacotas to the west and occupied part of Northern Wisconsin, ranging eastwards towards Lake Michigan and the territory of the Ojibways on Lake Superior.<sup>3</sup> The tribe was visited in 1823 by the expedition which Major S. H. Long led on behalf of the United States Government to the source of the St. Peter's River, the Red River, and Lake Winnipeg ; and the account which the members of the expedition have left us of the manners and customs of the Potawattamies contains a notice of their totemic system, which deserves to be quoted as an early document in the history of totemism. "Although not divided into regular tribes, they have a sort of family distinction, kept up by means of signs resembling those of heraldry. These signs are, by them, called Totem ; they are taken from an animal or some part of it, but by

Keating's account of their totemism.

<sup>1</sup> J. G. Kohl, *Kitschi-Gami oder Erzählungen vom Oberrn See* (Bremen, 1859), i. 140-146.

<sup>2</sup> Above, vol. ii, pp. 566 sqq.

<sup>3</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, pp. 202 sq.

no means imply a supposed relationship with that animal, as has been incorrectly stated. It is merely a distinguishing mark or badge, which appears to belong to every member of a family, whether male or female. The latter retain it even after matrimony, and do not assume that of their husbands. It does not appear that this implies the least obligation of the Indian to the animal from which it is taken. He may kill or eat it. The *totem* appears to answer no other purpose than that of distinguishing families ; it does not imply any degree of nobility or inequality of rank among them.”<sup>1</sup> About the same time the Rev. Jedidiah Morse reported that the Potawattamies, Ottawas, and Chippewas (Ojibways) were divided into tribes which “take their badges from parts of some insect, animal, fish, or fowl ; as bear, fin, tendon, etc. Those of the fish are of one tribe ; of the beast another ; of the fowl another, etc.”<sup>2</sup>

The Potawattamies are divided into fifteen totemic clans as follows :—

Totemic  
clans of  
the Pota-  
wattamies.

- |              |             |                 |
|--------------|-------------|-----------------|
| 1. Wolf.     | 2. Bear.    | 3. Beaver.      |
| 4. Elk.      | 5. Loon.    | 6. Eagle.       |
| 7. Sturgeon. | 8. Carp.    | 9. Bald Eagle.  |
| 10. Thunder. | 11. Rabbit. | 12. Crow.       |
| 13. Fox.     | 14. Turkey. | 15. Black Hawk. |

The rules of marriage, descent, and inheritance were the same among the Potawattamies as among the Ojibways ; that is, no man might marry a woman of his own clan ; children took their clan from their father, not from their mother ; and both property and office were hereditary in the clan.<sup>3</sup> “It was usual for them, when an Indian married one of several sisters, to consider him as wedded to all ; and it became incumbent upon him to take them all as wives. The marrying of a brother’s widow was not interdicted, but was always looked upon as a very improper connexion. The union of persons related by blood was likewise dis-

liked and discouraged. An incestuous connexion was at all times considered as highly criminal, but no punishment was attached to it."<sup>1</sup>

The Ottawas, another Algonkin tribe; their three totemic clans, the Great Hare, the Carp, and the Bear.

Legend of the Great Hare and the great flood.

Rule that dead people of the Hare clan must be burned, not buried.

The Ottawas, another Algonkin tribe, formerly dwelt on the Ottawa River in Canada; but being driven thence by the Iroquois they occupied the Manitoulin Islands in Lake Huron and some of them spread southward over Lower Michigan.<sup>2</sup> Morgan tells us that they were organised in clans, but he failed to obtain their names.<sup>3</sup> However, a Jesuit missionary, writing in 1723, has recorded that the Ottawas or Outaouaks, as he calls them, were divided into three families or clans, namely, the family of the Great Hare (*Michabou*), the family of the Carp (*Namepich*), and the family of the Bear (*Machova*). The first of these families averred that their ancestor the Great Hare was a man of such gigantic stature that when he stretched his nets in water eighteen fathoms deep the water barely reached to his armpits. At the time of the great flood this giant sent out the beaver to discover dry land, and when the animal did not return he sent out the otter on the same mission. The otter brought back a little soil covered with foam, out of which the Great Hare succeeded in creating the earth. Having accomplished that labour he flew up to heaven, where he usually resides; but before quitting the earth he commanded that, when his descendants died, their bodies should be burned and their ashes thrown into the air to enable them to mount up to heaven; and he warned them that if they omitted to do so, the snow would not cease to fall, and their lakes and rivers would remain frozen, so that the Indians would not be able to catch fish, which is their staple food, and they would all die of hunger in spring. In point of fact an unusually long winter was attributed by the family of the Great Hare to their culpable negligence in having failed to burn the body of one of their number, who had died at a distance. So by the advice of an old woman

<sup>1</sup> W. H. Keating, *Narrative of an Expedition to the Source of St. Peter's River* (London, 1825), i. 111.

<sup>3</sup> L. H. Morgan, *Ancient Society*, p. 167.

four and twenty men were despatched to find the corpse and burn it. In the interval the thaw came and the snow melted. The Carp family of the Ottawas alleged that a carp laid its eggs on the bank of a river, that the warmth of the sun hatched the eggs, and that out of them came a woman, from whom the Carp family is descended. The Bear family of the Ottawas ascribed their origin to a bear's paw, but without explaining the precise nature of the relationship. Whenever they killed a bear, they used to offer the animal a feast of its own flesh and harangued him as follows: "Do not bear us a grudge because we have killed you. You are sensible, you see that our children are hungry. They love you, they wish to put you into their body. Is it not glorious to be eaten by the sons of a chief?" The Bear family and the Carp family used to bury their dead, unlike the Great Hare family, who burned theirs.<sup>1</sup> From a much later account we hear of the Bear clan and also of a Gull clan among the Ottawas. The people of the Gull clan called themselves Gulls, but the people of the Bear clan called themselves Big Feet. Each clan had its separate quarter in the village and set up its *ododam* or totemic mark on a post at the gate which led into its quarter.<sup>2</sup>

Descent of the Carp clan from a carp.

Descent of the Bear clan from a bear's paw. Apologies offered by the Bear clan to a bear when they kill it.

On the other hand, totemism has not been discovered among the Crees (Kristinons, Kilistinons, Knisteneaux, etc.), a large and widely-spread Algonkin tribe of the Great Lake region. By language and blood they are closely related to the Ojibways. At the time when they were discovered towards the middle of the seventeenth century, they occupied the north-west shore of Lake Superior and spread thence through a thickly wooded country to Hudson's Bay on the north and the Red River on the west. They were then a race of roving hunters, without fixed abode, without villages, without fields, living by the chase and on wild oats which they gathered in the marshes. Under the influence of the Hudson's Bay Company they have dwelt on

Totemism not found among the Crees, a large Algonkin tribe.

the whole at peace among themselves and with their neighbours and have made some progress in civilisation. It is possible, and perhaps probable, as L. H. Morgan thought, that the Crees once had the totemic system, but have lost it. Like the rest of the Algonkin tribes they employ the classificatory system of relationship, but in an advanced or degenerate form; for they distinguish the father's brother from the father, the mother's sister from the mother, and a man's brother's children from his own children.<sup>1</sup>

### § 7. Totemism among the Algonkin Tribes of the Mississippi

The Algonkin tribes of the Mississippi.

The great prairies of the centre of North America.

Thus far we have found totemism among both the eastern and northern tribes of the great Algonkin stock. The system also exists or existed among the western Algonkin tribes, who occupied the eastern bank of the Mississippi in the present States of Wisconsin and Illinois, extending southward to Kentucky and eastward into Indiana.<sup>2</sup> Their country forms part of the great prairies which occupy a vast region in the interior of North America. From the Rocky Mountains in the west they stretch for more than a thousand miles to the great forests east of the Mississippi, and from the plateau of the Peace River in the north they extend southward for fifteen hundred miles to New Mexico. The immense carpet of verdure which they unroll day after day and week after week to the eye of the traveller is one of the most extraordinary natural spectacles on which the eye of man can rest. No description can bring home to those who have not seen them an adequate conception of the vastness and magnificence of the American prairies. Yet before the Indians received the horse from

<sup>1</sup> *Relations des Jésuites*, 1640, p. 34 (Canadian reprint, Quebec, 1858); *id.* 1656, p. 39; *id.* 1667, p. 24; Alexander Mackenzie, *Voyages from Montreal through the Continent of North America* (London, 1801), pp. xci. *sqq.*; L. H. Morgan, *Systems of Consanguinity and Affinity*, pp. 203, 206 *sqq.*, and Table II. pp. 293 *sqq.*; *Handbook of American Indians north of Mexico*, i. 359 *sqq.* In one passage (*Systems of Consanguinity and Affinity*, p. 208)

Morgan says that in the Cree system "my mother's sister is my mother"; but this statement seems to be a mistake, for it is contradicted by the table on p. 339, where in all three varieties of the Cree system the term for mother's sister is given, not as "mother" (*N'-gâ'-we* or *N'-gâ'-wa*) but as "step-mother" (*N'-dô'-sis* or *N'-dô'-zis*).

<sup>2</sup> L. H. Morgan, *Ancient Society*, p. 168.

Europeans and learned to breed and use it, these boundless plains must have been for the most part an unbroken solitude, uninhabited and uninhabitable by man, left to the undisturbed possession of the herds of wild animals which grazed their inexhaustible pastures. Only on the banks of the great rivers which traverse the prairies could the Indians without horses maintain themselves by fishing and hunting. Yet while the horse enabled the aborigines to spread and multiply over regions which had been a desert before, its acquisition hindered rather than helped their advance towards a higher form of social life. For it broke up the villages, in which the germ of progress was planted, and dispersed their inhabitants in little bands to scour the prairies far and wide in pursuit of the buffaloes, whose migrations they followed.<sup>1</sup>

Effect which the introduction of the horse had on the social life of the prairie Indians.

Amongst these prairie Indians were the Miamis, who, along with the other Western Algonkin tribes which we shall here notice, occupied the triangle between the Illinois, the Mississippi, and the Ohio Rivers.<sup>2</sup> The Miamis were divided into ten totemic and exogamous clans as follows:—

Totemic clans of the Miamis.

- |             |            |             |             |
|-------------|------------|-------------|-------------|
| 1. Wolf.    | 2. Loon.   | 3. Eagle.   | 4. Buzzard. |
| 5. Panther. | 6. Turkey. | 7. Raccoon. | 8. Snow.    |
| 9. Sun.     | 10. Water. |             |             |

Intermarriage within the clan was forbidden; descent was in the male line; and both property and the office of sachem were hereditary in the clan.<sup>3</sup>

Marriage and descent.

The Miamis have the classificatory system of relationship. Thus in the generation above his own a man calls his father's brother, as well as his own father, "my father" (*No-sá'*); and he calls his mother's sister, as well as his own mother, "my mother" (*Nin-ge-ah'*). But his mother's brother he calls "my uncle" (*Ne-zhesé'-sá*), not "my father"; and his father's sister he calls "my aunt" (*N-sa-gwe'-sá*), not "my mother." In his own generation he calls his cousins, the children either of his father's brother or of his mother's sister, "my elder brother" (*Ne-sá'-sá'*) or

The classificatory system of relationship among the Miamis.

<sup>1</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, pp. 172, 208 sq. *Handbook of American Indians north of Mexico*, i. 852 sqq.

<sup>3</sup> L. H. Morgan, *Ancient Society*, p. 168.

<sup>2</sup> L. H. Morgan, *op. cit.* p. 210;

"my younger brother" (*Ne-she-má'*), "my elder sister" (*Ne-mis-sá'*) or "my younger sister" (*Ne-she-má'*), according to their sex and age. In the generation below his own he calls his brother's son and daughter "my son" (*Neen-gwase'-sá'*) and "my daughter" (*Nin-dá'-ná'*); but he calls his sister's son and daughter "my nephew" (*Lan-gwá-les'-sá'*) and "my niece" (*Shames-sá'*), not "my son" and "my daughter." Conversely, a woman calls her brother's son and daughter "my nephew" and "my niece"; but her sister's son and daughter she calls "my son" and "my daughter." In the generation next but one below his own a man calls the grandchildren of his brothers and sisters, own and collateral, "my grandchildren"; and, conversely, in the generation next but one above his own he calls his grandfather's brothers "my grandfathers."<sup>1</sup> It will be observed that while there are separate terms for "elder brother" and "elder sister," the term for "younger brother" and "younger sister" is one and the same (*Ne-she-má'*). This identity of terms for younger brother and younger sister occurs in many forms of the classificatory system.

Anomalous feature of the Miami system in regard to cousins, the children of a brother and sister respectively.

So far the Miami form of the classificatory system is normal. But in regard to cousins, the children of a brother and sister respectively, the Miami system presents a remarkable feature, which we have not hitherto met with, though we shall find it again later on among tribes of the Dacotan stock. Two male cousins, the children of a brother and of a sister respectively, do not call each other cousins as they ordinarily would do under the classificatory system; they call each other "uncle" and "nephew," the son of the brother being the "uncle" and the son of the sister being the "nephew." With two female cousins, the daughters of a brother and sister respectively, the case is still more remarkable; for they call each other "mother" and "daughter," the daughter of the brother being the so-called "mother" of her cousin and the daughter of the sister being the so-called "daughter" of her cousin. When the two cousins, the children of a brother and sister respectively, are male and female, then, if the male is the son of the sister

<sup>1</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, p. 211, Table II. pp. 293 sqq.

and the female is the daughter of the brother, the female cousin calls her male cousin "my son," and he calls her "my mother." But if the male cousin is the son of the brother, and the female cousin is the daughter of the sister, then the male cousin calls his female cousin "my niece" and she calls him "my uncle."<sup>1</sup> It should be observed that in all these cases a position of superiority, or at least of seniority, is assigned to the cousin, whether male or female, who is the child of the brother; while the cousin, whether male or female, who is the child of the sister, is relegated to a position of inferiority or at least of juniority. Thus the male cousin, the child of the brother, is the "uncle" of his male or female cousin, the child of the sister; and the female cousin, the child of the brother, is the "mother" of her male or female cousin, the child of the sister. Thus in all such cases a preference is shewn for the male line, which may be connected with the fact that among the Miamis descent both of the clan and of property is in the male line. Whatever the origin of this curious nomenclature may be, we can hardly suppose that the persons who used it ever imagined a female cousin to have given birth to her male or female cousin; in other words, the relationship of maternity which it implies can only have been a social, not a physical one. As I have already pointed out more than once, the classificatory system in general is only intelligible on the supposition that the relationships which it recognises and classifies are not physical but social.<sup>2</sup> Nothing but confusion can result from an attempt to explain the system by means of our own conceptions of paternity and maternity. If an enquirer cannot divest himself of these conceptions in dealing with the subject, he had much better leave it alone.

Another Algonkin tribe of this region were the Shawnees. The Shawnees, another Algonkin tribe. Their old home was in the triangle between the Ohio and the Mississippi, but they have been again and again uprooted and expatriated by the Government of the United States.

<sup>1</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, pp. 211, 325, 331, 332, 333, 334.  
with Table II. pp. 322, 323, 324, <sup>2</sup> See vol. i. pp. 289 *sqq.*, 303 *sqq.*

They speak the most beautiful dialect of the Algonkin speech, and notwithstanding the shifts and changes to which they have been subjected, they have preserved their nationality and have made remarkable progress in agriculture and in other arts of civilised life.<sup>1</sup> They are divided into thirteen exogamous clans, which they still maintain for social and genealogical purposes. The names of the clans are these :—<sup>2</sup>

Their

Rules of  
marriage  
and  
descent.

The rules of marriage and descent are the same as among the Miamis; that is, marriage within the clan is forbidden, children take their clan from their father, not from their mother, and both property and the office of sachem are hereditary in the clan, from which it follows that they descend in the male line.<sup>3</sup> However, the Shawnees had a practice, which they shared with the Miamis and the Sauks and Foxes, of naming children, under certain restrictions, into any clan whatever. Each clan, as among the Iroquois and Wyandots,<sup>4</sup> had certain personal names appropriated to it which carried clan rights with them, so that a person's name determined the clan to which he belonged. The father had no voice in the naming of his child. By an arrangement between the clans the choice of children's names was left to certain persons, mostly matrons, who thereby possessed the power of deciding to which clan any person was to belong.<sup>5</sup> It has been already pointed out that this power of arbitrarily assigning any person to any clan may have been one of the means by which descent was shifted from the maternal to the paternal line.<sup>6</sup> In point of fact among the Shawnees, though descent is now in the male line, there are traces of a former custom of transmitting the sachemship in the female line. Thus a sachem of the Wolf clan, at the point of death, desired to be succeeded not by

Shawnee  
practice of  
naming  
children  
into any  
clan.

This  
practice  
may have  
helped  
to shift

<sup>6</sup> Above, p. 42.

his son but by a nephew, the son of a sister. The nephew was of the Fish clan, and the son was of the Rabbit clan, so that neither could succeed to the sachemship without being transferred, by a change of name, to the Wolf clan, in which the office was hereditary. But the chief's wish was respected. After his death the Fish name of the nephew was changed to one of the Wolf names and he succeeded his uncle in the office. Such laxity, as Morgan says, indicates a decadence of the clan organisation; but it tends to shew that at no remote period descent among the Shawnees was in the female line.<sup>1</sup>

The Shawnees have the classificatory system of relationship in a form which agrees in all essentials with that of the Miamis. The agreement is all the more remarkable, because for upwards of two centuries the Shawnees had been in great measure detached from their next of kin, the Western Algonkins, and had lived in intimate relations with the Eastern Algonkins. The main features of the Shawnee system are these. In the generation above his own a man calls his father's brother, as well as his own father, "my father" (*No-thá'*); and he calls his mother's sister, as well as his own mother, "my mother" (*Ne-ke-á'h'*). But his mother's brother he calls "my uncle" (*Ní-sí-thá'*), not "my father"; and his father's sister he calls "my aunt" (*Na-tha-gwe-thá'*), not "my mother." In his own generation he calls his cousins, the children either of his father's brother or of his mother's sister, "my elder brother" (*N'-tha-thá'*) or "my younger brother" (*N'-the-ma-thá'*), "my elder sister" (*Ní-mí-thá'*) or "my younger sister" (*N'-the-ma-thá'*), according to their sex and age. In the generation below his own he calls his brother's son and daughter "my son" (*Ne-kwe-thá'*) and "my daughter" (*Ní-tá-na-thá'*), but he calls his sister's son and daughter "my nephew" (*Na-la-gwal-thá'*) and "my niece" (*Ne-sa-me-thá'*), not "my son" and "my daughter." Conversely, a woman calls her brother's son and daughter "my nephew" and "my niece," not "my son" and "my daughter"; but her sister's son and daughter she calls "my

The classificatory system of relationship among the Shawnees.

<sup>1</sup> L. H. Morgan, *Ancient Society*, pp. 169 sq. The Fish clan is not mentioned by Morgan in his list of the Shawnee clans (above, p. 72). It may have been extinct at the time when his list was compiled.

son" and "my daughter." In the next generation but one below his own a man calls the grandchildren of his brothers and sisters, own and, collateral, "my grandchildren"; and, conversely, in the generation next but one above his own he calls his grandfather's brothers "my grandfathers." Here again it will be observed that while there are separate terms for "elder brother" and "elder sister," the term for "younger brother" and "younger sister" is one and the same (*N'-the-ma-thâ'*). In all these respects the Shawnee form of the system is identical with the Miami form, though the terms of relationship differ verbally. Further, the two systems agree in the curious relationships which they assign to the children of a brother and of a sister respectively. For in the Shawnee system, as in the Miami, two male cousins, the sons of a brother and a sister respectively, are called uncle and nephew to each other; and two female cousins, the children of a brother and of a sister respectively, are called mother and daughter to each other. But when two cousins, the children of a brother and sister respectively, are the one male and the other female, then the man calls his female cousin, the daughter of his father's sister, "my niece"; but his female cousin, the daughter of his mother's brother, he calls "my mother." On her side the woman calls her male cousin, the son of her father's sister, "my son," but her male cousin, the son of her mother's brother, she calls "my uncle."<sup>1</sup>

Anomalous feature of the Shawnee system in regard to cousins, the children of a brother and sister respectively.

The Sauks and Foxes, two Algonkin tribes consolidated into one.

Another Algonkin people of the Mississippi who have totemism are the Sauks and Foxes, two tribes which have been consolidated into one. They were first found upon the Fox River in Wisconsin and they ranged westward to the Mississippi. Among the tribes of the Mississippi the Sauks and Foxes have been distinguished by their restless and warlike disposition. They waged almost ceaseless war with the Illinois and Ojibways, and they were the only Algonkin tribe against whom the French turned their arms. But they were not nomads. They lived in villages and tilled the soil, raising crops of maize, beans, squashes, and

<sup>1</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, p. 217 and Table II. pp. 293 *sqq.*

tobacco.<sup>1</sup> In 1766 Captain Carver visited what he calls "the Great Town of the Saukies" on the Fox River, and he thus describes it: "This is the largest and best built Indian town I ever saw. It contains about ninety houses, each large enough for several families. These are built of hewn plank neatly jointed, and covered with bark so compactly as to keep out the most penetrating rains. Before the doors are placed comfortable sheds, in which the inhabitants sit, when the weather will permit, and smook their pipes. The streets are regular and spacious; so that it appears more like a civilized town than the abode of savages. The land near the town is very good. In their plantations, which lie adjacent to their houses, and which are neatly laid out, they raise great quantities of Indian corn, beans, melons, etc., so that this place is esteemed the best market for traders to furnish themselves with provisions, of any within eight hundred miles of it."<sup>2</sup> Like all prairie Indians the Sauks and Foxes are very dark-skinned, very much more so than the forest Indians. Some of them are but a few shades lighter than negroes.<sup>3</sup>

The great town of the Sauks

The Sauks or Sacs and Foxes are divided into at least fourteen totemic and exogamous clans, the names of which, according to L. H. Morgan, are as follows:—<sup>4</sup>

Totemic clans of the Sauks and Foxes.

- |               |               |          |             |
|---------------|---------------|----------|-------------|
| 1. Wolf.      | 2. Bear.      | 3. Deer. | 4. Elk.     |
| 5. Hawk.      | 6. Eagle.     | 7. Fish. | 8. Buffalo. |
| 9. Thunder.   | 10. Bone.     | 11. Fox. | 12. Sea.    |
| 13. Sturgeon. | 14. Big Tree. |          |             |

Other accounts, which agree as to the number of the clans, vary as to their names. Thus Jedidiah Morse in 1822 reported that "each nation is subdivided into a great number of families or clans. Among the Sauks there are no less than fourteen tribes, each of them distinguished by a particular name, generally by the name of some animal, as the Bear tribe, Wolf tribe, Dog tribe, Elk tribe, Eagle tribe,

<sup>2</sup> J. Carver, *Travels through the In-*

Partridge tribe, Sucker tribe, Thunder tribe, etc.”<sup>1</sup> In this list the Dog, Partridge, and Sucker clans are not mentioned by Morgan. Again, a later account also enumerates fourteen clans, but substitutes the Big Lynx, Swan, Pheasant, Bass, and Bear Potato clans for the Deer, Hawk, Fish, Bone, and Big Tree clans of Morgan’s list.<sup>2</sup> Another account speaks of seven clans only, and records a tradition that these seven clans had seven animal ancestors, namely, the fox, the eagle, the bear, the beaver, the fish, the antelope, and the raccoon. According to this legend, two brothers found the seven ancestral animals in a cave, lived for a month with them, and were adopted as brothers by the beasts. The first seven human ancestors of the clans had the power of taking the shape each of his totem animal.<sup>3</sup> The principal clan is the Eagle clan, the hereditary chief of which is head of the tribe.<sup>4</sup> Each clan has its own totemic dance, in which none but members of the secret society of the clan take part. The Eagle dance is the most important of these totemic dances. An old woman told Miss Owen “that when she was a little girl those who took part in the Totem dances were dressed to look like the Ancestral Animal whose favour was thus secured, but their appearance was so dreadful in their suits of skins, scales, or feathers, and the masks to correspond, that many women were frightened and made ill, a state of affairs very bad for a small tribe that could not afford the loss of women and babies. What to do the men knew not, but the Totems took pity on them, and in dreams warned the old men to destroy the masks. Since then masks have been painted to indicate the Totem.”<sup>5</sup>

Among the Sauks and Foxes each clan, as usual, had a number of personal names which were borne by

members of the clan. Thus in the Deer clan there was a personal name "Long Horn"; in the Wolf clan there was "Black Wolf"; in the Eagle clan there were "Eagle drawing his nest," "Eagle sitting with his head up," and "Eagle flying over a limb."<sup>1</sup>

The rules of marriage, descent, and inheritance are the same among the Sauks and Foxes as among the Miamis; that is, no man is allowed to marry a woman of his own clan, children take their clan from their father, not from their mother, and property and office are hereditary in the clan.<sup>2</sup>

Rules of marriage and descent.

Another of the Central Algonkin tribes, which is closely related to the Sauks and Foxes both by blood and language are the Kickapoos. The earliest notice of the tribe places them in the northern part of the present State of Illinois, between Lake Michigan and the Mississippi. About half of the tribe is now settled on a reservation in Mexico. The Kickapoos are divided into clans, of which at the present day the names are Water, Tree, Berry, Thunder, Man, Bear, Elk, Turkey, Bald Eagle, Wolf, and Fox. The rule was that no man might marry a woman of his own clan; children took the clan of their father.<sup>3</sup> The Kickapoos have the classificatory system of relationship in a form which agrees with that of the Miamis.<sup>4</sup>

Totemic clans of the Kickapoos, another Algonkin tribe.

The classificatory system of relationship.

Another Algonkin tribe of this region who have totemism are the Menominees. They now occupy a reservation at Keshena in North-eastern Wisconsin, which is almost the same territory that they held when they were discovered by Jean Nicollet in 1634. Their language shews that they are more nearly related to the Ojibways than to any other Algonkin tribe. In recent years certain of their customs and myths have been investigated and recorded in great detail by Dr. W. J. Hoffman.<sup>5</sup> He tells us that at the time

Totemic  
clans and  
phratries of  
the Meno-  
minees.

when he wrote (1892-93) the Menominees were divided into totemic clans, which were named and grouped under phratries as follows in the order of their importance:—<sup>1</sup>

MENOMINEE TOTEMIC SYSTEM

Phratries.	Clans.
I. Bear . . .	1. Bear. 2. Porcupine. 3. Turtle. 4. Crane. 5. Wolf. 6. Otter. 7. Sturgeon. 8. Sunfish.
II. Big Thunder.	1. Golden Eagle. 2. Fork-tail Hawk. 3. Bald Eagle. 4. Turkey-buzzard. 5. Swift-flying Hawk. 6. Winter Hawk (remains all winter in Wisconsin). 7. Sparrow Hawk. 8. Red-tail Hawk. 9. Crow. 10. Raven. 11. Beaver. 12. Elk. 13. Pine Squirrel.
III. Wolf . . .	1. Wolf. 2. Dog. 3. Deer.

On the position of the Wolf clan in the first phratry Dr. Hoffman observes that "although the Wolf is recognized as a member of the Bear phratry, his true position is at the head of the third phratry."

Another  
list of the  
totemic  
clans and  
phratries of  
the Meno-  
minees.

Having given the above as the list of "the Menomini totems or gentes as they exist at this day," Dr. Hoffman adds: "According to Shu'nien and Wios'kasit the arrangement of totems into phratries and subphratries was as follows:

"I. The *Owa'sse wi'dishi'anun*, or Bear phratry, consisting of the following totems and subphratries:

<i>Owa'sse</i>	Bear	} Totems
<i>Miqkä'no</i>	Mud-turtle	
<i>Kitä'mi</i>	Porcupine	
<i>Namä'nu</i>	Beaver	} Subphratries (these two being brothers).
<i>O'sass</i>	Muskrat	

<sup>1</sup> W. J. Hoffman, "The Menomini Indians," *Fourteenth Annual Report of the Bureau of Ethnology*, Part i. (Washington, 1896) p. 41.

" II. The *Kinē'u* *wi'dishu'anun*, or Eagle phratry, consisting of the following totems :

<i>Pināsh'iu</i>	Bald Eagle
<i>Kaka'kē</i>	Crow
<i>Inä qtēk</i>	Raven
<i>Ma'qkuana'ni</i>	Red-tail Hawk
' <i>Hinanä'shiu</i> '	Golden Eagle
<i>Pé'niki'konau</i>	Fish Hawk

" III. The *Otä'tshia* *wi'dishi-anun*, or Crane phratry, consisting of the following totems :

<i>Otä-tshia</i>	Crane
<i>Shakshak'eu</i>	Great Heron
<i>Os'se</i>	' Old Squaw ' Duck
<i>O'kawā'siku</i>	Coot

" IV. The *Moqwai'o* *wi'dishi'anun*, or Wolf phratry, consisting of the following totems :

<i>Moqwai'o</i>	Wolf
' <i>Hana</i> ' [ <i>änä'm</i> ]	Dog
<i>Apaq'ssos</i>	Deer

" V. The *Mō's* *wi'dishi-anun*, or Moose phratry, with the following totems :

<i>Mō's</i>	Moose
<i>Oma'skos</i>	Elk
<i>Wabä'shiu</i>	Marten
<i>Wū'tshik</i>	Fisher" <sup>1</sup>

Dr. Hoffman gives no explanation of the discrepancies between the two foregoing lists of clans and phratries. Perhaps he means us to understand that the second list, given on the authority of two Indians, represents the ancient arrangement of the clans as it has been handed down in the traditions of the tribe. As to the marriage rules Dr. Hoffman is also silent. We may conjecture that the clans are, theoretically at least, exogamous, but it would hardly be safe to infer that the phratries are so also.

It should be observed that with one exception every phratry bears the name of a bird or animal which is also the name of one of the totem clans included under it. This naturally suggests that the present clans have been produced by the subdivision of older clans, which thereby passed into the rank of phratries. Similar evidence of the subdivision

<sup>1</sup> W. J. Hoffman, "The Menomini Indians," *Fourteenth Annual Report of the Bureau of Ethnology*, Part i. (Washington, 1896) p. 42.

Evidence that the Menominee phratries have originated by subdivision of the original totemic clans.

of totemic clans into new clans has already met us among the Mohicans and Ojibways.<sup>1</sup> The Big Thunder phratry appears at first sight to be an exception to this rule, but the exception is more apparent than real. For though the Big Thunder phratry does not include a Big Thunder clan, it includes the clan of the golden Eagle, the bird which is said to have been the representative of the Invisible Thunder.<sup>2</sup> It is a common belief of the American Indians that the clap of thunder is made by a big bird flapping its great wings.<sup>3</sup>

The rule of descent among the Menominees seems to have changed from the maternal to the paternal line.

With regard to the rule of descent Dr. Hoffman says: "Mother-right, the older form of descent in the female line, is not now recognized by the Menomini, who have advanced to the next stage, that of father-right, or descent in the male line. . . . Some of the ancient customs respecting the disposition of property and children, in the event of the death of either parent, are still spoken of, though now seldom, if ever, practised. As descent was in the mother's line, at her death both children and personal effects were transmitted to the nearest of the mother's totemic kin, while at the death of the father his personal property was divided among his relatives or the people of his totem."<sup>4</sup> The view that the Menominees have passed from mother-kin to father-kin is supported by L. H. Morgan, who in 1859, questioning a Menominee man as to the rule of inheritance in his tribe, received the following answer: "If I should die, my brothers and maternal uncles would rob my wife and children of my property. We now expect that our children will inherit our effects, but there is no certainty of it. The old law gives my property to my nearest kindred who are not my children, but my brothers and sisters, and maternal uncles."<sup>5</sup>

<sup>1</sup> See above, pp. 44, 55, 57.

<sup>4</sup> W. J. Hoffman, "The Menomini Indians," *Fourteenth Annual Report of the Bureau of Ethnology*, Part i. (Washington, 1896), p. 43.

<sup>5</sup> L. H. Morgan, *Ancient Society*, pp. 170 sq.

Members of any totem clan regard as their relations all persons who have the same totem, even though they may belong to a different tribe, or even to tribes of a different linguistic family. Thus several Menominees of the Bear totem said to Dr. Hoffman that men of the Bear totem among the Sioux "must be of the same kinship with themselves, as they had the same common ancestor."<sup>1</sup>

Kinship between members of the same totemic clan in different tribes.

With regard to the relation in which a man stands to his totemic animal, Dr. Hoffman tells us that "although a Bear man may kill a bear, he must first address himself to it and apologize for depriving it of life; and there are certain portions only of which he may eat, the head and paws being tabu, and no member of his totem may partake of these portions, although the individuals of all other totems may do so."<sup>2</sup> Elsewhere the same writer says: "Should an Indian of the Bear totem, or one whose adopted guardian is represented by the bear, desire to go hunting and meet with that animal, due apology would be paid to it before destroying it. The carcass would then be dressed and served, but no member of the Bear totem would partake of the meat, though the members of all other totems could freely do so. The hunter could, however, eat of the paws and head, the bones of the latter being subsequently placed upon a shelf, probably over the door, or in some other conspicuous place. Due reverence is paid to such a relic of the totem, and so strictly observed is this custom that no greater insult could be offered to the host than for any one to take down such bones and to cast them carelessly aside."<sup>3</sup> We have seen that among the Ottawas men of the Bear clan used to apologise to a bear when they had killed it.<sup>4</sup>

Apologies for killing the totemic animal. A Bear man who has killed a bear may eat its head and paws.

The Menominees say that formerly there were more totemic clans, but that in course of time some of them have become extinct. The tradition as to the origin of some of

Menominee traditions as to the origin of their totemic clans and phratries.

<sup>1</sup> W. J. Hoffman, "The Menomini Indians," *Fourteenth Annual Report of the Bureau of Ethnology*, Part i. (Washington, 1896) p. 43. However, we are told that the Sioux (Dacotas) have not got totems. See below, p. 86.

<sup>2</sup> W. J. Hoffman, *op. cit.* p. 44.

<sup>3</sup> W. J. Hoffman, *op. cit.* p. 65.

At first sight Dr. Hoffman's statements as to eating the head and paws of the bear seem to contradict each other. But perhaps he means that the Bear hunter who kills a bear may eat of these portions, though no other member of the Bear clan may do so.

<sup>4</sup> Above, p. 67.

them runs thus. When the Great Mystery<sup>1</sup> made the earth, he created also numerous beings termed *manidos* or spirits, giving them the form of animals and birds. Most of the animal-*manidos* were malevolent (*ânâ maqkî' u'* "underground beings"); and the bird-*manidos* were eagles and hawks, known as the Thunderers, chief of whom was the Invisible Thunder, represented by the Golden Eagle. When the Good Mystery (*Mashâ' Ma'nidō*) saw that the bear was still an animal, he determined to allow him to change his form. This accordingly was done, and the bear was turned into a man at the Menominee River, near the spot where the animal first came out of the ground. The man found himself alone and called to the Golden Eagle to come and be his brother. So the eagle swooped down and took the form of a man. They laid their heads together and were just considering whom next to invite to join them, when they perceived a beaver approaching. The beaver begged to be taken into the totem of the Thunderers, but being a woman was called Beaver woman and was adopted as a younger brother—perhaps we should say sister—of the Thunderer. Soon afterwards the Bear and Eagle, standing on the river-bank, saw a sturgeon, and the Bear adopted the Sturgeon as his younger brother and servant. In like manner the Thunderer, who was the Golden Eagle, took the Elk to be his younger brother and water-carrier.

The Bear  
and the  
Golden  
Eagle or  
Thunderer.

The Bear,  
the Wolf,  
the Crane,  
and other  
animals.

Another time the Bear was going up the Wisconsin River, but being weary he sat down to rest. Hard by, the river tumbled over rocks with a refreshing murmur, and from underneath the waterfall appeared the Wolf, who asked the Bear what he did there. The Bear said he was on a journey and being too tired to go further had sat down to rest. At that moment a crane flew by. The Bear

<sup>1</sup> "*Mashâ' Ma'nidō*, or Great Unknown. This term is not to be understood as implying a belief in one supreme being; there are several *manidos*, each supreme in his own realm, as well as many lesser mysteries, or deities, or spirits. Neither is it to be regarded as implying a definite recognition of spirituality corresponding to that of civilized peoples, for the

American Indians have not fully risen to the plane of psychotheism" (W. J. Hoffman, "The Menomini Indians," *Fourteenth Annual Report of the Bureau of Ethnology*, Part i. (Washington, 1896) p. 39, note<sup>1</sup>). Dr. Hoffman represents *Mashâ' Ma'nidō* variously as "the Great Mystery," "the Good Mystery," and "the Great Unknown."

called to the bird and prayed it to carry him to the Bear people at the head of the river, promising if he would do so to make him his younger brother. Just as the Bear was in the act of mounting on the back of the Crane, the Wolf called out, "Bear, I am alone. Take me also as a younger brother." That is why the Crane and the Wolf are now the younger brothers of the Bear; but afterwards the Wolf allowed the Deer and the Dog to join him, and therefore these three, as we have seen, now compose a phratry. But the Wolf ranks not only with their phratry, but also with the phratry of the Bear, where he is entitled to a seat in council on the north side.<sup>1</sup>

The Good Mystery made the Thunderers to be labourers, that by their labours they might benefit the whole world. In spring days, when they return from the south-west, they bring with them the showers which make the black earth green and cause the plants to grow and the trees to put forth leaves. Were it not for the Thunderers, the earth would be parched, and the grass would wither and die. The Good Mystery also gave to the Thunderers his good gift of corn, the kind that is commonly called squaw corn, with small stalks and ears of various colours. The Thunderers were also the makers of fire, having first received it from Mä'näbüsh, the hero of many a Menominee tale, who himself stole it from an old man that dwelt on an island in a great lake. Among the Menominees to this day the Thunderers are charged with lighting the council fire, and when the tribe is on the march the Thunderers go on ahead to a camping-place and kindle the fire which is to be used by all the people. They are also the war-chiefs. They and the Bear people live together, the Bears taking their seats on the eastern side of the council and the Thunderers on the western.<sup>2</sup>

The Menominees have the classificatory system of relationship in a form which is substantially identical with that of the Miamis, agreeing with it in treating male cousins, the sons of a brother and sister respectively, as uncle and

The Thunderers and their fertilising function.

The Thunderers the makers of fire.

nephew, and female cousins, the children of a brother and sister respectively, as mother and daughter.<sup>1</sup>

### § 8. *Exogamy among the Algonkin Tribes of the Rocky Mountains*

The Blackfeet, the westernmost of the Algonkins.

The westernmost of the Algonkins are the Blackfeet, a numerous nation, who range over the eastern slopes of the Rocky Mountains and the prairies at their foot. A well-built, hardy, and courageous people, they are or rather were a nation of horsemen and depended for their subsistence exclusively on hunting. Their country used to abound in game more perhaps than any other part of North America. Among the American Indians the Blackfeet had no superiors in horsemanship and none in the art of stalking such wary animals as the antelope. So long as the buffalo existed, the tribe lived chiefly on its flesh and clothed themselves in its skin.<sup>2</sup> They are divided into three tribes: the Blackfeet proper, the Blood Blackfeet, and the Piegan Blackfeet, all speaking the same language, observing the same customs, and acknowledging a tie of blood between them. Each tribe is subdivided into a number of clans, bodies of blood kindred tracing their descent in the male line. Formerly the members of a clan were all considered to be relatives, however remote, to each other, and there was a law prohibiting a man from marrying within his clan. In the old days this law was strictly enforced, but like many other old customs it is no longer observed. But though the clans are or used to be exogamous, they are apparently not totemic; at least Mr. G. B. Grinnell, one of our chief authorities on the Blackfeet, knows of no clan that has a totem. The names of the clans which he gives confirm this view of the absence of totemism in the nation.<sup>3</sup>

The three tribes of Blackfeet.

Exogamous clans with male descent.

<sup>2</sup> L. H. Morgan, *op. cit.* pp. 224 *sq.*; G. B. Grinnell, *Blackfoot Lodge Tales* (London, 1893), pp. 177 *sqq.*, 226 *sq.*, 241.

<sup>3</sup> G. B. Grinnell, *op. cit.* pp. 208-211. In the Blackfeet proper Mr. Grinnell enumerates eight clans or, as he calls them, gentes; in the Blood Blackfeet, thirteen; and in the Piegan Blackfeet, twenty-four. Among the names of the clans are, for example, Flat Bows, Many Medicines, Black Elks, Liars, Biters, Skunks,

However, the Blackfeet have the classificatory system of relationship, though in an advanced form; for under it a man calls his father's brother "my step-father," not "my father"; he calls his mother's sister "my step-mother," not "my mother"; he calls his brother's son and daughter "my step-son" and "my step-daughter," not "my son" and "my daughter." On the other hand, he continues, as usual, to call his cousins, the son and daughter of his father's brother, "my brother" and "my sister"; he calls his grandfather's brother "my grandfather"; and he calls the grandchildren of his brother and sister, and also of his collateral brothers and sisters, "my grandchildren."<sup>1</sup>

The Blackfeet marry as many wives as they please. All the younger sisters of a man's wife were regarded as his wives, if he chose to take them. If he did not wish to marry them, they might not be given in marriage to any other man without his consent. When a man dies, his eldest brother has the right to marry the widow or widows.<sup>2</sup>

Right to marry all a wife's younger sisters. The levirate.

### § 9. Totemism among the Omahas

Thus far we have surveyed the totemic systems, first, of the Iroquois-Huron, and, next, of the Algonkin family. We now pass to the consideration of a third great family or stock of North American Indians, which may be called the Siouan or Dacotan from the Sioux or Dacotas, the largest and most famous members of the family. At the time of their discovery the Siouan family had fallen into a number of groups, and their language into a number of dialects, which differed from each other much more widely than the various dialects of the Algonkin language. But in the main the Siouan tribes inhabited continuous areas. They occupied the head-waters of the Mississippi and both banks of the Missouri for more than a thousand miles in

The Siouan or Dacotan family.

Many Lodge Poles, Hair Shirts, Short Bows, Dried Meat, Black Patched Mocassins, They Don't Laugh, Seldom Lonesome, Obstinate, Lone Fighters, Small Robes, Big Topknots, Worm people, All Chiefs, Red Round Robes. Compare L. H. Morgan, *Systems of*

*Consanguinity and Affinity*, pp. 224 sq.; *id.*, *Ancient Society*, p. 171.

<sup>1</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, pp. 225 sq., and Table II. pp. 293 sqq.

<sup>2</sup> G. B. Grinnell, *Blackfoot Lodge Tales*, pp. 215, 217, 218.

They occupied the head-waters of the Mississippi and both banks of the Missouri; but they seem to have moved thither from the east.

extent. Roughly speaking, their territory reached from the Arkansas River on the south to the Saskatchewan River on the north, and from the Mississippi on the east to the Rocky Mountains on the west. But there are reasons to think that this was not their original home; for tribes speaking archaic dialects of the Siouan speech have been found in Virginia and Louisiana. It is now believed, therefore, that the Siouan or Dacotan stock had its original home, not on the prairies of the west, but at the eastern foot of the Southern Alleghanies, till the pressure of the hostile Algonkin and Iroquoian tribes forced them back into the prairies west of the Mississippi, where they subsisted by hunting the buffalo.<sup>1</sup>

The Sioux proper or Dacotas have not now got totemism; but there is some reason to think that they had it formerly.

Of the tribes composing this stock it appears that the Sioux proper, or Dacotas, as they called themselves, had not the totemic system; at all events competent authorities failed to find it among them in the nineteenth century.<sup>2</sup> However, there are some grounds for thinking that they possessed the system as late as the middle of the eighteenth century. Thus Captain Carver, who explored the region of the Great Lakes and the head-waters of the Mississippi in 1766, writes as follows: "Every separate body of Indians is divided into bands or tribes; which band or tribe forms a little community with the nation to which it belongs. As the nation has some particular symbol by which it is distinguished from others, so each tribe has a badge from

<sup>1</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, pp. 170 sq.; *id.*, *Ancient Society*, p. 154; J. Mooney, *The Siouan Tribes of the East* (Washington, 1894), pp. 5 sqq.; J. Deniker, *The Races of Man*, pp. 528 sq. As to the various Siouan or Dacotan tribes, see S. R. Riggs, *Dakota Grammar, Texts, and Ethnography* (Washington, 1893), pp. 155 sqq.; W. J. McGee, "The Siouan Indians," *Fifteenth Annual Report of the Bureau of Ethnology* (Washington, 1897), pp. 157 sqq.; J. Owen Dorsey, "Siouan Sociology," *ibid.* pp. 213 sqq.

(London, 1830) pp. 313; W. W. Warren, "History of the Ojibways," *Collections of the Minnesota Historical Society*, v. (1885) p. 43 ("From personal knowledge and enquiry, I can confidently assert that among the Dakotas the system is not known"); L. H. Morgan, *Ancient Society*, p. 154; S. R. Riggs, *Dakota Grammar, Texts, and Ethnography* (Washington, 1893), p. 195 (*Contributions to North American Ethnology*, vol. ix.). The last-mentioned writer (Riggs) observes that "the real foundation for the totemic system exists among the Dakota as well as the Iroquois, in the names of men often being taken from mythical animals, but the system was never carried to perfection."

which it is denominated : as that of the Eagle, the Panther, the Tiger, the Buffalo, etc., etc. One band of the Naudowessie is represented by a Snake, another a Tortoise, a third a Squirrel, a fourth a Wolf, and a fifth a Buffalo. Throughout every nation they particularize themselves in the same manner, and the meanest person among them will remember his lineal descent, and distinguish himself by his respective family."<sup>1</sup> As Naudowessie is an old name for the Sioux or Dacotas,<sup>2</sup> Carver's testimony certainly seems to shew that those of the Dacotas with whom he came into contact were divided into totemic clans, as Morgan has already pointed out.<sup>3</sup> However, in modern times the numerous bands of which the tribe is composed appear to lack the characteristics of totemic clans, being neither named after animals nor exogamous.<sup>4</sup> Accordingly they need not be here considered. But if the Dacotas themselves no longer possess totemism, many of the tribes of the same stock are still, or were till lately, divided into totemic clans. We begin our survey of them with the Omahas, a tribe of the Missouri valley in the State of Nebraska. The remainder of the tribe is now settled on a reservation in Burt County.<sup>5</sup>

However, some tribes of the Dacotan stock have totemism.

The Omahas supported themselves partly by agriculture and partly by the chase. Their village, consisting of "dirt-lodges," was situated within a few miles of the Missouri, but they only occupied it for about five months in the year, returning to it in order to attend to their crops ;

The Omahas, a Siouan tribe of the Missouri.

<sup>3</sup> L. H. Morgan, *Ancient Society*, p. 154.

<sup>4</sup> *Handbook of American Indians north of Mexico*, i. 378. For lists of these bands, see Rev. J. Owen Dorsey, "Siouan Sociology," *Fifteenth Annual Report of the Bureau of Ethnology* (Washington, 1897), pp. 215 sqq. The writer calls these bands "gentes." Among the names of the bands mentioned by Dorsey are "Not encumbered with much baggage," "Eats-no-

geese," "Bad Nation," "Village on the Prairie," "Shooters among the Leaves," "Village at the Dam," "Dwellers on the Sand," "Dwellers on the Island," "Dwellers at the South," "Five Lodges," "Those who lay meat on their shoulders," etc. Another is called "Breakers (of the law or custom)," being so called "because members of this gens disregarded the marriage law by taking wives within the gens."

<sup>5</sup> L. H. Morgan, *Ancient Society*, p. 155 ; Rev. J. Owen Dorsey, "Omaha Sociology," *Third Annual Report of the Bureau of Ethnology* (Washington, 1884), p. 214 ; J. Deniker, *The Races of Man*, p. 530.

for they planted maize, beans, pumpkins, and water-melons, but no other vegetables. At other times of the year they roamed the country in the pursuit of the buffalo, their favourite game, which they followed on horseback. The flesh of the buffalo, dried in the sun or jerked over a slow fire and condensed into cakes, was one of their principal foods, but they also hunted the deer and the elk, and trapped beavers and otters. The skins of all these animals they dressed and bartered with traders for the blankets, guns, powder, calico, knives and so forth, of which they stood in need.<sup>1</sup> On the whole the Omahas depended mainly on the hunt for food, clothing, and shelter.<sup>2</sup>

We have a comparatively full account of Omaha totemism, including information about the totemic taboos. Such information is rarely given as to the American Indians.

The Omahas have had the good fortune to be studied by several competent observers, and accordingly we possess a more detailed account of their totemic system than of any other Indian tribe in North America. For the most part, as the reader may have already perceived, our knowledge of the totemism of an American Indian tribe comprises little more than a bare list of the names of the clans with a brief statement of the rules of marriage and descent. In fact the attention of American observers, even of an observer so sagacious as L. H. Morgan, seems to have been turned almost exclusively to the social side of totemism, while the religious or superstitious side of the system, in other words, the relation in which human beings are supposed to stand to their totemic objects, has been almost wholly overlooked. As a consequence, while we are generally informed as to the social taboo which forbids marriage within the totemic clan, we have commonly no information at all as to the religious or superstitious taboos which regulate the behaviour of the

<sup>1</sup> Edwin James, *Account of an Expedition from Pittsburgh to the Rocky Mountains performed in the years 1819, 1820, under the command of Major S. H. Long* (London, 1823), i. 181-204.

<sup>2</sup> J. Owen Dorsey, "Omaha Sociology," *Third Annual Report of the Bureau of Ethnology* (Washington, 1884), p. 221. As to the houses, furniture, and implements of the Omahas, see *id.* "Omaha Dwellings, Furniture, and Implements," *Thirteenth*

*Annual Report of the Bureau of Ethnology* (Washington, 1896), pp. 269-288. The "dirt-lodges" or "earth-lodges" of the Omahas were circular huts, consisting of a wooden framework thatched with grass, the whole structure being covered over with earth one or two feet deep. A hole in the middle allowed the smoke to escape. The Omahas formerly made pottery. They used stone knives and hoed the ground with the shoulder-blades of buffaloes (J. Owen Dorsey, *op. cit.* p. 278).

clanspeople towards their totem. Even such a simple matter as the rule whether a man may or may not kill and eat his totem animal has been very rarely recorded of any American tribe. It would be rash to assume from the silence of our authorities that no such superstitious taboos exist in tribes where they have not been recorded, and that to the American Indians in general their totemic names mean no more than the proper names Bull, Lamb, and Rose mean to us. The example of totemic tribes in many other parts of the world would suffice to raise a strong presumption that the Indians of America regard, or at some former time regarded, their totems with superstitious respect and awe ; and this presumption is greatly strengthened by the case of the Omahas, who are known to have so regarded their totems, and to have observed accordingly a system of taboos in respect of them. It is in the highest degree improbable that in doing so the Omahas were exceptional ; far more probably similar taboos have been observed by all the totemic tribes of North America, though unfortunately very few of them have been put on record. We are bound to be all the more grateful to the men of truly scientific spirit who have had the intelligence to note and the patience to record the totemic taboos of the Omahas.

Of these records we possess two, the first obtained by Major S. H. Long's expedition in 1819 and 1820, and the second by the Rev. J. Owen Dorsey, who was a missionary to the kindred tribe of Ponkas from 1871 to 1873 and afterwards studied the Omahas and other tribes of the Siouan family for the American Bureau of Ethnology. Dorsey's record is much the fuller and in many respects the more valuable of the two ; but Long's is also of great interest and importance, because it was procured at a time when the Omahas were still independent and when they retained their ancient customs and beliefs very little affected by contact with civilisation. Accordingly, I shall reproduce the earlier record entire in the words of the writer, Dr. Edwin James, the botanist and geologist of the expedition, who edited the journals of Major Long and his colleagues. The information with regard to the Omahas, or Omawhaws, as James calls them, was in great measure obtained from Mr. John

The  
researches  
of Major  
Long's  
expedition  
and of the  
Rev. J.  
Owen  
Dorsey.

Dougherty, Deputy Indian Agent for the Missouri, "who had an excellent opportunity of making himself acquainted with the natives, by residing for a time in the Omawhaw village, and by visiting all the different nations of this river [the Missouri]." <sup>1</sup> The account runs thus :—<sup>2</sup>

Totemic  
clans and  
taboos  
of the  
Omahas,  
as reported  
by Major  
Long's  
expedition.

The Omawhaw nation is divided into two principal sections or tribes, which are distinguished by the names Honga-sha-no and Ish-ta-sun-da; the latter means Grey Eyes.

The first-mentioned tribe is subdivided into eight bands, viz.

1. *Wase-ish-ta*.—This band is interdicted from eating the flesh of male deer or male elk, in consequence of having their great medicine, which is a large shell, enveloped in the prepared skin of those animals.<sup>3</sup> The chief of this band is the Big Elk, Ongpatungah; and it is more powerful and numerous in individuals than either of the others. . . .

2. *Enk-ka-sa-ba*.—This band will not eat red maize. They ascribe to their family the greatest antiquity, and declare that their first man emerged from the water with an ear of red maize in his hand. The principal chief is Ishkatappe.

3. *Wa-sa-ba-eta-je*; or, those who do not touch bears.—This band refrains from eating the flesh of bears.

4. *Ka-e-ta-je*, or those who do not touch turtles or tortoises.

5. *Wa-jinga-e-ta-je*, or those who do not touch any kind of bird, excepting the war-eagle.

6. *Hun-guh*.—This band does not eat white cranes, as the down of that bird is their medicine.

7. *Kon-sa*.—This band must not touch the green clay, or even verdigrise, both of which are used as pigments by the other bands, for ornamenting their persons.

8. *Ta-pa-taj-je*.—This band must not touch deers' heads, neither must they wear deer-skin mockasins. Many of the individuals of this band are partially gray-haired. This change of the hair, which they

<sup>1</sup> Edwin James, *Account of an Expedition from Pittsburgh to the Rocky Mountains performed in the years 1819, 1820, under the command of Major S. H. Long* (London, 1823), i. 181.

<sup>2</sup> E. James, *op. cit.* ii. 47-50.

<sup>3</sup> This sacred shell, Dr. James tells us (pp. 47 *sq.*), wrapped in its skin covering, was kept in "a skin lodge or temple," under charge of a person who constantly resided in the lodge and guarded the shell. It was placed on a stand and never allowed to touch the earth. No one dared to open the skin and look at the shell, for they thought

that the sight of it would instantly blind them. The sacred bundle was taken with the band to all national hunts, being transported on a man's back. And before a national expedition was undertaken against an enemy, the holy shell was consulted as an oracle. The medicine-men smoked and listened for a sound from the sacred bundle. If a sound resembling a strong expulsion of breath or a distant gunshot was heard, they took it for a favourable omen; and the expedition advanced with confidence. If no such sound was heard, they deemed the issue doubtful. As to the sacred shell, see also below, p. 107.

consider as a deformity, is attributed to a violation of the above-mentioned laws prescribed by their medicine.

The second division, or tribe *Ishtasunda*, is subdivided into five bands.

1. *Ta-pa-eta-je*.—This band does not touch bison heads.

2. *Mon-eka-goh-ha*, or the earth-makers. — Of this band was the celebrated Black Bird. They are not forbidden the use of any aliment; and are said to have originated the present mode of mourning, by rubbing the body with whitish clay.

3. *Ta-sin-da*, or the bison tail.—This band does not eat bison calves, in the first year of the age of that animal.

4. *Ing-gera-je-da*, or the red dung. — This name is said to have originated from the circumstance of this band having formerly quarrelled, and separated themselves from the nation, until, being nearly starved, they were compelled to eat the fruit of the wild cherry-tree, until their excrement became red.

5. *Wash-a-tung*.—This band must not touch any of the reptilia class of animals.

Each of these animals, or parts of animals, which the bands respectively are forbidden to touch or eat, is regarded as the particular mysterious medicine of the band collectively, to which it relates.

This singular, and, to us, absurd law of interdiction, is generally rigidly observed; and a violation of it, they firmly believe, will be followed by some signal judgment, such as blindness, gray hairs, or general misfortune. Even should the forbidden food be eaten inadvertently, or but tasted through ignorance, sickness they believe would be the inevitable consequence, not only to the unfortunate individual himself, but involving his wife and children also.

In this account of the Omaha bands or clans, no mention is made of the rule of exogamy, which forbids a man to marry a woman of his own clan; but this omission is supplied, as we shall see, by later writers. Thus it would appear from the account which I have just quoted that in the years 1819-1820 the Omaha were divided into thirteen totemic clans, which were arranged in two groups, perhaps phratries, as follows:—

Tribal Divisions (Pbratries?).	Clans.	Totems.	Taboos.
<i>Honga-sha-no</i>	1. <i>Wase-ish-ta</i>	Male deer and male elk	Forbidden to eat flesh of male deer or male elk.
	2. <i>Enk-ka-sa-ba</i>	Red Maize	Forbidden to eat red maize.
	3. <i>Wa-sa-ba-eta-je</i>	Bear	Forbidden to eat the flesh of bears.
	4. <i>Ka-e-ta-je</i>	Turtle (Tortoise)	Forbidden to touch turtles or tortoises.
	5. <i>Wa-jinga-e-ta-je</i>	Bird	Forbidden to touch any bird except the war- eagle.
	6. <i>Hun-guh</i>	White Crane	Forbidden to eat white cranes.
	7. <i>Kon-za</i>	Green Clay and verdigris	Forbidden to touch green clay and verdigris.
	8. <i>Ta-pa-taj-je</i>	Deers' heads and deer-skin moc- casins	Forbidden to touch deers' heads and to wear deer-skin moc- casins.
<i>Ish-ta-sun-da</i> (Grey Eyes)	1. <i>Ta-pa-eta-je</i>	Heads of Buffaloes	Forbidden to touch heads of buffaloes.
	2. <i>Mon-eka-goh-ha</i>	White clay?	?
	3. <i>Ta-sin-da</i>	Tails of buffaloes	Forbidden to eat buffalo calves one year old.
	4. <i>Ing-gera-je-da</i>	Red dung?	?
	5. <i>Wash-a-tung</i>	Reptiles	Forbidden to touch reptiles.

Some forty years later, in 1860, L. H. Morgan obtained a list of twelve Omaha clans as follows:—<sup>1</sup>

1. <i>Wâ-zhese-ta</i>	Deer.
2. <i>Ink-ka-sa-ba</i>	Black.
3. <i>Lâ-tâ-dâ</i>	Bird.
4. <i>Kâ-ih</i>	Turtle.
5. <i>Da-thun-da</i>	Buffalo.
6. <i>Wâ-sâ-ba</i>	Bear.
7. <i>Hun-gâ</i>	Medicine.
8. <i>Kunzâ</i>	Kaw.
9. <i>Tâ-pâ</i>	Head.
10. <i>In-grâ-zhe-da</i>	Red.
11. <i>Ish-dâ-sun-da</i>	Thunder.
12. <i>O-non-e-kâ gâ-ha</i>	Many seasons.

<sup>1</sup> L. H. Morgan, *Ancient Society*, p. 155. As Morgan ascertained the Omaha classificatory terms of relationship at Omaha, in Nebraska, in June 1860 (*Systems of Consanguinity and Affinity*, p.

284), I have assumed that he obtained his list of the clans at the same time. He was at work among the Eastern Dakotas in 1861 and among the Western in 1862 (*Ancient Society*, p. 154).

A comparison of this list with the preceding one will shew that while the two agree in some things, they differ in others. The discrepancies may be due to the changes which presumably took place among the Omahas in the interval. The name of Morgan's Thunder clan (*Ish-dâ-sun-da*) is clearly identical with *Ish-ta-sun-da*, which according to Dr. James's information was not a clan or band, but one of the two great divisions into which the whole nation or tribe was distributed.

When the Rev. J. Owen Dorsey studied the Omahas some sixty years after Major Long's expedition,<sup>1</sup> he found them organised in ten totemic clans, which were equally distributed between the same two great tribal divisions which had been recorded by his predecessors. The names of the two tribal divisions, according to Dorsey, are *Hanggashenoo* and *Eeshtasanda*, which are clearly identical with the *Hongasha-no* and *Ish-ta-sun-da* of Major Long; and each of the two divisions comprises five clans under it. In former days, when the tribe was encamped, the ten clans pitched their tents in a circle, the five clans of the Hanggashenoo division forming a semicircle on the right side of the line of march, and the five clans of the Eeshtasanda division forming the other semicircle on the left side of the line of march. Each clan had its regular place in the camp.<sup>2</sup> Further, each

The Rev. J. Owen Dorsey's account of the Omaha clans, subclans, and totemic taboos.

<sup>1</sup> The principal results of Mr. Dorsey's study of the Omahas and the kindred Siouan tribes are embodied in the three following papers: (1) "Omaha Sociology," *Third Annual Report of the Bureau of Ethnology* (Washington, 1884), pp. 205-370; (2) "A Study of Siouan Cults," *Eleventh Annual Report of the Bureau of Ethnology* (Washington, 1894), pp. 361-544; (3) "Siouan Sociology," *Fifteenth Annual Report of the Bureau of Ethnology* (Washington, 1897), pp. 205-244.

<sup>2</sup> J. Owen Dorsey, "Omaha Sociology," *Third Annual Report of the Bureau of Ethnology* (Washington, 1884), pp. 219 sq. In giving the Omaha names of the clans, subclans, and tribal subdivisions I have discarded Dorsey's peculiar spelling with the explanations given by Dorsey him-

self (p. 206). Thus I write *sh* instead of *c*; *th* instead of *q*; *ee* instead of *i*; *ng* instead of *n*; *oo* instead of *u*, etc.; and I have regularly restored to their usual position the consonants which Dorsey has placed upside down. Dorsey's spelling agrees in the main with the alphabet which the American Bureau of Ethnology has adopted for representing the sounds of the native Indian languages. It doubtless represents those sounds much more exactly than the spelling which I have adopted; but on the other hand it is complicated and uncouth and would be hardly intelligible to English readers. I have been content to sacrifice a certain degree of exactness for the sake of simplicity and intelligibility. Further, my spelling has the advantage of bringing out more clearly the agreement of the clan names given by Dorsey with those given by his predecessors.

Omaha clan is subdivided into subclans. The number of the subclans varies, at present, according to the particular clan; but Dorsey found traces of the existence of four subclans in each clan in former days. The subclans themselves seem to be composed of a number of groups of a still lower order which may be called sections.<sup>1</sup>

The list of Omaha clans (*gentes*) and subclans (*subgentes*) with their respective taboos, as ascertained by J. Owen Dorsey, is in the main as follows:—<sup>2</sup>

I. In the *Hanggashenoo* division of the tribe there were these five clans:

The Elk  
clan.

1. The *Wejeeshte* or Elk clan. It has the first place in the tribal circle. The members of this clan are afraid to touch any part of the male elk or to eat its flesh, and they may not eat the flesh of the male deer. Should they accidentally violate this custom, they say that they are sure to break out in boils and white spots on different parts of the body. But when a member of this clan dies, he is buried in moccasins made of deer skin.

The Black  
Shoulder  
(Buffalo)  
clan.

2. The *Eengke-sabě* or Black Shoulder clan. This is a Buffalo clan. Its place in the tribal circle is next to that of the Elk clan. The clan has a tradition that its ancestors were once buffaloes who lived under water, but that having reached the land they snuffed at the four winds and prayed to them. When the Omahas went on the buffalo hunt and could get skins for tents, it was customary to decorate the principal tent of this clan on the outside with three circles, within each of which was painted a buffalo head. The clan used to be divided into four subclans, of which one is now extinct. The names of some of the subclans are variously given. (*a*) The members of one of them (the *Wathigeejè*) are forbidden to eat buffalo tongues and to touch buffalo heads. (*b*) The members of a second (the *Wataseejeede thataji*) are forbidden to eat red maize. (*c*) The members of a third (the *Eeekethě*) are or were the criers of the tribe. (*d*) And the members of a fourth subdivision of the clan

<sup>1</sup> J. Owen Dorsey, "Omaha Sociology," *Third Annual Report of the Bureau of Ethnology* (Washington, 1884), p. 215.

<sup>2</sup> J. Owen Dorsey, "Omaha Socio-

logy," *op. cit.* pp. 225-251. As to spelling of the native names of the tribal divisions, clans, and subclans, see above, p. 93, note <sup>2</sup>.

(the *Te-he-sabě eetaji*) are not allowed to touch black horns (of buffaloes). But it is doubtful whether this last subdivision was strictly a subclan.

3. The *Hangga* clan. This, like the *Eengke-sabě*, is a Buffalo clan and camps next to it in the tribal circle. They, too, have a tradition that their ancestors were once buffaloes and lived under water. The clan is divided into two subclans, each of which has several names. (a) One of the subclans is sometimes spoken of by a name which means "Pertaining to the sacred cotton-wood bark"; but when its members are described by their taboos, they are called "Those who do not eat buffalo sides" and "Those who do not eat geese, swans, and cranes." They are allowed to eat buffalo tongues. (b) The second subclan is often referred to as "Pertaining to the sacred skin of the white buffalo cow"; but when reference is made to their taboo they are called by a name which seems to mean "They cannot eat buffalo tongues." However, they are at liberty to eat buffalo sides, which the other members of the *Hangga* clan are not allowed to do.

4. The *Thatada* clan. It occupies the fourth place in the tribal circle, next to the *Hangga* clan. But unlike other clans, its subclans have separate camping areas. Were it not for the marriage law, says Dorsey, we should say that the *Thatada* was a phratry and that its subclans were clans. These subclans are four in number, as follows: (a) The *Wasabe-heetaji* subclan. Its name is derived from *wasabe*, "a black bear," *ha*, "a skin," and *eetaji*, "not to touch"; so that the name of the clan means "Those who do not touch the skin of a black bear." The members of this subclan are forbidden to touch the hide of a black bear and to eat its flesh. They say that their ancestors were made underground, and that they afterwards came to the surface. This Black Bear subclan is itself reported to be subdivided into four sections, to wit, the Black Bears, the Raccoons, the Grizzly Bears, and the Porcupines. Of these four sections the Black Bears and the Raccoons are said to be brothers, and when a man kills a black bear, he says, "I have killed a raccoon." (b) The *Wajeenga thataji* subclan. This name means "They who do not eat (small) birds." The

members of this subclan may eat wild turkeys, geese, ducks, and cranes. When they are sick, they may eat prairie chickens. When they are on the warpath, the only birds tabooed to them are the hawk and the martin. One of his Indian informants told Dorsey that this Small Bird subclan was itself subdivided into sections and subsections as follows: I. Hawk people: II. Blackbird people, subdivided again into White heads, Red heads, Yellow heads, and Red wings. III. Gray Blackbird (the common starling) or Thunder people, subdivided again into Gray Blackbirds, Meadow larks, Prairie-chickens, and perhaps Martins. IV. Owl and Magpie people, subdivided again into Great Owls, Small Owls, and Magpies. However, two other of Dorsey's Indian informants denied that the Small Bird subclan was subdivided into these sections and subsections. (c) The *Te-pa-eetaji* subclan. These are the Eagle people, but they are not allowed to touch a buffalo head. According to one of Dorsey's informants, this subclan is again subdivided into four sections called respectively "Keepers of the Pipe," "The only Hangga," "Real Eagle," and "Bald Eagle." (d) The *Ke-ee* or Turtle subclan. The members of this subclan may not eat a turtle, but they are allowed to touch or carry one. Figures of turtles were painted on the outside of their tents. One of Dorsey's informants affirmed, and two others denied, that the Turtle subclan was itself subdivided into four sections called respectively "Big Turtle," "Turtle that does not flee," "Red-breasted Turtle," and "Spotted Turtle with Red Eyes."

The  
Verdigris  
clan.

5. The *Kaze* or *Kansas* clan. The members of the clan are forbidden to touch verdigris, which they call "green clay" (*wase-too*) or "gray green clay" (*wase-too-goode*). The clan is subdivided into two or four subclans, for with regard to the number of the subclans there was a difference of opinion among Dorsey's informants. One of the subclans was called "Keepers of a Pipe" and another "Wind people."

II. We now come to the five clans of the *Eeshtasanda* division. They are as follows:

The Wolf  
clan.

I. The *Mathingka-gaghe* clan. The name means "The Earth-lodge Makers," but the clan is a Wolf clan, for the

members of it call themselves the Wolf People, or the Prairie Wolf People. In the tribal circle the Wolf clan camps next to the *Kansas* clan, but on the opposite side of the road. They form the first of the *Eeshtasanda* clans. Their principal mythical ancestors (*nikie*)<sup>1</sup> are the coyote, the wolf, and certain sacred stones, as to the number and colours of which opinions differ. One story is that the stones were made by the coyote or prairie wolf in ancient days for the purpose of bewitching enemies. The clan is subdivided into several subclans, as to the number and names of which Dorsey's informants were not agreed. One subclan is said to have been called "Keepers of the Pipe," another "Sacred Persons," another "the Coyote and Wolf People," another "Keepers of the Sacred Stones," and a third, "Those who do not touch Swans."

2. The *Te-sinde* or Buffalo-tail clan. In the tribal circle it camps between the *Mathingka-gaghe* clan and the *Ta-da* clan. Members of this clan may not eat a calf while it is red, but they may eat it when it turns black. This rule applies to the calf of the domestic cow as well as to that of the buffalo. Further, members of the clan may not touch a buffalo head nor eat the meat on the lowest rib of the buffalo, because the head of the calf before birth touches the mother near that rib. For purposes of marriage this clan is undivided.

3. The *Ta-pa* or Deer-head clan. Their place in the tribal circle is next after that of the *Te-sinde* clan. Members of this clan may eat the flesh of deer, but they may not touch the skin of any animal of the deer family, nor wear mocassins of deer-skin, nor use the fat of deer for hair-oil, as the other Omahas do. According to some, the members of this clan are further forbidden to touch charcoal. For purposes of marriage this clan is subdivided into three or four subclans. One subclan is that of "The Keepers of the Sacred Pipe." They are said to be Eagle People and to have a special taboo, being forbidden to touch verdigris

<sup>1</sup> "*Nikie* is a term that refers to a mythical ancestor, to some part of his body, to some of his acts, or to some ancient rite ascribed to him. A '*nikie*' name is a personal name of

such a character" (J. Owen Dorsey, "A Study of Siouan Cults," *Eleventh Annual Report of the Bureau of Ethnology* (Washington, 1894), p. 367).

charcoal, and the skin of the wild cat. Another subclan is said to be that of "The Thunder People," and a third that of "The Real Deer People."

The Red  
Dung (?)  
clan.

4. The *Eenggthe-jeede* clan. The name has been explained in various ways. It seems to mean "red dung." The place of the clan in the tribal circle is next to the Ta-da clan. Members of the clan may not eat a buffalo calf. It appears, says Dorsey, that the two Buffalo clans of the *Eeshtasanda* division are Buffalo-calf clans, and that the two Buffalo clans of the *Hanggathenoo* division are connected with the grown buffalo. The skin-tents of the *Eengge-jeede* clan are decorated on each side of the entrance with a circle, within which is sketched the body of a buffalo calf, visible from the flanks upward. The clan is not subdivided for purposes of marriage.

The  
Reptile  
clan.

5. The *Eeshtasanda* clan. The meaning of the name is uncertain. According to one account the name (spelled *Ish-ta-sun-da*) means "Grey Eyes."<sup>1</sup> Members of the clan may not touch worms, snakes, toads, frogs, or any other kinds of reptiles. Hence they are sometimes called "the Reptile People." For purposes of marriage the clan is subdivided into three or perhaps four subclans. One of the subclans is called "Keepers of the Pipe" or "Real *Eeshtasanda*," another is called "Reptile People," and a third "Thunder People" (*Eengtha*). The "Reptile People" are sometimes called "Keepers of the Claws of the Wild-cat," because they bind these claws to the waist of a new-born infant; and the "Thunder People" are sometimes called "Keepers of the Clam Shell," because they bind a clam shell to the waist of a child of the subclan, when he is forward in learning to walk.

List of  
Omaha  
clans,  
with the  
authorities.

The three lists of Omaha totems furnished by Long (James), Morgan, and Dorsey will be found on comparison to agree in the main, though they differ in detail, as will appear from the following table, in which the subclans mentioned by Dorsey are omitted, except in so far as they appear to coincide with the clans enumerated by Long and Morgan:—

<sup>1</sup> See above, p. 90.

## OMAHA TOTEMS AND CLANS

Wolf? . . . .	<i>Mathingka-gaghe</i>	Dorsey

Hence we see that the Red Maize, Bear, Turtle, Bird, Buffalo-head, and Thunder, which are reckoned as clans by Long or Morgan or both, are described as subclans by Dorsey. It may be that in the interval between Long's or Morgan's visit to the Omahas and Dorsey's examination of the tribe these totemic divisions may have fallen from the rank of clans to that of subclans; but it is more probable

Apparent confusion between clans and subclans in some reports.

that Long and Morgan mistook (as they might easily do) subclans for clans, and that the more exact investigations of Dorsey revealed the error. The existence of subclans for purposes of marriage within the totemic clans is interesting and instructive, because it furnishes a fresh illustration of the strong tendency of totemic clans to subdivide into new divisions, which in time assume the rank of clans, while the original clans, from which they sprang, rise or sink to the condition of phratries.

The splitting or subdivision of the totemic animal is often apparently an economic expedient to enable people to eat most of the animal, while they renounce a part of it.

It is instructive to observe how often the device of splitting the totem has been applied by the Omahas to the buffalo, which formerly provided them with their principal means of subsistence. Thus among their totems are Buffalo Head, Buffalo Tail, and Black Shoulder of Buffalo; and members of the clans or subclans are accordingly forbidden, some to eat buffaloes' heads, others to eat buffaloes' tongues, others to eat buffaloes' sides, and others to eat buffalo calves while they are still red. I have already pointed out<sup>1</sup> that the practice of splitting a totem seems to be most commonly applied to an edible animal, the flesh of which is one of the staple foods of the tribe; and that the custom of thus splitting or subdividing a totemic animal into more or less minute parts is probably in many cases an economic expedient designed to quiet the scruples of the superstitious without debarring them altogether from participation in a food which they could ill spare, and which is indeed almost necessary to their subsistence. People thus salved their conscience by renouncing a small part of the animal, while they appeased their hunger by eating all the rest of it.

Rules of marriage and descent among the Omahas.

With regard to the rules of marriage and descent in the Omaha clans Morgan briefly tells us that they are the same as among the Ponkas; that is, no man is allowed to marry a woman of his own clan, children belong to the clan of their father, not of their mother, and both property and the office of sachem are hereditary in the clan.<sup>2</sup> Fuller details as to the marriage laws are given by Dorsey. From him we learn that a man is forbidden to marry any woman either of his father's or of his mother's clan; and that the

<sup>1</sup> See above, vol. ii. pp. 536 *sq.*

<sup>2</sup> L. H. Morgan, *Ancient Society*, p. 155.

same prohibition extends to the subclan of his father's mother, to the subclan of his father's mother's mother, to the subclan of his mother's mother, and to the subclan of his mother's mother's mother. Further, he may not marry a woman of the subclan to which the wife of his son, his nephew, or his grandson belongs; and he may not marry a woman of the subclan to which the husband of his daughter, his niece, or his granddaughter belongs.<sup>1</sup> With regard to the importance of the subclans or subgentes, as he calls them, Dorsey observes that "were it not for the institution of subgentes a man would be compelled to marry outside of his tribe, as all the women would be his kindred, owing to previous intermarriages between the ten gentes. But in any gens those on the other side of the gentile *unethe*, or fireplace, are not reckoned as full kindred, though they cannot intermarry."<sup>2</sup> On the other hand a man is allowed to marry a woman of his own totem, provided that she is a member of another tribe.<sup>3</sup>

Members of the various totem clans are distinguished from each other by their names and by the mode of wearing their hair. In regard to names we have seen that in other Indian tribes each totemic clan has its own names appropriated to it, which may not be used by members of other clans.<sup>4</sup> Similarly Omaha clans and subclans have each its own set of personal names which are bestowed on members of the clan but on no others. These names commonly refer in one way or other to the totem. For example, in the Elk clan there were certain sacred (*nikie*) names which were bestowed on boys according to the order of their birth in the family. Thus the first-born son was called the Soft Horn (of the young elk at its first appearance). The second was called Yellow Horn (of the young elk when a little older). The third was called the Branching Horns (of an elk three years old). The fourth was called the Four Horns (of an elk four years old). The fifth was called the Large Pronged Horns (of an elk six or seven years old). The sixth was called the Dark Horns (of a grown elk in summer).

Each clan and sub-clan has its personal names for its members, and these names commonly refer to the totem. Names of the Elk clan.

<sup>3</sup> J. Owen Dorsey, *op. cit.* p. 257.

<sup>4</sup> See above, pp. 13 *sq.*, 34 *sq.*, 76 *sq.*

The seventh was called the Standing White Horns, in the distance (namely those of a grown elk in winter). Among the sacred names of men in the Elk clan are Elk, Young Elk, Standing Elk, White Elk, Big Elk, Full-grown Elk, Dark Breast (of an elk), Stumpy Tail (of an elk). Among the sacred names of women in the Elk clan are Elk and Tail Female.<sup>1</sup> In the Black Shoulder clan, which is a Buffalo clan, the first son is called "He who stirs up the water by jumping in it," with reference to a buffalo wallowing in the water; the second is called "Buffaloes swimming in large numbers across a stream"; the third is called by a name that refers to the changing colour on the hairs of a buffalo calf; the fourth is called Knobby Horns (of a young buffalo bull); and so on. Among the names for men in this clan are (Buffalo that) Walks last in the herd, Four (buffaloes) Walking, Black Tongue (of a buffalo), Bent Tail, Cloven Hoofs (of a buffalo), Little Horn (of a buffalo), and Skittish Buffalo Calf.<sup>2</sup> In the Black Bear subclan the first son is called Young Black Bear, the second Black Bear, the third Four Eyes (with references to the bear's two eyes and the two eye-like spots over them in a black bear), and the fourth Gray Foot.<sup>3</sup> In the Bird subclan the first son is called Blackbird, the second Red feathers on the base of the wings, the third White-eyed Blackbird, the fourth Dried Wing, the fifth Hawk, the sixth Gray Hawk, the seventh White Wings. Among the names of men in the Bird subclan are Red Wings, Standing Hawk, Gray Blackbird, White Blackbird, and Yellow Head (of a blackbird).<sup>4</sup> Among the names of men in the Turtle subclan are Ancestral Turtle, Turtle that flees not, Spotted Turtle with Red Eyes, (Turtle that) Has gone into the Lodge (or Shell), and "Heat makes (a Turtle) Emerge from the Mud."<sup>5</sup> In the Eagle subclan the firstborn son is called Dried Eagle, the second Pipe, the third Eaglet, the fourth Real Bald Eagle, the sixth Standing Bald Eagle, and the seventh "He (an Eagle) makes the Ground Shake by

Alighting on it." <sup>1</sup> In the Buffalo-tail clan some of the men's names are Young Buffalo Bull, (Buffalo) Bristling with Arrows, and "(Buffalo) Bull raises a Dust by Pawing the Ground." <sup>2</sup> In the Deer-head clan some of the birth names are Hoof of a Deer, Dark Chin of a Deer, "Deer Paws the Ground," and "Deer in the Distance Shows its Tail White Suddenly." <sup>3</sup> And similarly with the names of boys, men, and women in the other Omaha clans and subclans. <sup>4</sup>

Names of the Buffalo-tail clan.

Names of the Deer-head clan.

It is a law with the Omahas that there may not be more than one living person in a clan who bears any particular name. But when the bearer of a name dies or changes it, then that name may be given to any new-born child of the clan. This rule applies more strictly to the names of boys than of girls. <sup>5</sup>

No two living persons may bear the same name.

The style of wearing the hair which is characteristic of a clan or subclan is sometimes an imitation of the totem. Thus in the Black Shoulder clan, which is a Buffalo clan, the smaller boys have their hair cut in two locks like the horns of a buffalo. <sup>6</sup> People of the Hangga clan, which is also a Buffalo clan, wear their hair in a crest from ear to ear, and this is called by a name which refers to the back of a buffalo. <sup>7</sup> People of the Bird subclan leave a little hair in front, over the forehead, for a bill, and some at the back of the head, for the bird's tail, with much over each ear for the two wings. <sup>8</sup> And people of the Turtle subclan cut off all the hair of a boy's head except six locks; two are left on each side, one over the forehead, and one hanging down the back, in imitation of the legs, head, and tail of a turtle. <sup>9</sup>

Each clan or subclan has its characteristic mode of wearing the hair, which is sometimes an imitation of the totem.

Members of the various Omaha clans also perform certain rites and ceremonies, which illustrate the relation in which the people are supposed to stand to their totems. Thus in the Deer-head clan, on the fifth day after a birth, red spots are made at short intervals down the infant's back to imitate

Rites and ceremonies of the clans.

Birth ceremony of the Deer-head clan.

a fawn. According to one account the members of the Deer-head clan all assemble to witness this ceremony and rub red on their hair and make red spots on their breasts.<sup>1</sup> The intention of the ceremony seems plainly to be to identify a new-born member of the clan with his totem the deer. A similar intention is expressed in a ceremony formerly observed at the death of a member of the Black Shoulder or Buffalo clan. The dying person, whether man or woman, was wrapped in a buffalo robe with the hair out, and his or her face was painted with the privileged decoration, which consists of two parallel lines painted across the forehead, two on each cheek, and two under the nose, one being above the upper lip and the other between the lower lip and the chin. Thus arrayed and decorated the dying man or woman was addressed as follows: "You are going to the animals (the buffaloes). You are going to rejoin your ancestors. You are going or, Your four souls are going, to the four winds. Be strong!"<sup>2</sup> Members of the *Hangga* clan, which is also a Buffalo clan, performed a like ceremony over one of their number at the point of death. They wrapped him in a buffalo robe with the hair out, painted his face with the traditional lines, and said to him: "You came hither from the animals. And you are going back thither. Do not face this way again. When you go, continue walking."<sup>3</sup> Taken in connection with the legends that these two Buffalo clans are descended from buffaloes,<sup>4</sup> these death ceremonies plainly point to a belief that dead members of the clans were transformed back into the ancestral animals, the buffaloes.

Further, members of the Omaha clans and subclans appear to have been credited with a power of magically controlling their totems for the good of the whole community. Thus at harvest time, when birds ate the corn, members of the Bird subclan used to chew corn and spit it over the field, believing that this prevented the birds from devouring the crop.<sup>5</sup> Again, when worms infested the corn,

<sup>1</sup> J. Owen Dorsey, "Omaha Sociology," *Third Annual Report of the Bureau of Ethnology* (Washington, 1884), pp. 245 *sq.*

Death ceremonies of two Buffalo clans.

Magical ceremonies for the control of the totems. Ceremonies of the Bird subclan and the Reptile clan.

members of the Reptile clan used to catch some of them, pound them up with a little corn into a soup, and eat it, thinking that after that the worms would leave the crop alone, at least for that season. Yet at ordinary times members of the Reptile clan were not allowed to touch worms.<sup>1</sup> Again, members of the *Kansas* clan, who are Wind People, flap blankets to start a breeze when the mosquitoes are troublesome.<sup>2</sup> Again, during a fog men of the Turtle subclan used to draw the figure of a turtle on the ground with its face to the south. On the head, tail, middle of the back, and on each leg were placed small pieces of a red breech-cloth with some tobacco. They imagined that this would make the fog disappear very soon.<sup>3</sup> These ceremonies imply that members of a totemic clan possess a magical control over their totem and are expected to exercise it for the common good. They thus resemble the *intichiuma* ceremonies of the Central Australian tribes.<sup>4</sup> It is probable that similar magical ceremonies for the control of the totems would have been found practised by many other totemic tribes of North America, if only these tribes had had the good fortune to be described by an observer of the calibre of the Rev. J. Owen Dorsey.

Ceremonies of the Wind clan and of the Turtle subclan.

A ceremony which appears to have been essentially akin to the foregoing was performed by members of the Omaha Elk clan whenever the first thunder was heard in spring. Then the Elk people called to their servants the Bear people, who repaired to the sacred tent of the Elk clan. There one of the Bear people opened the sacred bag, took out the sacred pipe, and handed it to one of the Elk men with some tobacco from the elk bladder. Before the pipe was smoked the Thunder god was addressed; and at the conclusion of the ceremony the rain was supposed to stop and the Bear people departed to their homes. The address to the Thunder god has not been recorded, but in the kindred tribe of the Ponkas it ran thus: "Well, venerable man, by your striking (with your club) you are

frightening us, your grandchildren, who are here. Depart on high."<sup>1</sup> This ceremony implies that the Elk clan was for some reason supposed to be able to stop thunder.

On the whole, Omaha totemism seems to comprise that identification of the man with his totem which is of the essence of totemism. The lack of evidence as to a similar identification in other American tribes is probably due to the inattention of observers.

On the whole, the Omaha traditions of descent from some of their totemic animals, the ceremonies performed at the birth and death of members of certain totemic clans, the adoption of personal names referring to the appearance or habits of the totemic animals, the wearing of the hair in imitation of the creatures, and the magical ceremonies performed for their control by the clansmen, all point clearly to that identification of the clanspeople with their totems which, as I have repeatedly indicated, appears to be of the essence of totemism. It is all the more remarkable to discover this fundamental principle of totemism carried into practice by a single tribe of American Indians, while among the tribes which surround it on all sides little or no trace of such an identification of the man with his totem has been reported. We may suspect that the lack of evidence on this head is due rather to the inattention of the observers than to the absence of the thing. Similarly it is highly probable that many of the features of Australian totemism which are reported only of the Central tribes were shared by many of the others, though they have not been recorded among them. He who studies reports of the habits and customs of savages has constantly to bear in mind that the mere absence of evidence as to the existence of an institution hardly raises any presumption of the absence of the institution itself, and that nothing is so unsafe as to argue from the one to the other. In all investigations of savage life the mental capacity, intelligence, tact, and sympathy of the observer are of the first importance; and as the union of these qualities is rare, so the number of first-rate observers of savages is few indeed. Where these personal qualities of head and heart are wanting, no liberal subvention of money, no costly apparatus, no elaborate machinery will supply their place.

Further, the Omahas possessed certain sacred objects

<sup>1</sup> J. Owen Dorsey, "Omaha Sociology," *Third Annual Report of the Bureau of Ethnology* (Washington, 1884), p. 227. As to sacred tent,

bag, pipe, and elk bladder, which are referred to in the text, see below, p. 107.

which were associated with their totemic clans. One of these was a sacred pole of cotton-wood about eight feet long, which according to tradition was cut more than two hundred years ago, before the separation of the Omahas, the Ponkas, and the Iowas. The Ponkas indeed still claim a share in it. A scalp is fastened to the top of the pole, and round about the middle of it is wound swan's down, which is itself covered with cotton-wood bark and a piece of buffalo hide. This sacred pole used to be greased every year when the Omahas were about to return from the summer hunt. They feared that if they neglected to grease the pole, the snow would lie deep on the ground when next they went out hunting. Though it has a scalp attached to it, the pole has nothing to do with war. Yet any warrior who had taken a scalp might dedicate it to the pole. This sacred pole was committed to the care of the *Hangga* clan, which was a Buffalo clan. They kept it in a sacred tent decorated on the outside with corn-stalks. Another sacred object which this clan had charge of was the skin of a white buffalo cow. This also they kept in a sacred tent adorned in like manner with corn-stalks.<sup>1</sup>

The Elk clan has likewise a sacred tent, in which certain holy objects are preserved with religious care. In this tent there is a sacred bag containing the sacred clam-shell (*tihaba*), the bladder of a male elk filled with tobacco, and the sacred pipe of the clan, the tribal war-pipe, made of red pipe-stone. The holy clam-shell is kept in a bag of buffalo hide which is never placed on the ground. In ancient days it was carried on the back of a youth, but in modern times, when a man could not be induced to carry it, it was put with its buffalo-skin bag into the skin of a coyote, and a woman took it on her back. The bag is fastened with the sinew of a male elk and may only be opened by a member of the Bear subclan of the *Thatada* clan.<sup>2</sup>

Lastly, the *Hangga* clan, which is a Buffalo clan, owns two sacred pipes, though it has committed them to the

<sup>1</sup> J. Owen Dorsey, "Omaha Sociology," *Third Annual Report of the Bureau of Ethnology* (Washington, 1884), pp. 233-235.

custody of the Black Shoulders, another Buffalo clan. The pipes are made of red pipe-stone and decorated with porcupine quills. On ceremonial occasions the two pipes are brought out and solemnly smoked. They may only be filled by an *Eeshtasanda* man, who knows the ritual and recites certain ancient words as he cleans the pipe-bowl, certain other words when he fills it, and so on. These words may not be heard by other people, so the pipe-cleaner turns everybody out of the lodge while he is engaged in the discharge of his solemn duty. When the pipes have been duly cleaned and filled, they are lit by a member of the *Hangga* clan, and are then passed round the chiefs assembled in council on the affairs of the tribe. Both pipes are smoked by the chiefs. In smoking they blow the smoke upwards, saying, "Here, Wakanda, is the smoke." They say that they do this because Wakanda gave them the pipes and he rules over them. Though at present there are only two sacred pipes, no less than seven clans are said to possess such objects.<sup>1</sup>

Smoking to  
Wakanda.

Sometimes a man marries his deceased wife's sister at the express wish of the dying woman, who may say to her brother, "Pity your brother-in-law. Let him marry my sister." The Omahas observe the law of the levirate: a man marries the widow of his "real or potential brother" in order to become the "little father" of his brother's children.<sup>2</sup>

The widespread custom which forbids all social inter-

<sup>1</sup> J. Owen Dorsey, "Omaha Sociology," *Third Annual Report of the Bureau of Ethnology* (Washington, 1884), pp. 221-224. As to Wakanida, a supernatural being whose name is derived from *wakan*, "mysterious," "wonderful," "incomprehensible," "holy," see J. Owen Dorsey, "A Study of Siouan Cults," *Eleventh Annual Report of the Bureau of Ethnology* (Washington, 1894), pp. 366 sq., 372 sqq. In S. R. Riggs's *Dakota-English Dictionary* (Washington, 1890), pp. 507 sq., *wakan* is defined as "spiritual, sacred, consecrated; wonderful, incomprehensible; said also of women at the menstrual period"; and the following explanatory note is added: "Mysterious: incomprehensible; in a peculiar state, which,

from not being understood, it is dangerous to meddle with; hence the application of this word to women at the menstrual period, and from hence, too, arises the feeling among the wilder Indians that if the Bible, the Church, the Missionary, etc., are *wakan*, they are to be avoided, or shunned, not as being bad or dangerous, but as *wakan*. The word seems to be the only suitable one for *holy*, *sacred*, etc., but the common acceptance of it, given above, makes it quite misleading to the heathen." *Wakan* may best be translated by "tabooed." See *The Golden Bough*,<sup>2</sup> i. 343.

<sup>2</sup> J. Owen Dorsey, "Omaha Sociology," *Third Annual Report of the Bureau of Ethnology* (Washington, 1884), p. 258. Compare E. James,

course between a man and his wife's parents, and also between a woman and her husband's parents, was strictly observed by the Omahas, as well as by other tribes of the Siouan or Dacotan stock. Thus we read that "it is a great singularity in the manners of the Omawhaws, that neither the father-in-law nor mother-in-law will hold any direct conversation with their son-in-law; nor will he, on any occasion, or under any consideration, converse immediately with them, although no ill-will exists between them; they will not, on any account, mention each other's name in company, nor look in each other's faces; any conversation that passes between them is conducted through the medium of some other person. . . . This extraordinary formality is carried to a great length, and is very rigidly observed. If a person enters a dwelling in which his son-in-law is seated, the latter turns his back, covers his head with his robe, and avails himself of the first opportunity to leave the presence. If a person visit his wife, during her residence at the lodge of her father, the latter averts himself, and conceals his head with his robe, and his hospitality is extended circuitously by means of his daughter, by whom the pipe is transferred to her husband to smoke. Communications or queries intended for the son-in-law are addressed aloud to the daughter, who receives the replies of her husband. The same formality is observed by the mother-in-law; if she wishes to present him with food, it is invariably handed to the daughter for him, or if she happens to be absent for the moment it is placed on the ground, and she retires from the lodge that he may take it up and eat it. A ten years' separation will not change this custom. The Pawnees have no such formality, and on that account are said to be great fools. . . . The more distinguished and respectable the parties are, the more rigidly is this rule observed; and if either of the parties should be treated otherwise, the departure from the observance would be regarded as a mark of disrespect for a trifling fellow."<sup>1</sup> The same rule of avoidance extends

Custom of avoidance between a man and his wife's parents and between a woman and her husband's parents.

*Account of an Expedition from Pittsburgh to the Rocky Mountains* (London, 1823), i. 222 sq. By "potential brother" Dorsey probably means what is otherwise called a collateral or

tribal brother.

<sup>1</sup> E. James, *Account of an Expedition from Pittsburgh to the Rocky Mountains*, i. 232-234.

to a wife's grandmother ; a man does not speak to his wife's grandmother ; he and she are ashamed to do so.<sup>1</sup>

The foregoing accounts, it will be observed, speak only of the avoidance of a man by his wife's parents or grandmother. But among the Omahas a wife was similarly debarred from social intercourse with her husband's father ; for Dorsey tells us that "in like manner a woman cannot speak directly to her husband's father under ordinary circumstances. They must resort to the medium of a third party, the woman's husband or child. But if the husband and child be absent, the woman or her father-in-law is obliged to make the necessary inquiry."<sup>2</sup>

Similar rules of avoidance between a woman and her husband's father, but especially between a man and his wife's mother, are observed by other tribes of the Siouan or Dacotan stock. Thus among the Assinneboins or Asiniboins, another Siouan tribe, "the names of the wife's parents are never pronounced by the husband ; to do so would excite the ridicule of the whole camp. The husband and the father-in-law never look on each other if they can avoid it, nor do they enter the same lodge. In like manner the wife never addresses her father-in-law."<sup>3</sup> Tanner tells us how he entered an Assinneboin village with an Assinneboin Indian. "When we entered it," says he, "I followed him immediately to his lodge. As I entered after him I saw the old man and woman cover their heads with their blankets, and my companion immediately entered a small lodge, merely large enough to admit one, and to conceal himself from the remainder of the family. Here he remained, his food being handed to him by his wife ; but though secluded from sight, he maintained, by conversation, some intercourse with those without. When he wished to pass out of the lodge his wife gave notice to her parents, and they concealed their heads, and again, in the same manner, when he came in. This formality is strictly observed by the married men among the Assinneboins, and I believe

Similarly a woman must avoid her husband's father.

A similar custom of avoidance between a man and his wife's parents is observed by the Assinneboins.

among all the Bwoi-nug, or Dah-ko-tah, as they call themselves. It is known to exist among the Omowhows of the Missouri. It affects not only the intercourse between men and the parents of their wives, but that with their aunts and uncles; and it is the business of all parties alike to avoid seeing each other. If a man enters a dwelling in which his son-in-law is seated, the latter conceals his face until he departs. While the young men remain with the parents of their wives, they have a little separate lodge within, or a part divided off by suspending mats or skins; and into this little apartment the wife retires at night; by day she is the organ of communication with those without. A man rarely, if ever, mentions the name of his father-in-law, and it is considered highly indecorous and disrespectful for him to do so. This custom does not exist in any shape among the Ojibbeways, and they look upon it as a very foolish and troublesome one."<sup>1</sup>

A similar custom prevails among the Ponkas, another tribe of the Siouan or Dacotan stock. A Ponka chief has been seen to throw his blanket over his head, turn round very quickly, and go away into another part of the house, when he happened to enter a room in which his mother-in-law was seated.<sup>2</sup> And as to the Dacotas proper, we are told that "somehow shame has come into the *tipi* [tent], and the man is not allowed to address or to look towards his wife's mother, especially, and the woman is shut off from familiar intercourse with her husband's father and others, and etiquette prohibits them from speaking the names of their relatives by marriage. This custom is called *wišten kiyapi* from *istela*, to be ashamed. How it grew is not apparent. But none of their customs is more tenacious of life than this. And no family law is more binding."<sup>3</sup> Another writer, speaking of the Dacotas, says: "The father-in-law must not call the son-in-law by name; neither must the mother-in-law: and the son-in-law must not call

Similar customs of avoidance among the Ponkas and Dacotas.

<sup>1</sup> *Narrative of the Captivity and Adventures of John Tanner*, prepared for the press by Edwin James, M.D. (London, 1830) p. 146.

his father-in-law or mother-in-law by name. There are also many others in the line of relationship who cannot call each other by name. I have heard of instances where the forbidden name has been called, and the offender was punished by having all of his or her clothes cut off of their backs and thrown away."<sup>1</sup>

Similar  
customs of  
avoidance  
among the  
Tetons  
and the  
Arapahos.

Among the Tetons, a Siouan or Dacotan tribe, a man may not look his mother-in-law in the face, nor may his brother do so, and she may not look at them. If a man sees his mother-in-law, he must put his robe over his head and shoulders and pass by on the other side of the road; also he must sit on the other side of the lodge. In like manner a woman dare not look at or address her husband's father. A Teton man who lives with his wife's kindred is called "a buried man" (*wi-cha wo-kha*), and a woman who lives with her husband's kindred is called "a buried woman."<sup>2</sup> "The restrictions as to intercourse between certain relations, which are so widespread in North America, exist also among the Arapaho. A man and his mother-in-law may not look at or speak to each other. If, however, he gives her a horse, he may speak to her and see her. The same restrictions exist between father and daughter-in-law as between mother and son-in-law, say the Arapaho (though perhaps they are less rigid)."<sup>3</sup>

The rule of  
avoidance  
seems to  
apply more  
strictly to  
a man and  
his mother-  
in-law than  
to a woman  
and her  
father-in-  
law. This  
may be  
because  
incest of a

It deserves to be noticed that in these accounts, while much is said of the mutual avoidance between a man and his wife's parents, comparatively little, in some cases nothing, is said of the mutual avoidance between a woman and her husband's parents. From this we may perhaps infer that the rule which debars a man from social intercourse with his wife's parents, especially with her mother, is more stringent than the rule which debars a woman from social intercourse with her husband's parents, especially with his father. The most probable explanation of all such rules of

ii. (1889) p. 157.

<sup>3</sup> A. L. Kroeber, *The Arapaho*, pp. 10 sq. (*Bulletin of the American Museum of Natural History*, vol. xviii. Part i. New York, 1902). The Arapahos are an Algonkin, not a Siouan, tribe.

avoidance appears to be, as we saw,<sup>1</sup> that they were adopted in order to prevent incest between persons who were deemed too nearly related by marriage, the avoidance between persons of opposite sexes being extended by false analogy to include avoidance between persons of the same sex who stood in a similar relation to each other. If this view is correct, it perhaps enables us to perceive why the rule of avoidance should apply more strictly to a man and his mother-in-law than to a woman and her father-in-law. For we can hardly doubt that incest with a mother was condemned as a social offence before incest with daughter fell under a similar condemnation, if for no other reason than that the physical relationship of a mother to her son must have been known long before the relationship of a father to his daughter was recognised. Hence the incest of a son with his mother has probably always excited even deeper horror than the incest of a daughter with her father; and if that is so, it is natural that when the conception of incest was extended so as to include persons related by marriage as well as by blood, the incest of a man with his mother-in-law should rank as a crime of deeper dye than the incest of a woman with her father-in-law, and that accordingly even more stringent precautions should be adopted to guard against its commission. We have met with some tribes which allow a man to marry his own daughter,<sup>2</sup> and with others which allow a man to have sexual intercourse with his daughter-in-law, his son's wife;<sup>3</sup> but we have as yet met with none which allows a mother to marry or have sexual intercourse with her own son. However, it is reported that among the Tinneh Indians of North-West America sons sometimes cohabit with and even marry their mothers;<sup>4</sup> and among the Wahehe of German East Africa a man must sleep with his mother-in-law before he is allowed to cohabit with her daughter.<sup>5</sup> The probable reason of this last singular custom will appear when we come to deal with the Navahoes.<sup>6</sup>

The Omahas, in common with other tribes of the Siouan

The classificatory system of relationship among the Omahas.

or Dacotan stock, possess the classificatory system of relationship. In its main outlines the system was detected among the Omahas in 1819-1820 by the members of Major Long's expedition, who have bequeathed to us a valuable account of the tribe. That account is based chiefly on information supplied by the Agent for the Indians of the Missouri, Major John Dougherty, to whose integrity of character, humanity, and unequalled familiarity with the Indian character the painter Catlin bears high testimony.<sup>1</sup> The account of the Omahas embodied in the report of Major Long's expedition is an honourable monument of this intelligent and upright man. He seems to have been the first to recognise in its main outlines the classificatory system of relationship. His account of it, redacted by Dr. Edwin James, who compiled the narrative of the expedition, runs as follows: "The designations by which the Omahaws distinguish their various degrees of consanguinity are somewhat different in meaning from ours. Children universally address their father's brother by the title of *father*, and their mother's brother by that of *uncle*; their mother's sister is called *mother*, and their father's sister *aunt*. . . . The children of brothers and sisters address each other by the titles of brother and sister. . . . A man applies the title of *We-hun-guh*, or sister-in-law, to his wife's sister, until he takes her as his wife; he also calls his wife's brother's daughter *Wehunguh*, and may in like manner take her to wife: thus the aunt and niece marry the same man. A man distinguishes his wife's brother by the title of *Tahong*, or brother-in-law, and his son also by the same designation. He calls the wife of his brother-in-law *Cong-ha*, or mother-in-law. A woman calls her husband's brother *Wish-e-a*, or brother-in-law, and speaks of his children as her own. Her husband's sister she distinguishes by the title of relationship, *Wish-e-cong*, or sister-in-law. Men who marry sisters address each other by the title of brother. All women who marry the same individual, even though not previously related, apply

Dougherty's account of the system.

<sup>1</sup> Geo. Catlin, *Letters and Notes on the Manners, Customs, and Condition of the North American Indians*, Fourth Edition (London, 1844), ii.

25 sq. Catlin speaks of Dougherty as "this stern and uncompromising friend of the red man, and of justice, who has taken them close to his heart."

to each other the title of sister. Remote degrees of consanguineous alliance are distinguished by their various appellatives, and are universally acknowledged."<sup>1</sup> The same writer tells us that among the Omahas "even a very remote degree of consanguinity is an insuperable barrier to the marriage union."<sup>2</sup>

At a later time the Omaha system of relationship was more fully investigated by L. H. Morgan. From his great work the following cardinal terms of Omaha relationships are derived.<sup>3</sup> In the generation above his own a man calls his father's brother "my father" (*In-dâ-de*) and his mother's sister "my mother" (*E-nâ-hâ*). But he calls his mother's brother "my uncle" (*Wee-nâ-gee*) and his father's sister "my aunt" (*Wee-tee-me*). In his own generation he calls his cousins, the children of his father's brother or of his mother's sister, "my elder brother" (*Wee-zhe-thâ*), "my younger brother" (*Wee-son-gâ*), "my elder sister" (*Wee-ton-ga*), "my younger sister" (*Wee-ton-ga*), according to the sex and age of the person referred to. In the generation below his own a man calls his brother's son and daughter "my son" (*Wee-nî-se*) and "my daughter" (*We-zhun-ga*). But his sister's son and daughter he calls "my nephew" (*Wee-toans-kâ*) and "my niece" (*We-te-zhâ*). Conversely in the generation below her own a woman calls her brother's son and daughter "my nephew" (*Wee-toans-kâ*) and "my niece" (*We-te-zhâ*); but her sister's son and daughter she calls "my son" (*Wee-zhin-ga*) and "my daughter" (*We-zhun-ga*).

Thus far the classificatory system of the Omahas is perfectly regular and normal. But in one respect it presents a remarkable deviation from the ordinary pattern of the system; and this deviation it shares with other Siouan or Dacotan tribes of the Missouri region, though not with the Sioux or Dacotas proper. The deviation consists in the peculiar position assigned to cousins, who are the children of a brother and sister respectively. Under the usual

Morgan's account of the classificatory system of relationship among the Omahas.

Anomalous relationships assigned to cousins, the children of a brother and a sister respectively.

<sup>1</sup> E. James, *Expedition from Pittsburgh to the Rocky Mountains* (London, 1823), i. 231 sq.

form of the classificatory system the children of a brother and a sister respectively are cousins to each other ; but among the Omahas and other Dacotan tribes of the Missouri they are uncle and nephew to each other, if they are males, and mother and daughter to each other if they are females.<sup>1</sup> Precisely the same treatment of such cousins is met with, as we saw, among certain Algonkin tribes such as the Miamis and Shawnees.<sup>2</sup> Thus an Omaha calls his male cousin, the son of his father's sister, not "my cousin," but "my nephew" (*We-toans-kâ*) ; and conversely he calls his male cousin, the son of his mother's brother, not "my cousin" but "my uncle" (*Wee-nâ-gee*).<sup>3</sup> A woman calls her female cousin, the daughter of her father's sister, not "my cousin," but "my daughter" (*Wee-zhun-ga*) ; and conversely she calls her female cousin, the daughter of her mother's brother, not "my cousin" but "my mother" (*E-nâ-hâ*).<sup>4</sup> So much for the cases where the cousins in question are either both males or both females. Now for the cases in which they are one male and one female. A man calls his female cousin, the daughter of his father's sister, not "my cousin" but "my niece" (*We-te-zhâ*) ; and conversely she calls him, not "my cousin" but "my uncle" (*Wee-nâ-gee*).<sup>5</sup> A man calls his female cousin, the daughter of his mother's brother, not "my cousin" but "my mother" (*E-nâ-hâ*), and conversely she calls him, not "my cousin" but "my son" (*We-zhun-ga* or *We-zhin-ga* according as he is older or younger than she).<sup>6</sup> In all these cases, as I have already pointed out,<sup>7</sup> the child of the brother ranks as senior to the child of the sister : if the two are males, then the son of the brother ranks as "uncle" and the son of the sister ranks as "nephew" of his cousin ; if the two are females, then the daughter of the brother ranks as "mother" and the daughter of the sister ranks as "daughter" of her cousin. If the two are one male and one female, then the male, who

<sup>4</sup> L. H. Morgan, *op. cit.* pp. 325, 333, 334.

<sup>5</sup> L. H. Morgan, *op. cit.* pp. 324, 325, 331, 332.

<sup>6</sup> L. H. Morgan, *op. cit.* pp. 323, 333, 334.

<sup>7</sup> Above, p. 71.

is the son of the brother, ranks as "uncle" of his female cousin, who is the daughter of the sister; and on the other hand the male, who is the son of the sister, ranks as "son" of his female cousin, who is the daughter of the brother. Thus in all cases a preference is shewn for the male line over the female.

It seems probable, as Morgan thought, that this remarkable treatment of cousins, the children of a brother and a sister, represents an older and ruder stage in the development of the classificatory system than the stage at which such relations are placed, as among ourselves, in the rank of cousins.<sup>1</sup> If that is so, we conclude that the Omahas and other Siouan or Dacotan tribes of the Missouri, as well as certain Algonkin tribes, have preserved the classificatory system in a more primitive form than the Iroquois and the Sioux or Dacotas proper, who, like ourselves, treat as cousins the children of a brother and sister.<sup>2</sup>

This treatment of cousins seems to represent an early stage in the history of the classificatory system.

### § 10. *Totemism among the other Dacotan Tribes of the Missouri*

The other Siouan or Dacotan tribes of the Missouri also had totemism, but their systems are far less fully known than that of the Omahas, and accordingly they may be dismissed more rapidly.

Other Siouan tribes.

Thus the Ponkas or Punkas, whose dialect is akin to that of the Omahas,<sup>3</sup> were found by L. H. Morgan to be organised in eight totemic clans as follows:—

Totemic clans of the Ponkas according to L. H. Morgan.

- |                  |                 |              |           |
|------------------|-----------------|--------------|-----------|
| 1. Grizzly Bear. | 2. Many People. | 3. Elk.      | 4. Skunk. |
| 5. Buffalo.      | 6. Snake.       | 7. Medicine. | 8. Ice.   |

Marriage within the clan is prohibited. Descent is in the male line, children belonging to the clan of their father. The office of sachem is hereditary in the clan.<sup>4</sup>

<sup>2</sup> As to the Iroquois, see above, p. 28; as to the terms for cousins (the children of the father's sister or of the mother's brother) among the Sioux

or Dacotas, see L. H. Morgan, *Systems of Consanguinity and Affinity*, pp. 322-325, 331-334.

<sup>3</sup> L. H. Morgan, *op. cit.* p. 177.

<sup>4</sup> L. H. Morgan, *Ancient Society*, p. 155.

J. Owen Dorsey's account of the totemic system of the Ponkas.

According to the Rev. J. Owen Dorsey, who, as a missionary to the tribe for several years, had special opportunities of studying its customs, the social organisation of the Ponkas is much more elaborate.<sup>1</sup> The tribe is divided into two moieties, one called Cheejoo and the other Wajaje; the Cheejoo moiety is again subdivided into two phratries, namely the Thunder or Fire phratry and the Wind-makers or War phratry; and the Wajaje moiety is in like manner subdivided into two moieties, namely the Earth phratry and the Water (?) phratry. Each phratry is again subdivided into two clans, and some of the clans are further subdivided into subclans. The whole may be exhibited in tabular form as on the opposite page.

Among the Ponkas, as among the Omahas, many of the totems and taboos refer to the buffalo, which furnished the tribe with their chief means of subsistence.

From this it appears that the clans and subclans of the Ponkas, with their taboos, agree to a considerable extent with those of the Omahas. It is interesting in both tribes to observe how many of the clans and the taboos have reference to buffaloes, which furnished these tribes with their principal means of subsistence. Similarly among the Herero and other pastoral tribes of Africa, who have the totemic system, a large proportion of the totemic taboos have reference to the cattle.<sup>2</sup> This observation should warn us against falling into the common error of treating totemism as a religion or worship of animals and plants. While it is true that the system invests animals, plants, and other natural objects with a degree of awe and mystery which seem strange to us, this superstitious respect never amounts to worship in the proper sense of the word so long as totemism is totemism. It is only when totemism proper has fallen into decay that a religion in the strict sense of the word may grow out of its ruins.

Tribal circle of the Ponkas.

Like the Omahas, the Ponkas camped in a circle, one half of the circle being assigned to the Cheejoo moiety and the other half to the Wajaje; and each phratry and each clan had its fixed place in the circle.<sup>3</sup>

<sup>1</sup> J. Owen Dorsey, "Siouan Sociology," *Fifteenth Annual Report of the Bureau of Ethnology* (Washington, 1897), pp. 228 sq. I have changed Dorsey's spelling. See above, p. 93 note <sup>2</sup>.

<sup>2</sup> See above, vol. ii. pp. 358, 362 sq.

<sup>3</sup> J. Owen Dorsey, "Siouan Sociology," *Fifteenth Annual Report of the Bureau of Ethnology* (Washington, 1897), p. 228.

The Ponkas have, with merely dialectical variations in the terms, the classificatory system of relationship in the same form as the Omahas. The agreement extends to the

totems  
derived  
from the  
primary.

Iowa  
traditions  
of the  
descent  
of the clans  
from their  
totemic  
animals.

The Iowas, another Siouan or Dacotan tribe of the Missouri, lived in a large village, cultivated maize and beans, and trafficked with traders from St. Louis in the skins of beavers, otters, raccoons, deer, and bears.<sup>2</sup> They were divided into two phratries; each phratry was subdivided into four or five clans; and each clan was again subdivided into subclans. In the tribal circle each phratry camped by itself in one of the semicircles. The table on the opposite page exhibits the Iowa phratries, clans, and subclans, as these were ascertained by the Rev. J. Owen Dorsey.<sup>3</sup>

In this list the names of the subclans compared with those of the clans seem to shew very clearly that among the Iowas, as among so many other totemic tribes, the clans have a tendency to split into subclans with secondary totems derived from the primary. Thus we may suppose that the Black Bear clan has split up into the subclans Black Bear with a White Spot, Black Bear with a Red Nose, etc.; that the Wolf clan has split up into the subclans White Wolf, Black Wolf, etc.; that the Eagle clan has split up into the subclans Golden Eagle, Grey Eagle, etc.; that the Elk clan has split up into the subclans Big Elk, Young Elk, etc.; and similarly with all the rest.

The Iowas have a tradition that the Bear clan and the Wolf clan used to live underground in the form of bears and wolves respectively, and that the Eagle and Pigeon clans came to earth in the shape of birds. They say, too, that the Owl clan came out of a hollow tree near the Red Bank; that the Snake clan came out of the bank near the water; and that the Beaver clan issued forth from a little

<sup>3</sup> J. Owen Dorsey, "Siouan Sociology," *Fifteenth Annual Report of the Bureau of Ethnology* (Washington, 1897), pp. 238 sq. Morgan gives a list of eight existing Iowa clans and one

extinct clan (*Ancient Society*, p. 156). It agrees perfectly with Dorsey's, except that it does not indicate the distribution of the clans into phratries and their subdivision into subclans. I subjoin his list for comparison:—  
1. Wolf. 2. Bear. 3. Cow Buffalo.  
4. Elk. 5. Eagle. 6. Pigeon.  
7. Snake. 8. Owl;

and an extinct Beaver clan.

TOTEMIC SYSTEM OF THE IOWAS

Phratries.	Clans.	Subclans.
First	1. Black bear	1. Large black bear with a white spot on the chest. 2. A black bear with a red nose (literally, Nose White). 3. Young black bear, a short black bear. 4. A small reddish black bear, motherless ; it has little hair and runs swiftly.
	2. Wolf . .	1. White-wolf. 2. Black-wolf. 3. Grey-wolf. 4. Coyote.
	3. Eagle and Thunder-being	1. Real or Golden Eagle. 2. Ancestral or Grey eagle. 3. Spotted-eagle. 4. Bald eagle.
	4. Elk (now extinct)	1. Big-elk. 2. Young-elk (?). 3. Elk-somewhat-long. 4. Young-elk (?).
	5. Beaver <sup>1</sup> .	1. Big-beaver. 2. (Meaning of name unknown). 3. Young-beaver. 4. Water-person.
Second	6. Pigeon .	1. Big-raccoon. 2. Young-raccoon. 3. Young-pigeon. 4. Prairie-chicken, grouse.
	7. Buffalo .	1. Big-buffalo-bull. 2. Young-buffalo-bull. 3. Young-buffalo-bull-that-is-distended (?). 4. Buffalo-calf.
	8. Snake (now extinct)	1. Yellow-snake (Rattlesnake). 2. Real-snake (species of snake shorter than the rattlesnake). 3. Copperhead-snake (?). 4. Grey-snake.
	9. Owl (now extinct)	The names of the subclans are forgotten.

<sup>1</sup> The survivors of the Beaver clan have joined the Beaver clan of the Oto tribe.

stream in an island of the river.<sup>1</sup> These legends all point to a belief that the human clanspeople are descended from their totemic animals.

Marriage,  
descent,  
and rela-  
tionship.

The rules of marriage, descent, and inheritance are the same among the Iowas as among the Ponkas,<sup>2</sup> and they have the classificatory system of relationship in the same form.<sup>3</sup>

The  
Otoes and  
Missouris :  
their  
totemic  
clans.

The Otoes and Missouris are two Siouan or Dacotan tribes of the Missouri valley who have long coalesced into one. According to Morgan, the united tribes were divided into eight totemic clans as follows :—<sup>4</sup>

- |           |            |                 |         |
|-----------|------------|-----------------|---------|
| 1. Wolf.  | 2. Bear.   | 3. Cow Buffalo. | 4. Elk. |
| 5. Eagle. | 6. Pigeon. | 7. Snake.       | 8. Owl. |

Thus the clans agreed in their totems as well as in their number with those of the Iowas. Like them, too, they were exogamous, no man being allowed to marry a woman of his own clan. But unlike the clans of the Iowas, Ponkas, and Omahas, the clans of the Otoes and Missouris are hereditary in the female line, children belonging to the clan of their mother, not to that of their father. The office of sachem is also hereditary in the clan, and therefore in the female line. Taken together with the case of the Mandans, another Siouan or Dacotan tribe who retain maternal descent, the custom of the Otoes and Missouris raises a presumption that all the Siouan or Dacotan tribes had

<sup>1</sup> The Rev. William Hamilton, quoted by the Rev. J. Owen Dorsey, "The Social Organization of the Siouan Tribes," *Journal of American Folk-lore*, iv. (1891) pp. 338-340. These legends were originally published by Mr. Hamilton in 1848 in a letter to the children of Presbyterian Sunday Schools. Mr. Hamilton is Owen Dorsey's authority for the list of Iowa clans given above.

<sup>2</sup> L. H. Morgan, *Ancient Society*, p. 156.

<sup>3</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, Table II, pp. 293 sqq.

<sup>4</sup> L. H. Morgan, *Ancient Society*, p. 156. The list of Oto clans given

by J. Owen Dorsey agrees with that of Morgan, except that it inserts a Beaver clan and does not distinguish the Black Bear from the Wolf clan. Of the Missouri clans Dorsey ascertained the names of three, namely the Black Bear, Eagle or Thunderbird, and the Elk. Of these the Eagle or Thunderbird clan is subdivided into four subclans, namely Thunderbird, Eagle, Hawk, and A-people-who-eat-no-small-birds-which-have-been-killed-by-larger-ones. This last subclan is said to be a recent addition. See J. Owen Dorsey, "Siouan Sociology," *Fifteenth Annual Report of the Bureau of Ethnology* (Washington, 1897), p. 240.

formerly mother-kin instead of father-kin, and that the change from the one line of descent to the other, wherever it has taken place among them, has been comparatively recent.<sup>1</sup>

The Otoes have the classificatory system of relationship in a form which agrees with that of the Omahas.<sup>2</sup>

Classifi-  
catory  
system.

Another tribe of the Siouan or Dacotan stock who had totemism were the Kansas or Kaw. Their language is most nearly akin to that of the Osages. According to Morgan, the Kansas or Kaw were among the wildest of the American Indians, yet withal an intelligent and interesting people. They long resisted all attempts to convert them to the Christian religion, of which the trappers and whisky-dealers in their neighbourhood did not perhaps afford an altogether shining example.<sup>3</sup> But they were not nomads. When the explorers Lewis and Clark visited them in 1804, they inhabited two villages on the Kansas River, to which they had been compelled to retreat from the Missouri by the inroads of the Sauks.<sup>4</sup> The members of Major Long's expedition in 1819 found the Kansas inhabiting a large village or town of a hundred and twenty houses on the Kansas River. The houses were circular, built of wood, thatched with mats and bark and covered completely over with earth. In the middle of the house was the fireplace, and raised bedsteads ran round the walls, which were hung with neatly-made reed-mats. In addition to the flesh of the buffalo, which they hunted till the vast herds of that useful animal were extinguished by the reckless improvidence of the white man, the Kansas subsisted on maize, beans, pumpkins, musk-melons, and water-melons. The work of cultivation was done by the women.<sup>5</sup>

totemic  
clans of the  
Kansas.

Morgan,<sup>1</sup> who found them divided into fourteen totemic and exogamous clans as follows:—

- |                   |              |             |                   |
|-------------------|--------------|-------------|-------------------|
| 1. Deer.          | 2. Bear.     | 3. Buffalo. | 4. Eagle (white). |
| 5. Eagle (black). | 6. Duck.     | 7. Elk.     | 8. Raccoon.       |
| 9. Prairie Wolf.  | 10. Turtle.  | 11. Earth.  | 12. Deer Tail.    |
| 13. Tent.         | 14. Thunder. |             |                   |

Segmentation  
of the  
Eagle clan.

In this list, as Morgan points out, there are two Eagle clans and two Deer clans. This affords, he adds, a good illustration of the segmentation of a clan, the Eagle clan having probably split into two fragments, which, retaining the original eagle totem, distinguished themselves from each other as Black Eagles and White Eagles. The rules of marriage and descent among the Kansas were the same as among the Ponkas; that is, intermarriage within the totem clan was prohibited; children belonged to the clan of their father, not of their mother; and both property and the office of sachem were hereditary in the clan.<sup>2</sup>

Marriage  
and  
descent.

J. Owen  
Dorsey's  
account of  
the social  
organisa-  
tion of the  
Kansas.

Arrange-  
ment of the  
phratries  
and clans  
in a tribal  
circle.

At a later time the social organisation of the Kansas was carefully investigated by the Rev. J. Owen Dorsey. He found them divided into sixteen clans, which were grouped in seven phratries and subdivided into a number of subclans. The tribe camped in a circle, in which the clans had their fixed places. Eight clans, composing the *Yata* or left side of the tribe, camped in the semicircle on the left side of the line of march; and the other eight clans, composing the *Eeshtungga* or right side of the tribe, camped in the semicircle on the right side of the line of march. These two halves or sides of the tribe, the *Yata* and the *Eeshtungga*, formed what may be called superior phratries, since no man was allowed to marry a wife from his side of the tribal circle.<sup>3</sup> The mode in which among the Kansas, and apparently among all the other Dacotan tribes of the Missouri who camped in circles, the exogamous groups were thus locally segregated from each other is very noteworthy; since it may help us to understand the method in which the somewhat complex relations between the groups were kept clear in the minds of those who had to observe

Such a  
local  
separation  
of the  
exogamous  
divisions  
was  
probably  
adopted  
when  
exogamy

them. It seems probable, as I have already pointed out in dealing with the Central Australians,<sup>1</sup> that when exogamy was first instituted the groups within which marriage was prohibited were for the sake of distinction locally separated from each other. Once the distinction between the kinship groups was clearly established in the minds of the people, the need of locally segregating them would be less urgent, and they might safely be allowed to intermingle freely, as they generally do in totemic communities. Yet still on certain occasions, when the tribe acted in concert, as in council or on the march, it might be deemed desirable to distinguish the kinship groups to the eye as well as to the mind by assigning them separate places at the council-board or in the camp. Such an arrangement would materially contribute to prevent the sharp but intricate lines, which at once united and divided the kinship groups, from becoming altogether blurred and confused.

was first instituted for the sake of facilitating the distinction between them.

The social organisation of the Kansas in phratries, clans, and subclans, as these were ascertained by the Rev. J. Owen Dorsey, is exhibited in the following table, in which the clans are arranged and numbered according to their order in the tribal circle.<sup>2</sup> It will be observed that clans of the same phratry do not always camp together. For the sake of clearness a diagram is subjoined, in which the places of the clans are numbered in the tribal circle.

Table of the phratries and clans of the Kansas.

## TOTEMIC SYSTEM OF THE KANSAS

Phratries.	Clans.	Subclans.
I.	1. Earth, or Earth-lodge makers	1. Large Earth. 2. Small Earth.
II.	2. Deer, or Osage . . .	1. Real deer. 2. Eats-no-deer. 3. Kills-deer, or Kills-quadrupeds.
III.	3. Ponka . . . . .	1. Ponka people. 2. Wear-red-cedar (fronds)-on-their-heads.
III.	4. Lodge-in-the-rear ; Last-lodge ( <i>Kaze</i> , <i>Kansa</i> )	1. Wind people, or South-wind people, or Camp-behind-all. 2. Small-wind, or Makes-a-breeze-near-the-ground.
III.	5. Black bear . . . . .	1. Real Black-bear, or Eats-raw (food). 2. Wears-tails (locks of hair)-on-the-head.
I.	6. Ghost . . . . .	Not ascertained.
IV.	7. Carries-a-turtle-on-his-back	Not ascertained.
V.	8. Carries-the-sun-on-his-back	Not ascertained.
I.	9. Elk . . . . .	1. Real Elk. 2. <i>Sahage</i> (meaning unknown).
VI.	10. White eagle . . . . .	1. Legs-stretched-out-stiff ; White-eagle people. 2. Wade-in-blood ; Blood people.
VI.	11. Night . . . . .	1. Night-people. 2. Walks-shining (Star people ?).
VII.	12. Holds-the-fire-brand-to-sacred-pipes, or Small <i>Hangga</i>	1. Hawk-that-has-a-tail-like a "King-eagle" ; Little-one-like-an-eagle. 2. Raccoon people, or Small lean raccoon.
VII.	13. Large <i>Hangga</i> ; <i>Hangga</i> apart from the rest, or Stiff-deer-tail	A black eagle with spots. Subclans not recorded.
II.	14. Buffalo (bull), or Big Feet	1. Buffalo with dark hair. 2. Reddish-yellow buffalo.
V.	15. <i>Cheejoo</i> peacemaker	(Red-hawk people ?) Subclans not recorded.
II.	16 Thunder-being people ; Grey-hawk people	Subclans not recorded.

Magical ceremonies for the control of the totems. Ceremony of the Thunder-

Some of the totemic clans of the Kansas, like certain of the clans of the Omahas, appear to have been supposed to exercise a magical control over their totems for the general good. Thus when the first thunderstorm broke in the spring of the year, the people of the Thunder-being clan used to put a quantity of green cedar on a fire, making a great smoke.

The storm ceased after the members of the other clans had offered prayers. The Buffalo clan helped the Thunder-being clan in the worship of the Thunder-being, by sending one of their men to open the sacred bag of grey hawk skin and remove the mystery pipe.<sup>1</sup> Again, when there was a blizzard or storm accompanied by severe cold and heavy snow, the other Kansas used to beg the men of the *Kaze* or *Kansa* clan to interpose, because they were Wind People. They said to one of that clan, "O grandfather, I wish good weather. Please cause one of your children to be decorated." Then the youngest son of one of the *Kaze* men was chosen for the purpose and painted with red paint. Thus decorated, the youth rolled over and over in the snow, reddening its white surface for some distance around him. That was supposed to stop the storm.<sup>2</sup> These ceremonies for stopping thunderstorms and snowstorms, performed respectively by Thunder People and Wind People, appear to resemble in principle the *intichiuma* ceremonies of the Central Australians: they are magical rites performed by members of totemic clans with the intention of controlling their totems for the general good of the community. It seems probable that such ceremonies were commonly practised by the American Indians, as by the aboriginal Australians, though unfortunately very little indeed about them has been observed and recorded.

being clan at the first thunder-storm in spring.

Ceremony of the *Kaze* clan during a snow-storm.

Analogy of these ceremonies to the *intichiuma* rites of the Central Australians.

The Kansas would not marry any of their kindred, however remote. Women before marriage laboured in the fields, served their parents, carried wood and water, and cooked. But when the eldest daughter married, she commanded the lodge, her mother, and all her sisters; for her sisters, in accordance with a custom widely prevalent among the North American Indians, were destined also to be the wives of her husband. The Kansas observed the law of the levirate. On the death of her husband the widow scarified herself, rubbed clay on her body, and neglected her dress for a year, after which the eldest brother of her deceased husband took her to wife without any ceremony, removing her and her children, whom he regarded as his own, to his house.

Marriage customs of the Kansas.

Marriage with several sisters.

The levirate.

<sup>1</sup> J. Owen Dorsey, "A Study of Siouan Cults," *Eleventh Annual Report of the Bureau of Ethnology* (Washington, 1894), p. 385.

<sup>2</sup> J. Owen Dorsey, *op. cit.* pp. 410 sq.

If the deceased man left no brother, the widow might marry whom she liked. Some Kansas had four or five wives, mostly sisters.<sup>1</sup>

The classificatory system of relationship among the Kansas.

The Kansas or Kaws had the classificatory system of relationship in the same form as the Omahas, including the peculiar position assigned to cousins, the children of a brother and a sister respectively.<sup>2</sup> The main outlines of the system were detected among the Kansas by the members of Major Long's expedition in 1819; for they have recorded that in this tribe "the niece has great deference for the uncle; the female calls her mother's sister *mother*, and her mother's brother *uncle*. The male calls his father's brother *father*, his father's sister *aunt*, his mother's sister *mother*, and his mother's brother *uncle*."<sup>3</sup>

The Osages another Siouan people of the Missouri valley.

Closely allied by language and blood to the Kansas, with whom they freely intermarried, were the Osages, another tribe of the Siouan or Dacotan stock in the basin of the Missouri. They called themselves Waw-sash-e, which the French traders corrupted into Osage. The tribe possessed fine horses, which they captured wild and kept in the best order. But they were settled in villages on the Osage River, had made considerable progress in agriculture, and were less addicted to war than their northern neighbours. In person the Osages were tall and well-built. L. H. Morgan did not succeed in reaching them when he was among the Missouri tribes in 1859 and 1860.<sup>4</sup>

The social system of the Osages; the Peace Side and the War Side.

The social system of the Osages has been described by the Rev. J. Owen Dorsey. According to him three primary divisions or tribes, each including seven clans, coalesced into a nation of fourteen clans, several of the original clans being suppressed in order that the number of the clans in the tribal

<sup>1</sup> Edwin James, *Account of an Expedition from Pittsburgh to the Rocky Mountains under the Command of Maj. S. H. Long* (London, 1823), i. 115, 116.

<sup>2</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, pp. 178 sq., and Table II. pp. 293 sqq.

<sup>3</sup> Edwin James, *Account of an Expedition from Pittsburgh to the Rocky Mountains* (London, 1823), i. 116 sq.

<sup>4</sup> *History of the Expedition under the Command of Captains Lewis and Clark to the Sources of the Missouri*, etc. (London, 1905) i. 43 sq.; Edwin James, *Account of an Expedition from Pittsburgh to the Rocky Mountains* (London, 1823), iii. 106-108; L. H. Morgan, *Systems of Consanguinity and Affinity*, p. 177; *id.*, *Ancient Society*, p. 157.

circle should not exceed fourteen, seven on one side of the circle and seven on the other. Those on the left are called *Chee-zhoo*; they are the Peace Side. Those on the right are called *Hang-ka* and *Washashe* (Osage); they are the War Side. The Peace clans might not take animal life of any sort, but were obliged to content themselves with vegetable food, till they made an agreement with the War clans to supply them with vegetable food in exchange for flesh, which the War clans could obtain. Some of the clans are divided into subclans. The list of the fourteen clans with their subclans<sup>1</sup> will be found on the next page.

The totemic clans of the Osages.

Before they attacked an enemy, the Osages painted their faces afresh. This was the "death paint." All the clans on the *Chee-zhoo* or Peace side used "fire paint," which was red, applying it with the left hand all over the face. They also put mud on the left cheek. The clans on the War side put mud on the right cheek. Some warriors who acted like black bears painted themselves with charcoal alone.<sup>2</sup>

The war-paint of the Osages.

The Osages are said to have universally believed that they were descended from a snail and a beaver. A flood, they alleged, swept a snail from the banks of the Osage River down to the Missouri and left it high and dry on the shore. Warmed by the sun, the snail ripened into a man, who, after receiving a bow and arrow from the Great Spirit, returned to the Osage River. There he fell into a dispute with a beaver for the possession of the stream; but the dispute was happily settled by his marrying the beaver's daughter and sharing the enjoyment of the river with her family. From their union sprang the nation of the Osages, "who have ever since preserved a pious reverence for their ancestors, abstaining from the chase of the beaver, because in killing that animal, they killed a brother of the Osage.

Belief of the Osages that they are descended from a snail and a beaver.

Their respect for beavers.

<sup>1</sup> J. Owen Dorsey, "Siouan Sociology," *Fifteenth Annual Report of the Bureau of Ethnology* (Washington, 1897), pp. 233 sq.; *id.* "An Account of the War Customs of the Osages," *The American Naturalist*, xviii. (Philadelphia, 1884) pp. 113-114. In the latter article the order of clans 3 and 4 is inverted; and the names of the clans are simplified. In the text I

have omitted some of the alternative names of the clans and subclans. As before, I have altered Dorsey's peculiar spelling, setting some of the consonants on their feet instead of on their heads, etc. See above, p. 93, note<sup>2</sup>.

<sup>2</sup> J. Owen Dorsey, "An Account of the War Customs of the Osages," *The American Naturalist*, xviii. (Philadelphia, 1884) pp. 132 sq.

TOTEMIC SYSTEM OF THE OSAGES

Sides.	Clans.	Subclans.
Chee-zhoo (Left or Peace Side)	1. Those-who-wear-tails-or-locks-of-hair - on - their heads	1. Sun and Comet people. 2. Wolf people.
	2. Buffalo-bull face	1. ? 2. Hide-with-the-hair-on.
	3. Those-who-carry-the-sun-on-their-back, Sun-carriers	1. Sun-people. 2. Swan people.
	4. Chee-zhoo peace-makers, or Red eagle	1. Touches-no-blood, or Red-eagle (really a hawk). 2. Bald eagle, or Sycamore people.
	5. Night people	1. Night people. 2. Black-bear people.
	6. Buffalo bull	1. Buffalo-bull. 2. Reddish-yellow buffalo.
	7. Thunder - being, or Camp-last	(Not recorded.)
Hang - ka and Washashe (Right or War Side)	8. Elder Osages	1. White Osage. 2. Turtle-carriers. 3. Tall-flags, etc. 4. Deer-lights, or Deer people. 5. Fish people. 6. A deer subclan, called by some, "Turtle-with-a-serrated-crest-along-the-shell."
	9. Hang-ka apart from the rest, or Real Eagle people	
	10. Ponka peace-makers	1. Pond-lily } or according to another account { 2. Dark Buffalo } 1. Flags. 2. Watsetsi (?) 3. Red cedar.
	11. Hang-ka-having-wings, or White-eagle people	1. Elder Hüsata. 2. Hüsata.
	12. Black bear <sup>1</sup> { A B	1. Black bear. 2. Small cat. 1. Swan. 2. Dried pond-lily.
	13. Elk	
	14. Lighters - of - the - sacred - pipes, or South-wind people, or Wind people, or Fire people	

<sup>1</sup> This clan (No. 12) is divided into two parts, which were originally separate clans: A. Wearing-a-tail (or

lock)-of-hair-on-the-head; B. Wearing-four-locks-of-hair.

Of late years, however, since the trade with the whites has rendered beaver skins more valuable, the sanctity of these maternal relatives has visibly reduced, and the poor animals have nearly lost all the privileges of kindred."<sup>1</sup> This legend, with the custom said to be based on it, has the appearance of being totemic ; yet neither the beaver nor the snail appears in the extant list of Osage totems. It is possible that they were the totems of clans which have become extinct.

The Osages had the classificatory system of relationship in a form which, apart from dialectical differences in the terms, agreed with that of the Omahas.<sup>2</sup>

The classificatory system.

Another tribe of the Siouan or Dacotan stock in the region of the Missouri were the Quappas. When they were discovered by the French they inhabited five villages on the Arkansas River. The following names of their totemic clans were obtained by the Rev. J. Owen Dorsey from a full-blooded member of the tribe :—Deer, Elk, Eagle, Small-bird, Ancestral, Black Bear, Grizzly Bear (?), Buffalo (ordinary), Reddish-yellow Buffalo, Beaver, Fish, Star, Crane, Dog (or Wolf?), Thunder-being, Panther, Turtle, Serpent, and Sun. Mr. Dorsey's informant was not able to say on which side of the tribal circle each clan encamped.<sup>3</sup> The Quappas had the classificatory system in a form which coincided with that of the Osages.<sup>4</sup>

The Quappas, another Siouan tribe : their totemic clans

The Winnebagoes are a tribe of the Siouan or Dacotan stock, who claimed to be the Elder Brothers of the Omahas, Otoes, Iowas, and Missouris, and their claim was conceded by these tribes.<sup>5</sup> When they were first discovered they were established at the head of Green Bay, Lake Michigan, and around Winnebago Lake in the present State of Wisconsin.

The Winnebagoes, another Siouan tribe.

<sup>5</sup> J. E. Fletcher, "Origin and History of the Winnebagoes," in H. R. Schoolcraft's *Indian Tribes of the United States*, iv. (Philadelphia, 1856) pp. 227, 235 sq.

Totemic  
clans of the  
Winne-  
bagoes.

They are the so-called *Puants* of the early French explorers. The Winnebago dialect belongs to the Siouan or Dacotan family of speech, but occupies in some respects a peculiar position. It approximates to the dialects of the Missouri tribes rather than to the language of the Sioux or Dacotas proper.<sup>1</sup> The Winnebagoes were divided into eight totemic and exogamous clans, of which the names are given by Morgan as follows:—<sup>2</sup>

- |          |          |             |             |
|----------|----------|-------------|-------------|
| 1. Wolf. | 2. Bear. | 3. Buffalo. | 4. Eagle.   |
| 5. Elk.  | 6. Deer. | 7. Snake.   | 8. Thunder. |

Another list of the Winnebago clans was obtained by the Rev. J. Owen Dorsey from a full-blooded Winnebago of the Wolf clan. It agrees with that of Morgan except that it substitutes a Water-monster clan for the Thunder clan, and that instead of the Eagle clan it exhibits a Bird clan subdivided into four subclans, namely Eagle, Pigeon, Hawk (probably), and Thunder-bird.<sup>3</sup>

Marriage  
and descent  
among the  
Winne-  
bagoes :  
traces of  
mother-kin.

The rules of marriage, descent, and inheritance were the same among the Winnebagoes as among the Ponkas; that is, intermarriage within the clan was forbidden, children belonged to the clan of their father, not of their mother, and both property and the office of sachem were hereditary in the clan.<sup>4</sup> Yet traces of an older custom of female descent or mother-kin may perhaps be detected among the Winnebagoes; for Carver, who travelled in these regions in 1766, 1767, and 1768, observes that "some nations, where the dignity is hereditary, limit the succession to the female line. On the death of a chief, his sister's son sometimes succeeds him in preference to his own son; and if he happens to have no sister, the nearest female relation assumes the dignity. This accounts for a woman being at the head of the Winnebago nation, which, before I was acquainted with their laws, appeared strange to me."<sup>5</sup>

The Winnebagoes possessed the classificatory system of

relationship in a form closely agreeing with that of the Omahas and Kansas ; amongst other points of agreement it placed cousins, the children of a brother and sister respectively, in the relation of uncle and nephew, or mother and daughter to each other, according as the cousins were males or females.<sup>1</sup>

The classificatory system of relationship.

An interesting account of the superstitions of the Indian tribes about Green Bay (*Baie des Puans*), Lake Michigan, is given in one of the Jesuit reports for 1672, and as the Winnebagoes were probably one at least of these tribes, the account may be here subjoined. If it does not directly bear on their totemic system, it does so indirectly, by illustrating that general attitude of mind towards nature of which totemism is a special product. "Four different peoples," says the Jesuit missionary, "are placed towards the head of the bay and live there partly by what they gather from the earth, and partly by fishing and hunting. Two others rather more distant dwell usually on the rivers which discharge into the same bay on the north side ; and all recognise diverse sorts of divinities, to which they often offer sacrifices. These peoples have their gods, as the pagans had theirs formerly ; they have them in the sky, in the air, on the earth, in the woods, in the waters, and even in the infernal regions ; and as there have been found theologians who assign particular intelligences not only to the stars but also to the earth for the preservation of each species of thing, so those of our savages who are esteemed intelligent by their fellows entertain a belief that in addition to the sun and the thunder, which they recognise as gods of the sky and the air, every sort of beast, fish, and fowl, has a particular guardian spirit (*genie*), which has care of it, which watches over its preservation, and which defends it from harm.

Superstitions of the Indians about Green Bay, Lake Michigan.

Guardian spirits of beast, fish, and fowl.

"That is why, just as the Egyptians erected altars to rats and mice, so these peoples have a particular regard for these creatures, as appears from a mouse which we had caught and thrown out of the house. For a young girl having seized the mouse and being desirous of eating it, her father took the creature first and fondled it tenderly. And

Guardian spirit of mice.

<sup>1</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, p. 180, and Table II. pp. 293 *sqq.* As to this treatment of cousins, see above, pp. 70, 74, 115 *sqq.*

when we asked him why he did so, 'It is,' said he, 'because I would appease the guardian spirit (*genie*), who has charge of mice; in order that my daughter may not suffer from such an unusual viand.'

Veneration for the bear and ceremonies when it is killed.

"There are certain animals, to the guardian spirits (*genies*) of which they pay much more respect than to others, because they are more useful to them. The veneration which they have for the bear is incredible; for when they have killed one of these animals in the chase, they usually make a solemn feast of it with very special ceremonies. They carefully preserve the beast's head, paint it with the most beautiful colours they can find, and during the feast they set the head in a conspicuous place, that it may receive the adoration of all the guests and the praises which they bestow on it, one after the other, in their finest songs.

Custom of fasting before a hunt in order to dream of the animal which is to be killed.

"They act somewhat in the same way towards the other divinities; but to propitiate them they practise diverse sorts of devotions, of which the commonest and most considerable is this. They remain four or five days without eating, in order that by thus weakening their heads they may be able in a dream to see one of their divinities, on whom they imagine all their good fortune to depend. And because they believe that they could not be lucky in the chase of the deer or the bear, if they had not first seen them in a dream before going to seek the beasts, their whole care is to get a sight in sleep of the animal which they wish to catch. That is why they prepare themselves for their hunts by great fasts, which they prolong sometimes for ten days, as the Outagami nation does more usually. Indeed they do much more, for while the men are out hunting, they oblige the little children to fast, in order that they may dream of the bear which their kinsfolk are gone to look for; and they fancy that the beast will be caught if it has been once dreamed of, even by children."<sup>1</sup>

The Mandans, another Siouan tribe of the Upper Missouri.

A Siouan or Dacotan tribe of the Upper Missouri valley are the Mandans, who having had the good fortune to be described by the painter Catlin and other travellers are amongst the best known of North American Indians, though they

<sup>1</sup> *Relations des Jésuites*, 1672, p. 38 (Canadian reprint, Quebec, 1858).

seem never to have played an important part in history. When they were visited in the first half of the nineteenth century, their once numerous villages had been reduced to two, which were situated on the Missouri about four miles below the mouth of the Knife River. Their principal village or town occupied a position of great natural beauty and strength, being built on a bluff at a bend of the Missouri and protected on two sides by the river, while the prairies stretched away, far as the eye could see, till their interminable carpet of green, unbroken by a tree, and changing into blue in the distance, touched the rim of the horizon. The houses of the village were of circular shape, from forty to sixty feet in diameter, solidly built of timber and covered with earth, which earned for them with white men the disparaging name of "dirt lodges." In spite of the name, however, the houses were not only commodious, but very neat and comfortable. The fire-place occupied the centre and the smoke escaped by a hole in the roof. Bedsteads, screened off by curtains of buffalo or elk skin, ran round the walls. Each house could accommodate from twenty to forty inmates. In the middle of the village was an open circular space, in which public festivals were held and religious rites celebrated. One of the huts facing on this open space was the council house or "Medicine Lodge," where some of the most sacred ceremonies were performed. It was in this lodge that the young Mandan warriors annually submitted to many of those dreadful tortures which Catlin has made famous by his descriptions and sketches.<sup>1</sup> The Mandans subsisted partly by agriculture and partly by the chase. Their staple foods were buffalo meat and maize. They raised a good deal of maize and some beans, pump-

Lewis and Clark spent the winter of 1804-1805 at the principal Mandan village; Catlin resided for several months in the same village in 1832; and Prince Maximilian visited it in 1833.

The staple foods of the Mandans were buffalo meat and maize.

kins, and tobacco. The corn was sown in May and reaped in October. During the summer the women thrice hoed the ground with the shoulder-blades of buffaloes, for which in later times iron hoes were substituted. The season of the green corn was a time of great festivity with the Mandans. What they did not then eat of the corn was dried and packed away in *caches*, as the French called such storehouses, that is, in pits six or eight feet deep, shaped like a jug and tightly closed at the top. But the Mandans depended mainly on the flesh of the buffalo, and when the herds did not approach their villages they sometimes suffered much from hunger; for being a small weak tribe they dared not venture far afield in search of the animals lest they should be cut off by their powerful enemies the Sioux.<sup>1</sup>

Exogamous clans of the Mandans.

According to enquiries made by L. H. Morgan at the old Mandan village in 1862, the Mandans were divided into seven exogamous clans as follows:—

1. Wolf.
2. Bear.
3. Prairie Chicken.
4. Good Knife.
5. Eagle.
6. Flathead.
7. High Village.

Female descent of the clans.

Marriage within the clan was as usual forbidden, but contrary to the rule of most Siouan or Dacotan tribes of the Missouri the descent of the clan was in the female line, that is, children belonged to the clan of their mother, not to that of their father. Taken with other exceptions, which have already met us, this raises a presumption that descent was originally in the female line among all the tribes of the Siouan or Dacotan stock. Property and office were both hereditary in the clan.<sup>2</sup> When a man married an eldest daughter, he had a right to all her sisters.<sup>3</sup> A woman never spoke to her son-in-law, the husband of her daughter; but if he brought her the scalp of a slain foe, from that moment the two were free to converse with each other.<sup>4</sup>

Right to marry a wife's younger sisters. Avoidance of wife's mother.

<sup>3</sup> Maximilian Prinz zu Wied, *Reise in das Innere Nord-America*, ii. 130.

<sup>4</sup> Maximilian Prinz zu Wied, *op. cit.* ii. 132.

Like all the other Indian tribes with which we are here concerned, the Mandans had the classificatory system of relationship. Thus in the generation above his own a man called his father's brother "my father" (*Tâ-tay*), and his mother's sister "my mother" (*Nâ-a*); but his mother's brother he called "my uncle" (*Tâ-wâ-râ-to-ra*), and his father's sister he called "my aunt" (*P-to-me-nick*). In his own generation he called his cousins, the children of his father's brother, "my elder brother" (*Moo-kâ*), "my younger brother" (*Me-sho-kâ*), "my elder sister" (*P'-tâ-me-a*), "my younger sister" (*P'-tâ-me-ha*), according to their sex and age. In the generation below his own he called his brother's son and daughter "my son" (*Me-ne-ka*) and "my daughter" (*Me-no-hâ-ka*); but his sister's son and daughter he called "my nephew" and "my niece."<sup>1</sup>

The classificatory system of relationship among the Mandans.

The Mandans performed certain magical ceremonies for the increase of the food supply, which in principle resemble the *intichiuma* ceremonies of the Central Australian aborigines, the only essential difference between them being that, whereas among the Australians the ceremony for increasing any particular article of food is only performed by the persons who have that article of food for their totem, there appears to have been no such limitation among the Mandans. Strictly speaking, therefore, the ceremonies which the Mandans performed were not totemic; but as they agree in principle with the magical totemic ceremonies performed by their kinsmen the Omahas and the Kansas,<sup>2</sup> as well as by the Central Australians, a brief description of them may not be out of place in this work.

Magical ceremonies performed by the Mandans for the increase of the food supply.

We have seen that the staple foods of the Mandans were two, namely, buffalo meat and Indian corn. Both these necessities of life they attempted to increase and multiply by ceremonies based on the principle of imitative or homœopathic magic. First, in regard to buffaloes, it was a standing rule of the Mandan village that every man must possess the

The Buffalo dance. In order to make the buffaloes to come the Mandans used to

<sup>1</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, pp. 184 sq., and Table II. pp. 293 sqq. The terms for elder and younger sister are the same in the tables. Morgan noted

this and thought there might be a mistake. He was not able to obtain a complete set of the Mandan terms of relationship.

<sup>2</sup> See above, pp. 104-106, 126 sq.

dress themselves in buffalo skins and mimic the action and voice of the buffalo.

skin of a buffalo's head with the horns, and this he had to keep in constant readiness hanging on a post at the head of his bed, that he might be able at a moment's notice to put it as a mask on his own head, and so disguised to turn out and dance for buffaloes in the public square, whenever the chiefs might command him so to do. Sometimes the dancers wore the entire skins of buffaloes, with horns, hoof, and tail all complete. The order to dance the buffalo dance was issued whenever no buffaloes had been seen for some time, and the pressure of hunger began to be felt in the village. Thereupon from ten to fifteen men, each wearing the head and horns of a buffalo, and armed with the bow or spear with which they were accustomed to slaughter the beasts, would sally out into the public square and there stamp, grunt, and bellow in imitation of buffaloes till they could stamp, grunt, and bellow no more. As each grew tired he signified it by bending forward and sinking towards the ground ; whereupon one of his fellows would draw his bow and hit him with a blunt arrow. The man so struck then dropped like a dead buffalo and was dragged out of the ring by the heels by the bystanders, who brandished their knives over him and went through the motions of skinning and cutting him up. The place of the wearied dancer was at once supplied by another, who danced into the ring with his mask on, and carried on the pantomime till exhausted nature compelled him also to desist. In this way the dance was kept up day and night by relays of dancers till the buffaloes appeared, even though the performance might last without a moment's intermission for weeks. All the time the drums were beating, the rattles rattling, the spectators singing or yelling themselves hoarse ; and all the time the sentinels on the neighbouring hills were straining their eyes to catch the first sight of the herd like moving specks in the distance. The moment they did so, they signalled the joyful news to the village by waving their robes. Then at last the dance ceased, the drums throbbed no longer, all was bustle in preparation for the hunt. Spears were polishing, bows were twanging, horses pawing and snorting in impatience. Then there was a great clatter of hoofs, a whirlwind of galloping horses, and they were off.

The dance had been successful; it had compelled the buffaloes to come.<sup>1</sup>

In this ceremony, which has been graphically described for us by the painter Catlin, the pretence of being buffaloes and of being killed and cut up as such was clearly supposed, on the principles of imitative or homœopathic magic, to produce the effect which it mimicked; it obliged the animals to come and be killed. The ceremony was not observed at stated intervals but only as occasion arose, whenever the buffaloes were long of coming. But the Mandans regularly performed another magical ceremony for buffaloes every year in spring, when the willows burst into leaf on the banks of the river. The intention of this annual rite, as the manner of its celebration clearly shews, was not to ensure the killing but rather the procreation of buffaloes. The actors were indeed disguised like buffaloes as in the other ceremony; they wore the entire skins of buffaloes with the horns and tails complete; the heads of the buffaloes were thrown over their heads, their eyes peered through the eye-holes of the animals, and they imitated the motions of buffaloes. But the scene which they acted was not the slaughter of the beast, but the leap of the buffalo bull on the buffalo cow. When that scene had been publicly acted in the presence of the whole population, wound up to the highest pitch of excitement, the actor who personated the buffalo bull was mocked by the women and children, bespattered with filth, and ignominiously driven away from the village into the prairie. There he was again beset by a throng of women and children, and the artificial implement of fertility was wrested from his body by one of the women, who wrapped it in a bunch of wild sage and, escorted by two matrons on each side, bore it back triumphantly to the village. There she was lifted by her four female attendants on to the roof of the Medicine Lodge, over the door, where she stood and harangued the multitude for some time,

Annual ceremony performed in spring for the multiplication of buffaloes. It consisted of a dramatic representation of the coupling of the buffaloes by men dressed in buffalo skins.

<sup>1</sup> Geo. Taplin, *Letters and Notes on the Manners, Customs, and Condition of the North American Indians*, Fourth Edition (London, 1844), i. 83, 127-129. Each buffalo-mask worn by a dancer had usually attached to it a strip

of skin of the whole length of the animal's back with the tail at the end, so that while the head and horns of the buffalo were on the dancer's head, its tail swept the ground at his heels.

claiming that "she held the power of *creation*, and also the power of life and death over them; that she was the father of all the buffaloes, and that she could make them come or stay away, as she pleased."<sup>1</sup>

Both these buffalo ceremonies are based on the principle of imitative magic.

While the two buffalo dances of the Mandans which have just been described, differed from each other both in their immediate purpose and in the manner of their celebration, the ultimate aim of both was one and the same; it was to ensure a plentiful supply of food for the tribe. And as the aim of the two ceremonies was identical, so too was the principle on which both were supposed to produce the desired result. It was the principle of imitative or homœopathic magic.

Magical ceremony performed by the Mandans in spring to ensure a good crop of maize.

The same magical principle was resorted to by the Mandans for the purpose of ensuring an abundant supply of their other staple food, the Indian corn. They celebrated in spring and autumn what they called "the Corn Medicine Festival of the Women" (*Wahka-Sinhusch*). For they thought that the Old Woman, who never dies, causes the fruits of the earth to grow and sends the migratory water-fowl in spring—the swans, the geese, and the ducks—as symbols of the fruits and as her own representatives, the wild goose signifying maize, the wild swan pumpkins, and the wild duck beans. So in spring days, when the birds were expected, the Indians got much dried meat ready and hung it up as

<sup>1</sup> George Catlin, *O-Kee-Pa, a Religious Ceremony, and other Customs of the Mandans* (London, 1867), pp. 6, 9, 16-24, and *Folium Reservatum*, pp. i.-iii. Compare *id.*, *Letters and Notes on the Manners, Customs, and Condition of the American Indians*, Fourth Edition (London, 1844), i. 157 sq., 164 sqq. Catlin speaks of "dancing what they call, *Bel-lohck-na-pic* (bull-dance); to the strict observance of which they attribute the coming of buffaloes to supply them with food during the season." But the nature of the dance clearly indicates that the purpose of the ceremony was not so much to ensure the coming as the multiplication of the buffaloes. A remarkable feature of the ceremony, which is not mentioned by Catlin, was

that during its celebration the men offered the use of their wives to the older men and the offer was generally accepted. The same feature characterised the bull-dance of the Minnetares or Hidatsas, a tribe akin to the Mandans. Probably it was regarded as a magical rite which sympathetically promoted the procreation of buffaloes. See *History of the Expedition under the Command of Captains Lewis and Clark to the Sources of the Missouri*, etc. (London, 1905) i. 209 sq.; Edwin James, *Account of an Expedition from Pittsburgh to the Rocky Mountains* (London, 1823), ii. 59 sq.; Maximilian Prinz zu Wied, *Reise in das Innere Nord-America* (Coblenz, 1839-1841), ii. 181, 263-267.

an offering to the Old Woman on rows of long poles in front of the village. Then on one of these days the old women of the village, as representatives of the Old Woman who never dies, assembled at the poles, each of them carrying a stick with a maize-cob fastened to the top. They sat down, laid their sticks before them on the earth, danced in a circle round the poles, and then took their maize-sticks in their hands. While they did so, old men beat drums and rattled rattles. Meantime younger women came and put a little dry powdered flesh in the mouths of the old women, each of them receiving in return a grain of the consecrated maize which she ate. Also three or four grains of the maize were placed in their dish, which were afterwards carefully mixed with the seed-corn and were supposed to impart luck and fertility to it. After that the dried meat which hung on the poles belonged to the old women, because they represented the Old Woman who never dies.

The Old Woman who never dies, and her birds, the symbols of the fruits of the earth.

Such was the Corn Medicine Festival of the Women which the Mandans held in spring. In autumn the festival was repeated, but its purpose, we are told, was then to attract the herds of buffaloes and to ensure a supply of their flesh. At that time, instead of a stick inserted into a cob of maize, every woman carried in her arms a whole plant of maize, which she had rooted out of the ground. They named the maize and also the birds, which symbolised the fruits of the earth, by the name of the Old Woman who never dies, and they cried to them in autumn, "Mother, have pity on us! Send us not the sharp cold too soon, that we may have meat! Let not all the game go away, that we may have something for the winter!" They thought that the birds flying south in autumn carried with them to the Old Woman the dried meat and other things which they had hung up on the poles as thank-offerings to her for the crops she had given them, and they imagined that she ate the meat which the birds brought her. Old women who could not afford to give a costlier offering would hang up the foot of a buffalo on one of the poles; and when the Old Woman who never dies received such a humble gift brought her by one of the birds, she would take it and say, "This poor offering is dearer to me than the costliest gifts"; and she

Ceremony in autumn to attract the buffaloes; appeal to the Old Woman who never dies.

would boil a piece of it with her maize and eat it with relish.<sup>1</sup>

The Old Woman is a corn-goddess, a savage equivalent of Demeter and Ceres.

In these ceremonies the Old Woman who never dies has clearly attained to the rank of a corn-goddess, the equivalent of the Greek Demeter and the Roman Ceres. For she is supposed to cause the crops to grow; she is actually, like her Greek and Roman counterparts, identified with the corn, since it is called by her name; she receives offerings, and is prayed to by the women under the title of Mother. All this is purely religious. Yet the personification of the goddess by the old women and the fertilisation of the seed-corn by them are magical in their nature, since they are not propitiations of the deity; far from that, they are usurpations of her divine functions by women, who take it on themselves to represent instead of to worship the goddess. Thus, whereas the Mandan ceremonies designed to ensure a supply of buffalo meat were purely magical, the ceremony for the fertilisation of the ground exhibits a blending of magic with religion. The distinction is interesting, since the intellectual advance from magic to religion is thus associated with the social advance from hunting to agriculture.

Minnetaree ceremony to promote the growth of the corn.

A somewhat similar ceremony intended to promote the growth of the corn was observed by the Minnetarees or Hidatsas, who also, as we saw, resembled their kinsmen the Mandans in dancing a bull-dance for the multiplication of buffaloes. The ceremony has been described by Dr. Edwin James as follows:—

“Amongst the Minnetarees, is a ceremony called the corn dance; which, however, has but little claim to the title of a dance. Notice being given of this ceremony, by the village criers, the squaws repair to the medicine lodge, in which the magi are seated, performing their incantations, carrying with them a portion of each kind of seed which they respectively intend to plant the ensuing season; as an ear of maize, some pumpkin, water-melon, or tobacco-seed. These are attached to the end of small sticks, which are stuck in the ground, so as to form a right line in front of the magi. The squaws then strip themselves entirely of their

<sup>1</sup> Maximilian Prinz zu Wied, *Reise in das Innere Nord-America*, ii. 182-184.

garments, and take their seats before the spectators. The magi then throw themselves into a violent agitation, singing, leaping about, pointing to the sky, the earth, the sun, and the north star, successively. After these paroxysms have subsided, the squaws arise ; and each one taking her respective sticks, holds them up with extended arms. One of the magi being provided with a large bunch of a species of bitter herb, dips it in a vessel of water, and sprinkles copiously the seeds and persons of the squaws, with much grotesque gesticulation. This concludes the ceremony ; when the seeds are supposed to be fertilized, and to be capable of communicating their fertility to any quantity of their kind. The women then assume their clothing, and return home, being careful to deposit the fertilized seed with their stock ; after which they may proceed to planting as soon as they please." <sup>1</sup>

In this Minnetaree ceremony it will be noticed that the fertilisation of the seed is performed by men, not by women ; yet the presence of naked women at the ceremony, each bearing the seed which is to be fertilised, shews that their help was deemed essential to the success of the rite. We may conjecture that their co-operation was based on the principle of imitative magic, their maternal functions being supposed to aid the production of the corn and other fruits of the earth. The conjecture is confirmed by the evidence of Prince Maximilian, who witnessed this same corn dance of the women among the Minnetarees, the intention of which, he tells us, was to ensure a good crop of maize in the coming year. In the middle of the hut, where a fire was blazing, stood a tall strong woman dressed in a long robe of yellow leather decorated with many tassels and pieces of red and blue cloth. She pretended to have a maize-cob in her body which she could conjure out and in at will. The music struck up and four other women began to dance, waddling like ducks with tiny steps in time to the rapid beat of the drum, while their arms hung limp at their sides. Meantime the other big woman danced alone by the fire, warming her hands at the flames and then holding them to

Women as well as men take part in the fertilisation ceremony.

Prince Maximilian's description of the Minnetaree ceremony for ensuring a good crop of maize. A woman pretended to bring up a cob of maize out of her mouth.

<sup>1</sup> Edwin James, *Account of an Expedition from Pittsburgh to the Rocky Mountains under the Command of Maj. S. H. Long* (London, 1823), ii. 58 sq.

her face. At last she began to totter and to swing her arms to and fro. Then her head drooped backwards, and in her open mouth appeared the point of a white cob of maize, which gradually protruded more and more, while the convulsive movements of the dancer increased in violence. When the cob was half out of her mouth, it seemed as if she would faint, and another woman ran to her assistance, put her arms round the sufferer's body, and set her on the ground. There she lay in convulsions, supported by her companion, while the music rose higher than ever. Other women stroked the arms and breast of the patient with bunches of wormwood, and the maize-cob gradually vanished again. Then the dancer rose to her feet, danced about for a little, and was relieved by another.<sup>1</sup>

In this scene the medicine-woman, as the writer calls her, seems to have personated the corn-goddess giving birth to the corn from her own body. In the Eleusinian mysteries the culminating point of the ceremonies was reached when the high priest, in a blaze of light, presented to the initiated a reaped ear of corn, while he cried with a loud voice that the goddess had been delivered of a sacred boy.<sup>2</sup> Perhaps in the temple at Eleusis, as in the Indian hut on the prairie by the Missouri, the goddess was personated by a woman who feigned to bring forth from her body the good gift of the goddess to mankind, an ear of corn. At all events we may assume with some degree of probability that the Old Woman who never dies, who makes the corn to grow, and whom the Mandans addressed as "Mother," was originally, like Demeter and Ceres, nothing but a personification of the corn itself. If any doubt remains in the reader's mind, it may be dissipated by a custom which is practised by the Arickarees, an Indian tribe of the Upper Missouri whose survivors now live in the same village with the survivors both of the Mandans and the Minnetarees. "In every Arickaree lodge," we are told, "there is a large ear of corn, which has lasted for generations, sticking out of the mouth of a medicine-bag. At their feasts, they make offerings to the

corn by rubbing a piece of meat on it, while they pray to it for plentiful harvests, and address it by the name of 'mother.'"<sup>1</sup> In this simple worship of the mother-corn we may see as it were in miniature the origin of some of the great goddesses of classical antiquity, Isis, Demeter, and Ceres, the only substantial difference between them being that whereas the corn-goddess of America was a personification of maize, the corn-goddesses of the old world were personifications of wheat or barley.

Before concluding this subject I would remind the reader that there is no ground for connecting either the buffalodances or the corn-dances of these Indians with totemism; in other words, there is no evidence that such dances were danced by men and women who had the buffalo or the corn for their totem. If nevertheless I have called attention to them in a treatise on totemism it is merely because in their aim and method these dances or rather dramas present a close analogy to the purely totemic ceremonies of the Central Australians, which similarly aim at increasing the food supply by means of imitative or homœopathic magic.

These ceremonies for the multiplication of buffaloes and corn are magical but not totemic.

Another tribe of the Upper Missouri valley are the Minnetarees or Hidatsas, as they now generally call themselves. The name Minnetarees, by which they have been

The Minnetarees or Hidatsas.

<sup>1</sup> Washington Matthews, *Ethnography and Philology of the Hidatsa Indians* (Washington, 1877), p. 12. As to the Arickaree worship of maize, see Maximilian Prinz zu Wied, *Reise in das Innere Nord-America*, ii. 244 sq. "Maize," he says, "is one of the chief mysteries ('medicines') of the Arickarees, and they honour it in many ways." He describes a very sacred bird-box, which was thought to be a most powerful means of promoting the growth of maize and the other crops. The box was about six feet long, but narrow, with seven gourd-bottles inserted on the top. Inside it was full of the stuffed skins of many birds, but only of migratory birds which passed the summer in the Arickaree country. The box also contained a famous medicine-pipe, which was only smoked at great festivals and on extraordinary

occasions. This priceless treasure, which, we are told, the Arickarees prized as much as Christians do the Bible, was kept in a medicine-hut, fastened high up. One of the chief mysteries or religious festivals of the Arickarees was celebrated with this bird-box when the fields had been sown and the first pumpkins were ripe. Also in summer, when the trees were in leaf, they took an evergreen tree, a juniper, peeled its stem, painted it with red, white, and blue stripes, and set it up before the medicine-hut. Then the precious bird-box was taken down and the sacred hocus-pocus performed with it. On the analogy of the Mandan belief (see above, p. 140) we may conjecture that the summer-birds, whose skins were kept in the mystic box, symbolised the various fruits of the earth, which the ceremony was designed to quicken.

commonly known, was applied to them by their neighbours the Mandans. From the French traders they received, very unjustly, the epithet *Grosventres*. When the tribe was visited by Lewis and Clark in 1804, they occupied villages on the Knife River. The remnant of the tribe, together with the survivors of the Mandans and the Arickarees, now inhabit the village of Fort Berthold on the Missouri in North Dakota. A remote affinity may be traced between the languages of the Minnetarees and the Mandans, but none between these languages and that of the Arickarees, with whom they live; a competent observer was not able to detect a single word alike in the Mandan and Arickaree tongues. On the other hand the language of the Minnetarees or Hidatsas is more nearly related to that of the Upsarokas or Crows, and it appears that these two tribes are immediate subdivisions of the same people. But though the speech of the Minnetarees or Hidatsas differs somewhat widely from that of the Mandans, the two tribes have been intimately connected with each other for centuries, and their culture, civil and religious, is of the same type. The Minnetarees or Hidatsas built commodious and comfortable houses of the same pattern as the Mandans; they cultivated maize, beans, pumpkins, and tobacco; they built boats of buffalo-hide; they manufactured pottery, made mats and baskets of various sorts, and fashioned arrow-heads out of flint and horn. They garnished their clothing with porcupine quills, which they coloured brilliantly with dyes of Indian discovery. They even knew how to manufacture glass and make rude beads and pendants out of it; and they possessed various pigments with which they recorded events in symbolic pictures. Yet though they were settled in villages and tilled the ground their staple food down to about 1870 was buffalo flesh, and their principal standard of value was a buffalo-horse, that is, a horse fleet enough to run down a young buffalo bull. With the nomadic tribes they exchanged their agricultural produce for horses. When the Dacotas saw a certain flower (*Liatris punctata*) blooming on the prairies, they knew that the corn was ripe, and they repaired to the villages of the farming Indians to trade. From the time they came in sight over the bluffs in the distance till the

meat.

moment they disappeared behind them again, there was a truce to the warfare between these Bedouins of the prairie and the village Indians.<sup>1</sup> We have seen that the Minnetarees, like the Mandans, performed magical dances or ceremonies to ensure a supply of their two staple foods, buffalo meat and maize ;<sup>2</sup> and annually in July they celebrated their great medicine-dance or dance of penitence, at which their young warriors, like those of the Mandans, voluntarily submitted themselves to excruciating tortures.<sup>3</sup> It was the opinion of L. H. Morgan that the partial civilisation of the tribes of the Upper Missouri valley, characterised by agriculture, communal timber-framed houses, and a peculiar system of religion or magic, was imported into this region by the Minnetarees when they immigrated thither from the south and imparted their superior knowledge to the Mandans, who had been settled in that country before them. Certainly the Mandans could not have learned either agriculture or house-building from the Sioux or Dakotas, for that nation of roving hunters was ignorant of both these arts.<sup>4</sup> In personal appearance the Minnetarees and Mandans were among the finest specimens of the Red Man in North America. Prince Maximilian describes with admiration the tall well-built figures of the Minnetarees, their long plaited hair decked with feathers, and the beautiful bronze colour of their skin set off by the red paint on their faces and the strings of white and sky-blue beads which they wore.<sup>5</sup>

Morgan's view that the partial civilisation of the Upper Missouri tribes was imported from the south.

The Minnetarees or Hidatsas are, or were, divided into seven exogamous clans as follows :—<sup>6</sup>

<sup>1</sup> Washington Matthews, *Ethnography and Philology of the Hidatsa Indians*, pp. 17 sqq., 23 sqq., 85 ; L. H. Morgan, *Systems of Consanguinity and Affinity*, pp. 185 sq. ; *id.*, *Ancient Society*, p. 158 ; *Handbook of American Indians north of Mexico*, i. 547 sq.

*sanguinity and Affinity*, pp. 181-186 ; *id.*, *Ancient Society*, pp. 158 sq.

<sup>5</sup> Maximilian Prinz zu Wied, *Reise in das Innere Nord-America*, i. 411 ; L. H. Morgan, *Ancient Society*, p. 159.

<sup>6</sup> L. H. Morgan, *Ancient Society*, p. 159. As to this list the Rev. J. Owen Dorsey observed that "Dr. Washington Matthews could have furnished a corrected list from his own notes had they not unfortunately been destroyed by fire" ("Siouan Sociology," *Fifteenth Annual Report of the Bureau of Ethnology* (Washington, 1897), p. 242).

Exogamous clans of the Minne- tarees or Hidatsas.	1. Knife.	2. Water.	3. Lodge.
	4. Prairie Chicken.	5. Hill People.	6. Unknown Animal.
	7. Bonnet.		

The large proportion of artificial objects in this list is suspicious, but L. H. Morgan, to whom we owe it, seems to have entertained no doubt that the clans so named were of the ordinary type. Intermarriage within the clan is forbidden; descent is in the female line; and both property and the office of sachem are hereditary in the clan.<sup>1</sup> A man who marries the eldest of several sisters has a claim to the others as they grow up, and he generally marries them, unless in the meantime they have formed other attachments and refuse to live with him. As certain female cousins are regarded as younger sisters, a man has often much latitude in choosing wives under this law. As a rule, the Minnetarees or Hidatsas observe the law of the levirate; that is, a man usually takes to wife the widow of his deceased brother, unless she expresses unwillingness, and he may adopt the orphans as his own children.<sup>2</sup> Like other Indian tribes of the Siouan or Dacotan stock, the Minnetarees deem it improper for a man to hold a direct conversation with his mother-in-law; but this custom seems to be falling into disuse.<sup>3</sup>

Terms for  
father and  
mother.

Further the Minnetarees or Hidatsas have as usual the classificatory system of relationship; but their form of the system is characterised by one anomalous feature, and by another which deviates from every form we have hitherto met with, though it has its counterpart, as we shall see, in the system of the Gulf nations. In the generation above his own a man calls his father's brother "my father" (*Tâ-ta*) and his mother's sister "my mother" (*Ih-kâ*); but his father's sister he calls "my grandmother" (*Kâ-ru-hâ*), and his mother's brother he calls "my elder brother" (*Me-â-ka*). This is an anomalous relationship in which the system of the Minnetarees and the Crows differs from that of all other tribes of American Indians. A Crow man calls his

<sup>1</sup> L. H. Morgan, *Ancient Society*, *Indians*, p. 53.  
p. 159.

<sup>2</sup> Washington Matthews, *Ethno-  
graphy and Philology of the Hidatsa*

<sup>3</sup> Washington Matthews, *op. cit.*  
p. 54.

father's sister, not like a Minnetaree, "my grandmother," but "my mother" (*E-ke-á*).

In his own generation a Minnetaree or Hidatsa man calls his male and female cousins, the son and daughter of his father's brother, "my elder brother" (*Mee-á-ká*), "my younger brother" (*Mat-so-gá*), "my elder sister" (*Mat-tá-we-á*), "my younger sister" (*Má-tá-ka-zhá*), according to the sex and age of the person. But his male cousin, the son of his father's sister, he calls "my father" (*Tá-ta*), and his female cousin, the daughter of his father's sister, he calls "my mother" (*Ih-ká*). Conversely he calls his male cousin, the son of his mother's brother, "my son" (*Má-de-shá*), and his female cousin, the daughter of his mother's brother, he calls "my daughter" (*Má-ká*). A woman applies the same terms to her cousins, the children either of her father's sister or of her mother's brother; that is, she calls them not her cousins but her father or mother, her son or daughter, according to their sex and according as they are the children of her father's sister or of her mother's brother. This treatment of cousins, the children of a brother and sister respectively, will meet us again in the system of the Gulf Indians. It differs from the treatment of such cousins among the Omahas, Kansas, and other tribes of the Dacotan stock, in as much as, unlike the system of these tribes, which assigns seniority to the brother's child over the sister's child,<sup>1</sup> it assigns seniority to the sister's child over the brother's child, thus shewing a preference for the female line. For of cousins, the children of a brother and a sister respectively, it is the children of the sister who rank as "father" and "mother" of their cousins; and it is the children of the brother who rank as "son" and "daughter" of their cousins.

In the generation below his own a Minnetaree or Hidatsa man calls his brother's son and daughter "my son" (*Ma-de-shá*) and "my daughter" (*Má-ká*); but his sister's son and daughter he calls "my younger brother" (*Mat-so-gá*) and "my younger sister" (*Má-tá-ka-zhá*). This remarkable deviation from the ordinary form of the classificatory system is shared by the Upsarokas or Crows, and it is peculiar to these two tribes. A woman calls her sister's son and

<sup>1</sup> See above, pp. 115-117, 128, 133.

daughter "my son" (*Mă-de-shă*) and "my daughter" (*Mă-kă*); but her brother's son and daughter she calls "my grandchild" (*Met-a-wă-pish-sha*). This last denomination is a deviation from the common form of the classificatory system.<sup>1</sup>

Terms for wife and wife's sisters, for husband and husband's brothers.

Further, it deserves to be noticed that a man applies the same term *itadamia* to his wife and to her sisters, especially to her younger sisters, which is natural enough, since they are his potential wives, he having a customary right to marry them in his wife's lifetime. But the wife applies quite different terms to her husband (*kida*) and to his brothers (*isikisi*), which is also natural, since they have not the right to marry her in their brother's lifetime, though they have at least a preferential right to marry her after his death.<sup>2</sup>

Belief of the Minnetarees or Hidatsas that there is a cave where children live, who can enter into women and be born of them.

It deserves to be noted that the Minnetarees or Hidatsas entertained a belief as to the birth of children which closely resembles the Central Australian theory of conception.<sup>3</sup> We possess two independent accounts of the Minnetaree belief. The older of the two, which we owe to Major Long's expedition of 1819-1820, runs thus: "At the distance of the journey of one day and a half from Knife-creek, which divides the larger and smaller towns of the Minnetarees from each other, are situate two conical hills, separated by about the distance of a mile. One of these hills was supposed to impart a prolific virtue to such squaws as resorted to it for the purpose of crying and lamenting, for the circumstance of their having no male issue. A person one day walking near the other mount, fancied he observed upon the top of it two very small children. Thinking they had strayed from the village, he ran towards them to induce them to return home; but they immediately fled from him, nor could his utmost speed overtake them,

<sup>1</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, pp. 188 sq. and Table II. pp. 293 sqq. Compare Washington Matthews, *Ethnography and Philology of the Hidatsa Indians*, pp. 55-57.

<sup>2</sup> Washington Matthews, *op. cit.*, pp. 56, 57. But a man has another term (*ua*) by which he can distinguish his

actual wife from her sisters. Similarly he has terms by which he can distinguish his actual father from his father's brothers and his actual mother from his mother's sisters (Washington Matthews, pp. 55-57).

<sup>3</sup> As to the Australian theory, see vol. i. pp. 93 sq., 182 sq., 188 sqq., 576 sqq.

and in a short time they eluded his sight. Returning to the village, the relation of his story excited much interest, and an Indian set out next day, mounted on a fleet horse, to take the little strangers. On the approach of this individual to the mount, he also saw the children, who ran away as before, and although he endeavoured to overtake them by lashing the horse into his utmost swiftness, the children left him far behind. But these children are no longer to be seen, and the hill once of singular efficacy in rendering the human species prolific, has lost this remarkable property."<sup>1</sup>

However, the property in question, or at least the faith of the Indians in it, seems to have survived much longer than the explorers imagined; for Dr. Washington Matthews, whose account of the tribe was published in 1877, speaks of the belief as if it were still entertained by some of the Hidatsas. He says: "The other famous oracle, to which they now often refer, as they have still some fancies connected with it, was the *Makadistati*, or 'House of the Infants,' a cavern, near the Knife River, which they supposed extended far into the earth, but whose entrance was only a span wide. This cave, they say, was inhabited by pigmies, or mysterious infants, who came out only at night, and then with great caution, lest they should be observed, and who followed a wise and watchful leader that knew the scent of a man and snuffed the air as he advanced, like the leader of a band of antelope. They suppose that if he detected the presence of a human being, he gave the alarm and all retreated. After rainy nights, they saw tracks of some animals going from and returning to the cave, which tracks they said were those of the infants. The oracle was thus consulted: The childless husband, after a long fast, would repair to the neighborhood of the cave at night, and secrete himself behind a boulder, to the leeward, to watch; if, in his hunger-weakened brain, he had a vision of the infants, he returned home, confident that he would be a father within a year. The barren wife who desired children would, at sunset, lay at the mouth of the cave a tiny play-ball and a little bow and arrow. If the ball was missing in the

offspring.

<sup>1</sup> Edwin James, *Account of an Expedition from Pittsburgh to the Rocky Mountains* (London, 1823), i. 253 sq.

morning, she believed that within a year she would be the mother of a girl; while if the bow and arrow were missing, she supposed she would be the mother of a boy. If neither were 'taken,' she went back with little hope, and could not consult the oracle again until a year had elapsed. There are those among them who imagine that, in some way or other, their children come from the *Makadistati*; and marks of contusion on an infant, arising from tight swaddling or other causes, are gravely attributed to kicks received from his former comrades when he was ejected from his subterranean abode."<sup>1</sup>

According to this last account it appears that some at least of the Hidatsas or Minnetarees imagine the "House of the Infants" to be inhabited by spirit children, who can project themselves into barren women and be born of them. This belief is identical with that of the Arunta and other tribes of Central Australia, and also with that of the Melanesians of the Banks' Islands.<sup>2</sup> A similar belief is entertained in certain circumstances by the Baganda of Central Africa. For in Uganda still-born babes and children born feet foremost are buried at cross-roads, and mounds are raised over their remains; and when women or girls pass by such a grave, they throw grass, sticks, or dust on it for the purpose, so they say, of preventing the ghost of the child from entering into them and being reborn.<sup>3</sup> Finding this crude theory of conception at points so distant from each other, we can hardly doubt that it has been held by savages far more commonly than would appear from the few instances of it which have been recorded. As I have already repeatedly pointed out, such primitive theories probably furnish the starting-point of totemism; and it is therefore not without significance that they are held in what may be called the classic lands of totemism, the heart of America, the heart of Africa, and the heart of Australia.

A Siouan or Dacotan tribe closely akin by blood and

Australians.

language to the Minnetarees or Hidatsas are the Upsarokas or Crows. In 1804 they were found by Lewis and Clark on the Knife River. Unlike their kinsmen the Minnetarees, who were agricultural and village Indians, the Crows were a roving tribe of hunters, who neither dwelt in villages nor tilled the ground, except that they grew a little tobacco. With their skin tents they moved about from place to place on horseback, hunting the buffaloes and every sort of game. They were a haughty tribe, who looked down with contempt on the whites. A troop of these barbarous cavaliers was a picturesque sight, as they sat their fine horses on panther-skins, their bronzed faces painted with many colours, their long hanging hair, of which they were very proud, decked with fluttering feathers, their bows and arrows slung on their backs, and guns or spears in their hands. When Prince Maximilian travelled in their country, they were reckoned to number four hundred tents and to muster from nine to ten thousand horses, some of them very fine animals. They roamed the prairies from the Yellowstone and Cheyenne Rivers to the Big Horn River and the Rocky Mountains. Their foes were the Dacotas, Blackfeet, and Cheyennes; their friends the Minnetarees and Mandans.<sup>1</sup>

The Upsarokas or Crows, a Siouan tribe of hunters.

According to L. H. Morgan, the Crows were divided into the following exogamous clans:—<sup>2</sup>

Exogamous clans of the Crows.

- |                         |                        |
|-------------------------|------------------------|
| 1. Prairie Dog.         | 2. Bad Leggings.       |
| 3. Skunk.               | 4. Treacherous Lodges. |
| 5. Lost Lodges.         | 6. Bad Honours.        |
| 7. Butchers.            | 8. Moving Lodges.      |
| 9. Bear's Paw Mountain. | 10. Blackfoot Lodges.  |
| 11. Fish Catchers.      | 12. Antelope.          |
| 13. Raven.              |                        |

Only two or three of these names appear to be totemic; the others resemble those of the dancing bands or societies,

<sup>1</sup> *History of the Expedition under the Command of Captains Lewis and Clark to the Sources of the Missouri*, etc. (London, 1905), i. 187; Maximilian Prinz zu Wied, *Reise in das Innere Nord-America*, i. 395 sq., 398 sq.; L. H. Morgan, *Systems of Consanguinity and Affinity*, p. 185; *Handbook of American Indians north*

*of Mexico*, i. 367 sqq. The name Crow as applied to this tribe is a translation through the French *gens des corbeaux* of their own name for themselves, namely, *Absároke*, which means crow, sparrow-hawk, or bird people.

<sup>2</sup> L. H. Morgan, *Ancient Society*, p. 159.

It seems doubtful whether the Crow clans are totemic.

Rules of marriage and descent.

Right of a man to marry all his wife's younger sisters in her lifetime. Frequency of this custom among the American Indians.

which are common in Indian tribes. Morgan himself was inclined for a time to take the same view; however, he says that the organisation of the Crows in clans or gentes, as he calls them, was clearly established by their rules of descent, marriage customs, and laws of inheritance with respect to property. His interpreter among the Crows was Robert Meldrum, then a factor of the American Fur Company, who had lived in the tribe for forty years, was one of their chiefs, and had mastered their language so perfectly that he thought in it. The rules of marriage, descent, and inheritance among the Crows were the same as among the Minnetarees; that is, no man might marry a woman of the same clan, children belonged to the clan of their mother, not of their father, and property was hereditary in the clan.<sup>1</sup>

The Crows observed a remarkable marriage custom which we have already met with among other Indian tribes.<sup>2</sup> If a man married the eldest daughter of a family, he had a right to marry all her younger sisters when they grew up, even in the lifetime of his first wife, their eldest sister. He might waive the right; but if he insisted, his claim to the women would be admitted by their clan. Morgan found the same custom with regard to the marriage of sisters practised by at least forty other Indian tribes.<sup>3</sup> Such a custom, taken together with the custom of the levirate, which allows brothers to marry the same woman successively, appears to be most naturally explicable on the hypothesis that it has survived from a time when a group of brothers regularly married a group of sisters.<sup>4</sup>

The last tribe of the Siouan or Dacotan stock which we shall notice here, though it does not belong to the

<sup>1</sup> L. H. Morgan, *Ancient Society*, p. 159. Prince Maximilian says that the Crows were divided into eight bands or societies, each of them with its own dance. Among the names of these bands were Buffalo-hulls, Prairie-foxes, Shorn Heads, Little Dogs, and Big Dogs. See Maximilian Prinz zu Wied, *Reise in das Innere Nord-America*, i. 401. The Prince's

evidence is in favour of the view that the divisions of the Crows were not totemic clans, but dancing bands or societies. We shall deal with these bands or societies later on.

<sup>2</sup> See above, pp. 65, 85, 127, 136, 148.

<sup>3</sup> L. H. Morgan, *Ancient Society*, p. 160.

<sup>4</sup> See also above, vol. ii. pp. 266 sq.

Missouri valley, are the Biloxi. They were a small tribe living in the southern part of what is now the State of Mississippi. Formerly they were reckoned to the Muskogean stock, which comprised the Indian tribes occupying the south-east portion of the United States. But the researches of Messrs. A. S. Gatschet and J. Owen Dorsey have proved that the language of the Biloxi was Siouan. The tribe is nearly or actually now extinct. A few survivors whom J. Owen Dorsey visited in 1892 and 1893 at Lecompte in Louisiana gave him the names of three of their clans, the Deer, the Bear, and the Alligator. Descent was traced in the female line. Though the exogamy of the clan appears to have broken down, the Biloxi retained the classificatory system of relationship in a peculiarly elaborate form. Thus they had terms for at least three degrees beyond grandparents; they had distinct terms and groups for father's elder sister, father's younger sister, father's elder brother, father's younger brother, and similarly for the mother's elder and younger brothers and sisters. They distinguished between the son of an elder sister and the son of a younger sister, and similarly between the daughter of an elder sister and the daughter of a younger sister. A man might not marry the daughter of his brother's wife nor the sister of his wife's father; but he might marry his deceased wife's sister, and a woman might marry her deceased husband's brother.<sup>1</sup> It is interesting, but not surprising, to find the classificatory system of relationship outlasting the exogamy of the totemic clans.

The Biloxi, a Siouan tribe of the south.

Their clans.

Marriage with a deceased wife's sister and with a deceased husband's brother.

### § 11. Totemism among the Gulf Nations

The south-eastern portion of what is now the United States, from the Mississippi on the west to the Atlantic on the east, and from the Tennessee River on the north to the Gulf of Mexico on the south, was inhabited by five principal Indian nations, which, following Morgan, we may call the

The Gulf nations, the Creeks, Seminoles, Choctaws, Chickasaws, and Cherokees.

<sup>1</sup> The Rev. J. Owen Dorsey, "Siouan Sociology," *Fifteenth Annual Report of the Bureau of Ethnology* (Washington, 1897), pp. 243 sq.;

J. Mooney, *The Siouan Tribes of the East* (Washington, 1894), pp. 14-17; *Handbook of American Indians north of Mexico*, i. 147 sq.

Gulf nations. These were the Creeks, the Seminoles, the Choctaws, the Chickasaws, and the Cherokees. Of these the first four belonged to the same linguistic stock, which has been called the Muskogean, from *Muskogee*, more properly *Maskoki*, the name by which the Creeks, the leading nation of the four, called themselves. The Choctaws and Chickasaws were subdivisions of the same people; their dialects are closely allied. But the variation between the Creek and the Choctaw dialects is very great. The Seminoles are derived from the Creeks. On the other hand the Cherokees belonged to an entirely different linguistic family, being an outlying branch of the Iroquoian stock. The territory occupied by the Muskogean peoples comprised the present States of Mississippi and Alabama, with parts of Tennessee, Georgia, Florida, and South Carolina. All the nations of this region had made considerable progress in culture. They were sedentary and agricultural, inhabiting large villages or rather towns of substantially built houses. Politically the Muskogean nations were organised in confederacies, each of which was governed by a federal council composed of representatives, who met annually or as occasion required at a place and time appointed by the chief. Each town was in like manner ruled by a council of its own, a miniature of the federal council. Thus the constitution of these Indians bore some resemblance to that under which the same region is still governed by a white race instead of a red.<sup>1</sup>

Among these nations the confederacy of the Creeks formed the largest division of the Muskogean family. In early times they occupied the greater part of Alabama and Georgia, and for about a century before they were finally removed, between 1836 and 1840, to the Indian Territory west of the Mississippi, they owned some fifty towns.<sup>2</sup> The confederacy included six tribes, namely the Creeks proper or Muskogees (*Maskoki*), as they called themselves, the Hitchetes, Yoochees, Alabamas, Coosatees, and Natchez, all

<sup>1</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, pp. 189 sq.; *Handbook of American Indians north of Mexico*, i. 245 sqq., 961 sq. As to the languages of the Muskogean family, see A. S. Gatschet, *A Migra-*

*tion Legend of the Creek Indians*, i. (Philadelphia, 1884) pp. 53 sqq.

<sup>2</sup> James Adair, *History of the American Indians* (London, 1775), p. 257; *Handbook of American Indians north of Mexico*, i. 362 sq.

of whom spoke dialects of the same language, with the exception of the Natchez, who were admitted to the confederacy after their settlement on the lower Mississippi had been broken up and the tribe dispersed by the French in 1730.<sup>1</sup> Taken altogether the Creeks were the most powerful and notable Indian nation in the southern territories of the United States.<sup>2</sup> Their land is a pleasant one and the climate salubrious. The winters are soft and mild, and the summers sweet and wholesome. Running waters and constant breezes temper the heat of summer, and in the autumn the air is fragrant with the perfume of the ripening aromatic shrubbery, which abounds throughout the country. In the eighteenth century the towns and villages of the Creeks were built along the banks of rivers, where the land was fertile, the water clear, and the air pure. The number of houses in them varied from twenty to two hundred. A distinction was drawn between the Red or War towns and the White or Peace towns; the Red towns were governed by warriors only, and the White towns by civil officers. These towns were distinguished from each other by red and white poles respectively. In the centre of each town was the public square, which was the place for public meetings and the celebration of festivals, especially for the annual busk or feast of first fruits in autumn, when the new maize was eaten with solemn rites.<sup>3</sup> A Creek town

Creek agri-  
culture.

had generally a large tract of excellent arable land adjoining or near it. The crops raised by the inhabitants included maize, rice, sweet potatoes, beans, pumpkins, and watermelons. The whole population planted their crops in one vast field together, yet every family or household had its own plot, which was marked out from the rest by a narrow strip of grass or any other natural or artificial boundary. Thus the whole plantation was an assemblage of lots adjoining each other, all comprised within one enclosure or general boundary. In the spring, after the ground had been already prepared, early one morning the sound of a conch shell summoned all the people to meet in the public square. Thither accordingly they repaired with their hoes and axes, and thence they proceeded to the fields, where they began to plant, not every one in his own plot, but all together working at one part of the field till it was finished. And when the rising crops were ready for dressing and cleansing, the people wrought all together in the same manner. When the harvest was come and the busk or feast of first fruits was over, every man carried off the ripe grain from his own patch and laid it up in his own granary. But before the crops were brought home from the field, a large crib or granary called the king's crib was set up in the plantation, and in it each family deposited as much or as little of the fruits of the earth as they thought fit. The grain and other fruits thus laid up in the king's crib served the king or chief (*mico*) as a public treasure over which he had control for the general good. Besides their cereals and roots the Creeks cultivated peaches, oranges, plums, and figs; several species of palms furnished them with a variety of agreeable and nourishing food; and grapes they had in abundance. They extracted a sweet oil from acorns and made use of it in their cookery. And in addition to the common field or public plantation every householder in a town enclosed a garden next to his house, where he planted maize, rice, squashes and so forth; and these, being planted earlier and tended more carefully, bore fruit before the crops in the common field were ripe.<sup>1</sup>

H. R. Schoolcraft's *Indian Tribes of the United States*, v. 267 sq. Elsewhere I have given a description of this

festival based on the original authorities (*The Golden Bough*,<sup>2</sup> ii. 329 sqq.).

<sup>1</sup> W. Bartram, *Travels through*

At the head of every Creek town was a chief (*mico*), whom the whites commonly called the king. He was elected for life from one particular tribe or totemic clan; for example, in one town he was always chosen from the Eagle clan. On his death, if his nephews were fit for office, one of them always succeeded his uncle; but if they were unfit, another of the next of kin was chosen, the office always descending in the female line. It was the king's duty to convene the council and preside over its deliberations in the public square. The council heard complaints, judged disputes, and decided questions of peace and war as well as all other matters of public concern. The king was little more than its president, and though he was treated with profound respect he dressed like an ordinary citizen, hunted with his family, and even worked daily in the field with his axe and hoe. His house was distinguished from those of other people only by its size. The king's body was beautifully tattooed in blue with figures of the sun, moon, and stars, animals of the chase, landscapes, battles, and so forth. The royal standard, which the Creeks always carried with them to battle, was made from the tail feathers of a species of vulture. Next in dignity to the king was the War Chief, who commanded the army. He was appointed to office by the king. Further, in every town there was a High Priest or chief Medicine-man, a person of great power and consequence in the state. The council never decided on an expedition against an enemy without his advice and assistance. He foretold, and even professed to produce, rain, thunder, and lightning; he claimed to heal diseases, to practise witchcraft, and to invoke or exorcise evil spirits. Sometimes the king combined the offices of War Chief and High Priest with his proper regal functions, and then his power became very formidable and dangerous to the liberty of the citizens; and he must be a very cunning man if he died in his bed

Each Creek town was governed by a king (*mico*) and council.

The annual  
new fire.

and not by the rifle or the tomahawk.<sup>1</sup> One of the duties of the High Priest was to make the new fire annually at the Feast of the First Fruits in autumn. This he did by rubbing two dry sticks against each other. All the fires in the town or nation had previously been put out and they were afterwards rekindled with the new fire. A perpetual fire burned in a large circular building commonly called the Rotunda. It was guarded by priests, and no woman might set foot within the building under pain of death.<sup>2</sup>

The  
houses of  
the Creeks.

The houses of well-to-do people among the Creeks consisted of four buildings arranged round a square courtyard. One of these buildings served as a kitchen and winter lodging-house; another as a summer lodging-house and hall for receiving visitors; a third consisted of a warehouse for storing skins and furs; and the fourth, completing the square, was commonly in two stories and comprised a granary, a storeroom, a parlour, and a spacious and airy pavilion on the upper floor, where the head of the family reposed and received his guests in the hot weather. Smaller or less wealthy families contented themselves with houses composed of one, two, or three buildings.<sup>3</sup>

The Creeks were divided into more than twenty-two

and several others, whose native names are recorded, though their meanings have been forgotten.<sup>1</sup>

In the eighteenth century James Adair rejected "the wild notion which some have espoused of the North American Indians being Præ-Adamites," but adopted what he conceived to be the rational view that they were lineally descended from the ancient Israelites, either while that Chosen People was still a maritime power (whenever that may have been), or more probably after the captivity.<sup>2</sup> He was personally acquainted with the Creek, Choctaw, Chikasaw, and Cherokee nations, and appears to have been an accurate observer, however little we may now be disposed to accept his genealogical theories and his attempts to resolve Indian words into Hebrew. On the totemism of these nations his observations deserve to be quoted, though we cannot say how far they apply to the Creeks in particular: He says: "As the Israelites were divided into tribes, and had chiefs over them, so the Indians divide themselves: each tribe forms a little community within the nation, and as the nation hath its particular symbol, so hath each tribe the badge from which it is denominated. The sachem of each tribe is a necessary party in conveyances and treaties, to which he affixes the mark of his tribe, as a corporation with

totemism  
among the  
tribes of  
this region.

<sup>1</sup> L. H. Morgan, *Ancient Society*, p. 161; A. S. Gatschet, *A Migration Legend of the Creek Indians*, i. 155 sq. The two lists given by these writers are independent and for the most part in agreement with each other. The Beaver and Otter clans are not mentioned by Morgan; and the Buffalo and Snake clans are mentioned neither

by Morgan nor Gatschet. As to these two last, see below, pp. 162, 163. Compare H. R. Schoolcraft, *Indian Tribes of the United States*, i. 275, where the Creek clans mentioned are those of the Tiger (Panther), Wind, Bear, Wolf, Bird, Fox, Root, Alligator, and Deer.

<sup>2</sup> J. Adair, *History of the American Indians* (London, 1775), pp. 11 sqq.

us doth their public seal. If we go from nation to nation among them, we shall not find one, who doth not lineally distinguish himself by his respective family. The genealogical names which they assume are derived, either from the names of those animals, whereof the *cherubim* are said in revelation to be compounded, or from such creatures as are most familiar to them. They have the families of the *eagle*, *panther*, *tyger*, and *buffalo*; the family of the *bear*, *deer*, *raccoon*, *tortoise*, *snake*, *fish*, and likewise of the *wind*. . . . The Indians, however, bear no religious respect to the animals from which they derive the names of their tribes, but will kill any of the species, when opportunity serves. The wolf, indeed, several of them do not care to meddle with, believing it unlucky to kill them; which is the sole reason that few of the Indians shoot at that creature, through a notion of spoiling their guns.”<sup>1</sup>

Thus it appears from Adair’s account that among the Creeks and kindred nations men had no superstitious regard for their totemic animals. On the other hand, we learn from him that the social tie, which knits together members of the same totemic clan, was strong among these nations. For after describing what he calls the tribes or families named after animals, that is, the totemic clans, he proceeds thus: “I have observed with much inward satisfaction the community of goods that prevailed among them, after the patriarchal manner, and that of the primitive christians; especially with those of their own tribe. Though they are become exceedingly corrupt, in most of their ancient commendable qualities, yet they are so hospitable, kind-hearted, and free, that they would share with those of their own tribe the last part of their provisions, even to a single ear of corn. . . . When the Indians are travelling in their own country, they enquire for a house of their own tribe; and if there be any, they go to it, and are kindly received, though they never saw the persons before—they eat, drink, and regale themselves with as much freedom as at their own tables.”<sup>2</sup> It would seem that the relationship between members of the same clan, who inhabited different towns,

<sup>1</sup> J. Adair, *History of the American Indians* (London, 1775), pp. 15 sq.

<sup>2</sup> J. Adair, *op. cit.* p. 17.

Closeness  
of the  
social tie  
between  
members  
of the same  
clan.

was closer than that between members of different clans who inhabited the same town. For Adair tells us that "when a warrior dies a natural death (which seldom happens) the war-drums, musical instruments, and all other kinds of diversion are laid aside for the space of three days and nights. In this time of mourning for the dead, I have known some of the frolicsome young sparks to ask the name of the deceased person's tribe; and once, being told it was a *raccoon* (the genealogical name of the family), one of them scoffingly replied, 'Then let us away to another town, and cheer ourselves with those who have no reason to weep; for why should we make our hearts weigh heavy for an ugly, dead racoon?' But notwithstanding they are commonly negligent of any other tribe but their own, they regard their own particular lineal descent in as strict a manner as did the Hebrew nation."<sup>1</sup>

Amongst the clans mentioned by Adair are those of the Buffalo and the Snake. These seem to have become extinct since his time, for they are not noticed by Morgan or Gatschet, our principal modern authorities. However, the Buffalo clan is mentioned by Major Caleb Swan, who travelled among the Creeks in the winter of 1790-1791. He says: "On the post, or on a plank over each of the cabins, are painted the emblems of the family to whom it is allotted, to wit: the buffalo family have the buffalo painted on their cabin; the bear has the bear, and so on."<sup>2</sup>

Buffalo  
and Snake  
clans.

Totemic  
emblems.

Marriage between persons of the same clan was forbidden, and among the Creeks, as among the Seminoles and all the nations of the Muskogean family, descent was in the female line. Children took their clan from their mother, not from their father. Property and the office of head chief or king (*nico*) were hereditary in the clan. The king, as we have seen,<sup>3</sup> could only be chosen from one particular clan, but the royal clan differed in different towns. In one town it was the Eagle clan, in another the Raccoon clan, in another the Bear clan, and in another probably the Wind clan. In cases of adultery and murder, only the relations

of the injured person who belonged to his clan had the right of judging and obtaining satisfaction: the king and the council were debarred from any interference.<sup>1</sup>

Trace  
of the  
levirate.

Amongst the Creeks and kindred nations it appears that the law of the levirate was observed in a somewhat peculiar form; for James Adair, sniffing about for traces of Judaism among the Indians, thought he detected a particularly strong scent in the relation of a widow to her deceased husband's brother. After mentioning the Hebrew law which obliged a man to raise up seed to his deceased brother by marrying his childless widow, he goes on: "The Indian custom looks the very same way; yet it is in this as in their law of blood—the eldest brother can redeem. Although a widow is bound, by a strict penal law, to mourn the death of her husband for the space of three or four years; yet, if she be known to lament her loss with a sincere heart, for the space of a year, and her circumstances of living are so strait as to need a change of her station—and the elder brother of her deceased husband lies with her, she is thereby exempted from the law of mourning, has a liberty to tie up her hair, anoint and paint herself in the same manner as the Hebrew widow, who was refused by the surviving brother of her deceased husband, became free to marry whom she pleased. The warm-constituted young widows keep their eye so intent on this mild beneficent law, that they frequently treat their elder brothers-in-law with spirituous liquors till they intoxicate them, and thereby decoy them to make free, and so put themselves out of the reach of that mortifying law."<sup>2</sup> This account seems to shew that an old custom, which obliged an elder brother to marry the widow of his deceased younger brother, had dwindled away to a custom which allowed the widow to marry whom she pleased, if only the elder brother of the deceased had once exercised his marital right.

The classifi-  
catory  
system of  
relation-  
ship among  
the Creeks.

The Creeks, like all the other Gulf nations, including the Cherokees, possessed the classificatory system of relationship, though in a form which presents certain anomalies.

<sup>1</sup> A. S. Gatschet, *A Migration Legend of the Creek Indians*, i. 153, 154. Compare L. H. Morgan, *Ancient*

*Society*, p. 161.

<sup>2</sup> J. Adair, *History of the American Indians*, pp. 189 sq.

Thus among the Creeks, in the generation above his own a man called his father's brother "my little father" (*Chul-kÿ-che*) and his mother's sister "my little mother" (*Chuch-kÿ-ce*); but his mother's brother he called "my uncle" (*Chu-pâ-wâ*), and his father's sister he called "my grandmother" (*Chu-pÿ-se*). Classifica-  
tory terms  
for father  
and mother.

In his own generation he called his cousins, the children of his father's brother, "my other brother" (*Un-it-te-châ-ke-to*) and "my sister" (*Chu-wun-wâ*); and he called his cousins, the children of his mother's sister, "my elder brother" (*Chu-hlâ-hâ*), "my younger brother" (*Chu-chÿ-se*), and "my sister" (*Chu-wun-wâ*), according to their sex and age. But, as usually happens under the classificatory system, his relations to his other cousins, the children either of his father's sister or of his mother's brother, were different. He called his male cousin, the son of his father's sister, "my little father" (*Chuhl-kÿ-che*), and he called his female cousin, the daughter of his father's sister, "my grandmother" (*Chu-pÿ-se*). Conversely, he called his male cousin, the son of his mother's brother, "my son" (*Chup-pÿ-che*); and he called his female cousin, the daughter of his mother's brother, "my daughter" (*Chuch-hus-te*). A woman likewise called her female cousin, the daughter of her father's sister, "my grandmother" (*Chu-pÿ-se*); and, conversely, she called her female cousin, the daughter of her mother's brother, "my grandchild" (*Um-os-sÿs-wâ*). But her male cousin, the son of her father's sister, she called "my little father" (*Chuhl-kÿ-che*); and her male cousin, the son of her mother's brother, she called "my grandchild" (*Um-os-sÿs-wa*). In this treatment of cousins, the children of a brother and sister respectively, the Creek form of the classificatory system agrees with the Minnetaree form in assigning to the cousin who is the child of the sister seniority of rank over the cousin who is the child of the brother. For the son of the sister is "little father" to his cousin, the son of the brother; and the daughter of the sister is "grandmother" to her cousin, the daughter of the brother. Thus, like the Minnetaree, and unlike the Omaha form of the classificatory system,<sup>1</sup> the Creek form shews a preference for the female line; Preference  
shewn for  
the female  
line.

<sup>1</sup> See above, pp. 115-117, 149.

and this is natural enough, since the Creeks have retained maternal descent or mother-kin.

Classi-  
ficatory  
terms for  
nephews  
and nieces.

In the generation below his own a Creek man calls his brother's son and daughter "my son" (*Chup-pŭ-che*) and "my daughter" (*Chu-chus-te*); but his sister's son and daughter he calls "my nephew" (*Un-ho-pŭe-wă*) and "my niece" (*Un-hăk-pu-te*). In the generation below her own a woman calls her sister's son and daughter "my little son" (*Cuch-ho-sŭ-che*) and "my daughter" (*Chu-chus-wă*). Thus far the relationships between a Creek man and woman and what we should call their nephews and nieces are normal according to the classificatory system, except that a woman calls her sister's son "my little son" instead of "my son." But when we come to the relationship between a woman and her brother's children, the Creek form of the classificatory system presents an anomaly; for instead of calling them "my nephew" and "my niece," as she would do in the normal form of the system, she calls them both "my grandchild" (*Um-os-sus-wă*).<sup>1</sup> A similar anomaly occurs in the Choctaw form of the classificatory system.<sup>2</sup>

Peculiarities of the  
Creek  
form of  
the classi-  
ficatory  
system.

The reader is perhaps now sufficiently familiar with the classificatory system of relationship to perceive for himself the other points in which the Creek form of it diverges from the normal pattern. But it may not be amiss to indicate some of them. In the first place, then, a man distinguishes his father's brother from his father by calling him "my little father," and similarly he distinguishes his mother's sister from his mother by calling her "my little mother." This change marks an advance; the father's brother is no longer confounded with the father nor the mother's sister with the mother. Again, in his own generation, while he continues to call his male cousins, the sons of his mother's sister, "my elder brother" and "my younger brother," according to their ages, he gives a quite different name (translated by Morgan "my other brother") to his male cousins, the sons of his father's brother. This also

<sup>1</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, Table II. pp. 293 *sqq.*; compare *id.* pp. 190

*sq.* (where the system presented is the Choctaw, not the Creek).

<sup>2</sup> See below, pp. 176 *sq.*

marks an advance ; certain cousins are no longer confounded with brothers. Lastly, the treatment of cousins, who are the children not of two brothers or of two sisters, but of a brother and a sister, also differs from that accorded to them in the ordinary type of the classificatory system ; for whereas under the ordinary form of the system these children would be cousins to each other, just as with us, under the Creek form of the system they are little father and son, little father and daughter, or grandmother and grandchild. Similar, but not identical, treatment of such cousins occurs in the Minnetaree and Choctaw forms of the classificatory system.<sup>1</sup>

The Seminole Indians of Florida are a branch of the Creeks, from whom they seceded and by whom they were looked down upon as outcasts. Their language does not differ appreciably from the Creek. But they never attained the same power and importance as the parent stock, though they offered a stubborn resistance both to the Spaniards and to the troops of the United States.<sup>2</sup> Indeed the Government of the United States, on the confession of one of its citizens, has never been able either to conciliate or to conquer these intractable Indians. The mass of the Seminoles has been deported from their native country to the Indian Territory west of the Mississippi, but in 1880 more than two hundred Seminoles still remained in Florida, spread in scattered settlements over

The Seminoles of Florida, a branch of the Creek Indians.

<sup>1</sup> See above, p. 149, and below, pp. 175 sq.

<sup>2</sup> As to the history of the Seminoles, see A. S. Gatschet, *A Migration Legend of the Creek Indians*, i. 66 sqq. The attempt of the United States Government in 1832 to banish the Seminoles from Florida to the west of the Mississippi resulted in a war which raged with unabated fury for five years, entailing an immense expenditure of blood and treasure. As to the identity of the Seminole and Creek language, see A. S. Gatschet, *op. cit.* i. 73. On the other hand it has been said that the

Creek and Seminole dialects differ so widely as to be hardly intelligible ; but this statement is made on the authority of General McGillivray, who, although he was called their great chief by the Seminoles, had seldom, if ever, visited their country, and few of them had ever seen him. See H. R. Schoolcraft, *The Indian Tribes of the United States*, v. 260. The Creek chief, Alexander McGillivray, was the son of a Scotch trader by a half-breed mother. See J. Mooney, "Myths of the Cherokee," *Nineteenth Annual Report of the Bureau of Ethnology*, Part i. (Washington, 1900) pp. 209 sq.

The  
country  
of the  
Seminoles.

an otherwise almost uninhabited region and rarely seeing the face of a white man. Their country is a vast and nearly unbroken plain, which exhibits a remarkable alternation of the most exuberant fertility and almost absolute sterility. For miles the traveller may pass over low ridges of dry dazzling white sand interspersed with a growth of dwarf palmetto and of sparse pinewoods, which afford little or no shade from the burning rays of the nearly tropical sun. Then for miles again he may splash through sedgy swamps or shallow lakes, for so level is the country that the sluggish streams have no proper banks and the water overflows on all sides in reedy grass-fringed meres and morasses. Where the ground rises a few inches above the dead flat it is commonly covered with dark pines or oaks, which rise like islets above the marsh. Where it sinks a few inches, the swamp is generally filled with cypress trees, forming sombre sharply-marked thickets. Again, it is a far-spreading savannah of springy turf, a great expanse of green lawns and swelling knolls, over which the traveller passes with delight to rest from time to time in the shade of noble woods of intermingled pines and oaks, of beeches with massive trunks like the shafts of a cathedral aisle, of palms and magnolias, of luxuriant groves of oranges and lemons, spangled with their golden fruit, and mirrored in the still clear water of a glassy lake. Over all is spread the serenity of a sky of eternal summer; for lying on the edge of the tropics the country, where it is not a sandy waste, is green throughout the year with a profusion of foliage, fruit, and flowers. It was well named by the Spaniards Florida, the Flowery Land.<sup>1</sup>

Fertility  
of the  
country.

The country abounds with game, and the waters with fish, and the soil, where it exists, being a soft black loam, is of such fertility that it needs only to be cleared of trees, vines, and underwood and to be planted, in order to yield an abundant return of maize, sweet potatoes, melons, or anything else that thrives in a warm and equable climate.

<sup>1</sup> W. Bartram, *Travels through North and South Carolina, Georgia, East and West Florida, the Cherokee Country, etc.* (London, 1792), pp. 168-216; Clay MacCauley, "The Seminole

Indians of Florida," *Fifth Annual Report of the Bureau of Ethnology* (Washington, 1887), pp. 477-599, 504, 508, 512, 527-529.

Indeed nature has here been so bounteous to man and made life so easy for him, that it might seem as if his energy, unbraced by any serious difficulties to contend with, must in time be sapped and he must sink into languor and indolence, content with the present and heedless of the morrow. At all events, from whatever cause, the Seminoles never played the conspicuous part in history which was sustained by their kinsfolk the Creeks. Yet a modern American observer of the remnant of the tribe in its native haunts has drawn a very favourable picture of their physical appearance and character. The men are tall, strong, handsome, and well-built, the women very comely. They are intelligent, affectionate, and industrious, the men working with the women in the fields, as well as hunting and fishing for the support of their families. The women are virtuous and modest; there are no half-breed whites among them; death at the hand of her relations would be the penalty inflicted on the woman who gave birth to such a child. They dislike the Government of the United States and everything even remotely connected with it, and they have probably good reasons for doing so.<sup>1</sup> Not less favourable is the portrait painted of the Seminoles and their country by a traveller towards the end of the eighteenth century, at a time when the tribe had not yet been conquered in war and banished for the most part from its native land to a remote region of the West. He says: "The Siminoles are but a weak people with respect to numbers. . . . Yet this handful of people possesses a vast territory; all East Florida and the greatest part of West Florida, which being naturally cut and divided into thousands of islets, knolls, and eminences by the innumerable rivers, lakes, swamps, vast savannas and ponds, form so many secure retreats and temporary dwelling places, that effectually guard them from any sudden invasions or attacks from their enemies; and being such a swampy, hommocky country, furnishes such a plenty and variety of supplies for the nourishment of varieties of animals, that I can venture to assert, that no part of the globe so abounds

Character

Seminoles.

<sup>1</sup> Clay MacCauley, "The Seminole Indians of Florida," *Fifth Annual Report of the Bureau of Ethnology* (Washington, 1887), pp. 479, 481, 482, 490 *sqq.*, 504, 529-531.

with wild game or creatures fit for the food of man. Thus they enjoy a superabundance of the necessaries and conveniences of life, with the security of person and property, the two great concerns of mankind. The hides of deer, bears, tigers and wolves, together with honey, wax and other productions of the country, purchase their clothing, equipage, and domestic utensils from the whites. They seem to be free from want or desires. No cruel enemy to dread; nothing to give them disquietude, but the gradual encroachments of the white people. Thus contented and undisturbed, they appear as blithe and free as the birds of the air, and like them as volatile and active, tuneful and vociferous. The visage, action, and deportment of the Seminoles form the most striking picture of happiness in this life; joy, contentment, love, and friendship, without guile or affectation, seem inherent in them, or predominant in their vital principle, for it leaves them but with the last breath of life. It even seems imposing a constraint upon their ancient chiefs and senators, to maintain a necessary decorum and solemnity, in their public councils; not even the debility and decrepitude of extreme old age is sufficient to erase from their visages this youthful, joyous simplicity; but like the gray eve of a serene and calm day a gladdening, cheering blush remains on the western horizon after the sun is set."<sup>1</sup> Since Bartram thus wrote, the birds to which he compared the Seminoles are mostly flown and their nests are empty.

The small remnant of the tribe still living in Florida in 1880-1881 was found to be divided into at least nine exogamous clans, of which the names were as follows:—<sup>2</sup>

- |          |                     |               |
|----------|---------------------|---------------|
| 1. Wind. | 2. Tiger (Panther). | 3. Otter.     |
| 4. Bird. | 5. Deer.            | 6. Snake.     |
| 7. Bear. | 8. Wolf.            | 9. Alligator. |

Thus the clans, so far as they go, agree with those of the Creeks.<sup>3</sup> No man is allowed to marry a woman of his own clan; the children belong exclusively to the mother and

take their clan from her, not from their father. The two hundred and eight persons who made up this fragment of the tribe consisted of thirty-seven families, and these were distributed into twenty-two camps, in each of which, with one apparent exception, all the persons but the husbands belonged to a single clan.<sup>1</sup> Nothing is known as to any religious or magical rites practised by the totemic clans. If we may judge by the analogy of their kinsmen the Creeks, who are said to have no respect for their totemic animals,<sup>2</sup> it seems probable that among the Seminoles also the superstitious side of totemism has long fallen into decay. The principal ceremony in which the native religious beliefs of the Seminoles find expression is the Green Corn Dance, held at the time when the maize is ripe in May and June. It resembles the Creek Feast of First Fruits, being an annual purification and rejoicing to celebrate the eating of the new corn. But the details of the festival are unknown.<sup>3</sup> Maize is the principal product of Seminole agriculture, but the people also highly value an edible root called *koonti*, which yields an excellent flour. They say that when Jesus Christ was incarnated on earth He came down first at Cape Florida and there bestowed this valuable root on the Red Man.<sup>4</sup>

The Green  
Corn  
Dance.

A more important tribe than the Seminoles were the Choctaws, who in the eighteenth century were perhaps the most numerous branch of the Muskogean stock. They held the middle and southern parts of what is now the State of Mississippi, where they had, according to early authors, from fifty to seventy villages. Their territory began some two hundred miles north of New Orleans and extended from the Mississippi on the west to the Tombigbee River and east of it. It is, or was in those days, a pleasant land of rich pastures, watered by numerous springs and brooks, broken here and there by hills, and shaded by fine timber, such as oak, hickory, walnut, and poplar. The climate is

happy and healthy. The towns of the Choctaws, who were a settled and agricultural people, stood on the banks of the small streams which flow into the Mobile River. The tribe waged constant war with their kinsmen the Creeks and Chickasaws. In the long struggle between France and England for the possession of America, the Choctaws sided with the French; they received an annual subsidy from the French court. The Englishman Adair paints their character in the darkest colours, the only virtues he allows them being their intense love of their native land and their utter contempt of danger in the defence of it. Even the French traveller Bossu, while he speaks of their devotion to France and their warlike character, has little good to say of their intelligence and their morals. In the early part of the nineteenth century, about 1832, the Choctaws migrated or were transferred to a rich and beautiful country on the Red River, to the west of the Mississippi.<sup>1</sup>

Totemic  
and  
exogamous  
clans of the  
Choctaws.

The Choctaws were divided into totemic and exogamous clans. The first, apparently, to observe and record their totemic system was an Englishman, Adam Hodgson, who travelled among them in 1820. He says: "My half-breed Choctaw also informed me, that there were tribes or families among the Indians, somewhat similar to the Scottish clans; such as, the Panther Family, the Bird Family, the Racoon Family, the Wolf Family. He belonged to the Racoon Family, but his children to the family of his wife; families being perpetuated in the female line—an institution originating, perhaps, in polygamy. By marriage, the husband is considered as, in some degree, adopted into the family of his wife; and the mother's brothers are regarded as, in some respects, entitled to more influence over the children than their own father. The suitor always consults them (sending them the usual propitiatory offering of a blanket) when he wishes to marry their niece; and, if they approve,

<sup>1</sup> J. Adair, *History of the American Indians* (London, 1775), pp. 282-285; Bossu, *Nouveaux Voyages aux Indes Occidentales*, Seconde Édition (Paris, 1768), ii. 87 sqq., 100; G. Catlin, *Letters and Notes on the Manners, Customs, and Condition of the Ameri-*

*can Indians*, Fourth Edition (London, 1844), ii. 45 sq., 122 sq.; A. S. Gatschet, *A Migration Legend of the Creek Indians*, i. 100 sqq.; *Handbook of American Indians north of Mexico*, i. 288 sq.

the father consents as a matter of course. I have since had this confirmed by information from many different sources. Those of the same family or clan are not allowed to intermarry; although no relationship, however remote, can be traced between them; and although the ancestors of the two parties may have been living, for centuries, in different and distant nations. A marriage between a brother and a sister would not excite a stronger sensation, or be more loudly condemned. Indeed, wherever any of the family or clan meet, they recognise one another as brothers and sisters; and use one another's houses, though personally strangers, without reserve."<sup>1</sup> The same traveller also tells us that "the Choctaws formerly placed their dead on a scaffold, in a large chamber, called the House of Bones, a particular portion of which was reserved for each particular family, as the Raccoon Family, or the Panther Family."<sup>2</sup>

According to L. H. Morgan, the Choctaws were divided into eight exogamous clans, which were equally distributed between two phratries as follows:—<sup>3</sup>

Morgan's list of the Choctaw clans.

TOTEMIC SYSTEM OF THE CHOCTAWS

Phratries.	Clans.
I. Divided People . . . . .	{ 1. Reed. 2. <i>Law Okla.</i> 3. <i>Lulak.</i> 4. <i>Linoklusha.</i>
II. Beloved People . . . . .	{ 1. Beloved People. 2. Small People. 3. Large People. 4. Cray Fish.

It will be observed that none of the totemic clans mentioned by Hodgson (namely, the Panther, Bird, Raccoon,

<sup>1</sup> Adam Hodgson, *Letters from North America written during a Tour in the United States and Canada* (London, 1824), i. 244-246.

<sup>2</sup> Adam Hodgson, *op. cit.* pp. 258 sq.

<sup>3</sup> L. H. Morgan, *Ancient Society*, p. 162.

and Wolf clans) are noticed by Morgan; but on the other hand all of them are included in his list of the Chickasaw clans.<sup>1</sup> It is possible, therefore, that Hodgson's informant, a half-blood Choctaw, whose wife was a Chickasaw and whose hut stood on the frontier between the two tribes,<sup>2</sup> referred to the Chickasaw and not to the Choctaw clans. But it is also possible that the Panther, Bird, Raccoon, and Wolf clans among the Choctaws were overlooked by Morgan, or that they had become extinct before his time.

Rules of marriage and descent.

Though property passed in the female line, a man might give it in his lifetime to his children. Such a practice might help to shift descent from the female to the male line.

No man might marry a woman of any clan in his own phratry, but he might marry a woman of any clan in the other phratry. Descent was in the female line. Both property and the office of sachem were hereditary in the clan. A Choctaw once expressed to Dr. Cyrus Byington, who laboured devotedly in the tribe as a missionary for forty-five years, a wish that he might be made a citizen of the United States in order that his children might inherit his property instead of his clan kindred, who would take it under the old clan law. For Choctaw custom distributed a man's property after his death among his brothers and sisters and the children of his sisters, all of whom were members of his own clan, whereas his children belonged not to his clan but to their mother's. However, a man was allowed to give his property in his lifetime to his own children, and if he did so, they could hold it against the members of their father's clan. Many Indian tribes now have considerable property in domestic animals, houses, and lands owned by individuals, and in these tribes it has become a common practice for a father to bestow his property during his life upon his children in order that it may not pass from them to his clan kindred after his death. As property increases, the disinheritance of a man's children under a rule of maternal descent arouses more and more opposition; hence in some Indian tribes, including the Choctaw, the law of inheritance has been changed and the right of succession invested exclusively in the children of the deceased owner.<sup>3</sup> Thus the growth of private property has been a powerful agent

<sup>1</sup> See below, p. 179.

<sup>2</sup> Adam Hodgson, *Letters from North America*, i. 240.

<sup>3</sup> L. H. Morgan, *Ancient Society*, pp. 162 sq.

in shifting descent from the female to the male line, and thereby substituting father-kin for mother-kin.

The Choctaws tell a story to account for the origin of their Cray-fish clan. They say that the ancestors of the clan were a species of cray-fish who lived long ago under ground, going on their hands and feet in a great cave where there was no light for miles. They neither spoke nor understood any language, but they used to come up through the mud into the sunshine. The Choctaws watched for them and tried to talk to them and to strike up an acquaintance, but the cray-fish escaped back into their cave. However, one day the Choctaws contrived to smoke a parcel of them out of their den, and treated them kindly, taught them the Choctaw language, taught them to walk on two legs, made them cut off their toe nails, and pluck the hair from their bodies, and after that they adopted them into the Choctaw nation. But the rest of the cray-fish are still cray-fish under ground.<sup>1</sup>

Legend of the descent of the Cray-fish clan from real cray-fish.

The Choctaws possess the classificatory system of relationship in a form closely similar to that of their kinsmen the Creeks. Thus, in the generation above his own a man calls his father's brother "my father" (*A-ki*) and his mother's sister "my mother" (*Ush-ki*); but his mother's brother he calls "my uncle" (*Um-ush-i*) and his father's sister he calls "my aunt" (*A-huk-ne*).

The classificatory system of relationship among the Choctaws.

In his own generation a Choctaw man calls his cousins, the children either of his father's brother or of his mother's sister, "my elder brother" (*Um-un-ni*), "my younger brother" (*Suh-nâk-fish*), and "my sister" (*An-take*), according to their age and sex; whereby it is to be observed that, as in some other forms of the classificatory system, while there are two quite distinct words for "elder brother" and "younger brother," there is only one word for "sister," whether elder or younger. But as usual the relationship between cousins, who are the children of a brother and sister respectively, differs from that between cousins, who are the children of two brothers or of two sisters. Thus, a Choctaw man calls his male cousin, the son of his

Classificatory terms for cousins.

<sup>1</sup> Geo. Catlin, *Letters and Notes on the Manners, Customs, and Condition of the North American Indians*, Fourth Edition (London, 1844), ii. 128.

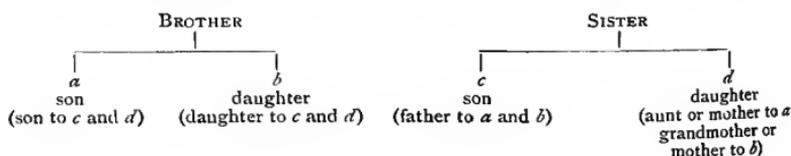

father's sister, not "my brother" nor yet "my cousin," but "my father" (*A-kĭ*); and, similarly, a woman calls her male cousin, the son of her father's sister, "my father" (*A-kĭ*). A man calls his female cousin, the daughter of his father's sister, not "my sister" nor yet "my cousin," but "my aunt" (*A-huc-ne*) or "my mother" (*Ush-kĭ*); but a woman calls her female cousin, the daughter of her father's sister, "my grandmother" (*Up-puk-ne*) or "my mother" (*Ush-kĭ*). Conversely, a man calls his cousins, the children of his mother's brother, "my son" (*Suh-sŭh*) and "my daughter" (*Suh-suh-take*), according to their sex; and, similarly, a woman calls her cousins, the children of her mother's brother, "my son" (*Suh-sŭh*) and "my daughter" (*Suh-suh-take*). Thus in the Choctaw as in the Creek form of the classificatory system a preference is shewn for the female line by making the cousin who is the son or daughter of the sister senior in rank to the cousin who is the son or daughter of the brother. For the son of the sister ranks as "father" to his cousins, the son and daughter of the brother; and the daughter of the sister ranks as "aunt" or "mother" to her male cousin, the son of the brother, and she ranks as "grandmother" or "mother" to her female cousin, the daughter of the brother. And on the other hand, the son and daughter of the brother rank as "son" and "daughter" to their male and female cousins, the son and daughter of the sister.<sup>1</sup>

Preference  
shewn for  
the female  
line.

Classifi-  
catory  
terms for  
nephews  
and nieces.

In the generation below his own a Choctaw man calls his brother's son and daughter "my son" (*Suh-sŭh*) and "my daughter" (*Suh-sŭh-take*); but his sister's son and daughter he calls "my nephew" (*Sub-ai-yih*) and "my niece" (*Suh-bĭh-take*). A woman calls her sister's son and daughter "my son" (*Suh-sŭh*) and "my daughter" (*Suh-sŭh-take*). So far the relationships of a Choctaw man and woman to what we should call their nephews and nieces are entirely normal according to the classificatory system; but

<sup>1</sup> The following tree will make the relationships of these cousins clear:—

the relationship between a woman and the children of her brother is anomalous, for whereas according to the normal type of the classificatory system she should call them "my nephew" and "my niece," she actually calls them "my grandson" (*Sup-uk - nõk - ne*) and "my granddaughter" (*Sup-uk*).<sup>1</sup> We have seen that a similar anomaly occurs in the Creek form of the classificatory system.<sup>2</sup>

To the north of the Choctaws lay the territory of their kinsmen but enemies the Chickasaws, a still more warlike tribe, who were as steady in their loyalty to England as the Choctaws in their devotion to France. The dialects of the two tribes were closely allied and they differed little in their manners and customs, except that the Choctaws were more sedentary and devoted to agriculture, the Chickasaws more restless and turbulent.<sup>3</sup> But if the Chickasaws paid less attention to their fields, they seem to have paid more to their persons. A traveller passing from the Choctaws to the Chickasaws noticed the greater magnificence of dress among the latter tribe and the far greater profusion of silver ornaments which they wore. Thus adorned, he says, they cut a splendid figure as they galloped through the woods.<sup>4</sup> Their country was situated in the north of what is now the State of Mississippi. "The Chikkasah," says Adair, "live in as happy a region as any under the sun. It is temperate; as cool in summer as can be wished, and but moderately cold in winter. There is frost enough to purify the air, but not to chill the blood; and the snow does not lie four-and-twenty hours together. This extraordinary benefit is not

The  
Chicka-  
saws.

The  
country of  
the Chicka-  
saws.

<sup>1</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, pp. 190 sq., and Table II. pp. 293 sqq. Morgan here gives two forms of the Choctaw system, which differ somewhat from each other. Thus in one form a father's sister's daughter ranks as "mother" to her cousins, the son and daughter of her mother's brother; in the other form she ranks as "aunt" to her male cousin, the son of her mother's brother and as "grandmother" to her female cousin, the daughter of her mother's brother. In the text I have not noted all the variations of the two

forms.

<sup>4</sup> Adam Hodgson, *Letters from North America* (London, 1824), i. 255 sq.

from its situation to the equator, for the Cheerake country, among the Apalahche mountains is colder in a surprising degree, but from the nature and levelness of the extensive circumjacent lands, which in general are very fertile."<sup>1</sup> A traveller passing through the Chickasaw country on the borders of Mississippi and Alabama describes with delight the prospect which suddenly opened out when, after journeying for days through dense forests, he at last emerged on the brow of a hill and saw spread out below and beyond him a wide expanse of wooded and broken country with a romantic river winding through it. All was solitude and silence except for the warbling of birds in the branches; the only signs of human habitation were a solitary hut and a patch of Indian corn. Yet the fragrance of the woods, the magnificence of the forest-trees, the cooing of doves, and the ethereal charm of the delicious climate of Mississippi softened or dissipated the impression of melancholy which the sight of this savage wilderness, stretching away to the horizon, naturally made upon the mind; and it was with regret that towards evening the traveller passed from the land of the Chickasaws into the settlements of the whites.<sup>2</sup>

Totemic  
and  
exogamous  
clans of the  
Chickasaws.

Like their kinsmen but hereditary foes, the Creeks and Choctaws, the Chickasaws were divided into totemic and exogamous clans, and these clans were distributed into two phratries. The social organisation of the tribe, according to L. H. Morgan, was as follows :—<sup>3</sup>

<sup>1</sup> J. Adair, *History of the American Indians* (London, 1775), p. 357.

<sup>2</sup> Adam Hodgson, *Letters from North America* (London, 1824), i. 262-266. Afterwards the Chickasaws were removed to a fertile and well-

watered district in the Indian Territory west of the Mississippi. See H. R. Schoolcraft, *Indian Tribes of the United States*, i. 312.

<sup>3</sup> L. H. Morgan, *Ancient Society*, p. 163.

## TOTEMIC ORGANISATION OF THE CHICKASAWS

Phratries.	Clans.
I. Panther	<ol style="list-style-type: none"> <li>1. Wild Cat.</li> <li>2. Bird.</li> <li>3. Fish.</li> <li>4. Deer.</li> </ol>
II. Spanish .	<ol style="list-style-type: none"> <li>1. Raccoon.</li> <li>2. Spanish.</li> <li>3. Royal.</li> <li>4. <i>Hush-ko-ni</i>.</li> <li>5. Squirrel.</li> <li>6. Alligator.</li> <li>7. Wolf.</li> <li>8. Blackbird.</li> </ol>

This list of the Chickasaw clans was obtained by Morgan from the Rev. Chas. C. Copeland, an American missionary residing with the tribe. Another list, which omits some of the foregoing clans, mentions in addition a Tiger clan, a Catamount clan, and a Skunk clan, the last being the least respected of all.<sup>1</sup> No man was allowed to marry a woman of his own clan; descent was in the female line, children belonging to the clan of their mother, not of their father; and both property and the office of sachem were hereditary in the clan.<sup>2</sup> The head chief, or king (*minko*), as he has been called, was always chosen from the Royal clan; the office was hereditary in the female line.<sup>3</sup>

Rules of marriage and descent.

The Chickasaws possess the classificatory system of relationship in a form like that of their near kinsmen the Choctaws; many of the terms of relationship are verbally the same.<sup>4</sup> It would be needless, therefore, to repeat the account of the system which has been given above.<sup>5</sup>

The classificatory system of relationship.

<sup>1</sup> A. S. Gatschet, *A Migration Legend of the Creek Indians*, i. 96 sq., on the authority of Gibbs.

<sup>2</sup> L. H. Morgan, *Ancient Society*, p. 163.

<sup>3</sup> H. R. Schoolcraft, *Indian Tribes of the United States*, i. 311; A. S. Gatschet, *A Migration Legend of the Creek Indians*, i. 97. The title *minko*

applied to the chief or king of the Chickasaws is clearly identical with *mico*, the title which the Creeks bestowed on their head chiefs or kings.

<sup>4</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, Table II. pp. 293 sqq.

<sup>5</sup> See above, pp. 175-177.

The  
Caddos.

The Caddos, a name contracted from *Kadohadacho*, that is, "the real Caddo," formed one of the chief tribes of a confederacy, which embraced about a dozen tribes and claimed as their original territory the whole of the lower Red River and adjacent country in Louisiana, Eastern Texas, and Southern Arkansas. They formed the southern group of a linguistic family, of which the northern group included the Arickarees of North Dakota, and the middle group the Pawnees.<sup>1</sup> The charm and beauty of the old homes of the Caddos on the Red River in Texas are described in enthusiastic terms by the painter Catlin. He says that as he and his companions sat their horses on a bluff in the prairie and drank in with their eyes the landscape, as it rolled away before them till its swelling waves of deepest green melted into the blue of the mountains which rimmed the horizon, far far away, the very horses on which they rode seemed sensible of the beauty of the scene and forgot to graze, as with deep-drawn sighs, high-arched necks, and starting eyeballs they gazed into the distance. For days they had been travelling, now over ridges sprinkled with oak-woods, where the ground was mantled with vines laden with clusters of delicious grapes ; now they would be trailing through verdant valleys where the way was often blocked by tangled thickets of plum-trees bent to the earth with the weight of their purple fruit, while the intervening ground was variegated by beds of wild roses, wild currants, and gooseberries, interlaced here and there with huge masses of prickly pears.<sup>2</sup>

The old  
country  
of the  
Caddos.

The  
Caddos  
a settled  
agricultural  
tribe.

The Caddos early came into contact with the Spaniards and the French, and from the oldest records and traditions it would seem that so far as memory goes back they and the kindred tribes of the confederacy have always been tillers of the soil. Their fields extended round their villages and yielded them large crops of maize, pumpkins, and

<sup>1</sup> *Handbook of American Indians north of Mexico*, i. 179, 182, 638 ; J. Mooney, "The Ghost-Dance Religion," *Fourteenth Annual Report of the Bureau of Ethnology*, Part ii. (Washington, 1896) p. 1092. As to the Arickaree language, see above, p. 146.

<sup>2</sup> Geo. Catlin, *Letters and Notes on*

*the Manners, Customs, and Condition of the North American Indians*, Fourth Edition (London, 1844), ii. 45 sq. The point where Catlin was especially struck by the beauty of the landscape was at the meeting of the waters of the Red and False Washita rivers, with Texas on the opposite bank.

melons, their staple foods. They lived in conical huts thatched with grass and grouped round an open space which served for social and ceremonial gatherings. Couches covered with mats ran round the interior of the house, serving as seats by day and as beds by night. The fire was in the centre. They cooked their food in earthenware vessels, made baskets, and wove cloth of vegetable fibres. Their mantles adorned with feathers were much admired by the French. Besides bracelets, necklaces, and ear-rings, they wore rings in their noses, which earned for them the epithet of "Pierced Noses." They did not hunt the buffalo until they came out into the plains. Though they were a brave people, they boasted that they had never shed a white man's blood.<sup>1</sup>

The Caddo or, to give them their full name, the Kadohadacho, are divided into ten totemic clans, which are named as follows:—

The totemic clans of the Caddos.

- |                              |                                   |                                |

Of these the Bear clan is the most numerous. The Buffalo clan is sometimes called the Alligator (*Koho*), because both animals bellow in the same way. Members of a clan will not kill the animal from which their clan takes its name.<sup>2</sup> The writer to whom we are indebted for these particulars says nothing as to the rules of marriage and descent in the clans. But we may perhaps assume that the clans are, or were, exogamous, and that descent is in the female line; in other words, that no man may marry a woman of his own clan, and that children take their clan from their mother, not from their father. That amongst the Caddos descent was traced through the mother is expressly mentioned by another writer.<sup>3</sup>

Respect of the clans-people for their totems.

While no Caddo would kill an animal of his own particular totemic species, all Caddos without distinction of

Respect of the Caddos for the eagle : ceremonies observed at killing the bird for the sake of its feathers.

totemic clan abstained from killing eagles and panthers. With them, as with other Indian tribes, the eagle was a sacred bird, and in the old times only a few medicine-men, who knew the sacred formula, would dare to kill an eagle for the sake of its feathers. Were any one else to slay an eagle, it was believed that his family would die or some other great misfortune would befall him. The formula consisted of certain secret prayers and rites. The eagle-killer always took a robe or some other valuable offering with him, and after he had shot the eagle, he recited the prayer, pulled out the tail and wing feathers, and covered the body of the dead bird with the robe, which he left there as a peace offering to the spirit of the eagle.<sup>1</sup> This general respect for the eagle is not totemic, because it is shared by the whole tribe instead of being confined to the members of a particular clan. Totemism implies that within the tribe there are groups of kinsfolk, each group respecting its own species of natural or occasionally artificial objects, that is, its totem, but not respecting the totems of the other groups. Hence an animal which is revered by all the members of a tribe without distinction is not strictly speaking a totem at all, and ought not to be so designated. It may indeed have been originally a totem, that is, the sacred animal of a particular clan within the tribe. But there is no necessity that it should ever have been so ; the respect for the animal may have sprung from causes quite independent of totemism.

The Cherokee and their mountain country.

The Cherokee were the mountaineers, the Indian Swiss, of the South. They held the whole region of the Alleghany Mountains, from the head-streams of the Kanawha and the Tennessee southward almost to the site of Atlanta, and from the Blue Ridge on the east to the Cumberland Range on the west. The country, comprising an area of 40,000 square miles, is now included in the States of Virginia, Tennessee, North Carolina, South Carolina, Georgia, and Alabama.<sup>2</sup> The Cherokee divided their territory into two,

<sup>1</sup> J. Mooney, "The Ghost-Dance Religion," *Fourteenth Annual Report of the Bureau of Ethnology*, Part ii. (Washington, 1896) pp. 1093, 1100. As to the Cherokee practice in regard

to eagles, see below, pp. 187 sq.

<sup>2</sup> J. Mooney, "Myths of the Cherokee," *Nineteenth Annual Report of the Bureau of American Ethnology*, Part i. (Washington, 1900) p. 14.

the lowlands and the highlands, the former intersected by the head-waters of the beautiful meandering Savannah River, the latter by the streams that flow westward to join the Mississippi. The climate even of the lowlands strikes a native of Carolina as sharp and cold in winter, but that of the highlands is much more severe. For there the mountains are high, and on their northern slopes the ice and snow last till late in the spring. In this lofty rugged chilly country the towns of the Cherokee were widely scattered, being built for the most part on stretches of level and fertile land beside some river or creek shut in by frowning mountains, whose tops were veiled in black and blue clouds or lit up fitfully by scattered rays of sunshine. The Indian paths wound along the foot of the mountains, following the beds of the streams, and were so steep in places that horses often pitched and reared in the attempt to scramble up them. Yet there is not, says an old writer, a more healthful region under the sun than this country; for the air is commonly open and clear, and abundance of wholesome water gushes from every hillside to join the cold crystalline rivers. For the most part the rivers are very shallow and pleasant to the eye, their limpid streams flowing swiftly along without overflowing their banks. But when heavy rain has fallen on the snow of the high mountains, the swollen torrents, whirling blocks of ice in their current, come rushing down the crags with tremendous violence, and sweep away rocks, pinewoods, and oakwoods in their impetuous career.<sup>1</sup>

The Cherokee belong to the stock of the Iroquois, as is proved by their language, which is spoken in several dialects.<sup>2</sup> They are amongst the most civilised of American Indians. Like the Creeks, Choctaws, and Chickasaws, they lived in settled villages or towns and practised agriculture, raising crops of maize and beans. Their houses were oblong in shape, built of logs and plastered with clay both

Their  
houses.

outside and inside, the whole being roofed with bark or shingles. Each house was partitioned transversely into three apartments, and had besides a small conical hut, called the winter or hot house, distant a few yards from the front door. The town-house or council-house was a rotunda built of wood and sometimes raised on an artificial mound. In the middle of the town-house was a fire-pit in which burned or smouldered a perpetual fire in charge of a fire-maker. All the fires in the town were obtained from the one in the town-house. The council of the village or town held its meetings in this circular building, and here too the annual Green-Corn Dance and other national ceremonials were celebrated. Couches or seats ran round the inside of the building for the accommodation of spectators. The only entrance to the edifice was a narrow door; window or chimney there was none. The smoke escaped by the door.<sup>1</sup>

press, and  
national  
constitu-  
tion.

In the early part of the nineteenth century a Cherokee of mixed blood named Sequoya, or, as the whites called him, George Gist, after years of patient study invented a syllabary or alphabet to represent the sounds of the Cherokee language. It was adopted by his nation, whom it at once raised to the rank of a literary people. In the course of a few months the Cherokee were able to read and write in their own language. Types were cast and books and newspapers printed in the native tongue. One of the newspapers was published in English and Cherokee and distributed free at the expense of the nation. Simultaneously with the institution of a national press the Cherokee, in a general convention of delegates held for that purpose in 1827, adopted a national constitution based on the assumption of a distinct and independent Cherokee nationality. Thus with a political constitution, a national press, a well-developed system of industries and home education, and a government administered by educated Christian men, the Cherokee were now justly entitled to

<sup>1</sup> W. Bartram, *Travels through North and South Carolina, Georgia, East and West Florida, the Cherokee Country, etc.* (London, 1792), pp. 365-367; J. Mooney, "Myths of the Cherokee," *Nineteenth Annual Report of the*

be considered a civilised people.<sup>1</sup> The prospect was fair, but it was soon clouded.

The neighbouring States, and Georgia in particular, coveted the territory of the Cherokee, and when violence and chicanery alike failed to shake the attachment of the patriots to their native land, the United States Government in 1838 sent troops, drove the Indians from their homes at the point of the bayonet, and forced them to emigrate on foot and in waggons, in the dead of the winter, to the lands which had been assigned to them in the Indian Territory beyond the Mississippi. On that march of death, as it has been called by an American writer, the exiles perished by the hundred and the thousand. In their new home they set themselves bravely to retrieve their shattered fortunes. The national government was reorganised, the national press restored, the missions revived, and the work of civilisation again taken up. At the close of the Civil War, in which the Cherokee suffered severely for their adhesion to the South, the Government of the United States pledged its faith to leave them in undisturbed possession of their lands and to guard them against intrusion. The pledge was not kept. The whites again encroached, and again, after long but vain resistance the Indians yielded to the inevitable. Only a few years ago—in 1906—the national government of the Cherokee was abolished and their lands divided. The Cherokee nation as such ceased to exist. The despoiled Indians dream of quitting the country of their fathers and seeking in some foreign land, in Mexico or South America, a haven of rest, where the long arm of the United States can reach and harass them no more. A remnant of the tribe, who fled to the mountains in 1838, contrived to elude the man-hunt of the soldiers, and their descendants still cling to the old ancestral home among the mountains, the woods, and waters of the Alleghanies. They are a peaceable, law-abiding folk, kindly and hospitable, providing for their simple wants by their industry and neither asking nor receiving help from Govern-

ment. Their fields, orchards, and fish-traps, with a few domestic animals and a little hunting, supply them with food, while, by the sale of ginseng and other simples gathered in the mountains, as well as by fruit and honey of their own raising, they procure what additional comforts they need from the traders. The old folk still cleave to their ancient rites and sacred traditions, but the dance and the once favourite ball-play are neglected, and the long Indian day draws fast to evening.<sup>1</sup>

According to L. H. Morgan, the Cherokee were anciently divided into ten exogamous clans, which were named as follows:—

- |           |               |                  |                   |
|-----------|---------------|------------------|-------------------|
| 1. Wolf.  | 2. Red Paint. | 3. Long Prairie. | 4. Deaf (a bird). |
| 5. Holly. | 6. Deer.      | 7. Blue.         | 8. Long Hair.     |
| 9. Acorn. | 10. Bird.     |                  |                   |

Of these ten clans the two last were extinct when Morgan wrote. Marriage within the clan was forbidden. Descent was in the female line.<sup>2</sup> The Cherokee possess the classificatory system of relationship in a form agreeing so closely with that of the Choctaws that it need not be considered separately.<sup>3</sup>

While the clans of the Cherokee had animals and plants for their totems, it should be observed that these Indians entertained many superstitious beliefs and observed many superstitious practices in reference to animals and plants which had no connection whatever with totemism. This observation is the more necessary because with some writers there appears to be a tendency, whenever they find superstitious beliefs and practices concerned with animals and plants, to derive them all from totemism, actual or hypo-

totemism.

thetical. Such a derivation is by no means necessary. There appears to be no reason why even among totemic peoples there should not be many superstitions connected with animals and plants which are and always have been quite independent of totemism. If we doubted this, the example of the Cherokee might suffice to satisfy us. Thus, for instance, the eagle and the snake were not totems of the Cherokee, yet these Indians regarded eagles and snakes as sacred or supernatural beings and treated them accordingly. The eagle, we are told, is the great sacred bird of the Cherokee, as of nearly all the Indian tribes, and it figures prominently in their ritual, especially in everything that pertains to war. The particular species on which so high a value was set was the golden or war eagle (*Aquila chrysoetus*), called by the Cherokee the "pretty-feathered eagle," on account of its beautiful tail feathers, white tipped with black, which were in great demand for ceremonial and decorative purposes. Among the Cherokee in old times the killing of an eagle was an event which concerned the whole settlement and could be undertaken only by the professional eagle-killer, who was chosen for the work because he was an adept in eagle-lore, having learned the ceremonies which had to be observed and the prayers which had to be said in order to obtain pardon for the sacrilege and ward off vengeance from the tribe. The eagle might be killed only in the winter or the late autumn, when the crops were gathered in and the snakes had retired to their dens for their winter sleep. They thought that if an eagle were slain in summer, a frost would blight the maize, and the songs of the Eagle dance, danced when the feathers were brought home, would so anger the snakes that they would become doubly dangerous. So the Eagle songs were never sung till the snakes had gone to sleep for the winter and could not hear them. When the people of a Cherokee town decided to hold an Eagle dance, they hired a professional eagle-killer to procure the feathers for the occasion. He repaired alone to the mountains with his gun or bow and arrows, and there, after a long vigil of prayer and fasting, he hunted till he had killed a deer. Having exposed the carcass in a

prominent place on one of the highest cliffs, he hid himself hard by and sang in a low undertone songs to draw down eagles from the sky. When an eagle had swooped on the carrion, he shot the bird and standing by its dead body prayed that it would not wreak its vengeance on his tribe, because it was not a Cherokee but a Spaniard who had done the foul deed. Then leaving the dead eagle on the ground, he hastened to the town and announced that a snowbird had died. This he did to deceive the eagles, in order that they might think he had only killed a poor little snowbird and not one of their fierce and majestic selves. Four days later hunters went out and brought back the eagle feathers to the town, where a dish of venison and corn was set on the ground before them and they were invited to eat, because it was thought that they must be hungry after their journey. And the carcass of the deer, which the eagle-killer had shot, was left lying on the ground beside the carcass of the eagle as a sacrifice to the eagle-spirits. The same day on which the feathers were brought in, the Indians danced the Eagle dance.<sup>1</sup>

Super-  
stitious  
respect  
of the  
Cherokee  
for snakes.

Again, snakes are not totems of the Cherokee, yet these Indians hold the creatures in awe and are very careful not to offend them. All snakes are regarded by them as supernatural (*anida'wehi*) and as endowed with a certain influence over the other animals and plants. It is said that the snakes, the deer, and the ginseng are allies, and that an injury done to any one of them is avenged by all. He who kills snakes will see, or fancy he sees, them swarming about him with glistening eyes and darting tongues, till the sight drives him crazy and he roams the woods unable to find the way out. Certain songs, such as those of the Townhouse dance, are offensive to snakes, therefore they are not danced till late in the autumn when the snakes have withdrawn to their dens for the winter. And for fear of hurting the feelings of the reptiles, it is never said that a man has been bitten by a snake, but only that he has been scratched by a brier. Moreover, when

<sup>1</sup> J. Mooney, "Myths of the Cherokee," *Nineteenth Annual Report of the Bureau of American Ethnology*,

Part i. (Washington, 1900) pp. 281-283.

a man merely dreams that he has been bitten by a snake, he must be treated in exactly the same way as if he had been actually bitten; for in fact a snake ghost has stung him, and if the sufferer were not so treated, the place would certainly swell and ulcerate, not perhaps at the time, but sooner or later, it may be years afterwards. The rattlesnake is deemed by the Cherokee to be the chief of the snake tribe, and they fear and respect him accordingly. Few Cherokee will dare to kill a rattlesnake, unless they are actually compelled to do so, and even then they will atone for the crime by begging pardon of its ghost, either in their own person or through the medium of a priest. Otherwise the kinsfolk of the slain rattlesnake would send one of their number to track down the murderer and sting him to death. Nevertheless, rattlesnakes are killed by the Cherokee for the sake of their rattles, teeth, flesh, and oil, which are greatly prized for occult or medical uses. But the slaughter is done only by certain priests who know the rites and prayers necessary for obtaining pardon from the victim and his injured fellow-snakes. Whenever a rattlesnake is killed, its head must be cut off and buried in the ground and the body must be buried in a hollow log. For if the remains were left exposed to the weather, the angry snakes would send such torrents of rain that all the streams would overflow their banks. Moreover, they would tell their friends the deer and the ginseng in the mountains what had been done, so that the deer and the ginseng would hide themselves, and the hunter would seek for them in vain.<sup>1</sup>

Respect for the rattlesnake, which is deemed the chief of snakes.

Ceremonies at killing a rattlesnake.

The respect and fear naturally entertained for such powerful and dangerous creatures as the eagle and the rattlesnake are quite sufficient to explain these superstitious beliefs and practices of the Cherokee; we need not resort to an hypothesis that the eagle and the rattlesnake were once totems of the Cherokee, of which there is no record or evidence whatever.

The Cherokee respect for the eagle and rattlesnake is not totemic.

Further, it may be observed that while the deer and the wolf are certainly Cherokee totems, certain superstitions

<sup>1</sup> J. Mooney, "Myths of the Cherokee," *Nineteenth Annual Report of the Bureau of American Ethnology*, Part i. (Washington, 1900) pp. 294-296.

about deer.

attaching to these animals are not limited to members of the Deer and Wolf clans, but appear to be shared by all members of the tribe. Thus, the deer, which still ranges the mountains, was the main stand-by of the Cherokee hunter and consequently figures prominently in Cherokee myth, folk-lore, and ceremonial. Rheumatic pains were supposed to be inflicted by the ghosts of angry deer, which the heedless hunter had omitted to appease. For the deer tribe is ruled by a powerful chief called Little Deer, who watches over his people and takes care that none of them is wantonly put to death. Though none but the greatest masters of the huntsman's craft can see him, this chief of the deer tribe hastens to the spot where a deer has been killed, and bending low asks the blood stains on the ground whether they have heard, that is, whether the hunter has begged pardon for the life which he has taken. If the blood stains say yes, all is well: the hunter has recited the necessary formula and so atoned for his crime. But if the blood stains say no, then Little Deer tracks the huntsman to his house by the blood drops on the trail, and unseen and unsuspected he insinuates into the rash man's body the spirit of rheumatism which will rack him with aches and pains from that time forth.<sup>1</sup>

Super-  
stitious  
beliefs and  
customs  
of the  
Cherokee  
about  
wolves.

Again, though the wolf is the totem of the largest Cherokee clan, the reverence for the formidable animal is not restricted to members of the Wolf clan, but is shared by Cherokee hunters generally. The ordinary Cherokee will never kill a wolf if he can help it, but will let the beast go unscathed, believing that the kindred of a slain wolf would surely avenge his death, and that the weapon with which the deed had been done would never shoot straight again till it had been cleaned and exorcised by a medicine-man. However, when a man's fish-traps or cattle have suffered much from the raids of wolves, he will sometimes hire a professional wolf-killer to abate the nuisance. This man of skill can slaughter wolves with impunity, because he knows the proper rites of atonement. After he has killed a wolf, he prays the animal not to avenge his death on the

<sup>1</sup> J. Mooney, "Myths of the Cherokee," *Nineteenth Annual Report of the Bureau of American Ethnology*, Part i. (Washington, 1900) pp. 263-99.

tribe, because the burden of guilt really rests on other people. And he cleanses the gun which has shot the wolf by unscrewing the barrel, inserting seven small sour-wood rods in it, and leaving it overnight in a running stream.<sup>1</sup>

Further, the Cherokee ascribe mysterious properties and perform curious rites to plants which are not and, so far as we know, never have been their totems. The Cherokee are an agricultural tribe, and accordingly of all vegetables the one which holds the first place in their domestic economy and ceremonial observances is maize (*selu*). In their sacred formulas they invoke the plant under the name of the Old Woman, because they have a legend that maize sprang from the blood of an old woman slain by her disobedient sons. Formerly the most solemn ceremony of the tribe was the annual Green-corn dance, celebrated as a preliminary to eating the new corn. It was at once an expiation for the sins of the past year, an amnesty for public criminals, and a prayer for happiness and prosperity in the year to come. Only such as had duly prepared themselves by prayer, fasting and purification were allowed to partake of this solemn sacrament; and till then no one dared to taste the new corn. Seven ears from the last year's crop were always put carefully aside in order to "attract the corn" until the new crop had ripened; and when the harvest was come and the Green-corn dance was danced, these seven ears were eaten with the rest.<sup>2</sup> At the Green-Corn Dance in ancient times it was customary for each household to procure fresh fire from a new fire kindled in the town-house.<sup>3</sup> Much ceremony also attended the planting and tending of the maize. Thus, when the corn was growing, a priest went into the field with the owner and built a small inclosure in the middle of it. There the two sat themselves on the ground, and the priest, rattle in hand, sang songs of invocation to the spirit of the corn. Soon a loud rustling sound would be heard. It was the Old Woman bringing the corn into the field; but neither of the

men crouching among the corn might look up till the song was finished. This ceremony was repeated on four successive nights; then when seven more nights had gone by, during which no one might enter the field, the priest himself would come to it and, lo! the young ears would be upon the stalks. Moreover, care was always taken to keep a clean trail from the field to the house, so that the corn might be encouraged to stay at home and not go wandering elsewhere. Again, soon after the maize had been sown, the owner, or a priest, would stand at each corner of the field, one after the other, and weep and wail loudly; but why they did so, the priests cannot now say. It was perhaps, as has been suggested, a lament for the bloody death of the corn-goddess, the Old Woman who had been slain by her sons.<sup>1</sup>

The weeping and wailing for the corn.

Story of the death of the Corn-Woman, and of the fertilising virtue of her blood.

The story of her death was this. Once upon a time there was a woman and her name was Corn (*selu*). She was the wife of a hunter and lived with him at Pilot Knob. They had an only child, a little boy. But the boy had a playmate, a Wild Boy, who sprang from the blood of some game which the woman had washed beside the river. The Wild Boy called himself the little boy's elder brother. Well, one day it happened that the two boys were very tired and hungry and asked their mother for something to eat. She told them to wait and she would fetch it. So off she went with a basket to the storehouse. The storehouse stood on poles high above the ground to keep it out of reach of the animals, and there was a ladder to climb up to it, and a door, but no other opening. Every day when Corn, which was the woman's name, made ready to cook the dinner she would go to the storehouse with a basket, and bring it back full of corn and beans. The storehouse was not large, and the boys, who had never been in it, wondered where all the corn and beans could come from. So no sooner was their mother's back turned than the Wild Boy said to his brother, "Let us go and see what she does." They ran and climbed up at the back of the storehouse, pulled out a piece of clay from between the logs, and peeped

<sup>1</sup> J. Mooney, "Myths of the Cherokee," *Nineteenth Annual Report of the*

*Bureau of American Ethnology*, Part i. (Washington, 1900) pp. 423 sq.

in. What should they see but their mother standing in the middle of the room with the basket in front of her on the floor ; and there she was rubbing her stomach, so, and then the basket was half full of corn ; and then she rubbed under her armpits, so, and the basket was now full to the brim with beans. The two boys looked at each other and said, " This will never do. Our mother is a witch. If we eat any of that stuff, it will poison us. We must kill her." When the boys came back to the house, their mother read their thoughts and said, " So you are going to kill me ? " " That we are," said the boys ; " you are a witch." " Well," said the mother, " when you have killed me, clear a large piece of ground in front of the house and drag my body seven times round the circle. Then drag me seven times over the ground inside the circle, and stay up all night and watch, and in the morning you will have plenty of corn. The boys killed her with their clubs, cut off her head, put it on the roof of the house with her face to the west, and told her, with cutting sarcasm, to look for her husband. Then they set to work to clear the ground in front of the house, but instead of clearing the whole piece they only cleared seven little spots. That is why corn now grows only in a few places instead of over the whole wide world. They dragged the body of their mother Corn round the circle, and wherever her blood fell on the ground, corn sprang up. But instead of dragging her body seven times across the ground, they dragged it only twice, and that is why the Indians still hoe their fields only twice. The two brothers, having disposed of their mother, sat up and watched their corn all night, and in the morning it was full-grown and ripe.<sup>1</sup>

How the corn goddess produced corn and beans from her body.

How she was slain, and how the corn sprang from her blood.

In this story and these customs we may see in germ a myth and ritual of a mother goddess of the corn ; yet although the story and the customs are found among a totemic people, there is no ground whatever for connecting them with totemism.

Myth and ritual of a Corn-goddess in germ.

Again, the Cherokee have many superstitious beliefs and practices connected with ginseng, yet the plant is not one of their totems. They gather it on the mountains, use it in

<sup>1</sup> J. Mooney, " Myths of the Cherokee," *Nineteenth Annual Report of the Bureau of American Ethnology*, Part i. (Washington, 1900) pp. 242, 244 sq.

Superstitious beliefs and customs of the Cherokee about ginseng.

medicine, and sell large quantities of it to the traders. The priests address the plant as "Little Man" or "Little Man, Most Powerful Magician" on account of the resemblance which the root often bears to a man's body. The doctor speaks constantly of it as of a sentient being, and it is thought to be able to make itself invisible to such as are unworthy to gather it. In the search for it the first three plants are passed by and the fourth is taken, but not until the doctor has humbly entreated the Great Magician to let him take a small piece of his flesh. Having dug up the plant he drops a bead into the hole and covers it up, leaving it there by way of payment to the plant spirit. After that he gathers the other ginseng plants as he finds them without further ceremony.<sup>1</sup>

Cherokee superstitions about the cedar and the laurel.

Again, with the Cherokee, as with nearly all Indian tribes, the cedar is a sacred tree, but it is not a totem. They burn the small green twigs as incense in certain ceremonies, especially to counteract the effect of evil dreams; for they think that the malicious demons who cause such dreams cannot endure the smell of burning cedar. But cedar-wood is too sacred to be used as fuel. They say that the red tinge of the wood comes from the blood of a wicked magician whose head was hung on the top of a tall cedar.<sup>2</sup> Again, the Cherokee never burn the laurel, yet it is not one of their totems. They use it in medicine and carve spoons and combs out of its close-grained wood. The reason why they will not burn it is simply that in the fire laurel leaves make a hissing, sputtering sound like winter winds or falling snow; so the Cherokee think that to burn them would bring on cold weather.<sup>3</sup> Thus the ground of their objection to putting laurel in the fire is not totemism, but the fallacy

J. Mooney, "Myths of the Cherokee," *Nineteenth Annual Report of the Bureau of American Ethnology*, Part i. (Washington, 1900) p. 425.

<sup>2</sup> J. Mooney, *op. cit.* p. 421. In order to drive away ghosts from sick people, the Tetons make a smoke with cedar-wood, or they will fasten the wood at the smoke-hole, or lay it down outside the hut. See the Rev. J. Owen Dorsey, "Teton Folk-lore," *American Anthropologist*, ii. (Wash-

ington, 1889) p. 144. The same mythical explanation of the redness of cedar-wood which is given by the Cherokee is alleged also by the Yuchi Indians. See A. S. Gatschet, "Some Mythic Stories of the Yuchi Indians," *American Anthropologist*, vi. (1893) pp. 281 sq.

<sup>3</sup> J. Mooney, "Myths of the Cherokee," *Nineteenth Annual Report of the Bureau of American Ethnology*, Part i. (Washington, 1900) p. 422.

which underlies homœopathic magic, namely, the assumption that effects resemble their causes.

With these instances before us—and instances of the same sort might be multiplied indefinitely—we must beware of reducing to totemism all the superstitious beliefs and practices which even a really totemic people entertain and observe in regard to animals and plants. Totemism in fact, as I have said before, is only one of the multitudinous forms in which such superstitions have crystallised. It is indeed a common crystal, but there are many others of diverse shapes and colours. In a treatise on totemism it is legitimate and even necessary to emphasise the distinction, because there is a common tendency to confound all sacred animals and plants with totems. The example of the Cherokee, to which I have just called attention, may serve as a warning against this confusion.

Totemism is only one of many forms of superstition concerned with animals and plants.

### § 12. *Totemism among the Pueblo Indians*

Amongst the most interesting and important aborigines of North America are the Pueblo or Village Indians of Arizona and New Mexico. Their importance arises neither from their numbers nor the part which they have played in history; for their numbers are inconsiderable and they have always been a quiet pacific people, more concerned to support themselves by their own industry than to overrun and conquer their neighbours. But in their institutions they form a link or intermediate stage between the barbarous tribes to the north and the civilised Indians of Mexico, Central America, and Peru. They are settled in substantially built villages or towns, to which the Spaniards gave the name of *pueblos*; they subsist mainly by agriculture; and they exhibit some degree of skill and taste in the arts of pottery and weaving. The material basis of their indigenous civilisation was supplied by a single cereal, maize; by a single textile plant, cotton; and by the sandstone or the sun-dried bricks of which they constructed their two-, three-, or four-storied dwellings.<sup>1</sup>

The Pueblo or Village Indians of Arizona and New Mexico.

<sup>1</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, pp. 254 sqq.

A convenient summary of information on the Pueblo Indians, compiled from

Ruins of Pueblo villages are scattered over a wide area.

Although the Pueblo Indians are now confined to a limited area in Arizona and New Mexico, the abundant ruins of their deserted towns and villages prove that at one time or another they must have occupied the whole region from the Great Salt Lake in Utah southward into Mexico, and from the Grand Canyon of the Colorado eastward to the prairies beyond the Rio Grande. Within this great area, covering about a hundred and fifty thousand square miles, the ruined Pueblos may be numbered almost by thousands.<sup>1</sup>

The natural features and landscape of the Pueblo country.

The natural features of the Pueblo country are very remarkable and have done much to mould the character and institutions of the natives. For the most part the land is an arid wilderness, almost a desert, where animal life is very scarce and vegetation sparse and stunted. These characteristics it owes partly to its great elevation, which varies from six to eight or even nine thousand feet above the sea, and partly to the lack of rain and running water, an effect of the extreme dryness of the air. The surface is generally smooth or slightly undulating. Were a traveller suddenly set down in the midst of one of these high tablelands, he might at first sight imagine it an ideal country for journeying in. But he could not go far without being undeceived. For sooner or later he would find himself on the brink of a yawning chasm which opened suddenly at his feet; or mounting to higher ground he would see, spread out below him, a bewildering network of jagged ravines, a confused tangle of cliffs and gorges, barring his progress. In fact the apparent level of the plateau is gashed and seamed at frequent intervals by tremendous gullies or canyons, as they are called in the country, which nature has scooped and carved to giddy depths out of the sandstone rock. To put

The tablelands and canyons.

the original sources, is furnished by Mr. Fritz Krause, "Die Pueblo-Indianer, eine historisch-ethnographische Studie," *Nova Acta, Abhandlungen der Kaiser. Leopoldin.-Carolin. Deutsch. Akademie der Naturforscher*, lxxxvii. (Halle, 1907) pp. 1-218. For a graphic picture by an eyewitness of the country and life of the Pueblo Indians a book of the late Captain J. G. Bourke (*The Snake-*

*Dance of the Moquis of Arizona*, London, 1884) may be recommended.

<sup>1</sup> Victor Mindeleff, "A Study of Pueblo Architecture in Tusayan and Cibola," *Eighth Annual Report of the Bureau of Ethnology* (Washington, 1891), p. 13; Cosmos Mindeleff, "Localisation of Tusayan Clans," *Nineteenth Annual Report of the Bureau of American Ethnology*, Part ii. (Washington, 1900) p. 639.

it otherwise, the country consists of an endless series of isolated tablelands, of no great extent, each terminating in steep rugged slopes or sheer precipices and divided from its neighbours, sometimes merely by a deep and narrow ravine, sometimes by a broad stretch of flat ground. These tablelands are what the Spaniards, the former lords of the land, used to call the *mesas*, and the name still survives in the common speech of the inhabitants. The cliffs which bound the tablelands sometimes run in the same general direction for miles, winding in and out so as to form a long succession of bays and capes, of alcoves and bastions, in the wall of precipice. For the most part the soil is utterly barren. Even near the villages, which are commonly built for safety on the summit of some beetling crag or jutting ledge of rock, there are wide expanses where not a green blade is to be seen, nothing but a waste of drifting sand or a labyrinth of rugged rocks piled in confusion at the foot of the cliffs. The beds of the rivers themselves, except after heavy rain, are generally dry, consisting merely of sandy stony hollows, like the wadies of the Arabian desert. Such scanty vegetation as contrives to find a foothold in the thirsty soil has little in it to relieve the dreary monotony of the landscape; for it consists usually of scrubby dwarf pines and cedars, gnarled bushes of prickly greasewood, or clumps of sad-coloured sagebrush. Yet desolate as the scenery undoubtedly is, it possesses nevertheless a certain charm of its own. The sandstone rocks, of which the country is chiefly composed, are of many tints, most commonly of a bright red; and in the clear desert air, under a sky of the deepest blue, their mighty precipices, soaring pinnacles, and swelling buttresses present a wonderful spectacle as they recede, crag beyond crag, till they melt away in the distance. But the characteristic landscape of the Pueblo region is a dull monotonous expanse of plains bounded only far away by cliffs of gorgeous colours; in the foreground a soil of bright yellow or ashy grey; and over all the most brilliant sunshine, while distant features are softened by a blue haze. For a few weeks in early summer the tablelands are seen at their best. The open stretches are then carpeted with verdure almost hidden under a profusion of flowers. Then, too, the

of the  
scenery.

The red  
cliffs.

The bloom of early summer. grey and dusty sagebrush takes on a tinge of green: even the furzy greasewood drapes itself in flakes of golden bloom; and every thorny green tablet of the prickly pear seems grafted with rosebuds. Fantastic cactuses of many kinds vie with each other in putting forth the gayest flowers, scentless but gorgeous. But soon all this brightness fades, and the country resumes its habitual aspect of sterile monotony.<sup>1</sup>

The landscape in winter.

Very different, however, is the appearance which the landscape wears in mid-winter, especially if we view it on a day when the Indians of some high-perched village are busy celebrating one of those elaborate religious rites, to which in the dead season of the year the natives of these bleak uplands devote much time and thought. Snow then covers the earth with a mantle of dazzling white; the valley below is white; and white without a speck are the slopes of the tablelands, except where a solitary clump of pines, seen through the distant haze, shews like a blue stain on the blanched hillside. In the foreground the bands of Indians intent on their sacred mission, as they flit about in their bright dresses across the snow, present a constantly shifting kaleidoscope of colours, the effect of which is heightened by the crisp frosty air. The gay scene lasts all the winter day, till the stars begin to sparkle overhead, and in the west the orange light of evening dies away.<sup>2</sup>

<sup>1</sup> Victor Mindeleff, "A Study of Pueblo Architecture in Tusayan and Cibola," *Eighth Annual Report of the Bureau of Ethnology* (Washington, 1891), pp. 42-44; A. M. Stephen, "The Navaho," *American Anthropologist*, vi. (1893) pp. 345-347; Cosmos Mindeleff, "The Cliff Ruins of Canyon de Chelly, Arizona," *Sixteenth Annual Report of the Bureau of American Ethnology* (Washington, 1897), pp. 82-84; *id.* "Navaho Houses," *Seventeenth Annual Report of the Bureau of American Ethnology*, Part ii. (Washington, 1898) pp. 477-481; *id.* "Localization of Tusayan Clans," *Nineteenth Annual Report of the Bureau of American Ethnology*, Part ii. (Washington, 1900) pp. 640-642; Walter Hough, "The Hopi in relation to their Plant Environment," *American*

*Anthropologist*, x. (1897) pp. 33 *sq.* The monotony of the landscape is even more marked in Tusayan, the home of the Hopi Indians, because there the sandstones are mostly of a neutral tint, and consequently there is less of that warmth and play of colour which elsewhere in the Pueblo country goes far to relieve the dullness of the scenery.

<sup>2</sup> Mrs. Matilda Coxé Stevenson, "The Zuñi Indians," *Twenty-third Annual Report of the Bureau of American Ethnology* (Washington, 1904), p. 119. I have borrowed from Wordsworth the description of a winter sunset:—

*the stars*  
*Eastward were sparkling clear, and in*  
*the west*  
*The orange sky of evening died away.*

The great lack of the Pueblo country is water. The rainfall, in years when it rains at all, is less than ten inches and dew is rare. Great tracts in the mountains would be utterly uninhabitable for want of water if it were not for the snow which lies deep in winter and percolating through the porous sandstone soil issues in small springs at the foot of the tablelands or in the recesses of the ravines. But such springs are few and far between; they are reached by tortuous trails often known only to the Indians; and they fail in the hot summer days, when the withered grass is dry and brittle and the whole country is parched. In winter the Navaho shepherds and their sheep depend wholly on snow water; and it is the melting snow in spring which causes the grass to grow and vegetation to sprout. Yet meagre as plant life is in this arid region, the Pueblo Indians, till they obtained some sheep and cattle from the whites, supported themselves entirely by agriculture or horticulture; for they are gardeners rather than farmers. Indeed they had no alternative. They could not be hunters, because there is little game to hunt; they could not be fishermen, because there is little fish to catch. Accordingly in their natural state these Indians subsisted almost wholly on vegetable food except for a stray rat, rabbit, or prairie-dog which occasionally went to the pot. A religious fraternity of the Hopi Indians did indeed solemnly turn out once a year and hunt the neighbourhood; but twenty-five men on horseback and many men on foot have been known to scour the country for miles and knock down one rabbit. It seems clear that in such regions man could not live by rabbits nor yet by rats and dogs alone; he must have something else to eat or perish. He found the staple of life in maize.<sup>1</sup>

Scarcity of water in the Pueblo country.

The Pueblo Indians in their native state depended entirely on agriculture.

<sup>1</sup> Walter Hough, "The Hopi in relation to their Plant Environment," *American Anthropologist*, x. (1897) pp. 33 sqq.; Victor Mindeleff, "A Study of Pueblo Architecture in Tusayan and Cibola," *Eighth Annual Report of the Bureau of Ethnology* (Washington, 1891), pp. 42 sq.; Cosmos Mindeleff, "Navaho Houses," *Seventeenth Annual Report of the Bureau of American Ethnology*, Part ii. (Washington, 1898)

pp. 478-482; *id.* "Localization of Tusayann Clans," *Nineteenth Annual Report of the Bureau of American Ethnology*, Part ii. (Washington, 1900) pp. 640-643; Jesse Walter Fewkes, "Two Summers' Work in Pueblo Ruins," *Twenty-second Annual Report of the Bureau of American Ethnology*, Part i. (Washington, 1904) p. 194. As to sheep and cattle of the Zuñi Indians, see Mrs. Matilda Coxé Stevenson,

The peculiar type of the Pueblo village originated in the need of defence and of being near the cultivated lands.

Thus the prime necessity of these tribes, when they first migrated or were driven by foes into their present country, was to discover arable land and to settle near it. Except in the valleys of the so-called rivers or rather wadies such land is to be found only here and there in small patches, little sheltered nooks of the tablelands or fertile bottoms of rich alluvial soil in the depth of the canyons. Beside or within reach of these favoured spots the Indians were compelled to fix their abodes. They had no choice. Whatever happened, the crops must be sown and reaped; their failure involved the death of the people. At first, perhaps, when the Indians entered the country they may have lived dispersed in small groups wherever they met with a plot of arable land sufficient for their wants; for it is likely enough that they moved into these deserts only under the pressure of stronger tribes, and that for a while they had no formidable rivals to dispute the possession of the steppes. But as time went on their enemies would follow on their heels, and the need of protecting themselves and their fields from raids and depredations would be more and more felt. Thus they would naturally gather for mutual defence in large fortified villages or towns. Such were in all probability the circumstances which created the peculiar type of Indian village or town known as a Pueblo. These villages were built for safety in positions of great natural strength such as in that rugged and broken country can everywhere be found, whether on the projecting spur of a tableland with access from one side only, or on a pinnacle wholly surrounded by precipices and steep slopes, which could be reached only by a long and arduous climb up a winding and difficult path.<sup>1</sup> For example, the Hopi

“The Zuñi Indians,” *Twenty-third Annual Report of the Bureau of American Ethnology* (Washington, 1904), p. 368. The Navahoes are not Pueblo Indians, but their country adjoins the Pueblo country on the north and partakes of its character. As to the annual rabbit-hunt of the Pueblo Indians, see Dr. P. G. S. Ten Broeck, in H. R. Schoolcraft's *Indian Tribes of the United States*, iv. 78; Mrs. Matilda Coxe Stevenson, “The Zuñi Indians,” *Twenty-third Annual*

*Report of the Bureau of American Ethnology* (Washington, 1904), pp. 89-94. From the detailed account given by Mrs. Stevenson it would seem that the hunt is a religious or magical rite specially designed to bestow fertility on women as well as to ensure a supply of game and rain. According to her, the ceremony is celebrated quadrennially, but may be held oftener in time of great drought.

<sup>1</sup> Cosmos Mindeleff, “The Localization of Tusayan Clans,” *Nineteenth*

87 + 10

or Moqui villages are built like eagles' eyries on the crests of perpendicular sandstone bluffs at a height of from five hundred to eight hundred feet above the springs on which the villagers depend for their supply of water. All the water used in such a village is carried on the backs of women who patiently trudge up and down the steep and giddy tracks cut in the side of the precipice, each bearing a brimming or an empty pot on her shoulders. It is a common sight to see them toiling slowly up the almost vertical face of the cliff wrapped in their faded blue blankets and bending under a weight of which the strongest man would soon grow weary.<sup>1</sup>

The plan of a Pueblo village differs from that of all other Indian villages in North America. It consists of long rows of quadrangular flat-roofed chambers rising in a series of terraces, one row of chambers above the other, to a height of two, three, four or even five stories, in such a way that each story recedes by a space of ten feet or more from the front wall of the story immediately below it, and hence the inmates of the upper stories can walk out on the flat roofs of the houses below them and use them as promenades. The whole structure viewed from the front thus presents the appearance of a gigantic staircase; viewed from the back it is one perpendicular wall. Such rows of chambers, each chamber forming a separate house with its own fire-place and chimney, may be two or three hundred feet long; and the ground floor, on which all the receding upper stories rest, may be a hundred feet deep. Access from one story to another is obtained by ladders placed against the outside walls; sometimes the upper stories are connected by staircases. In the old villages the ground-floor rooms had no doors opening on the street or public square; the only entrance was a hole in the roof, so that in order to enter one of them it was necessary first to ascend a ladder to the roof and then to descend another ladder into the chamber.

The plan and architecture of a Pueblo village.

The terraced, flat-roofed houses rise above each other in rows like the steps of a gigantic staircase.

*Annual Report of the Bureau of American Ethnology*, Part ii. (Washington, 1900) pp. 639-646; compare *id.* "The Cliff Ruins in the Canyon de Chelly, Arizona," *Sixteenth Annual Report of the Bureau of American*

*Ethnology* (Washington, 1897), p. 194.

<sup>1</sup> J. G. Bourke, *The Snake-Dance of the Moquis of Arizona* (London, 1884), pp. 104, 155, 272.

This arrangement was adopted for the purpose of defence ; for it enabled the inmates, on the approach of an enemy, to retire to the upper stories, draw up the ladders behind them, and then assail the attacking party with a shower of missiles from a position of comparative safety. For a similar reason the tiers of houses were arranged round a square or courtyard in such a way that they presented their terraced front to the square and turned their perpendicular back walls to the open country, thus offering a formidable obstacle to assailants possessed of no better artillery than bows and arrows. But in positions where the nature of the ground furnished a sufficient defence, the tiers of houses were sometimes arranged not in a square but in streets. However, now that the strong arm of the United States Government protects these peaceful Indians from the depredations of their fiercer neighbours, the Navahoes and Apaches, the old type of a fortified village has undergone some modifications, and the population shews a tendency to disperse into a number of lesser settlements planted more conveniently on lower ground near the cultivated lands.<sup>1</sup>

The building materials stone and sun-dried bricks.

Nearly all the ancient Pueblo villages, at least in the provinces of Tusayan and Cibola, were built of the native limestone, a stone which readily breaks into small pieces of regular shape suitable for use in simple masonry without the need of being artificially dressed. The chinks were filled

<sup>1</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, p. 262 ; Victor Mindeleff, "A Study of Pueblo Architecture," *Eighth Annual Report of the Bureau of Ethnology* (Washington, 1891), *passim* ; Cosmos Mindeleff, "Localization of Tusayan Clans," *Nineteenth Annual Report of the Bureau of American Ethnology*, Part ii. (Washington, 1900) pp. 639-646 ; Mrs. Matilda Coxé Stevenson, "The Zúñi Indians," *Twenty-third Annual Report of the Bureau of American Ethnology* (Washington, 1904 *sq.*), pp. 349 *sq.* ; Fritz Krause, "Die Pueblo-Indianer," *Nova Acta, Abhandlungen der Kaiserl. Leopold. Carol. Deutschen Akademie der Naturforscher*, lxxvii. No. 1 (Halle, 1907), pp. 40 *sqq.* With reference to the pacific character of the Pueblo

Indians I may cite what Captain Bourke says of the Hopis or Moquis : "They are avaricious in the extreme, vacillating and timid, and generally do not impress one as being so reliable as their immediate neighbours, the Apaches and Navajoes. They have not been known to engage in hostilities with the whites or Indians since the date of American occupation" (J. G. Bourke, *The Snake-Dance of the Moquis of Arizona*, p. 255). Another writer observes of the Hopis that "they are an undersized puny race, content with what they have and asking only to be left alone" (Cosmos Mindeleff, "Navaho Houses," *Seventeenth Annual Report of the Bureau of American Ethnology*, Part ii. (Washington, 1898) p. 486).

with smaller stones and a mortar of mud. ~~The practice of building with sun-dried bricks instead of stone is now common, but it~~ appears to be comparatively recent, and was perhaps learned by the Indians from the Spaniards. As the bricks which the Indians make are of inferior quality and the walls too thin to bear the weight of the upper stories, houses constructed of this material are apt to fall into ruins.<sup>1</sup>

An interesting feature in the architecture of a Pueblo village is the *kiva*, or the *estufa*, as it used to be called by the Spaniards. This is a sacred chamber in which the civil and religious affairs of the people are transacted. It also forms a place of resort, a club, or lounge for the men. No women frequent these sacred chambers; indeed they never enter them except to plaster the walls at customary periods or during the celebration of certain ceremonies. A village may have several *kivas*; for example, the village of Walpi (Hualpi) has five, and the large village of Oraibi has ten. Some of these sacred chambers belong each to a particular totemic clan; thus among the Hopis or Moquis we hear of *kivas* of the Butterfly, Rabbit, Oak, Corn, and Eagle clans. Many of them have been built by religious societies, which hold their stated observances there; but no *kiva* now serves exclusively for religious purposes. In the province of Tusayan the *kivas* are quadrangular, like the rest of the chambers; but elsewhere they are sometimes circular, as in the village of Taos; and in many of the older ruins the same shape is found. This circular *kiva*, differing from all the other rooms of the village, which are regularly quadrangular, is probably a survival from the time when the ancestors of the Pueblo Indians dwelt in circular huts or tents. Religious conservatism has retained the ancient form for the sacred buildings long after considerations of utility had abolished it from purely secular edifices. For a similar reason, probably, the entrance to a *kiva* is never by a door but always by a hole in the roof, through which you descend into the room by a ladder. Further, it seems to have been a common requirement throughout the Pueblo

The sacred chambers (*kivas* or *estufas*) of the Pueblo villages.

These sacred chambers are sometimes circular, and probably this was the original shape.

<sup>1</sup> Cosmos Mindeleff, "A Study of Pueblo Architecture," *Eighth Annual Report of the Bureau of Ethnology* (Washington, 1891), pp. 137-140.

country that the *kiva* should be wholly or partially underground, as it still is in Tusayan.<sup>1</sup>

The population of a large Pueblo village often numbered from a thousand to fifteen hundred persons.<sup>2</sup> In 1852 the seven Hopi or Moqui villages were estimated to contain eight thousand inhabitants; and the population of a single large village, Zuñi, was put as high as four thousand.<sup>3</sup> If these estimates were correct, the Pueblo Indians have since diminished in number; for in 1896 the population of the village of Zuñi was given at 1621 persons, and the total number of Pueblo Indians in Arizona and New Mexico was said to be 10,287.<sup>4</sup>

The principal crop raised by the Pueblo Indians is maize, and they cultivate several varieties of this cereal. The fields, of which some are artificially irrigated by water led to them in channels from springs, often lie at considerable distances from the main settlement; hence many of the Indians have been accustomed to leave their villages in summer and take up a temporary abode in farm-steadings near their fields. In peaceful times such as the present these summer farm-steadings tend to develop into permanent villages. The soil is hoed with primitive implements, and when the corn has been gathered and brought home, it is spread on the terraced roofs of the houses to dry before it is husked and stacked in the store-rooms. Experience has taught the Pueblo Indians to store corn as a provision against a possible failure of crops. The harvests of one or even two years may sometimes be seen piled in large granaries. The corn is ground into flour between millstones, kneaded into a paste, and baked on flat stones into wafers no thicker than sheets of paper, and of interminable length. Besides maize the Indians also grow large quantities of

Population of the Pueblo villages.

The agriculture of the Pueblo Indians.

The maize is kept in store-rooms.

beans, melons, pumpkins, and onions, and these they also store for winter use. From the whites they have obtained wheat, peaches, apricots, and other plants, which they cultivate to some extent. Of peaches they are extravagantly fond, and every village has its peach orchards. When the fruit is ripe, people who have orchards move to them and live there in temporary or permanent huts till the peaches are gathered and sometimes dried. It is a happy season for the Indians, and especially for the children, who spend their days eating peaches and rolling on the sandhills. Cotton and tobacco are raised in small quantities; in old days the cultivation of native cotton was much more extensive.<sup>1</sup>

Other  
crops.

In modern times the Pueblo Indians, having acquired sheep, goats, and cattle from the whites, have become to some extent a pastoral people. They eat the flesh of these animals and weave the wool of the sheep into blankets, which they adorn with parti-coloured patterns. Their woven stuffs are durable and shew a considerable variety of fabric. Pottery is made by the women without the use of the wheel. In many villages the pots are undecorated, the surface being finished in plain black or red. But in other villages the pottery is adorned with paintings of animals, plants, flowers, and so forth. Some of the designs are said to be totemic. The vessels themselves are sometimes moulded in the form of animals. On ancient vases the figures of beasts and birds are sometimes executed in so purely conventional a style that only the initiated can decipher them. Certain superstitions attend the making of pottery; for example, a bit of wafer bread is deposited in each pot, that the spirit of the pot may consume its spiritual essence.<sup>2</sup>

Flocks and  
herds.

Government of the Pueblo villages.

Among the Hopi or Moqui Indians, one of the principal branches of the Pueblo peoples, the governing body is composed of a council of hereditary clan-elders and chiefs of religious fraternities. Of these officials one is a speaker-chief and another a war-chief; but there has never been a supreme chief among the Hopis. Each village has its own hereditary chief who directs certain communal works, such as the cleaning of springs.<sup>1</sup> The government of Zuñi is described as hierarchical, being in the hands of various priesthoods and other religious fraternities, of whom the Rain Priests, eight men and one woman, form the dominant body. The civil branch of the government consists of a governor with four assistants, and a lieutenant-governor, also with four deputies. These men are all nominated by the Rain Priests. The governor is elected for one year, but he may be re-elected. He and his staff attend to such secular affairs as do not require the intervention of the priests.<sup>2</sup>

The Pueblo Indians are at present restricted to a small area in New Mexico and Arizona.

While Indians of the Pueblo type of culture appear from the ruins of their villages to have at one time occupied the great region of arid plateaus which stretches from central Utah on the north to the Mexican boundary and beyond it to the south, their descendants or successors are now restricted to a comparatively small area in Western New Mexico and Eastern Arizona, over which their villages, about thirty in number, are irregularly distributed. Most of them are scattered along the upper course of the Rio Grande and its tributaries in New Mexico; and a few of them, situated partly in Western New Mexico and partly in Eastern Arizona, lie in the ancient provinces of Cibola and Tusayan, which are drained by the Little Colorado. Locally, the Pueblo villages may be said to fall into three groups, an eastern group on the Rio Grande, a central group on the

There are three groups of them; an

Zuñi plateau, and a western group in Tusayan.<sup>1</sup> But though the Pueblo Indians inhabit contiguous districts, and though their general character and type of culture are the same, it is remarkable that they speak languages of four different stocks, and therefore presumably belong to four different families. The four stock languages spoken by these people are the Tanoan, Keresan, Zuñian, and Shoshonean; and of these the Tanoan language is, or rather used to be, spoken in five different dialects, the Tano, the Tewa, the Tiwa, the Jemez, and the Piro. The Tano are now extinct as a tribe, but their descendants are still scattered throughout the other Pueblo villages, most of them being at Santo Domingo on the Rio Grande. The Tewa occupy the villages of San Juan, Santa Clara, San Ildefonso, Pojoaque, Nambe, and Tesuque, all on or near the Rio Grande, together with the village of Hano among the Hopi in Tusayan.<sup>2</sup> The Tiwa, called by the Spaniards Tigua, inhabit the villages of Taos, Picuris, Sandia, and Isleta, all in the valley of the Rio Grande. The Jemez live in the single village of that name, which stands on a small western tributary of the Rio Grande. The Piros, who are now almost completely Mexicanised, are found, mixed with some Tiwa, at the villages of Senecu and Isleta del Sur, below El Paso, on the Rio Grande in Texas and Chihuahua. The Indians who speak the Keres or Keresan language occupy the villages of Acoma, Laguna, Sia, Santa Ana, San Felipe, Santo Domingo, and Cochiti, all in the Rio Grande valley.

eastern group on the Rio Grande, a central group on the Zuñi plateau, and a western group in Tusayan. They speak languages of four different stocks.

<sup>1</sup> Victor Mindeleff, "A Study of Pueblo Architecture in Tusayan and Cibola," *Eighth Annual Report of the Bureau of Ethnology* (Washington, 1891), p. 13, with the map.

<sup>2</sup> The difference of language between the people of Hano or Harno and the Hopi or Moqui by whom they were surrounded was long ago noted by Dr. P. G. S. Ten Broeck, who, writing of the Hopi or Moqui villages, observes that "they all speak the same language except Harno, the most northern town of the three, which has a different language and some customs peculiar to itself. It is, however, considered one of the towns of the confederation, and

joins in all the feasts. It seems a very singular fact that, being within 150 yards of the middle town, Harno should have preserved for so long a period its own language and customs. The other Moquis say the inhabitants of this town have a great advantage over them, as they perfectly understand the common language, and none but the people of Harno understand their dialect" (Dr. P. G. S. Ten Broeck, in H. R. Schoolcraft's *Indian Tribes of the United States*, iv. 87 sq.). Compare J. W. Fewkes, "The Kinship of a Tanoan-speaking Community in Tusayan," *American Anthropologist*, vii. (1894) pp. 162 sqq.

The people who speak the Zuñi language are confined to the single large village of that name, situated about midway between the Pueblos on the Rio Grande and the Pueblos of the Hopis or Moquis in Arizona. Lastly, the Shoshonean language is spoken by the Hopis or Moquis who occupy the ancient province of Tusayan in North-eastern Arizona: their villages or towns are Oraibi, Walpi, Sichimovi, Mishongnovi, Shupaulovi, and Shongopovi.<sup>1</sup> This diversity of tongues among groups of Indians, all living side by side within a comparatively small area and characterised by the same general type of culture, seems to shew that these groups are descendants of different races who have been driven, probably by the pressure of stronger tribes, into these arid and semi-desert regions; and that the similarity of their civilisation is to be ascribed, not to derivation from common ancestors, but to the effect of peculiar natural surroundings acting alike upon them all, and aided, no doubt, by inter-communication between them.<sup>2</sup>

This diversity of languages seem to shew that the Pueblo Indians belong to different races.

The Pueblo Indians are divided into many totemic and exogamous clans with descent in the female line.

The Pueblo Indians are divided into a large number of totemic and exogamous clans, and the clans are further grouped in phratries. In former times marriage within the clan, and sometimes within the phratry, was rigorously forbidden; members of the same clan were regarded as brothers and sisters. But nowadays the old rule of exogamy has to some extent broken down and in many villages a man may marry any woman who will have him, without regard to her clan or her phratry. The Pueblo Indians are monogamists. When a man marries, he goes to live in his wife's house. Descent and inheritance are in the female line; children belong to the clan of their mother, not to that of their father. Women own the houses, crops, sheep, and orchards, all in fact that pertains to the comfort of the family. The men own the horses and donkeys. No man

<sup>1</sup> F. W. Hodge, "Pueblo Indian Clans," *American Anthropologist*, ix. (1896) pp. 345 sq., with Mr. Victor Mindeleff's map (Plate I.), in *Eighth Annual Report of the Bureau of Ethnology* (Washington, 1891), prefixed to page 13. Authorities differ in their spelling of the names of the Hopi villages. I follow Mr. J. W. Fewkes,

in the *Handbook of American Indians north of Mexico*, i. 561 sq.

will sell anything in a house without his wife's consent, and when anything is sold the price received belongs to her. At a woman's death her property descends to her daughters.<sup>1</sup>

The most westerly group of Pueblo Indians are the Hopis or, as they used to be called, the Moquis. The name Hopi is a contraction of Hopitu, "peaceful ones," or *Hopitushinumu*, "peaceful all people," the name by which they call themselves. The origin of the name Moqui or Moki, by which these Indians have been popularly known, is uncertain.<sup>2</sup> Their country lies just west of the boundary between New Mexico and Arizona, north and east of the Little Colorado River, and some sixty or seventy miles south of the Grand Colorado. The Hopi villages are seven in number, each built on the crest of a sandstone precipice in a position which must have rendered it practically impregnable to aboriginal foes. They fall into three groups, an eastern, a central, and a western. The eastern group comprises three villages all situated very close together on what is called the Eastern Tableland (*Mesa*). The names of the three villages, beginning at the east, are Hano (or Tegua), Sichomovi (Suchongnewy), and Walpi (Hualpi). Of these three Hano, as we have seen,<sup>3</sup> is not strictly speaking a Hopi village, being inhabited by Indians who speak a different language. A broad valley of seven miles of sand, interspersed with the corn, bean, and melon patches of these Indian farmers, divides the Eastern Tableland from the abrupt promontory on which perches, first, the romantic village of Mishongnovi

The Hopis or Moquis, the most westerly group of Pueblo Indians.

Their seven villages.

<sup>3</sup> Above, p. 207, note 2.

(Mushangnewy); above it, looking like the stronghold of a German robber-baron of the Middle Ages, appear the masonry walls of Shupaulovi (Shupowlewy); and three miles away, on the other wall of a wide and deep ravine, the fortress of Shongopovi (Sumopowy). Nearly ten miles west of Shongopovi is the solitary village or rather town of Oraibi (Oraybe), the largest and most westerly of the Hopi settlements. It occupies a strong position on the summit of a lofty bluff. The inhabitants studiously hold aloof from their kinsmen in the other villages, and their pronunciation of the common Hopi language differs somewhat from that of their fellows. The village of Walpi (Hualpi or Gualpe, as the Spaniards called it) is regarded as the most ancient of the Hopi settlements in Tusayan: it dates from before the middle of the sixteenth century. Some thirty years ago the population of Oraibi was estimated at not less than fifteen hundred.<sup>1</sup>

Clans and  
phratries of  
the Indians  
of Walpi  
and  
Sichomovi.

The Indians of Walpi and its neighbour village of Sichomovi are or were divided into twelve phratries, and each of these phratries is subdivided into a number of totemic clans. The names of these phratries and clans are as follows:—<sup>2</sup>

<sup>1</sup> J. G. Bourke, *The Snake-Dance of the Moquis of Arizona* (London, 1884), pp. 226 sq., 329 sq.; J. W. Fewkes, "Tusayan Migration Traditions," *Nineteenth Annual Report of the Bureau of American Ethnology*, Part ii. (Washington, 1900) pp. 579 sq.; *id.* in *Handbook of American Indians north of Mexico*, i. 560 sqq. The forms of the names in brackets are those given by Captain Bourke. For a detailed description of the Hopi (Moqui) villages, with illustrations and plans, see Victor Mindeleff, "A Study of Pueblo Architecture in Tusayan and Cibola," *Eighth Annual Report of the Bureau of American Ethnology* (Washington, 1891), pp. 45 sqq. The date assigned to Walpi in the text rests on the authority of Mr. J. W. Fewkes ("Tusayan Migration Traditions," p. 579). Elsewhere Mr. Fewkes argues that Walpi was not founded on its present site till about 1700. See J. W.

Fewkes, "The Kinship of the Tusayan Villages," *American Anthropologist*, vii. (1894) pp. 394 sqq.

<sup>2</sup> J. W. Fewkes, in *Handbook of American Indians north of Mexico*, i. 562. This is the latest and presumably the most complete list. For earlier lists of Hopi (Moqui) clans, see Dr. P. G. S. Ten Broeck, in H. R. Schoolcraft's *Indian Tribes of the United States*, iv. 86 (repeated by L. H. Morgan, *Ancient Society*, p. 179); J. G. Bourke, *The Snake-Dance of the Moquis of Arizona* (London, 1884), pp. 116 sq., 335 sq.; Victor Mindeleff, "A Study of Pueblo Architecture," *Eighth Annual Report of the Bureau of Ethnology* (Washington, 1891), pp. 38 sq.; J. W. Fewkes, "The Kinship of the Tusayan Villages," *American Anthropologist*, vii. (1894) pp. 400 sqq.; *id.* "Tusayan Migration Traditions," *Nineteenth Annual Report of the Bureau of American Ethnology*, Part ii. (Washington, 1900), pp. 582 sqq.; Cosmos

SOCIAL ORGANIZATION OF THE HOPI AT WALPI AND SICHOMOVI

Phratries.	Clans.
I. Horn-flute ( <i>Ala-Lengya</i> )	1. Horn ( <i>Ala</i> ); 2. Mountain sheep; 3. Deer; 4. Antelope; 5. Elk; 6. Seed grass; 7. Ant; 8. Red ant; 9. Black ant; 10. Great ant; 11. Tiny ant; 12. Blue flute; 13. Drab or All-colours flute.
II. Waterhouse or Cloud ( <i>Patki</i> )	1. Water-house ( <i>Patki</i> ); 2. Corn; 3. Rain-cloud; 4. Rainbow; 5. Lightning; 6. Agave; 7. Rabbit-brush; 8. Aquatic animal [Duck]; 9. Frog; 10. Tadpole; 11. Bean; 12. Watermelon; 13. Rain.
III. Snake ( <i>Chua</i> )	1. Snake ( <i>Chua</i> ); 2. Puma; 3. Dove; 4. Columnar cactus; 5. Cactus fruit; 6. <i>Opuntia</i> ; 7. <i>Opuntia frutescens</i> ; 8. Marmot; 9. Skunk; 10. Raccoon; 11. Sorrow; 12. Squash; 13. Crane; 14. Pigeon-hawk; 15. Thistle. The last five of these clans are extinct.
IV. Reed ( <i>Pakab</i> )	1. Reed ( <i>Pakab</i> ); 2. Eagle; 3. Hawk; 4. Turkey; 5. Sun; 6. Paluna (Twin-brother of Puhukonghoya); 7. Star; 8. Chicken-hawk; 9. Willow; 10. Greasewood.

[Continued on p. 212.]

Mindeleff, "Localization of Tusayan Clans," *ibid.* p. 651. The earliest of these lists (that of Dr. Ten Broeck) comprised only seven clans, namely, the Deer, Sand, Water, Bear, Hare, Prairie-wolf, Rattlesnake, Tobacco-

plant, and Reed-grass clans. Captain Bourke enlarged the list to twenty-three, arranged in ten phratries with one clan over. His list (*The Snake-Dance of the Moquis of Arizona* (London, 1884), p. 336) is as follows:—

Phratries.	Clans.	Phratries.	Clans.
I. Phratry	1. Parrot. 2. Cottonwood.	VI. Phratry	13. Bear. 14. Hemlock.
II. Phratry	3. Macaw. 4. Corn.	VII. Phratry	15. Rattlesnake. 16. Dove.
III. Phratry	5. Frog. 6. Turkey.	VIII. Phratry	17. Tobacco. 18. Cotton-tail Rabbit.
IV. Phratry	7. Eagle. 8. Sun.	IX. Phratry	19. Blue-seed-grass. 20. Buck-grass.
V. Phratry	9. Badger. 10. Butterfly.	X. Phratry	21. Deer. 22. Yellow Wood.
V. Phratry	11. Coyote. 12. Skeleton.		23. Squash.

Phratries.	Clans.
V. Wood ( <i>Kokop</i> )	1. Wood ( <i>Kokop</i> ); 2. Coyote; 3. Wolf; 4. Yellow fox; 5. Grey fox; 6. <i>Zrohona</i> (small mammal); 7. <i>Masi</i> ( <i>Masauu</i> , dead, skeleton, Ruler of the Dead); 8. Piñon; 9. Juniper; 10. Bow; 11. <i>Sikyachi</i> (small yellow bird); 12. <i>Tuwuchi</i> (small red bird).
VI. Cottontail rabbit ( <i>Tabo</i> )	1. Cottontail rabbit ( <i>Tabo</i> ); 2. Jackrabbit.
VII. Sand or Earth ( <i>Tuwa</i> )	1. <i>Kukuch</i> (kind of lizard); 2. <i>Bachipkwasi</i> (kind of lizard); 3. <i>Nananawi</i> (kind of lizard); 4. <i>Momobi</i> (kind of lizard); 5. White sand; 6. Red sand ( <i>Tuwa</i> ); 7. Mud; 8. Flower; 9. Small striped squirrel.
VIII. Bear ( <i>Honau</i> )	1. Bear ( <i>Honau</i> ); 2. Wild-cat; 3. Blue-bird; 4. Spider; 5. Fir.
IX. Sacred Dancer ( <i>Kachina</i> )	1. Sacred Dancer ( <i>Kachina</i> ); 2. Paroquet; 3. Raven; 4. Yellow bird; 5. Blackbird; 6. Spruce; 7. Cottonwood.
X. Tansy mustard ( <i>Asa</i> )	1. Tansy mustard ( <i>Asa</i> ); 2. Blackearth Sacred Dancer ( <i>Kachina</i> ); 3. Oak; 4. Chaparral cock; 5. Magpie; 6. Snow-bunting; 7. Boomerang rabbit-stick; 8. Field-mouse.
XI. Tobacco ( <i>Piba</i> )	1. Tobacco ( <i>Piba</i> ); 2. Pipe.
XII. Badger ( <i>Honani</i> )	1. Badger ( <i>Honani</i> ); 2. Porcupine; 3. Turkey-buzzard; 4. Butterfly; 5. Evening primrose; 6. Sacred Dancer ( <i>Kachina</i> )

Small size of the Hopi clans.

This gives a total of one hundred and two, or rather one hundred and one clans for the two villages of Walpi and Sichomovi, one of the clans (Sacred Dancer, *Kachina*) occurring in two phratries. But of these clans five are now extinct, so that the number of existing clans in these two villages seems to be ninety-six. As the total population of the two villages at the census of 1900 was only 324,<sup>1</sup> it follows that the average strength, or rather weakness, of each clan in these villages was three persons and a fraction, all told. These very remarkable figures deserve to be borne in mind in considering the present state of totemism

<sup>1</sup> J. W. Fewkes, in *Handbook of American Indians north of Mexico*, l. 562. Of this grand total Walpi

claimed two hundred and five, and Sichomovi had to be content with one hundred and nineteen.

among the Hopis. No wonder the Hopi clans are ex-  
 amous. A man could not have a very large choice of  
 wives in his own clan, when the rest of it, exclusive of  
 himself, is composed of two whole persons and a fragment  
 of a third, all, or rather both, of whom may possibly be  
 males.

Most of these clans occur in the other Hopi villages,  
 though not in Hano. The Bear clan is supposed to be the  
 oldest in Tusayan, and the Snake clan is said to have been  
 among the first to settle in the district. Together, the  
 Snake and Horn people control the Antelope and Snake  
 fraternities and possess the fetishes and other paraphernalia  
 of the famous Snake dance. The palladium of this people  
 is kept at Walpi. The Flute people, once very numerous,  
 are now nearly extinct in the Hopi villages of the Eastern  
 Tableland. The chief of the Flute priesthood controls the  
 Flute ceremony, which occurs biennially, alternating with  
 the Snake dance. There are two divisions of the Flute  
 fraternity, one known as the Drab Flute and the other as  
 the Blue Flute. There are Horn people in most of the  
 Hopi villages, and clans belonging to this phratry are  
 generally named after horned animals. They now join the  
 Snake priest in the Antelope rites of the Snake dance. The  
 Water-house or Cloud (*Patki*) phratry includes a number of  
 clans which came to the Hopi country from the south,  
 bringing with them a high form of sun and serpent worship,  
 which is still prominent at the Winter Solstice ceremony.  
 The Sun priests, who are found in most Hopi villages  
 and are especially strong at Walpi, accompanied the Cloud  
 people.<sup>1</sup> The Snake clan at Walpi is said to be descended  
 from a Snake-woman, who had the power of changing from  
 a snake into a woman. She married a man and gave birth  
 first to snakes but afterwards to human beings, from whom  
 the Snake clan is descended. They established the Snake  
 worship at Walpi, from which it spread to the other Hopi  
 villages.<sup>2</sup>

<sup>1</sup> J. W. Fewkes, in *Handbook of American Indians north of Mexico*, p. 562 sq.

<sup>2</sup> J. G. Bourke, *The Snake-Dance of the Moquis of Arizona* (London, 1884),

p. 177; H. R. Voth, *The Traditions of the Hopi* (Chicago, 1905), pp. 30-35 (Field Columbian Museum, Publication 96). A considerable number of other traditions relating to the Hopi clans

The clans  
of the  
village of  
Hano.

The village of Hano, though it ranks with the Hopi Pueblos, is inhabited, as we have seen, by Indians of a different stock. In 1893 the native population of the village of Hano, exclusive of twenty-three husbands of Hano women, numbered one hundred and forty persons. These were divided into eight clans, namely, the Bear, Corn, Tobacco, Pine, Cloud, Earth, Sacred Dancer (*Kachina*), and Sun. Formerly, they included also the Crane, Timber, Pink Conch, Herb, Turquoise Ear Pendant, Stone, and Grass clans; but these have died out since the Hano people settled in Tusayan.<sup>1</sup>

The Hopi  
phratries  
seem to  
have arisen  
by sub-  
division of  
the original  
clans.

From the table of the Hopi phratries and clans given above<sup>2</sup> it will be seen that each phratry bears a name which is also that of a clan included within it. This points to the subdivision of an original clan of that name into a number of new clans, all but one of which took new names for the sake of distinction. On this subject the remarks of Mr. Cosmos Mindeleff deserve to be quoted. Speaking of the Hopi clans he says that under the rule of female descent, by which children belonged to their mother's clan, not to their father's, "a clan in which there were many girls would grow

have been recorded; but as they appear to relate mainly to the migrations of the people and to throw little or no light on totemism, that is, on the relation of the people to their totems, they need not be considered in this work. See Victor Mindeleff, "A Study of Pueblo Architecture," *Eighth Annual Report of the Bureau of Ethnology* (Washington, 1891), pp. 16 sqq.; J. W. Fewkes, "Tusayan Migration Legends," *Nineteenth Annual Report of the Bureau of American Ethnology*, Part ii. (Washington, 1900) pp. 577 sqq.; H. R. Voth, *The Traditions of the Hopi* (Chicago, 1905), pp. 16-48. From Mr. Voth's book we gather that the clans at the village of Oraibi include the Bear, Spider, Lizard, Sand, Rattlesnake, Badger, Butterfly, and Divided Spring (*Batki*) clans; and that the clans in the village of Mishongnovi include the Divided Spring (*Batki*), Sand, Bear, Parrot, Crow, Crane, Eagle, Corn-Ear, and Sacred Dancer (*Kachina*) clans. For a list of clans in these and the other

Hopi villages, as they existed about 1883, see Cosmos Mindeleff, "Localization of Tusayan Clans," *Nineteenth Annual Report of the Bureau of American Ethnology*, Part ii. (Washington, 1900) p. 651.

<sup>1</sup> *Handbook of American Indians north of Mexico*, i. 531. Captain J. G. Bourke, writing in 1884, says that the Tegua (Tewa) Indians of Hano were divided into nine clans named as follows: Sun, Corn, Snake, Tobacco, Cottonwood, Pine, Cloud, Bear, and Parrot. See J. G. Bourke, *The Snake-Dance of the Moquis of Arizona* (London, 1884), p. 335. According to Mr. Cosmos Mindeleff, about the year 1883 there were at Hano families belonging to the following clans: Bear, Eagle, Sun, Cottonwood, Tansy Mustard (*Asa*), Water (Corn), Water (Cloud), Lizard, Tobacco, and Coyote. See Cosmos Mindeleff, "Localization of Tusayan Clans," *Nineteenth Annual Report of the Bureau of American Ethnology*, Part ii. (Washington, 1900) p. 651.

<sup>2</sup> See pp. 211 sq.

and increase in importance, while one in which the children were all boys would become extinct. There was thus a constant ebb and flow of population within each clan and consequently in the home or houses of each clan. The clans themselves were not fixed units; new ones were born and old ones died, as children of one sex or the other predominated. The creation of clans was a continuous process. Thus, in the Corn clan of Tusayan, under favourable conditions there grew up subclans claiming connection with the root, stem, leaves, blossom, pollen, etc."<sup>1</sup> Thus, we can understand why lists of totemic clans drawn up at different times among the same people may differ from each other considerably, and yet all of them be correct for the time to which they refer.

The Pueblo Indians of the Zuñian stock are comprised within the single large village of Zuñi, which in 1896 was reported to contain 1621 inhabitants.<sup>2</sup> Their country lies between Tusayan, the land of the Hopi Indians, on the west and the Rio Grande valley, the home of the Eastern group of Pueblo Indians. It appears to correspond to the ancient province of Cibola.<sup>3</sup> The present village of Zuñi, which is the largest of all modern Pueblo villages, stands on a knoll beside the Zuñi River. The position is not naturally a strong one, and appears to have been chosen merely because it is conveniently near to a large stretch of arable land watered by what is rare in the land of the Pueblos, a perennial stream. Three miles to the east of it rises the conspicuous and beautiful tableland of red and white sandstone known as Thunder Mountain, on the summit of which lie the ruins of

The Zuñi  
Indians.

The  
present  
village of  
Zuñi.

The ruins  
of the old  
village of  
Zuñi.

<sup>1</sup> Cosmos Mindeleff, "Localization of Tusayan Clans," *Nineteenth Annual Report of the Bureau of American Ethnology*, Part ii. (Washington, 1900) p. 647. Similarly, speaking of the old Hopi gentes (clans), Mr. Victor Mindeleff observes: "There are, moreover, in addition to these, many other gentes and sub-gentes of more recent origin. The subdivision, or rather the multiplication of gentes may be said to be a continuous process; as, for example, in 'corn' can be found families claiming to be of the root, stem, leaf, ear, blossom, etc., all be-

longing to corn; but there may be several families of each of these components constituting district sub-gentes." See Victor Mindeleff, "A Study of Pueblo Architecture," *Eighth Annual Report of the Bureau of Ethnology* (Washington, 1891) p. 38.

<sup>2</sup> F. W. Hodge, "Pueblo Indian Clans," *American Anthropologist*, ix. (1896) pp. 346, 348.

<sup>3</sup> Victor Mindeleff, "A Study of Pueblo Architecture," *Eighth Annual Report of the Bureau of Ethnology* (Washington, 1891), p. 80.

old Zuñi. Its situation, unlike that of the modern village, is impregnable; for the tableland is a thousand feet above the plain and almost inaccessible, the sides being for the most part too precipitous to be scaled. Two foot-paths traversing abrupt slopes, where holds for hands and feet have been chipped out of the rock, furnish a precarious approach to the summit. Many legends and superstitions of the Zuñi cluster round these airy ruins; and amongst the crags, hidden away in secluded nooks or perched on nearly unapproachable pinnacles and slopes, are many shrines and sacred objects to which the Indians go on pilgrimage.<sup>1</sup>

Totemic  
clans of  
the Zuñi.

The Indians of Zuñi are or were till lately divided into twenty-four totemic clans, of which the names are as follows:—<sup>2</sup>

- |                                  |                                         |
|----------------------------------|-----------------------------------------|
| 1. Crane or Pelican.             | 2. Grouse or Sagecock (Chaparral Cock). |
| 3. Yellow-wood or Evergreen-oak. | 4. Bear.                                |
| 5. Coyote.                       | 6. Red-top plant or Spring-herb.        |
| 7. Tobacco.                      | 8. Maize-plant.                         |
| 9. Badger.                       | 10. Deer.                               |
| 11. Antelope.                    | 12. Turkey.                             |
| 13. Sun.                         | 14. Sky.                                |

<sup>1</sup> Mrs. Tilly E. Stevenson, "The Religious Life of the Zuñi Child," *Fifth Annual Report of the Bureau of Ethnology* (Washington, 1887), pp. 539 sq.; Victor Mindeleff, "A Study of Pueblo Architecture," *Eighth Annual Report of the Bureau of Ethnology* (Washington, 1891), pp. 80, 89 sq., 97 sq.

<sup>2</sup> F. H. Cushing, "Outlines of Zuñi Creation Myths," *Thirteenth Annual Report of the Bureau of Ethnology* (Washington, 1896), p. 368; Mrs. Matilda Coxé Stevenson, "The Zuñi Indians," *Twenty-third Annual Report of the Bureau of American Ethnology* (Washington, 1904), p. 292; J. G. Bourke, "Notes upon the Gentile Organization of the Apaches of Arizona," *Journal of American*

*Folk-lore*, iii. (1890) p. 116. Mrs. Stevenson gives a list of sixteen existing and four extinct clans, which agrees with that of Mr. Cushing except that (1) she omits the Water and Rattlesnake clan; (2) she adds the Wood, Cotton-tail rabbit, and Black corn clans; (3) she translates the native word *Pichikwe* as "Dogwood," whereas Cushing translates it "Parrot-Macaw." Elsewhere Mrs. Stevenson records a tradition that the *Pichikwe* (Dogwood clan) was divided into a Macaw (*Mula*) section and a Raven (*Kākā*) section (*op. cit.* p. 40). Captain Bourke gives a list of fourteen clans. In the text the first nineteen clans are taken from Mr. Cushing's list, the next three from Mrs. Stevenson's, and the last two from Captain Bourke's.

With regard to the rules of marriage in Zuñi we have unfortunately no information; but we may presume that the Zuñi clans, like those of other Pueblo Indians, are or once were exogamous, that is, that no man was allowed to marry a woman of his own clan. We are told that descent and inheritance are in the female line,<sup>1</sup> which implies that children belong to the clan of their mother, not to that of their father. But "while descent is through the maternal side, the offspring is also closely allied to the father's clan. The child is always referred to as belonging to the mother's clan and as being 'the child' of the father's clan."<sup>2</sup> Further, the Zuñi clans, says Mr. Cushing, are "totemic; that is, they bear the names and are supposed to have intimate relationship with various animals, plants, and objects or elements."<sup>3</sup> But what precisely the relationship is supposed to be between a person and his or her totem, Mr. Cushing omits to say, nor is the omission, so far as I know, supplied by any other writer. Here, as in the case of most of the tribes within the area of the United States, we are left without exact information as to the essence of totemism, that is, the nature of the relation which is supposed to exist between a totemic clan and its totem.

The Eastern group of Pueblo Indians occupy, as we have seen,<sup>4</sup> a considerable number of villages scattered about in the valley of the Rio Grande, and they belong to two linguistic stocks, the Tanoan and the Keresan. Like their western brethren in Zuñi and Tusayan, they are divided into totemic clans, of which the names, if little else, have been recorded. One of the villages inhabited by Indians of the Keresan stock is Acoma, strongly situated on a high rock in New Mexico, about sixty miles west of the Rio Grande. It is said to enjoy the distinction of being the oldest inhabited settlement within the United States. The Spaniards, who visited it in 1583, and estimated its

<sup>2</sup> Mrs. Matilda Coxé Stevenson, *l.c.* The statement is obscure, but I have no means of elucidating it.

<sup>3</sup> F. H. Cushing, *l.c.*

<sup>4</sup> Above, pp. 206 *sq.*

population at six thousand persons, speak of the dizzy path that leads up to the town and mention the cultivated fields two leagues away. The number of inhabitants in 1902 had dwindled to five hundred and sixty-six. They were divided into twenty clans named as follows :—

- |                |                  |               |                  |
|----------------|------------------|---------------|------------------|
| 1. Water.      | 2. Yellow corn.  | 3. Red corn.  | 4. Blue corn.    |
| 5. Brown corn. | 6. White corn.   | 7. Eagle.     | 8. Parrot.       |
| 9. Sun.        | 10. Road-runner. | 11. Oak.      | 12. Rattlesnake. |
| 13. Bear.      | 14. Turkey.      | 15. Calabash. | 16. Antelope.    |
| 17. Sky.       | 18. Buffalo.     | 19. Fire.     | 20. Ant.         |

Four of these clans (namely, Blue corn, Brown corn, Buffalo, and Fire) were extinct in 1902. Nothing is said as to the rules of marriage and descent, and nothing as to the relation of people to their totems.<sup>1</sup> On the analogy of those Pueblo Indians as to whose social system we are better informed, we may perhaps assume that the Acoma clans are or were once exogamous, and that the children belong to their mother's clan.

Totemic  
clans  
of the  
Laguna,  
a Pueblo  
people  
of the  
Keresan  
stock.

Laguna is the name of another tribe of Pueblo Indians speaking the Keresan language. They have their principal village on the bank of the San José River in New Mexico, about forty-five miles west of Albuquerque. In 1851 the population of the village was estimated at nine hundred persons ;<sup>2</sup> in 1905 the whole tribe numbered 1384 souls, divided into twenty clans, which were named as follows :—

- |                     |                                                              |                 |
|---------------------|--------------------------------------------------------------|-----------------|
| 1. Bear.            | 2. Sun.                                                      | 3. Badger.      |
| 4. Eagle.           | 5. Watersnake.                                               | 6. Rattlesnake. |
| 7. Coyote.          | 8. Corn (divided into<br>8. Yellow corn and<br>9. Red corn). | 10. Water.      |
| 11. Turkey.         | 12. Wolf.                                                    | 13. Earth.      |
| 14. Mountain lion.  | 15. Parrot.                                                  | 16. Turquoise.  |
| 17. Chapparal-cock. | 18. Antelope.                                                | 19. Lizard.     |
| 20. Oak.            |                                                              |                 |

Two of these clans (namely, Earth and Mountain lion) were extinct in 1905. Most of the clans were grouped

<sup>1</sup> F. W. Hodge, in *Handbook of American Indians north of Mexico*, i. 10 sq.

<sup>2</sup> Dr. P. G. S. Ten Broeck, in H. R. Schoolcraft's *Indian Tribes of the United States*, iv. 75 sq.

together in phratries, of which the following have been recorded :—

Grouping of the Laguna clans in phratries.

Phratries.	Clans.	Phratries.	Clans.
I. <i>Phratry</i>	1. Bear. 2. Badger. 3. Coyote. 4. Wolf.	III. <i>Phratry</i>	1. Water-snake. 2. Rattlesnake. 3. Lizard. 4. Earth.
II. <i>Phratry</i>	1. Mountain-lion. 2. Oak.	IV. <i>Phratry</i>	1. Antelope. 2. Water.

The writer who gives us this information says nothing as to the rules of marriage and descent in the tribe.<sup>1</sup> Fortunately in the case of the Laguna people we are not left merely to conjecture. An older writer, the Rev. Samuel Gorman, has supplied the requisite information. Writing of the Pueblo Indians in 1860, he says: "Each town is classed into tribes or families, and each of these groups is named after some animal, bird, herb, timber, planet, or one of the four elements. In the pueblo of Laguna, which is one of above one thousand inhabitants, there are seventeen of these tribes; some are called bear, some deer, some rattlesnake, some corn, some wolf, some water, etc. etc. The children are of the same tribe as their mother. And, according to ancient custom, two persons of the same tribe are forbidden to marry; but, recently, this custom begins to be less rigorously observed than anciently."<sup>2</sup> Thus the totemic clans of the Laguna Indians are or were exogamous, with descent in the female line; which agrees with the few statements on that subject which have been vouchsafed with reference to the other Pueblo Indians.

Rules of marriage and descent among the Laguna.

The Sia are another Pueblo people of the Keresan stock.<sup>3</sup> Their village stands on high ground beside the Jemez River, a western tributary of the Rio Grande. The people are poor and shrunken in numbers, inhabiting only a small group of houses among the extensive ruins of what

The Sia, a Pueblo people of the Keresan stock.

<sup>1</sup> F. W. Hodge, in *Handbook of American Indians north of Mexico*, i. 752 sq.

of New Mexico, quoted by L. H. Morgan, *Ancient Society*, p. 180.

<sup>2</sup> The Rev. Samuel Gorman, in an address to the Historical Society

<sup>3</sup> F. W. Hodge, "Pueblo Indian Clans," *American Anthropologist*, ix. (1896) p. 346.

was formerly one of the largest towns of this region. According to the census of 1890 they numbered only one hundred and six persons. So scanty is the supply of water that the Sia cannot grow enough grain to supply their needs; but the women labour industriously at the manufacture of pottery, and the men barter their wares for corn and wheat with their neighbours.<sup>1</sup> The Sia were formerly divided into at least twenty-three totemic and exogamous clans, of which the names have been recorded as follows:—<sup>2</sup>

- |                  |                 |                       |
|------------------|-----------------|-----------------------|
| 1. Corn.         | 2. Coyote.      | 3. Squash.            |
| 4. Tobacco.      | 5. Bear.        | 6. Eagle.             |
| 7. Star.         | 8. Moon.        | 9. Sun.               |
| 10. Deer.        | 11. Antelope.   | 12. Cougar.           |
| 13. Cloud.       | 14. Crane.      | 15. Oak.              |
| 16. Fire.        | 17. Parrot.     | 18. White shell bead. |
| 19. Ant.         | 20. Granite.    | 21. Cactus.           |
| 22. Turtle Dove. | 23. Sage Brush. |                       |

However, by 1890 all but the first six of these clans were extinct, and even of the first six the Eagle, Bear, and Squash clans were almost extinct, being represented only by one old man each, though the Squash clan had in addition a second man from Tusayan. The Tobacco clan was represented by a single family. The only two clans numerically well represented were the Corn and the Coyote.<sup>3</sup> The old custom of the tribe forbade a man to marry a woman either of his father's or of his mother's clan; but in 1890, when

Totemic  
clans of  
the Sia.

Marriage  
customs of  
the Sia.

<sup>1</sup> Mrs. Matilda Coxe Stevenson, "The Sia," *Eleventh Annual Report of the Bureau of Ethnology* (Washington, 1894), pp. 9-11.

<sup>2</sup> Mrs. Matilda Coxe Stevenson, *op. cit.* p. 19; J. G. Bourke, "Notes upon the Gentile Organization of the Apaches of Arizona," *Journal of American Folk-lore*, iii. (1890) p. 117. Captain Bourke, who visited Zia (Sia) in 1881, gives a list of eight clans (Turtle Dove, Native Tobacco, Bear, Corn, Eagle, Coyote, Sage Brush, Pumpkin). Mrs. Stevenson, who visited Sia in 1890, gives a list of twenty-one, of which, however, all but six (Corn, Coyote, Squash, Tobacco, Bear, Eagle) were extinct.

At the time of Captain Bourke's visit there were only fifteen families living at Sia, so that the number of members of each clan must have been very small.

<sup>3</sup> Mrs. Matilda Coxe Stevenson, "The Sia," *Eleventh Annual Report of the Bureau of Ethnology* (Washington, 1894), p. 19. Mrs. Coxe left Washington in March 1890 to study the Sia and continued her researches among them to the end of the fiscal year (*op. cit.* p. xxx.). Six years later, in 1895, Mr. F. W. Hodge reported a somewhat different state of things at Sia. According to him there were then sixteen clans in existence, while twenty-one had become extinct. As the

the remnant of the tribe was investigated, the numbers were so shrunken that the Sia had to break through the old exogamous rules or perish. Accordingly marriages with the forbidden clans were looked upon with disfavour but tolerated. The older men watched jealously over the younger men, lest they should seek brides among other tribes; and beautiful as the Sia maidens are esteemed, few suitors came awooing them from other villages; for according to tribal custom a husband takes up his abode in his wife's home, and there is little to attract well-to-do Indians to the ruinous, poverty-stricken village of Sia. "Though the Sia are monogamists, it is common for the married, as well as the unmarried, to live promiscuously with one another; the husband being as fond of his wife's children as if he were sure of the paternal parentage. That these people, however, have their share of latent jealousy is evident from the secrecy observed on the part of a married man or woman to prevent the anger of the spouse. Parents are quite as fond of their daughter's illegitimate offspring, and as proud of them, as if they had been born in wedlock; and the man who marries a woman having one or more illegitimate children apparently feels the same attachment for these children as for those his wife bears him. . . . These loose marriage customs doubtless arise from the fact that the Sia are now numerically few and their increase is desired, and that, as many of the clans are now extinct, it is impossible to intermarry in obedience to ancient rule."<sup>1</sup>

Loose relations of the sexes among the Sia.

Another Pueblo tribe of the Keresan stock are the Cochiti. Their village of the same name stands on the

average number of members in each of the existing clans was 6.62, the population of the village had practically remained stationary since Mrs. Stevenson's visit, though there had been apparently a curious revival of extinct clans, due perhaps to the importation of fresh blood from other villages. At the time of Mr. Hodge's visit the existing clans were the Antelope, Badger, Bear, Calabash, Chapparal Cock, Corn, Coyote, Deer, Eagle, Fire, Parrot, Rattlesnake, Sun, Tobacco, Turkey, and Water; and the extinct clans were Ant, Arrow, Buffalo,

Cloud, Crane, Crow, Dance-Kilt, Dove, Hawk, Ivy, Lizard, Moon, Mountain Lion, Oak, Pegwood (?), Piñon, Salt, Shell bead, Star, Stone, Turquoise. Mr. Hodge visited the Pueblo villages of New Mexico in the summer and autumn of 1895. See F. W. Hodge, "Pueblo Indian Clans," *American Anthropologist*, ix. (1896) pp. 345, 347, 348 *sqq.*, with the table.

<sup>1</sup> Mrs. Matilda Coxe Stevenson, "The Sia," *Eleventh Annual Report of the Bureau of Ethnology* (Washington, 1894), pp. 19-21.

The clans of the Cochiti, a Pueblo people of the Keresan stock.

west bank of the Rio Grande in New Mexico, twenty-seven miles south-west of Santa Fe. In 1907 they numbered three hundred persons and were divided into clans, of which the following nineteen names have been recorded :—

- |                   |                   |                  |
|-------------------|-------------------|------------------|
| 1. Sun.           | 2. Water.         | 3. Cottonwood.   |
| 4. Turquoise.     | 5. Mountain Lion. | 6. Bear.         |
| 7. Calabash.      | 8. Coyote.        | 9. Oak.          |
| 10. Corn.         | 11. Fire.         | 12. Eagle.       |
| 13. Turkey.       | 14. Antelope.     | 15. Rattlesnake. |
| 16. Dance-Kilt.   | 17. Reindeer (?). | 18. Ivy.         |
| 19. Mexican Sage. |                   |                  |

The last eight of these clans were extinct in 1907. Nothing is said as to the rules of marriage and descent in the tribe.<sup>1</sup> We may conjecture that the clans are or were exogamous, and that descent was in the female line.

Clans of Santa Domingo, a Pueblo village of the Keresan stock.

Another Pueblo village inhabited by Indians speaking the Keresan language is Santo Domingo<sup>2</sup> on the Rio Grande in New Mexico. It was visited in 1881 by Captain J. G. Bourke, who found the inhabitants divided into eighteen clans, bearing the following names :—

- |                         |                    |                  |
|-------------------------|--------------------|------------------|
| 1. Eagle.               | 2. Water.          | 3. Toad.         |
| 4. Macaw-Parrot.        | 5. Snake.          | 6. Sun.          |
| 7. Bear.                | 8. Mountain Lion.  | 9. Crane.        |
| 10. Yucca or Soap-weed. | 11. Sage Brush.    | 12. Badger.      |
| 13. Buffalo.            | 14. Coyote.        | 15. Antelope.    |
| 16. Tortoise.           | 17. Evergreen Oak. | 18. Maiz (Corn). |

Some of these clans were represented by only two or three survivors. Though he does not expressly record the rules of marriage and descent among these Indians, Captain Bourke makes a statement from which we may infer that the clans are, as appears to be usual with the Pueblo Indians, exogamous, with descent in the female line. He says that

<sup>1</sup> F. W. Hodge, in *Handbook of American Indians north of Mexico*, i. 317 sq. Captain J. G. Bourke visited Cochiti in 1881 or 1882 and has recorded the names of twelve clans as follows : 1. Macaw ; 2. Melon ; 3. Eagle ; 4. Sun ; 5. Water ; 6. Evergreen Oak ; 7. Antelope ; 8. Badger ; 9. Corn ; 10. Bear ; 11. Turkey ; 12.

Coyote. See J. G. Bourke, "Notes upon the Gentile Organization of the Apaches of Arizona," *Journal of American Folk-lore*, iii. (1890) p. 117.

<sup>2</sup> F. W. Hodge, "Pueblo Indian Clans," *American Anthropologist*, ix. (1896) p. 346; *id.* in *Handbook of American Indians north of Mexico*, i. 675.

an Indian of Santo Domingo "asserted that he was a member of the *Chamisa* or Sage Brush clan, his father was of the Maize or Corn clan, his wife and children of the Coyote, and his wife's father of the *Aguila* or Eagle."<sup>1</sup>

The remaining two Pueblo villages of Indians speaking the Keresan languages are Santa Ana and San Felipe, the latter situated on the Rio Grande and the former on its western tributary the Jemez River.<sup>2</sup> In 1881 or 1882 the Indians of Santa Ana were divided into ten clans, of which the names were these:—<sup>3</sup>

Clans of  
Santa Ana.

- |            |                          |                 |
|------------|--------------------------|-----------------|
| 1. Turkey. | 2. <i>Chalchihuitl</i> . | 3. Turtle Dove. |
| 4. Coyote. | 5. Macaw.                | 6. Corn.        |
| 7. Eagle.  | 8. Snake.                | 9. Badger.      |
| 10. Bear.  |                          |                 |

In the year 1895 the Indians of San Felipe were divided into twenty-one clans, of which three were nearly extinct; and they remembered nine more clans which had become extinct. The names of these clans are as follows:—<sup>4</sup>

Clans of  
San Felipe

- |            |              |                     |
|------------|--------------|---------------------|
| 1. Ant.    | 2. Antelope. | 3. Arrow.*          |
| 4. Bear.   | 5. Calabash. | 6. Chapparal Cock.* |
| 7. Coral.  | 8. Corn.     | 9. Coyote.          |
| 10. Crow.* | 11. Deer.*   | 12. Dove.           |

<sup>1</sup> J. G. Bourke, *The Snake-Dance of the Moquis of Arizona* (London, 1884), pp. 49 sq.

<sup>2</sup> F. W. Hodge, "Pueblo Indian Clans," *American Anthropologist*, ix. (1896) p. 346, with the map of the Pueblo country, in *Eighth Annual Report of the Bureau of Ethnology* (Washington, 1891), Plate I., facing p. 13.

<sup>3</sup> J. G. Bourke, "Notes upon the Gentile Organization of the Apaches of Arizona," *Journal of American Folklore*, iii. (1890) p. 116. In 1895 Mr. F. W. Hodge recorded only seven clans at Santa Ana, as follows: 1. Corn; 2. Coyote; 3. Dove; 4. Eagle; 5. Fire; 6. Parrot; 7. Turkey. See F. W. Hodge, "Pueblo Indian Clans," *American Anthropologist*, ix. (1896) pp. 348 sqq., with the table, Plate VII.

<sup>4</sup> F. W. Hodge, *op. cit.* pp. 348 sqq., with the table, Plate VII. The clans

whose names are distinguished by an asterisk were extinct at the time when Mr. Hodge wrote. Captain Bourke visited San Felipe in 1881 or 1882 and has recorded sixteen clans as follows: 1. Eagle; 2. Sun (almost extinct); 3. Water; 4. Antelope; 5. Corn; 6. Frog; 7. Turkey; 8. Coyote; 9. Turtle Dove; 10. *Bunchi* (native tobacco); 11. *Chalchihuitl*; 12. Snake (extinct); 13. Evergreen Oak (extinct); 14. Badger (extinct); 15. Macaw (extinct); 16. Bear (extinct). See J. G. Bourke, "Notes upon the Gentile Organization of the Apaches of Arizona," *Journal of American Folklore*, iii. (1890) p. 116. In regard to these and other discrepancies between lists of totem clans recorded at different times we must always bear in mind the more or less constant flux to which totem clans are subject. See above, pp. 214 sq.

- |                     |                             |                   |
|---------------------|-----------------------------|-------------------|
| 13. Duck.           | 14. Eagle.                  | 15. Earth.*       |
| 16. Fire.           | 17. Flower (red and white). | 18. Frog or Toad. |
| 19. Humming-bird.   | 20. Ivy.                    | 21. Moon.*        |
| 22. Mountain Lion.* | 23. Oak.                    | 24. Parrot.       |
| 25. Salt.*          | 26. Sun.                    | 27. Swallow.      |
| 28. Tobacco.        | 29. Turkey.                 | 30. Turquoise.*   |
| 31. Water.          |                             |                   |

The writer who has recorded the names of these clans says nothing as to the rules of marriage and descent. But on the analogy of the other Pueblo Indians, about whom these particulars have been given, we may conjecture that the clans of Santa Ana and San Felipe are or were at one time exogamous, and that children belong to their mother's clan.

Lastly, the Pueblo Indians who speak dialects of the Tanoan language, and occupy a considerable number of villages in the valley of the Rio Grande,<sup>1</sup> are or have been divided into many clans, of which not a few are now extinct. The following names of their clans, existing or extinct, have been recorded by Mr. F. W. Hodge:—<sup>2</sup>

- |                   |                     |                      |
|-------------------|---------------------|----------------------|
| 1. Ant.           | 2. Antelope.        | 3. Axe.              |

<sup>1</sup> For the names of their villages, see above, p. 207.

<sup>2</sup> F. W. Hodge, "Pueblo Indian Clans," *American Anthropologist*, ix. (1896) pp. 348 *sqq.*, with the table, Plate VII. Two of these villages, namely, Jemez on the Jemez River in New Mexico and Isleta in Texas, were visited by Captain Bourke in 1881, and he has recorded the names of their clans. In Jemez, of which the population was 401 in 1881, Captain Bourke recorded the names of ten clans as follows: 1. *Chalchihuitl*; 2. Coyote; 3. Corn; 4. Pine; 5. Evergreen Oak; 6. Sun;

7. Eagle; 8. Badger; 9. Pumpkin; 10. Crow (only one man left). In Isleta, which in 1881 was almost completely Mexicanised and contained thirty-six families and four widows, Captain Bourke recorded the names of twelve clans, as follows: 1. Corn; 2. Eagle; 3. Sun; 4. Water; 5. *Chalchihuitl*; 6. Bear; 7. Turtle Dove; 8. Rabbit; 9. Watermelon, or Pumpkin; 10. Goose, or Turkey; 11. Coyote (extinct); 12. Snake (extinct). See J. G. Bourke, "Notes upon the Gentile Organization of the Apaches of Arizona," *Journal of American Folklore*, iii. (1890) p. 117.

These clans are variously distributed among the villages of the Tanoan-speaking Indians. Some of them are represented only in a single village, others in two, three, four, and so on. The total population of the Tanoan-speaking villages, including the village of Hano, was reported in 1896 to number three thousand two hundred and sixty-six.<sup>1</sup> The writer who has recorded the names of the Tanoan clans says nothing as to their rules of marriage and descent. But on the analogy of other Pueblo Indians we may conjecture that the clans are or were at one time exogamous, and that children belong to their mother's clan.

Amongst the Hopis, and perhaps among the other Pueblo Indians, though as to them we have no information, personal names regularly refer to the clan totem of the giver, not the bearer, of the name. When a child is twenty days old, it receives its first names from the grandmother or, if she be not living, from some aunt or other near relative on the mother's side, and from other women. All these women must belong to the clan of the mother and child. Of the names thus bestowed one usually sticks and is called the "child-name." It is retained until the child is initiated into some order or society, when it receives a new name from the godfather or godmother who presents it for initiation. Sometimes a new name is also given at these initiations by

Among the Hopi Indians personal names refer to the totem of the giver, not the bearer, of the name.

<sup>1</sup> F. W. Hodge, "Pueblo Indian Clans," *American Anthropologist*, ix. (1896) p. 346, with the table, Plate VII. As to the village of Hano,

which is situated among the Hopis (Moquis) Indians in Tusayan, see above, p. 207 note <sup>2</sup>.

the leaders of the ceremony. Such initiations, however, are by no means confined to the age of childhood, but may take place at any time. A few specimens will illustrate the relation of Hopi personal names to the clan totems of the persons who bestow them. Thus a member of the Bow clan may bestow the personal name of "Arrow." A member of the Crane clan may give the name of "Crane." A member of the Squash clan may give the name of "The one that figures a Blossom"; a member of the Bluebird clan may give the names of "Bluebird," "Little Bluebird," "Follow the Bluebird," "Bluebird Walk," "Bluebird Hunt," and so forth. A member of the Bear clan may give the names of "Bear," "Little Bear," "Bear Maiden," "Bear Claw." A member of the Parrot or Macaw clan may give the names of "Parrot Maiden," "Parrot Tail," "Parrots Alighted," "Parrots Flown Away," and so on. A member of the Spider clan may give the name of "Spider Web." A member of the Eagle clan may give the names of "Eagle Man," "Eagle Sits," "Eagle Stand," and so on. And similarly with other clans.<sup>1</sup>

Members of each clan and phratry seem formerly to have dwelt together in the villages.

In old days apparently each clan and each group of clans, which we call a phratry, dwelt by itself in its own cluster or row of houses in the common Pueblo village; and to some extent this local grouping of kins may still be traced in the villages and towns of these Indians. "Related clans," we are told, "commonly built together, the newcomers seeking and usually obtaining permission to build with their kindred; thus clusters of rooms were formed, each inhabited by a clan or a phratry. As occupancy continued over long periods, these clusters became more or less joined together, and the lines of division on the ground became more or less obliterated in cases, but the actual division of the people remained the same and the quarters were just as much separated and divided to those who knew where the lines fell. But as a rule the separation of the clusters is apparent to every one; it can nearly always be traced in the ground plans of ruins, and even in the great valley pueblos, which were probably inhabited continuously for several centuries, the principal division

<sup>1</sup> H. R. Voth, *Hopi Proper Names* 80 sq., 81 sqq., 88, 91 sq. (Field Chicago, 1905), pp. 67 sq., 74, 76 sq., Columbian Museum, Publication 100

may still be made out. In the simpler plans the clusters are usually well separated.”<sup>1</sup> “At the present time the house of the priestess of the clan is considered the home of that clan, and she has much to say about proposed marriages and other social functions.”<sup>2</sup>

Each Pueblo clan has its totemic badge, which consists of a conventional representation or symbol of the clan totem. Such badges or crests serve members of the clan as signatures, and they are worn by persons who represent the clan at foot-races and other ceremonies. For example, if a dancer is of the Eagle clan, he will be decorated on his breast or back with an eagle or with some conventional mark which everybody knows to be the badge of the Eagles. Similarly with representatives of the Corn, Tobacco, Bear, Badger, and other clans.<sup>3</sup>

Totemic badges of the Pueblo Indians.

The Pueblo Indians are an eminently religious people, and devote much time, especially in winter, to the performance of complicated rites intended to ensure an adequate supply of rain, the growth of corn, and other blessings. Many of these ceremonies are dramas in which the parts of gods and goddesses or other supernatural beings are played by masked men and women, or by men disguised as women. Such mystery plays are acted in the piazza or square of the village and are watched with enthusiasm by the inhabitants of both sexes seated on the terraced roofs of the houses, as on the tiers of a great theatre or amphitheatre. If any doubt existed as to the essentially religious or rather perhaps magical origin of the drama, the elaborate ritual of the Pueblo Indians, with its personation of gods and goddesses by masked men, might help to dissipate the doubt. Such maskers and masquerades are known among the Hopis as

Religious or magical dramas of the Pueblo Indians, in which masked actors personate gods.

<sup>1</sup> Cosmos Mindeleff, “Localization of Tusayan Clans,” *Nineteenth Annual Report of the Bureau of American Ethnology*, Part ii. (Washington, 1900) p. 648; compare the same writer’s whole discussion of the subject, pp. 646-653. Captain Bourke also observes that each clan lives in its own section or ward of the village (*The Snake-Dance of the Moquis of Arizona*, p. 229).

<sup>2</sup> Cosmos Mindeleff, “Localization of Tusayan Clans,” *Nineteenth Annual Report of the Bureau of American Ethnology*, Part ii. (Washington, 1900) p. 653.

<sup>3</sup> J. G. Bourke, *The Snake-Dance of the Moquis of Arizona* (London, 1884), p. 229; J. W. Fewkes, “Tusayan Totemic Signatures,” *American Anthropologist*, v. (1897) pp. 1-11.

The masks are thought to transform the actors into the gods whom they personate.

The Hopi rites are based in the main on sympathetic magic.

*kachinas*, and the same name is applied by them to the supernatural beings themselves who are personated. "E the use of these masks or helmets," we are told, "the participant is supposed to be transformed into the deity represented." But when we speak of gods, deities, and worship in this connection it should be borne in mind that "w undoubtedly endow the subject with conceptions which do not exist in the Indian mind, but spring from philosophical ideas resulting from our higher culture. For the first two the more cumbersome term 'supernatural beings' is more expressive, and the word 'spirit' is perhaps more convenient except from the fact that it likewise has come to have a definite meaning unknown to the primitive mind. Worship, as we understand it, is not a proper term to use in the description of the Indian's methods of approaching his supernal beings. It involves much which is unknown to him, and implies the existence of that which is foreign to his conceptions. Still, until some better nomenclature, more exactly defining his methods, is suggested, these terms from their convenience will still continue in common use." "The Hopi ritual is extraordinarily complex and time-consuming, and the paraphernalia required is extensive. Although the Hopi cultus has become highly modified by a semi-arid environment, it consisted originally of ancestor worship, embracing worship of the great powers of nature—sky, sun, moon, fire, rain, and earth. A confusion of effect and cause and an elaboration of the doctrine of signature pervade all their rites, which in the main may be regarded as sympathetic magic."<sup>2</sup>

<sup>1</sup> Jesse Walter Fewkes, "The Group of Tusayan Ceremonials called *Katchinas*," *Fifteenth Report of the Bureau of Ethnology* (Washington, 1897), pp. 251-263, etc.; the quotations in the text are taken from pp. 263 and 253 respectively. Elsewhere Mr. Fewkes has argued that the maskers called *kachinas* (*Katchinas*) "represent the dead or the totemic ancients of clans; or, in other words, the spirits of deceased members of the clan with totemic symbolic paraphernalia characteristic of the ancients." See his article, "An Interpretation of *Katchina* Worship,"

*Journal of American Folk-lore*, xiv (1901) pp. 81-94. As to the Hopi religion in general and the *kachinas* (or *Katchinas*) in particular see also J. W. Fewkes, in *Handbook of American Indians north of Mexico*, i. 566 sq. The masked dances of the Pueblo Indians were first described by Dr. P. G. S. Ten Broeck in 1852. See H. R. Schoolcraft's *Indian Tribes of the United States*, iv. 83-85.

<sup>2</sup> J. W. Fewkes, in *Handbook of American Indians north of Mexico*, i. 567.

At the present day the religious or rather perhaps magical rites of the Pueblo Indians appear to be performed for the most part by religious fraternities, the members of which are not restricted to any particular totemic clan. Accordingly a full consideration of the elaborate ritual of these people does not fall within the scope of a treatise on totemism, and I shall not attempt it. But it may be remarked that many of these rites, though now no longer totemic, may have been so originally; in other words, they may in former times have been performed only by members of a particular totemic clan and the intention of the ceremonies may have been to multiply or otherwise influence the totem for the common good. There is a certain amount of evidence that this was so. For example, in regard to the most famous of all the Pueblo ceremonies, the Snake Dance, we are told by the chief authority on the subject, Mr. Jesse Walter Fewkes, that "no one can now doubt that the Snake dance was primarily a part of the ritual of the Snake clan, and that ancestor worship is very prominent in it. We need only look to the clan relation of the majority of priests in the celebration to show its intimate connection with the Snake clan, for the Snake chief, the Antelope chief, and all the adult men of the Snake family participate in it. The reverence with which the ancestor, and particularly the ancestress, of the Snake clan, viz., Tcüamana, is regarded, and the personation of these beings in *kiva* rites, certainly gives strong support to a theory of totemistic ancestor worship."<sup>1</sup>

These religious or magical dramas are now performed by fraternities, the members of which are not confined to any one totemic clan. But perhaps originally the ceremonies may have been totemic; that is, they may have been celebrated by members of a totemic clan for the multiplication or control of their totem. Thus the Snake dance may once have been a ceremony of the Snake clan.

The Snake Dance was witnessed by Captain J. G. Bourke of the United States Army at the Hopi village of Hualpi (Walpi) on the twelfth of August 1881; and his description was the first to attract general attention to the rite. The ceremony, which is not confined to the Hopis or Moquis, though perhaps it originated with them, has since been often described. Its main feature is a dance performed by men, each of whom holds a live serpent between his teeth. It is

Captain Bourke's description of the Snake Dance at Walpi in August 1881.

<sup>1</sup> Jesse Walter Fewkes, "Notes on Tusayan Snake and Flute Ceremonies," *Nineteenth Annual Report of the Bureau of American Ethnology*, Part

ii. (Washington, 1900) p. 965; compare *id.* "The Growth of the Hopi Ritual," *Journal of American Folk-lore*, xi. (1898) pp. 190 sq.

said that most of the serpents used in the rite are venomous and that nothing is done to render them innocuous, though men distract the attention of the reptiles from the dancer by tickling them with sacred wands, which have incised on them the figure of a long green snake and are tipped with eagle feathers. The weird procession of the dancers marches round and round a sacred rock which rises from the ground in the piazza at Walpi. Women, both maidens and matrons scatter sacred corn-meal on the serpents and on the dancers from beautifully decorated baskets which they carry in their hands, till the air is misty with the flour and the ground is white as driven snow. This scattering of the corn-meal has a sacred significance; and the lips of the women engaged in it may be seen moving in prayer. After the serpents have been spat out on the ground by the dancers and sprinkled with meal by the women, most of them are placed for a moment or two in the hands of little boys, who handle them apparently without fear. Finally, the serpents are carried by runners at full speed down the precipitous path which leads from the village to the plain, where the reptiles are set at liberty. All the time the men are racing down the steep slope with their wriggling burdens, an old man whirls a bull-roarer so as to produce a humming, whirring sound like that of rain driven by the wind. The same sound is made in the same way when the head of the sacred procession first emerges to view on the piazza.<sup>1</sup> A medicine-man informed Captain Bourke that by making this sound they compelled the wind and rain to come to the aid of the crops. At a later time the same officer found the bull-roarer

The scattering of the sacred meal.

The serpents placed in the hands of boys and then set free.

Bull-roarers whirled to make wind and rain.

used by the Apaches for the same purpose.<sup>1</sup> The time occupied by the whole ceremony was not more than half or three-quarters of an hour. More than a hundred snakes were used in it.<sup>2</sup> The ceremony appears to take place regularly in August, but the days on which it is held are known to have varied at the village of Walpi in different years from the 12th to the 21st of the month.<sup>3</sup> The meaning of the Snake Dance is very uncertain. Mr. J. W. Fewkes, who has studied it carefully, inclines to believe that the dance "has two main purposes, the making of rain and the growth of corn, and renewed research confirms my belief, elsewhere expressed, that ophiolatry has little or nothing to do with it."<sup>4</sup> In this connection it deserves to be noted that a part of the Snake Dance, as it was witnessed by Captain Bourke, who had no such theory of its meaning, consisted in an imitation of corn-planting performed by the dancers as they slowly pranced by twos, arm in arm, round the sacred rock.<sup>5</sup>

Theory that the Snake Dance is intended to make the rain fall and the corn grow.

The theory that the Snake Dance was originally a totemic ceremony performed by persons of the Snake clan and by them alone is confirmed by a statement of Nanahe, a Hopi (Moqui) Indian, an intelligent, quiet, and well-behaved man, whose evidence was interpreted to Captain Bourke by Mr. Frank Cushing. This man said that he was a member of the Maize or Corn clan of the Moquis, but also a member of the Snake Order, a secret society to which is entrusted the preparation and care of the dance. By a rule of the Moquis none but a member of the Snake clan may belong to the Snake Order; only when a member of the Snake clan dies,

Statement of a Hopi Indian that only

members of the Rattlesnake clan or their sons may belong to the Snake Order, the secret society which manages the Snake dance.

his son is allowed to participate in the sacred drama. On the subject of the Snake Order and its relation to the Snake clan the Indian's evidence ran thus: "You must not ask me to give you any information about that order. I am a member of it. It is a secret order, and under no circumstances can any of its secrets be made known. Very few people, even among the Moquis, know anything about it, and its members would be more careful to keep its affairs from the knowledge of the Moquis, not members, than they would from you. This order was first organised in the Grand Cañon of the Rattlesnakes, the Grand Cañon of the Cohoninos, the Cañon of the Ava-Supais, and our people in their migration from that point eastward brought the secret with them. At first all members of the order were members of the Rattlesnake gens [clan], but as time passed the descendants of that clan became too numerous and were mixed up with all the other gentes [clans] of our people. To keep the order from getting too big, no members were taken in unless they were members of the Rattlesnake gens, or sons of the members of that gens, as in my case. But if a man had no other claim than by inheritance, and did not possess the qualifications demanded of aspirants, he would surely be rejected; while I think that a man of brave heart and good character, willing to comply with all the rules imposed, would be likely to be admitted without consideration of his father's or his mother's want of connection with the Rattlesnake gens. From the Moqui villages the order spread to other villages; the headquarters, however, always remained among the Moquis."<sup>1</sup> This account of the manner in which the rites of the Snake clan gradually passed out of the exclusive possession of the clan and were transferred to a secret society known as the Snake Order may very well apply, with the necessary modifications, to the development of many secret societies out of totem clans.

Ceremony performed by the Frog clan

Again, the Frog clan of the Zuñi Indians performs an annual ceremony, which reminds us of the *intichiuma* or magical rites performed by totem clans in Central Australia

<sup>1</sup> J. G. Bourke, *The Snake-Dance of the Moquis of Arizona* (London, 1884), pp. 180 sq.

for the multiplication of their totems. In the arid land inhabited by the Pueblo Indians the great want is water; accordingly rain is the prime object of their prayers and ceremonies, the constant preoccupation of their minds.<sup>1</sup> Now the frog is an animal associated with water; hence the Frog clan is naturally charged with the performance of ceremonies for the procuring of rain. About five miles to the east of the present village of Zuñi there is a spring of water which flows into a rocky basin some twenty feet long. Terraced ledges, whether natural or artificial is uncertain, run round the basin under the surface of the water. This spring is cleaned out by members of the Frog clan after the installation of a new Sun Priest (*pekwin*) and at such other times as may be deemed necessary. On the day appointed the Sun Priest, accompanied by men and women of the Frog clan, repairs to the pool. There the Frog men, descending into the pool, scoop up the water in bowls and pass it to the women, who pour it out. When the basin has thus been nearly emptied, feathers are attached to the bowls, and the Sun Priest then deposits them on the ledges of rock. These ledges are literally covered with bowls which have been thus deposited from time immemorial. After that the Sun Priest takes a bunch of feathers or prayer-plumes (*telikinawe*), weights them with a stone, and throws the feathers and stone together into the water of the spring, now only a few inches deep. As he does so, he utters the following prayer: "We pray that the Rain-makers (*uwannami*) will work for us, that our crops and the crops of all the world may be watered and be plentiful, that our people and all people may be happy, that our people may not die but sleep to awake in Kothluwalawa."<sup>2</sup> The

of the Zuñi  
Indians for  
the making  
of rain.

Prayer to  
the Rain-  
makers.

<sup>1</sup> Mrs. Matilda Coxe Stevenson, "The Zuñi Indians," *Twenty-third Annual Report of the Bureau of American Ethnology* (Washington, 1904), pp. 21, 175. Compare the observations of Mr. Walter Hough: "The aridity of the climate has had a profound effect on the religious beliefs and practices of the Hopi. To the traveler going for the first time among the white people experiencing the severe probation of this region, water

would seem to be the chief good. One might think that no conversation was ever carried on in Arizona in which the subject of the lack of water was not a primary topic" ("The Hopi in relation to their Plant Environment," *American Anthropologist*, x, (1897) pp. 33 sq.).

<sup>2</sup> Mrs. Matilda Coxe Stevenson, "The Zuñi Indians," *Twenty-third Annual Report of the Bureau of American Ethnology* (Washington, 1904), pp. 58-60. Kothluwalawa is

prayer-plumes (*telikinawe*) are supposed to waft the prayer to the supernatural beings to whom they are addressed. Such plumes play a great part in Zuñi myth and ritual. Thousands of them are offered every year to the various gods and goddesses of the Zuñi pantheon.<sup>1</sup> The Rain-makers thus invoked by the Sun Priest are the spirits of the dead Zuñi men and women and children, who are supposed to pass to and fro in the upper air, hidden from the sight of the living by cloud masks, but carrying vases and gourds full of water, which they pour down on earth in the form of rain. The clouds are produced by the breath of the gods and by smoke; hence smoking as a means of producing clouds and rain is a conspicuous feature in Zuñi ritual. There is a time at the summer solstice when torch-bearers set fire to grass, trees, or whatever comes in their way in order to make a great cloud of smoke, while two men whirl bull-roarers with a booming sound like rain or thunder, imploring the Rain-makers to water the earth.<sup>2</sup> This attempt to produce rain-clouds by smoke is clearly a case of sympathetic or imitative magic: the desired effect is supposed to be produced by imitating it. Taken with the prayers, which are purely religious, this smoke-making ceremony shews that the Zuñis, like so many other peoples who have risen above the lowest level of savagery, seek to compass their ends by combining magic with religion.

But while the Frog clan of the Zuñis performs a ceremony of which the intention seems to be to ensure rain for the crops, the function of procuring the necessary showers is committed by the Zuñis mainly to a body of Rain Priests (*Ashiwanni*), whose business it is to fast and pray for rain, but who are not drawn from any one totem clan. It is possible that just as the Snake Order among the Hopis appears to have been developed out of the Snake clan, so the Rain Priests of the Zuñis have been developed out of

a salt lake at some distance from Zuñi, to which the souls of the dead are supposed to go immediately after their decease. A solemn pilgrimage is made to the lake by some of the Zuñis every year about the summer solstice. See Mrs. Matilda Coxé Stevenson, "The Zuñi Indians,"

*Twenty-third Annual Report of the Bureau of American Ethnology* (Washington, 1904), pp. 20, 153 sqq.

<sup>1</sup> Mrs. Matilda Coxé Stevenson, *op. cit.* pp. 171 sq.

<sup>2</sup> Mrs. Matilda Coxé Stevenson, *op. cit.* pp. 20 sq., 158.

The Rain-makers are thought to be dead Zuñi people who pour water from vessels on the earth. Raising a smoke is resorted to as a means of producing clouds and rain on the principle of sympathetic magic.

The Rain Priests of the Zuñis.

the Rain or the Cloud clan ; but this is merely a conjecture, I know of no evidence in support of it. The Rain priesthood is indeed confined to certain families, but these families belong to several clans, among which the Rain and Cloud clans appear not to be included. The methods adopted by the Rain Priests to procure rain for the people combine the principles of magic and religion. No secular work is done by these men ; they are set apart for the discharge of their solemn duties, and their daily life must be such as not to offend the Council of the Gods, who control and direct the Rain-makers. Each of these priests possesses certain fetishes or sacred instruments (*étoné*) which he uses in his professional business. They are hollow reeds, some filled with water and others with edible seeds of all the kinds known to the Zuñis. In one of the water-filled reeds there is kept a small toad (*Bufo punctatus*), which seems to thrive in its cramped quarters. These fetishes are said to symbolise the Earth Mother, rain, vegetation, and everything that nourishes mankind. At a rain-making ceremony in winter the priest draws a picture of a cloud with pollen and meal on the ground and places the water-filled and seed-filled reeds on the picture. This is the most solemn part of the ceremony ; the hearts and minds of all concerned are now filled with adoring wonder at these holiest of fetishes and with a trembling hope that the gods will thus be moved to water the earth. It is a supreme moment with the Zuñis and has been compared by an eyewitness to the administration of the Holy Eucharist in the Catholic Church. Afterwards the priest with the assistance of a female associate consecrates a mixture of water, meal, and a powdered root in a bowl, and standing up whirls a bull-roarer, while the associate whips the contents of the bowl into frothy suds symbolic of clouds, and another associate plays the flute. "All this," we are told, "is an invocation to the gods for rain—the one great and perpetual prayer of the people of this arid land." Next the priest, laying aside the bull-roarer, dips two eagle feathers in the holy water and with it sprinkles the offerings. All night long the appeal to the gods is crooned in low, weird, yet musical tones. It runs in a set form, of which the following is part :—

Fetishes employed by the Rain Priests.

Prayer to the gods for rain.

- “All come out and give us your showers and great rains ; all come  
 “That the seeds may be strong and come up, that all seed plants may  
 come up and be strong.  
 “Come you that all trees and seeds may come up and be strong.  
 “Come you hither ; all come.  
 “Cover my Earth Mother four times with many flowers.  
 “Let the heavens be covered with the banked-up clouds.  
 “Let the earth be covered with fog ; cover the earth with rains.  
 “Great waters, rains, cover the earth. Lightning cover the earth.  
 “Let thunder be heard over the earth ; let thunder be heard ;  
 “Let thunder be heard over the six regions of the earth.  
 “Rain-makers, come out from all roads that great rivers may cover the  
 earth ;  
 “That stones may be moved by the torrents ;  
 “That trees may be uprooted and moved by the torrents.  
 “Great rain-makers, come out from all roads, carry the sands of our  
 Earth Mother of the place.  
 “Cover the earth with her heart, that all seeds may develop,  
 “That my children may have all things to eat and be happy ;  
 “That the people of the outlying villages may all laugh and be happy ;  
 “That the growing children may all have things to eat and be happy.”

Mimic  
 thunder  
 made as a  
 means of  
 producing  
 rain.

In a summer ceremony for the making of rain the Rain  
 Priest and his associates roll thunder-stones along the ground  
 from a cloud-picture made of meal to a disk of corn pollen,  
 which is called the house of the thunder-stones. At the  
 same time the invocation to the Rain-makers is chanted.  
 The stones called thunder-stones are amongst the most  
 sacred possessions of the Zuñis, who believe that they were  
 dropped to earth by the Rain-makers at their sports in the  
 upper air.<sup>1</sup> The rolling of these stones is clearly an imita-  
 tion of thunder, and the ceremony thus partakes of the  
 nature of imitative or homeopathic magic, the performers  
 mimicking the result which they wish to produce. It is  
 not unreasonable to conjecture that such magical rites were  
 once the special function of a Rain or Water clan, like the  
 similar rites called *intichiuma* by the Arunta in Central  
 Australia.

The Zuñi  
 dance of  
 the Corn  
 Maidens,

Every four years in August, when the corn is a foot  
 high, two bands of Zuñi maidens, ten in each band, personate  
 the mythical Corn Maidens, carrying baskets of corn and

<sup>1</sup> Mrs. Matilda Coxe Stevenson, *American Ethnology* (Washington  
 “The Zuñi Indians,” *Twenty-third Annual Report of the Bureau of*  
 1904), pp. 21, 163-177, 416.

other seeds on their heads, and dancing to the music of two choirs in order that the rains may fall and the corn may grow. They are assisted in this solemn rite by various youths and maidens, including water-sprinklers, a man of the Frog clan, and another who personates the Great Father of Corn and dances in order that the ears of corn may be perfect. In his dance this man wears a perfect ear of corn (not a grain of it may be missing) in the back of his belt. While the dancers are dancing, the choirs sing songs to the Great Mother Corn imploring her to give many of her children in the coming year, and also entreating the Sun Father to embrace the Earth Mother that she may bestow the fruits of her being. The man of the Frog clan smokes a cigarette of native tobacco over vessels of water and stalks of green corn, while both choirs sing that the earth may be abundantly watered. After that the water-sprinklers sprinkle water over a symbolic cloud, baskets of corn, and all persons present. The corn from the baskets is finally put away, kept separate from all the other corn in the house and planted as seed the following year. The whole ritual is elaborate and aims at ensuring a supply of rain and the growth of corn by a combination of religion and magic.<sup>1</sup> We may surmise that originally such rites were the exclusive property of the Corn clan, though there is now no such restriction. Here, as in the case of the Snake Order and the Rain Priests, the magical rites of one totemic clan have perhaps broadened out into a religion of the whole tribe.

a ceremony intended to ensure rain and an abundant crop of corn.

The Indians of Zuñi celebrate elaborate rites at both the solstices, which the Sun Priest determines by observing the points of the mountains where the sun rises on the shortest and sets on the longest day. The ceremonies include at both seasons the kindling of new fire by the friction of wood. At the winter solstice the chosen fire-maker collects a faggot of cedar-wood from every house in the village, and each person, as he gives the fire-maker the wood, prays that the crops may be bountiful in the coming year. For several days before the fire is kindled, no ashes or sweepings may

The Zuñi ceremonies of making new fire by the friction of wood at the summer and winter solstices.

<sup>1</sup> Mrs. Matilda Coxé Stevenson, *American Ethnology* (Washington, 1904), pp. 31 sq., 48 sq., 51-57, *Annual Report of the Bureau of* 180-204.

be removed from the houses and no artificial light may appear outside of them, not even a burning cigarette or the flash of fire-arms. It is the belief of these Indians that no rain will fall on the fields of the man outside of whose house a light has been seen at this season. The exact moment for the kindling of the new fire is fixed by the rising of the Morning Star. The flame is produced by twirling an upright stick between the hands on a horizontal stick laid upon the floor of a sacred chamber, the sparks being caught by a tinder of cedar-dust. It is forbidden to blow up the smouldering tinder with the breath, for that would offend the gods. After the fire has been thus ceremonially kindled, the women and girls of all the families in the village clean out their houses. They carry the sweepings and ashes in baskets or bowls to the fields and there deposit them. To the sweepings the woman says: "I now deposit you as sweepings, but in one year you will return to me as corn." To the ashes she says: "I now deposit you as ashes, but in one year you will return to me as meal." At the summer solstice the sacred fire which has been obtained by the friction of wood is used to kindle the grass and trees, that there may be a great cloud of smoke, while bull-roarers are swung and prayers are uttered that the Rain-makers will water the earth.<sup>1</sup>

The makers  
of the new  
fire.

We might be disposed to conjecture that the duty of kindling the sacred new fire at the solstices had been originally discharged by members of the Sun clan; but the facts do not seem to support this conjecture. For we learn that "the office of fire-maker is filled alternately by a member of the Badger clan and a child of that clan,"<sup>2</sup> that is, by a man whose father is a member of the Badger clan,

<sup>1</sup> Mrs. Matilda Coxe Stevenson, "The Zuñi Indians," *Twenty-third Annual Report of the Bureau of American Ethnology* (Washington, 1904), pp. 108-141, 148-162, especially pp. 108, 109, 114 sq., 120 sq., 130 sq., 132, 148 sq., 157 sq. Among the Hopi Indians of Walpi new fire is ceremonially kindled by friction in November. See J. W. Fewkes, "The Tusayan New Fire Ceremony," *Proceedings of the Boston*

*Society of Natural History*, xxvi. 422-458.

<sup>2</sup> Mrs. Matilda Coxe Stevenson, "The Zuñi Indians," *Twenty-third Annual Report of the Bureau of American Ethnology* (Washington, 1904), p. 114. The writer is here speaking of the new fire at the winter solstice. It does not appear whether the same man kindles the fire also at the summer solstice.

but who is not himself a member of that clan, since children take their clans from their mothers, not from their fathers. Formerly each Pueblo village seems to have regularly maintained a sacred fire, which was tended by old men and never allowed to go out.<sup>1</sup> But no such perpetual fire has been kept up by these Indians since they procured matches and could gather fuel in the neighbourhood without the risk of being surprised and cut off by prowling enemies. In former times the scarcity of wood near home and the necessity of carrying it on their backs for long distances (for they had no beasts of burden till they got them from the Spaniards), compelled them to husband their fuel with the strictest economy, and led to the institution of a central fire in every village, from which the householders might obtain a light when they needed it. But with changed conditions the need, and with it the custom, of keeping up a perpetual fire has passed away.<sup>2</sup>

The custom of maintaining a perpetual fire has died out with the need of it.

In considering the elaborate religious ritual of the Pueblo Indians we must not forget that they have been subject for centuries to Christian and especially to Catholic influence; for the Spaniards established missions among them early in the seventeenth century. It is therefore by no means impossible that the native beliefs and customs of these Indians have been modified by missionary teaching.<sup>3</sup> For example, the Indians of Laguna, we are told, "believe that on a certain day (in August, I think) the dead rise from their graves, and flit about the neighboring hills, and on

The elaborate religious ritual of the Pueblo Indians may perhaps have been influenced by the teaching of the old Spanish missionaries.

<sup>1</sup> In 1851 and 1852 Dr. P. G. S. Ten Broeck reported this for the villages of the Laguna and the Moquis (Hopis). See H. R. Schoolcraft, *The Indian Tribes of the United States*, iv. 76, 86.

102; Victor Mindeleff, "A Study of Pueblo Architecture," *Eighth Annual Report of the Bureau of Ethnology* (Washington, 1891), pp. 21 sqq.; J. W. Fewkes, "The Group of Tusayan Ceremonials called Katcinas," *Fifteenth Annual Report of the Bureau of Ethnology* (Washington, 1897), p. 306; *id.* "Tusayan Migration Traditions," *Nineteenth Annual Report of the Bureau of American Ethnology*, Part ii. (Washington, 1904) pp. 581 sq. The missionaries made themselves very unpopular, not only by their attempts to uproot the native religion, but by imposing a system of forced labour on the Indians, who in their exasperation rose on the monks and massacred them.

that day, all who have lost friends, carry out quantities of corn, bread, meat, and such other good things of this life as they can obtain, and place them in the haunts frequented by the dead, in order that the departed spirits may once more enjoy the comforts of this nether world. They have been encouraged in this belief by the priests, who were in the habit of sending out and appropriating to themselves all these things, and then making the poor simple Indians believe that the dead had eaten them."<sup>1</sup> At first sight we might think that this Indian custom of entertaining the spirits of their dead once a year was nothing but an adaptation of the Catholic feast of All Souls on the second of November; but such festivals have been held by so many purely pagan peoples<sup>2</sup> that we need not suppose the Pueblo Indians to have learned the custom from the priests.

But on the whole it seems to be a genuine aboriginal product.

On the whole, the religious ritual of the Pueblo Indians, so far as it has been described by eye-witnesses, appears to be in the main a genuine product of the aboriginal American mind hardly affected by foreign influence.

Morgan's attempts to ascertain the system of relationship of the Pueblo Indians.

With regard to the system of relationship recognised by the Pueblo Indians we have unfortunately almost no information. Many years ago L. H. Morgan made strenuous efforts to ascertain it and exhausted every available resource in the prosecution of the enquiry, but with extremely little success; and he complained with justice that "although the New Mexican Village Indians are now under the supervision of the national government, through superintendents and agents, their country seems, notwithstanding, to be hermetically sealed, so far as ethnological investigations are concerned, unless they are made in person. India and China are both much more accessible."<sup>3</sup> Forty years and more have passed since the greatest of American ethnologists wrote thus. In the interval a national Bureau of Ethnology has been established in the United States, and its agents have spent years in investigating the customs of the Pueblo Indians, yet nothing

<sup>1</sup> Dr. P. G. S. Ten Broeck, in H. R. Schoolcraft's *Indian Tribes of the United States*, iv. 78.

<sup>2</sup> For examples of similar festivals of the dead in other parts of the world

<sup>3</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, p. 260.

more appears to be now known as to the systems of relationship of this people than was known in Morgan's time. It is to be hoped that Morgan's successors in America, who have given us many minute and valuable descriptions of the elaborate Pueblo ceremonies, may yet turn their attention to the Pueblo systems of consanguinity and affinity and supply us with the necessary information before the opportunity of obtaining it shall have passed away for ever.

In regard to the Pueblo Indians of Laguna it was ascertained by L. H. Morgan that they have separate terms for elder and younger brother (*Sât-tum-si-yă* and *Tüm-mü-hă-mâsh*) and for elder and younger sister (*Sâ-gwets-si-yă* and *Sâ-gue-sâ-ha-mâsh*); that a man calls his father's brother "my father" (*Nish-te-ă*), but his mother's brother "my uncle" (*Să-nou-wa*); that he calls his father's (not his mother's) sister "my mother" (*Ni-ya*); and that he calls his cousin, the son of his father's brother, "my brother" (*Tüm-mü*).<sup>1</sup> So far as they go, these terms point to the existence of the classificatory system of relationship among the Pueblo Indians.

Traces of the classificatory system of relationship among the Pueblo Indians.

### § 13. Exogamy among the Navahoes and Apaches

Bordering on the peaceful agricultural Pueblo Indians are two Indian tribes of a different stock and a different character. These are the once fierce and warlike Apaches and Navahoes or Navajoes. The two tribes are closely akin in blood and language; both belong to what is called the Athapascan or Athabascan family, of whom by far the greater part inhabit the distant territories of the Hudson's Bay Company, British Columbia, and Alaska. This family is indeed the most widely distributed of all Indian families in North America. All the tribes of this stock call themselves by a name which means "men" or "people" and is more or less similar in all the dialects. It has been variously represented as Tinneh, Dené, Dindje, and so forth. The Navahoes call themselves Tinneh or Diné, and the Apaches call themselves Ndé. These two tribes are the most southerly representatives of the stock, forming as it were an isolated vanguard

The Apaches and Navahoes, two tribes of the widespread Athapascan family.

<sup>1</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, p. 262.

The Athapascans have been for the most part hunters and fishers.

which has straggled far away from the main army. With the exception of the Navahoes no tribe of this great family originally tilled the ground. In the bleak regions of north-west America bordering on Hudson's Bay and the Arctic Ocean agriculture was impossible on account of the cold ; and in the southern division, the home of the Apaches and Navahoes, it was at least very difficult, without artificial irrigation, on account of the aridity and heat of the climate. Accordingly the Athapascan tribes have been for the most part hunters and fishers. Even from fishing both the Apaches and the Navahoes were excluded by a strong prejudice against eating fish ; and though bears are numerous in their country and their forests abound with wild turkeys, the Navahoes would not touch the flesh of these creatures. The mainstay of the nomadic Apaches was the American aloe, the so-called mescal or agave, which was cut down by the women and baked in pits. The Navahoes seem always to have been acquainted with maize, but so long as they remained a hunting tribe they detested the labour of planting. It was only when their numbers increased and game grew scarce that necessity compelled them to cultivate corn somewhat more systematically. Having obtained sheep and goats from the whites they have become mainly a pastoral people ; their country is indeed better fitted for raising sheep than for anything else. Their reservation occupies an area of over 12,000 square miles in the extreme north-eastern corner of Arizona and the north-western corner of New Mexico. According to the latest census the Navahoes now number more than 27,000 ; but it is said that this estimate is too high, and that the actual number is about 20,000.<sup>1</sup>

Cultivation of maize by the Navahoes.

(1892-93) pp. 8 sqq. ; Cosmos Mindeleff, "Navaho Houses," *Seventeenth Annual Report of the Bureau of American Ethnology*, Part ii. (Washington, 1898) pp. 481 sq. ; Washington Matthews, *Navaho Legends* (Boston and New York, 1897), pp. 1, 5, 9 sq., 12 sq. ; Father Leopold Ostermann, "The Navajo Indians of New Mexico and Arizona," *Anthropos*, iii. (1908) pp. 857 sqq. As to the

Both the Apaches and the Navahoes are divided into a large number of exogamous clans with descent in the female line, but the names of the clans appear to be local, not totemic; with the single exception of the Navaho name, "Many Goats," which must be a modern designation, no clan bears the name of an animal. Lists of the Apache clans were obtained by Captain J. G. Bourke,<sup>1</sup> and of the Navaho clans by Dr. Washington Matthews.<sup>2</sup> The list given by the latter includes fifty-one names of Navaho clans. They are such as "House of the Black Cliffs," "Bend in a Canyon," "Encircled Mountain," "Among the Waters," "Sage-brush Hill," "Willows," "Red Flat," "Lone Tree," "Overhanging Rocks," "Salt," "Beads," and so forth. The Navaho clans are further grouped together in phratries, but as to the number of the phratries our authorities differ, varying in their statements from eight to twelve. Captain Bourke obtained a list of eleven Navaho phratries with three independent clans. According to tradition the Navaho phratries have been produced both by segmentation and by aggregation of the clans, but oftener apparently by aggregation than by segmentation. In Navaho legend there are frequent allusions to ties of friendship formed between clans of such a nature that marriage between members of these clans was precluded. At the present day no Navaho may marry a woman of his own clan or phratry; neither may he marry a woman of his father's clan or phratry. They believe that if they married women of their own clan, "their bones would dry up and they would die." Every Navaho belongs to his or her mother's clan and bears its name.<sup>3</sup> It is very noticeable that according to Dr. Washington Matthews, our

There are no special names for the Navaho phratries.

best authority on the subject, the Navahoes give no formal names to their phratries. When a man is speaking of a phratry he will often refer to it by naming some one clan in it, usually the most ancient or the most numerous clan. It is easy to suppose, as Dr. Washington Matthews justly observes, that this tendency to name a phratry after one of its clans might end in the permanent and universal use of such a name for a phratry.<sup>1</sup> Thus when we find, as we have often found among the Indian tribes of America, a phratry named after the same animal as one or more of its component clans, it is not necessary to infer, as following Morgan I have commonly done, that the phratry represents an original totemic clan which has been subdivided into the existing clans. It may have been so, but the other possibility, indicated by the Navaho practice, must also be borne in mind. In any case the existence of phratries and exogamous classes without names for them is significant, and, supported as it is by the analogy of the Melanesians, it confirms the view which I have taken that the absence of names for some of the Australian exogamous classes is no proof that these classes once had names but have lost them. Polygamy is general among the Navahoes. The custom is to have two wives, but many men have three, and a few have four or five. Girls are betrothed very young.<sup>4</sup> By common consent the house and all of the domestic gear belong entirely to the wife; the husband owns a few blankets, his saddle and horse-trappings, his weapons, ornaments, and a few odds and ends, but all else that the house covers is his wife's property. If she does not already possess a cornfield by inheritance or purchase, the husband must plant one for her. She has her own sheep and horses, and her husband has no claim on them. The children belong to her wholly, and she has entire control of the domestic life. The father has nothing to say, very little to say with regard to his children, even by way of correction or discipline, and his property does not descend

Among the Navahoes the house and the domestic gear belong to the wife, and the father has little or nothing to do with his own children.

to them at his death, it goes to his nephews or nieces, no doubt the children of his sisters. But if he chooses to distribute his property to his own children in his lifetime, the disposition will be recognised.<sup>1</sup> Among the Navahoes brother and sister may not touch one another nor receive anything directly from each other's hands. Thus, if a sister wishes to give anything to her brother, she places it on the ground and he picks it up.<sup>2</sup> Similarly among the Arapahos, an Algonkin tribe of the plains, a brother and sister may not speak to each other more than is necessary, and a sister is supposed to sit at some distance from her brother.<sup>3</sup> A like custom of avoidance between brothers and sisters has met us elsewhere and an explanation of it has been suggested.<sup>4</sup>

Navaho custom of avoidance between brother and sister.

Dr. Washington Matthews, who spoke with authority on the subject, was of opinion that the Navaho clans were originally and indeed till quite recently local exogamous groups and not true clans. At the same time he found evidence in legend that some of them had once been totemic; for it is said that when they set out on their journey each clan was provided with a different pet, such as a bear, a puma, a deer, a snake, and a porcupine, and that when the clans received their local names, these pets were set free.<sup>5</sup> The Navahoes observe certain taboos in regard to animals, but apparently these taboos are not totemic, since they are not limited to any one clan but are shared by the whole Navaho tribe or nation. On this subject Mr. A. M. Stephen, who knew the Navahoes well, writes as follows: "Several other taboos are also rigidly observed; they must never touch fish, and nothing will induce them to taste one; their forests abound with wild turkey, but they are strictly forbidden to eat them; bears are quite numerous, but as they are also

Evidence that the Navaho clans were once totemic.

taboo they will not even touch a bearskin robe ; nor may any one plant a tree ; and the flesh of swine they abominate as if they were the devoutest of Hebrews. The wood of the hunting corral in which they trap the antelope is also taboo. They observe many curious ceremonies before and during hunt, and all of the tree limbs forming the hunt corral are held as having been sacrificed to the hunting deities. Not only do they abhor food cooked on a fire of wood obtained from these enclosures, but they also keep at a distance from such a fire, dreading to feel its warmth or inhale its smoke.'

Names of  
Apache  
clans.

Among the names of Apache clans collected by Captain Bourke are "Red Rock," "Red Paint," "The Fallen Cottonwood," "Salt Springs," "White Mountain," "Acorn," "Sunflower," "Pine," "People of the Canyon," "Grassy Hill People," "Water Tanks," "Walnut," "Juniper," "Rush Willow," "Broad River," and so forth.<sup>2</sup> The names appear to be local or topographical ; yet the clans are true exogamous

marries his deceased brother's widow ; but he must exercise this right within a year of his brother's death, otherwise the widow is free to marry whom she pleases. On the war-path

Order of  
battle.

Apache clans camp together, and go into battle side by side as my gallant correspondent, the late Captain Bourke, of the United States cavalry, had good opportunity for observing o

Among both Navahoes and Apaches a man avoids his wife's mother. From the time that a Navaho is married, he and his mother-in-law may never look each other in the face again; otherwise they fear they will go blind. Hence they carefully shun each other; they will not sit in the same room and if they meet by accident, they abruptly turn away and get out of each other's sight as fast as they can. Their word for mother-in-law is therefore *Doyishini*, that is, "Whom I do (or may) not see." Yet it is the Navaho custom for the husband to live with his wife's people, and the commonest sounds in a Navaho camp are the friendly shouts warning men and their mothers-in-law to keep apart. To avoid these embarrassments a man will sometimes marry the mother first and then the daughter so as to make the mother-in-law also a wife, thus disarming her of her terrors.<sup>1</sup> A similar custom of marrying, or at least lying with, the mother-in-law before marriage is practised, as we saw,<sup>2</sup> by the Wahehe of East Africa, and probably for the same reason. Among the Apaches also no man will speak to his wife's mother, nor will she speak to him; and they avoid meeting each other. Rather than face his mother-in-law a desperate Apache, the bravest of the brave, has been seen clinging to rocks, from which had he fallen he must inevitably have been dashed to pieces or at least broken several of his limbs.<sup>3</sup>

After repeated and persevering efforts continued through several years L. H. Morgan failed to ascertain the Apache system of relationship,<sup>4</sup> nor has anything, so far as I know, been done since his time to supply this blank in our knowledge.

#### § 14. *Traces of Totemism among the Mohaves*

While the tribes of California, so far as is known, had neither totemism nor a system of exogamous clans, some traces of totemic clans have been detected among the

The Mohaves of the Colorado River.

Their country. Their mode of life. Exogamous clans of the Mohaves.

Mohaves, a tribe whose narrow strip of country lies half in Arizona and half in California, so that the Mohaves are situated midway between the totemic and exogamous tribes of Arizona and New Mexico on the one hand and the non-totemic and non-exogamous tribes of California on the other hand. Their territory lies along both banks of the Colorado River, where that stream forms the boundary between Arizona and California, for about two days' journey southward from the southernmost part of Nevada. The scenery is sullen but impressive. The swift current of the turbid river sweeps along betwixt islets of bleak sand; and lofty, rugged, naked mountains shut in the valley on either side. The surrounding country is a desert; but stretches of land along the river are rendered arable by being annually flooded. Like the other agricultural tribes of this arid region, the Mohaves raised crops of maize, pumpkins, melons and beans. They hunted little, but fished more. Their dwellings were scattered. They had no large villages and no sacred chambers like the *kivas* of the Pueblo Indians. Their houses were low four-sided structures, slightly rounded, with the door to the south.<sup>1</sup>

Captain J. G. Bourke visited the Mohaves in February 1886, and reported that they were divided into fourteen exogamous families or clans bearing the following names:—<sup>2</sup>

- |                                         |                                                     |
|-----------------------------------------|-----------------------------------------------------|
| 1. Moon ( <i>Hual-ga</i> ).             | 2. Rain-cloud ( <i>O-cha</i> ).                     |
| 3. Caterpillar ( <i>Ma-ha</i> ).        | 4. Sun ( <i>Nol-cha</i> ).                          |
| 5. Coyote ( <i>Hi-pa</i> ).             | 6. Ocatilla or Iron Cactus<br>( <i>Ku-mad-ha</i> ). |
| 7. Tobacco ( <i>Va-had-ha</i> ).        | 8. Beaver ( <i>Shul-ya</i> ).                       |
| 9. Mescal or Tobacco ( <i>Kot-ta</i> ). | 10. Mescal ( <i>Ti-hil-ya</i> ).                    |

Men and women of the same clan may not marry under any circumstances. A man marries but one wife at a time; he marries his deceased brother's widow, if he happens to be single at the time of the death. Children belong to their father's clan.<sup>1</sup> According to Mohave tradition their clans were instituted by the water-god Mustam-ho, who created men and women. The legend of the institution of the clans, as related to Captain Bourke by a Mohave Indian of the Tobacco clan, runs thus: "Mustam-ho divided our people up. He said: 'You remain together and take this name for distinction, and you others take that name'; and so on. Now, he said, 'When you want to marry, you *Va-ha-dha* [Tobacco] men cannot marry *Va-ha-dha* [Tobacco] women, because they are your sisters; you must marry some one else, of another name. You must have but one wife at a time, but, if you don't like her, send her away and get another one.'" <sup>2</sup>

Tradition  
of the  
institution  
of the  
Mohave  
clans.

Captain Bourke's account of the clan system of the Mohaves was obtained from a single Mohave Indian, a man of the Tobacco clan; but there seems to be no reason to question its substantial accuracy. If it is correct, it would seem that the Mohaves have, or formerly had, exogamous and totemic clans of the ordinary pattern with descent in the male line. But the tribe has since been more carefully investigated by Mr. A. L. Kroeber in 1900 and 1902, and he reports a somewhat different state of things. It will be best to subjoin his report in his own words. He says: "The Californian tribes, so far as known, all lack any gentile or totemic system. Among the tribes of the Southwest it is a marked feature of the social organization. Among the Mohave there is no full gentile system, but something closely akin to it, which may be called either an incipient or a decadent clan system. Certain men, and all their ancestors and descendants in the male line, have only one name for all their female relatives. Thus, if the female name hereditary in my family be Maha, my father's sister,

my own sisters, my daughters (no matter how great their number), and my son's daughters, will all be called Maha. There are about twenty such women's names, or virtual gentes [clans], among the Mohave. None of these names seems to have any signification. But according to the myths of the tribe, certain numbers of men originally had, or were given, such names as Sun, Moon, Tobacco, Fire, Cloud, Coyote, Deer, Wind, Beaver, Owl, and others, which correspond exactly to totemic clan names; then these men were instructed by Mastamho, the chief mythological 'being, to call all their daughters and female descendants in the male line by certain names corresponding to these clan names. Thus the male ancestors of all the women who at present bear the name Hipa, are believed to have been originally named Coyote. It is also said that all those with one name formerly lived in one area, and were all considered related. This, however, is not the case now, nor does it seem to have been so within recent historic times. It should also be added that many members of the tribe are not aware of the connection between the present women's names and the totemic names of the myth."<sup>1</sup> It must be left for future enquiry to unravel this curious system, and to determine how far it tallies with the social state of the Mohaves as described some sixteen or eighteen years previously by Captain Bourke.

## CHAPTER XVII

### TOTEMISM IN NORTH-WEST AMERICA

#### § 1. *The Races of North-West America*

THE north-western parts of North America, including British Columbia, Alaska, and the region of British America which adjoins Alaska on the east, are inhabited by two entirely distinct races of men, the Eskimo and the Indians, of whom the Eskimo occupy the extreme northern and north-western portions, while the Indians extend eastward and southward from them to the borders of the United States. The vast region occupied by these two races is drained by three great rivers, the Mackenzie River flowing into the Arctic Ocean and the Yukon and Fraser Rivers flowing into the Pacific. The Eskimo or Innuít, as they call themselves, are a peaceful race of fishers and hunters, without chiefs and happily ignorant of war. As a rule, they dwell on or near the sea-coast, seldom wandering inland more than thirty miles; though formerly they extended two hundred miles up the Mackenzie River, till they were driven out by the Indians. The people known as Aleuts, who inhabit the Aleutian Islands stretching westward from Alaska, are a branch of the Eskimo or Innuít stock and speak a language of the same type. Physically as well as in respect of language and customs the Eskimo differ from the Indians; their complexion is a light fresh yellow, their faces broad and round, their eyes straight and black, their cheek-bones high, their noses prominent, and their mouths somewhat thick-lipped.<sup>1</sup> They

have no regular system of totemism, though some traces of it are reported to have been detected among them.<sup>1</sup>

The Indian tribes of North-West America fall into several distinct groups or stocks, of which the principal, to enumerate them from north to south, are as follows:—

1. The Tinnehs or Dénés, a branch of the widespread Athapaskan family, of which the Navahoes and Apaches in Arizona and New Mexico are the most southerly members. These Tinnehs or Dénés are the most northerly of all the Indians of America; on the north and west they are conterminous with the Eskimo. For the most part they inhabit the interior of Alaska and the adjacent British territory; but they extend westward nearly to the delta of the Yukon River and they actually reach the sea-coast at Cook's Inlet and the mouth of the Copper River. Eastward they stretch over a vast area to the watershed which divides the Mackenzie River and Lake Athabasca from the streams which flow into Hudson's Bay. The name Tinneh (*tinneh*, *tana*, or *tena*) is a native word meaning "men," "people."<sup>2</sup>

2. The Tlingits, Tlinkits, Thlinkets, or Thlinkeets, as the name is variously spelled, otherwise called the Koloshes, inhabiting southern Alaska.

3. The Haidas, occupying the Queen Charlotte Islands and the southern part of the Prince of Wales Archipelago. Their name, like that of the Tinneh, signifies "people."

4. The Tsimshians, inhabiting the valleys of the Nass and Skeena Rivers and the adjacent islands of British Columbia.

5. The Kwakiutl, inhabiting the coast of British

Columbia from Gardiner Channel to Cape Mudge, except the country about Dean Inlet and the west coast of Vancouver Island.

6. The Nootkas, inhabiting the west coast of Vancouver Island. The Nootkas.

7. The Salish, inhabiting the coast and the eastern part of Vancouver Island south of Cape Mudge, and the southern part of the interior of British Columbia as far as the crest of the Selkirk Range and the northern parts of Washington, Idaho, and Montana. On the coast of British Columbia this important and widespread stock is represented by two groups of tribes, one being the Bella Coola or Bilqula of Dean Inlet and Bentinck Arm, the other the Coast Salish. The Salish.

8. The Kootenay, Kutenai, or Kutonaqa, inhabiting the valley of the Upper Columbia River, Kootenay Lake and River, and the adjoining parts of the United States.<sup>1</sup> The Kootenay.

Of these eight Indian stocks the Tlingits, the Haidas, and the Tsimshians may be grouped together on the ground of their physical resemblance and similarity of culture; while language and social organization indicate a still closer affinity between the Tlingits and the Haidas. On the other hand the language of the Tsimshians is strikingly different and must be placed by itself among the Indian tongues of North-West America.<sup>2</sup> Again, the Kwakiutl and Nootka stocks are grouped together by ethnologists under the name of Wakashan or Wakashes on account of the affinity of their language.<sup>3</sup> Group of the Tlingits, Haidas, and Tsimshians.

Natural features and climate of the interior of North-West America.

In respect of natural features and climate the interior of North-Western America differs widely from the coast. The difference is due mainly to the disposition of the mountains, which run in a series of high and rugged chains parallel to the sea and at short distances from it, often indeed plunging into its waters abruptly in lofty cliffs. By this mighty mountain barrier, the peaks of which rise above the level of perpetual snow, the moisture-laden winds from the sea are arrested and their watery burden discharged in the shape of snow and rain. East of the mountains the land slopes gently away in one continuous and almost level plain to the far-distant waters of Hudson's Bay. It is for the most part a dreary region of rocks and marshes, of shallow lakes and treacherous rivers, which form an intricate network so linked together that it is almost possible to boat from Hudson's Bay without a break to the mouth of the Mackenzie River on the Arctic Sea. This whole vast region is bleak and barren except along the valley of the Mackenzie, which in some places is well wooded. The climate is extremely severe, varying from intense cold in winter to great heat in summer. Winter sets in early and lasts till May or even June. The thermometer falls to 40° or 50° below zero: snow lies deep on the ground for months; and the waters of the Mackenzie River freeze to a depth of five and a half feet. However, the fur-bearing animals which roam over these immense solitudes attract the hunter and afford the wandering tribes of Indians a precarious subsistence. Myriads of water-fowl swarm about the lakes and rivers in spring and autumn, and the waters yield a fair supply of fish. But the rigorous climate forbids the growth of cereals. Such is the land of the Tinné Indians.<sup>1</sup>

Natural features and climate of the coast of North-West America.

Very different is the face of nature when we cross the mountains westward by one of the high passes where the snow lies till late in summer and the declivities on either hand are lined with glaciers. Descending the pass to the

<sup>1</sup> C. Hill-Tout, *The Far West, the Home of the Salish and Déné* (London, 1907), pp. 2, 6, 13 sq.; A. G. Morice, *Au Pays de l'Ours Noir, chez les Sauvages de la Colombie Britannique*

sea we shall probably find ourselves on the shore of one of those long winding inlets which cut deep into the land, and might fancy ourselves standing at the head of a Norwegian fjord. There are the same high misty mountains, the same sombre pine-forests, the same dark water lapping softly on the cliffs, the same waterfalls dissolving into spray as they seem to drop from the same grey clouds. Here and there a white scar in the prevailing mantle of gloomy green shews where an avalanche has torn its way from the mountain top through the pine forest to the water's edge; and occasionally, at the head of some profound ravine, the eye is caught by the shining front of a glacier contrasting sharply with the dense foliage on either side. With the scenery, too, the climate has changed. From the clear dry cold or clear dry heat of the interior we have passed into a softer air, a mild moist atmosphere, like that of the West of Scotland or even of Devonshire. The chances are that the weather is rainy and the sea veiled in mist; for on this wild coast, rent by deep fjords and studded with innumerable islands, the rainfall is one of the heaviest and most constant in the world. These steady rains and pervading mists are an effect of the warm Japan current, as it is called, the Gulf Stream of the Pacific, which sweeps along the coast, tempering the summer heat and winter cold, but wrapping land and sea in clouds and fog. The warm waters of this current keep the straits and channels open for navigation throughout the year; even in the coldest winters a sheet of ice forms only at the heads of the fjords and at the mouths of the rivers. Few rivers, however, force their way at long intervals through narrow and profound canyons to the Pacific. For the most part the mountains fall so steeply into the sea that no room is left for the course of considerable streams. And for the same reason communication along this iron-bound coast is chiefly maintained by boat or canoe, the countless inlets, sounds, and narrows, sheltered from the open sea by capes and islands, offering to the natives a natural highway which the rugged nature of the country denies them by land. Yet the navigation has its perils even for large vessels; for in these tortuous channels the tides run fast and high, forming eddies and

The Japan current and its effect on the climate.

whirlpools, and sunken reefs abound, on which, before he is aware, the mariner may run in the fog, the ominous grating of the keel and the vibration of the ship first announcing to him that he is on the rocks.<sup>1</sup> But, in the long summer days, when the weather is fine, the atmosphere is sometimes clear as crystal and the scenery fairly sparkles in the brilliant light. It is then that the landscape wears its most pleasing aspect. The snowy peaks glitter in the sunshine against the blue; the glaciers gleam like fire in their clefts and ravines; the huge landslides stand out conspicuous on the sides of the mountains; and everywhere the soft green foliage meets and refreshes the eye of the traveller sailing along this grand and beautiful coast.

The chief natural wealth of the country consists of the forests of fir and cedar and the shoals of fish.

On the whole, the coasts of Southern Alaska and British Columbia are so mountainous and the climate so wet that the cultivation of cereals is generally impracticable.<sup>2</sup> The chief natural wealth of the country consists, first, of the dense forests, mostly of fir and cedar, which clothe its rugged fastnesses; and, second, of the shoals of fish which swarm in its seas or ascend its rivers in almost incredible numbers. Through the excessive rainfall the vegetation of the coast is astonishingly luxuriant. Up to a height of about two thousand feet the pine-woods reign almost unbroken, only yielding here and there in more than usually damp spots to alders, poplars, and willows, or on very steep slopes to birch.<sup>3</sup> No better district for lumbering,

as it is called, can be imagined, for the means of transport by water are everywhere to hand, and the mountain-sides are so steep that you have only to make a slide out of the less valuable timber and to shoot the logs down it to the sea.<sup>1</sup> Some of the firs which clothe the land to the water's edge are enormous, measuring twenty-five feet in girth and three hundred feet in height, the trunks hardly tapering at all for half that altitude. Especially notable in the dense woods is the American white cedar, the *Thuja gigantea* of the botanists. These giants of the forest not uncommonly attain a diameter of fifteen or twenty feet at the butt. The tree was invaluable to the Indians in their native state. It served them as the coco-nut palm served the South-Sea Islanders. With its wood the men built their houses and carved their domestic utensils, their treasure-chests, canoes, totem posts, and heraldic emblems. Its outer bark they made into ropes and slow matches for carrying fire on journeys; while the women wove its inner bark into garments and its split roots into beautiful water-tight baskets. Indeed there was hardly any part of the tree which they did not apply to some useful purpose. In time of famine its cones even provided them with a food sufficient to stay the pangs of hunger. Flowering shrubs abound in the more open glades of the forest, in the upper valleys, and on the slopes of the mountains; and many of them yield edible berries, which are gathered and preserved by the women and girls in autumn days. Ferns and mosses of many kinds flourish in rank luxuriance; among them are the magnificent stag and fern mosses, the exquisite tree and maiden-hair ferns, and the tall fronds of the common bracken, which grows so high in many places as to overtop a man's head riding on horse-back. It is not only over the fallen and mouldering tree-trunks that the mosses spread a mantle of beautiful but treacherous verdure; they clasp the great boles of the living trees with wreaths and cushions of emerald green. So dense is the underwood of these forests that it is often practically impenetrable. To shoot birds here is for the most part labour in vain, for if they drop in the thicket even a few

<sup>1</sup> W. H. Dall, *Alaska and its Resources*, p. 456.

The woods  
in early  
summer.

paces from the path they are lost. Only the axe can cleave the matted undergrowth ; fire is powerless to spread a conflagration among woods saturated with moisture. Perhaps the sylvan scene is viewed to most advantage from a boat gliding down between the wooded banks of a broad river in early summer. The eye then never tires of ranging over the varied tints of the fresh green foliage, the maple, the white and black thorn, the tall shivering rustling poplar, mingled with the clustering white flowers of the wild apple-tree in full bloom and perfuming the air with its delicious fragrance. Above all tower the pines and prodigious firs, dark, stately, and solemn. When the current sweeps the boat from sunshine into the dappled shade of a leafy canopy of overhanging boughs, the effect is enchanting.<sup>1</sup>

The game  
in the  
woods.

In these wild woods game abounds ; indeed the country is a paradise for the hunter. Among the larger animals are the American elk, the cariboo, the moose, several species of deer, the mountain goat, the big-horn sheep, the puma or mountain lion, the wolf, and the black, the brown, and the grizzly bear. Among the smaller animals are the beaver, martin, otter, raccoon, and squirrel.<sup>2</sup> But the main dependence of the coast Indians in the old days was on the sea : such is the abundance of animal life in it that the natives lived almost solely on the food which it supplied. They were therefore essentially fishermen, all other pursuits being of secondary importance. They hunted the sea-otter, the fur-seal, the hair-seal, and the sea-lion both for their flesh and their fur. But the characteristic product of the waters of British Columbia is the salmon. Nowhere in the world is this fish found in such numbers and varieties as on the North Pacific coast of America. The swarms that pass up the rivers and streams to spawn are prodigious. In the narrows of the Fraser River or at any point where the progress of the fish is impeded by natural or artificial

obstacles such as a waterfall or a weir, the salmon are said to congregate below in such quantities that it is almost possible to cross the river on their backs. Hence, before the Indians came into contact with traders they subsisted chiefly on salmon, that fish taking the same place with them that bread does with us or rice with the Hindoos. The salmon and the cedar, it has been said, are the foundations of the Indian culture on the north-west coast of America. The sturgeon, which grows to an enormous size, the cod, the halibut, and the oolachen or candle-fish (*Thaleichthys pacificus*), also figure largely in the dietary of the coastal tribes. The oolachen is a small silvery fish of a delicious flavour, and so full of fat or oil that the dried fish are used as torches, burning with a bright flame; the oil is also extracted and kept in bottles. In such prodigious swarms do these little fish ascend the rivers that they literally choke the waters and can be scooped up in bucketfuls; even wild beasts draw them out of the stream with their paws. Another product of the sea of which the Indians made great use was the clam. This shell-fish is found in large quantities on all the tidal flats. The coastal Indians not only ate these shell-fish, but also dried, cured, and bartered them with the inland tribes. Vast heaps of their shells testify to the extent to which the clam was eaten by the Indians of old. Among some tribes of the interior who live far from salmon rivers the flesh of deer or cariboo takes the place of salmon as the staple food.<sup>1</sup>

Part of the year the coast Indians dwell in permanent villages. These villages consist of large wooden houses solidly built of heavy cedar planks, beams, and posts. The houses stand in a row facing the sea, and the canoes are drawn up on the beach before the village. In olden times the dwellings of the northern tribes were of moderate size, about thirty feet square, and partly excavated out of the

ground, with the fire in the centre, and a hole in the roof above it to let the smoke escape. A house is generally inhabited by four families, each of them occupying one corner. The houses of the coast Salish are of a different type, consisting of great communal dwellings, stretching under a single roof in an unbroken line for two, four, six, eight, or even ten hundred feet in length. Each of these huge houses is subdivided by temporary hangings or permanent walls into compartments, which are occupied by separate families. The building of these houses was laborious, and required considerable skill in carpentry at a time when the Indians were ignorant of metal tools and could only work with implements of stone, horn, or wood. They felled trees with stone axes, split them into planks by means of wooden or horn wedges, and carved them with stone knives. Stone hammers are still in use among the tribes. The carved decorations of their household utensils, canoes, and of nearly all wooden objects employed by them are elaborate and characteristic. The patterns regularly consist of representations of those animals, or of parts of those animals, which play a part in their mythical tales and tribal legends. Geometrical designs are almost wholly absent, except in Southern Alaska, where they are employed to decorate baskets. The art of pottery was unknown to these Indians in their native state; but they supplied the want of earthenware with vessels of wood and baskets.<sup>1</sup> The principal part of the native clothing is the blanket, which is either made of tanned skins or more frequently woven of mountain sheep's wool, dog's hair, or of a mixture of both. The thread is spun on the bare leg by means of a stone spindle, and is then woven into blankets on a solid frame. Another kind of blanket is woven of soft cedar-bark. Weaving is the work of the women.<sup>2</sup>

<sup>2</sup> Fr. Boas, in *Fifth Report of the Committee on the North-Western Tribes of Canada*, pp. 20 sq. (*Report of the British Association*, Newcastle-upon-Tyne, 1889, separate reprint);

Society among the Indians of the North Pacific coast was divided into four classes: chiefs, nobility, common people, and slaves. The children of nobles were born common people, and remained so until they either became members of a secret society or gave a great feast and took a new name. All along the coast the giving of presents is employed as a means of attaining social distinction. There are very few common people, for whoever can afford to do so lets his child enter a secret society immediately after birth by proxy. The child thus becomes a noble. The more feasts he gives, the higher grows his rank; but no noble can ever become a member of the chiefly class. When a chief dies, his office devolves upon his younger brother, then upon his nephew, and, if he had none, then upon his niece. The chief has many prerogatives, but exercises comparatively little influence over the members of his tribe. He has to carry out the decrees of the council of nobles, which decides all important questions concerning the tribe and acts as a criminal court. Nobody who has not taken a name, or who is not a member of a secret society, may share in the deliberations of the council. The mother's brother represents his nephews. A woman is only admitted if she is the head of a family.<sup>1</sup> However, the social organisation differs somewhat from tribe to tribe. For example, among the Salish tribes of the coast and the lower delta of the Fraser River the chieftainship, which is elective among the interior tribes, is strictly hereditary, passing automatically from fathers to sons. On the whole the rigidity of the system of ranks increases greatly as we pass from the roving tribes of the interior to the settled tribes of the coast and islands, among whom the barriers between the various classes are said to be almost as inflexible as between the castes of the Hindoos.<sup>2</sup> The existence of social ranks distinguishes the Indians of North-West America from the

The four classes of society: chiefs, nobles, commoners, and slaves.

The rigidity of the system of social ranks increases as we pass from the roving tribes of

tribes in the United States to the east of the Rocky Mountains, and may be regarded as marking a relative advance in civilisation, though the material base of life remains at a lower level; for whereas many of the democratic tribes of eastern North America subsisted to a large extent by agriculture, the more aristocratic tribes of the North-West depended purely on fishing, hunting, and the search for berries and roots. Another sign of progress among the North-Western Indians was a highly developed system of barter and credit. For these tribes have always been great traders and had currencies of various sorts. In olden times dentalia-shells, elk-skin blankets, canoes, and slaves served as standards of value; while marmot-skins sewed together were used as a smaller currency. Certain large copper plates of a peculiar shape but of no practical use are highly valued by these Indians, sometimes indeed at fabulous prices; and among the Kwakiutl small copies of these plates, each about an inch long, are used as a form of money. The Tsimshians used to exchange oolachen oil and carvings of mountain-goat horn for canoes. At the present time the blanket is the unit of value, prices being calculated in blankets. A vast system of credit has grown up among all the tribes of the North Pacific coast. It seems to have been based originally on the custom of lending property before the assembled tribe as a means of ensuring a public record of the transaction. This apparently was the fundamental idea of the so-called *potlatch*, which at the present day is simply a great festival at which the host distributes the whole of his property among his friends either to obtain social distinction or in the expectation of being repaid with interest at a future time. The distribution of property at a *potlatch* may therefore be regarded as an investment by which the distributor or his family after him hopes to benefit; for all who receive anything at a *potlatch* must repay double the value at a future day. At every *potlatch* which he gives a man acquires a new and more honourable name.<sup>1</sup>

Many but not all of the Indian tribes of North-West America are organised in totemic and exogamous clans. This social system is found among the Tinnehs or Dénés of the interior as well as among the tribes of various stocks on the coast. On the other hand totemism appears to be wholly wanting among the Kootenay and most, if not all, of the inland tribes of the Salish stock, such as the Thompson Indians.<sup>1</sup> In the opinion of the experienced missionary, Father A. G. Morice, who has given us much valuable information on the Tinnehs or Dénés, these Indians have unquestionably derived their clan totems from the tribes on the coast;<sup>2</sup> and among the coastal tribes, according to Dr. Franz Boas, the Tlingits and the Haidas have exerted a very strong influence over the social system of their neighbours.<sup>3</sup> We shall therefore begin our survey of totemism in North-West America with the Tlingits and the Haidas; we shall then, moving southward, deal with the other tribes of the coast; and afterwards, retracing our steps northward, we shall examine the totemic system of the Tinnehs or Dénés of the interior.

Totemism and exogamy practised by some, but not all, of the Indians of North-West America.

M. Dawson, *Report on the Queen Charlotte Islands, 1878* (Montreal, 1880), pp. 125 B-127 B (*Geological Survey of Canada*). As to the copper plates, see G. M. Dawson, *op. cit.* p. 135 B; Franz Boas, "The Social Organization and the Secret Societies of the Kwakiutl Indians," *Report of the United States National Museum for 1895* (Washington, 1897), pp. 344 *sqq.* An early account of these coppers, as they are commonly called, is given by John Dunn, in his *History of the Oregon Territory* (London, 1844), p. 288. He says: "A little to the northward of this there is a tribe called the Chilkasts. In their country great quantities of virgin copper are found. Some of it is worked by the natives into a kind of shield, about two feet

and a half long, and one foot broad, with figures of men and animals engraved upon it. The labour and ingenuity expended in working one of these shields give them great value. One of them is estimated as worth nine slaves, and is transmitted as a precious heirloom from father to son."

Koloshes  
by the  
Russians.

The  
country  
of the  
Tlingits.

The Tlingit  
villages.

The Tlingits or Thlinkets inhabit the mountainous, densely wooded, and rainy coast of Southern Alaska from latitude 60° to latitude 55°, that is, nearly from Mount St. Elias, the highest mountain in North America, southward to the boundary of British Columbia.<sup>1</sup> The name of the tribe, which is spelled in many different ways by different writers, means "men" or "people." By the Russians these Indians were called Koloshes.<sup>2</sup> Their country is so mountainous that farming is possible only in a few limited areas; and the severe climate, with its long winters, wet summers, late springs, and early autumnal frosts, greatly restricts the number of plants which can be cultivated. There are no large pasture-lands where cattle could be kept, and the heavy rains make it difficult to procure sufficient fodder to feed the beasts through the long months of winter. Even the chase could only support a scanty population; for the game in the woods is not very plentiful, and persistent hunting on a great scale would rapidly reduce, if not exterminate, the supply of sea-mammals, as has happened with the sea-otters. Hence the catch of fish, which abound in these waters, remains the chief source of subsistence for the inhabitants; and accordingly in choosing the site of a settlement the first consideration with the Tlingits is to find a spot near good fishing-grounds and a beach where the canoes can land. Accordingly their villages are commonly built on the flat sandy shore of some sheltered bay or strait or at the mouth of a river; and with their rows of regularly and solidly built wooden houses, and their canoes and fishing-tackle drawn up on the beach, they present a pleasant picture in the wilderness, which calls up memories of home in the mind of a European, till the sight of the tall

totem-poles and Indians muffled in blankets remind him that he is in a foreign land.<sup>1</sup>

The Tlingits are divided into two exogamous classes or phratries, which bear the name of the Raven and the Wolf respectively, though in the northern part of the Tlingit territory the Wolf class is also known as the Eagle. The rule of exogamy is, or was, strictly observed: no man may marry a woman of his own class; a Raven man must marry a Wolf woman, and a Wolf man must marry a Raven woman. Descent is in the female line: children belong to their mother's, not their father's class. If she is a Raven, the children are Ravens; if she is a Wolf, they are Wolves. The two classes trace their descent from two mythical heroes or gods who in the beginning of time by their deeds and supernatural power conferred on mankind various benefits which they still enjoy. These two heroes were Yehl or Yeshl, the ancestor of the Raven class, and Kanook, the ancestor of the Wolf class. Yet those ancestors are not thought of as having been a raven and a wolf respectively; Yehl is indeed said to have had the power of transforming himself into a raven; but there is no tradition of Kanook ever assuming the shape of a wolf.

Further, both the Raven class and the Wolf class are subdivided into a number of clans which are named after various animals, and which are no doubt exogamous since the classes which include them are so. Thus, the Raven class is subdivided into the Raven, Frog, Goose, Sea-lion, Owl, Salmon, Beaver, Codfish, and Skate clans; the Wolf class is subdivided into the Wolf, Bear, Eagle, Whale, Shark, Auk, Gull, Sparrow-hawk, and Thunder-bird clans. The Tlingit classes and clans may be exhibited in the following table, which, however, does not claim to be complete:—

<sup>1</sup> A. Krause, *Die Tlinkit-Indianer*, pp. 93, 123 sq.

## SOCIAL SYSTEM OF THE TLINGITS

Class.	Clans.	Class.	Clans.
Raven	Raven Frog Goose Sea-lion Owl Salmon Beaver Codfish Skate	Wolf (Eagle)	Wolf Bear Eagle Killer-Whale ( <i>Delphinus orca</i> ) Shark Auk Gull Sparrow-hawk Thunder-bird

The classes and clans live mixed up together.

The clans are subdivided into families.

The classes and clans do not live separately, each by itself; on the contrary they are mixed up together. The members of each class and clan are distributed among many villages, and each village contains members of both classes and of several clans. Finally, the clans are in turn subdivided into families or households, which may occupy one or more houses. The families generally take their names from places. Members of the same class speak of each other as *Achchani*, that is, "compatriots," or *Achgakau*, that is, "friends." They speak of the members of the other class as *Kunyetkanagi*, that is, "not here" or "strangers." But in their presence they address members of the other class as *Achssani*, that is, "uncles," or *Achkani*, that is, "sons-in-law" or "brothers-in-law," because they are always related to them by marriage. Though the Raven class perhaps ranks higher in virtue of their descent from Yehl, the great benefactor of mankind, yet the Wolf class also enjoys distinction by reason of its numbers, superior courage, and deeds of valour.<sup>1</sup>

Boas, in *Fifth Report of the Committee on the North-Western Tribes of Canada*, p. 25 (*Report of the British Association*, Newcastle-upon-Tyne, 1889, separate reprint); John R. Swanton, "Social Condition, Beliefs,

Besides the two great classes or phratries of the Raven and the Eagle, there is or used to be among the Tlingits a small group, the Nexadi of Sanya, which stood outside of both the principal classes and could marry into either of them. This group is characterised principally by the possession of the Eagle crest and Eagle personal names.<sup>1</sup>

The Nexadi group, outside of both the classes.

Each Tlingit clan has its badge or crest, which commonly consists of some easily-recognised part of its totemic animal or bird. Such crests are or were carved or painted on houses, canoes, paddles, household utensils, blankets, shields, and wooden hats or helmets; and on solemn occasions such as dances, memorial feasts, and funeral ceremonies men often appeared completely disguised in the shape of their totemic animals.<sup>2</sup> Theoretically, the crests used by members of the Raven class differ from those used by members of the Wolf or Eagle class; all Raven clans are supposed to have a right to the Raven crest, and most Wolf clans use the Wolf crest. But a man of high rank might temporarily borrow a crest from his brother-in-law, who in virtue of the law of exogamy necessarily belonged to a different clan with a

Crests or badges of the Tlingit clans.

and Linguistic Relationship of the Tlingit Indians," *Twenty-Sixth Annual Report of the Bureau of American Ethnology* (Washington, 1908), pp. 398, 423 sq. The list of clans in the text is given on the authority of Mr. F. Boas. The list given by Holmberg ("Über die Völker des russischen Amerika," *Acta Societatis Scientiarum Fennicae*, iv. (Helsingfors, 1856) p. 293) agrees, so far as it goes, with that of Mr. Boas, but it omits the last three of the clans in each class. Most of these writers refer to the exogamy of the two classes or phratries (the Raven and the Wolf) without saying whether the clans into which these two classes are subdivided are also exogamous or not. However, Petroff observes: "The curious totemic system is more fully developed here than it has been found with any other tribe. The ties of the totem or clanship are considered far stronger than those of blood relationship. The principal clans are those of the Raven, the Bear, the Wolf, and

the Whale. Men may not marry in their own clan, children belong to the clan of their mother" (*Report on the Population, Industries, and Resources of Alaska*, p. 165). This seems clearly to imply that the rule of exogamy is not limited to the two classes or phratries, but extends also to the clans; and indeed if the rule of exogamy applies strictly to the two classes, it necessarily applies to all the clans included under them.

<sup>1</sup> J. R. Swanton, "Social Condition, Beliefs, and Linguistic Relationship of the Tlingit Indians," *Twenty-Sixth Annual Report of the Bureau of American Ethnology* (Washington, 1908), pp. 398, 409.

Myths told to explain the origin of the Grizzly bear crest and story of a woman who married a grizzly bear.

different crest. Some families are too poor to have a crest ; but on the other hand it is said of some great ones that they are rich enough to use any crest whatever. The possession of a particular crest by a clan is often explained by a myth about the ancestor of the clan. Thus a wooden hat or helmet shaped like a grizzly bear is used as a crest by a clan who say that a man of their clan once married a female grizzly bear. Members of the Kagwantan clan, who tell the same story, go about with the ears of bears fastened to the sides of their heads as their crest, and some members of this clan wear shirts made out of grizzly bear hides. Yet the Kagwantans are members of the Wolf class and highly value the Wolf crest. Members of another clan tell how at the time of the Great Flood a grizzly bear and a mountain goat climbed a mountain in company to escape from the rising tide of water ; and in memory of that event the clan still uses as its crest the skin of a grizzly bear combined with the head of a mountain goat, but it is prouder of the bearskin than of the goat's head. The Nexadi of Sanya base their claim to the possession of the eagle crest on the belief that one of their people was once helped by an eagle and finally turned into the bird. The Eagle crest is now generally employed by the northern Tlingits of the Wolf class ; hence they have come to be called Eagles instead of Wolves. It is to be observed that the same crest may be and is used by different clans, and further that any one clan may have several crests, though it generally holds only one or two of them in particular esteem. For example, the Petrel crest is explained by a myth that the hero Raven obtained fresh water from the petrel ; yet the crest is said to be used by the Wolves as well as by the Ravens. Again, some members of the Wolf class claim the right to use the Raven crest on the ground that the hero Raven dragged a house full of fishes ashore at their village. The Luqaxadi of Chilkat make so much of the Raven crest that they are often called Real Ravens. Members of another clan have a hair ornament shaped like the beak of a raven, which hangs down the back of a dancer at the *potlatch*. The Frog crest was a special possession of the Kiksadi, who claimed it because persons of their clan had had special dealings with

Eagle crest and story of transformation into an eagle.

The same crest may be used by several clans, and any one clan may have several crests.

Frog crest and story of a woman who

frogs. The Ganaxadi of Tongas tell a story of a woman of their clan who married a frog; probably they also claim the Frog crest by right of marriage. At Sitka another clan recently attempted to adopt the Frog crest, but the claim was deemed groundless by other people and led to a riot. The Ganaxadi, who say that one of their women married a frog, also allege that another of their women suckled a monster woodworm, and for that reason the Woodworm crest is a special possession of the clan. The common whale hat is worn by several Raven clans. Two clans wear hats representing king-salmon, and one of them wears a swan hat also. The Kikasadi, who pique themselves on their Frog crest, also wear hats shaped like geese: further, they use the cry of the sea-lion because they once heard that cry at Cape Ommaney when the sea-lions were fighting with the killer-whales. And in former days, when members of this clan charged down on their enemies they used to hoot like owls, because one of their women was once turned into an owl. Thus it appears that one clan may claim affinity with several animals. Such claims are perhaps to be explained by marriages of members of the clan with members of other clans who had these animals for their crests. But while the Tlingit crests are generally in the shape of animals, they are not all so. Thus, the Nastedi use as a crest a big rock called Fort-Far-Out, where Petrel, from whom Raven stole the fresh water, had his spring. All kinds of birds build their nests on the rock, and when members of the Nastedi clan dance they imitate the birds. Two clans lay claim to the hero Blackskin and carve his figure on posts with the guts of sea-lions wrapped about his head. Two clans set up as their heraldic device posts carved to resemble the Spirit of Sleep. Another clan took as their crest a mountain at Cape Fairweather and also a rock; the mountain was represented on their hats.<sup>1</sup>

<sup>1</sup> J. R. Swanton, "Social Condition, Beliefs, and Linguistic Relationship of the Tlingit Indians," *Twenty-*

*Sixth Annual Report of the Bureau of American Ethnology* (Washington, 1908), pp. 415-418.

conventional that their meaning could hardly be understood without verbal explanations. They consist of bands, spots, or daubs of various colours, red, blue, yellow, and green, which stand for a raven's wings, raven's tracks, a goose's head, a whale's jaw, a whale's tail, a wolf's mouth, a mouse's feet, bear's feet, bear's tracks, bear's blood, sea-lions, slugs, the sun, stars, mountains, rocks, clouds, waves, glacial ice, canoes with people in them, and so forth. Sometimes, however, animals, fish, or birds are painted on the face in full and with a fair attempt at realism; such, for example, are figures of the killer-whale, porpoise, salmon, black sea-bass, goose, swan, and puffin. These facial paintings are often used along with hats which also exhibit the crest of the clan.<sup>1</sup>

Totem-poles or totem-posts.

The most conspicuous and best-known representations of Indian totems in North-West America are the figures carved and painted on great wooden poles. These totem-poles, or totem-posts, however, are not so common among the Tlingits as among their southern neighbours the Haidas and Tsimshians. There seem to be two sorts of them, namely, house-poles and grave-poles. House-poles are set up by rich chiefs beside the doors of their houses and sometimes measure as much as fifty feet in height. Each is made of a single tree-trunk and displays various figures of men and animals, the successive ancestral totems, carved and painted in bright colours and grouped together in the most diverse fashions. The pole is usually capped by the totem of the man who set it up. Sometimes the pole is placed directly in front of the house with the doorway of the house cut through the block, which is often of enormous size.<sup>2</sup> The grave-poles either support boxes containing the ashes of the dead, or they contain cavities in which the ashes are deposited. Sometimes the ashes are placed in a mortuary house in one part of the village, while a memorial pole is set up elsewhere. These grave-poles are also decorated with the carved and painted crests of the clan. The crests are commonly carved one above the other. For example, a large pole erected at Wrangell

Totemic house-poles.

shews at the top the Raven-at-the-head-of-Nass-river (*Nascaki-yel*), the highest being in Tlingit mythology, with Raven (*Yel*) on his breast; below him appears another being "wearing a hat and the red snapper coat with which he used to murder his children"; underneath this unnatural parent again is the frog, and at the bottom the thunder-bird.<sup>1</sup>

The totem-poles of the Tlingits, together with their totemic system, were described at the beginning of the nineteenth century by the Russian explorer, Lisiansky, who circumnavigated the world in the years 1803-1806 by command of the Czar Alexander the First. His account refers especially to the Tlingits or Koloshes of the island of Sitka. As it possesses an historical interest, it may be quoted. "The manners and customs of the Sitca people, in general," he says, "so nearly resemble those of the island of Cadiack, that a description would be a repetition. The Sitcans appear, however, to be fonder of amusements; for they sing and dance continually. There is also a great difference in their treatment of the dead. The bodies here are burned, and the ashes, together with the bones that remain unconsumed, deposited in wooden boxes, which are placed on pillars, that have different figures painted and carved on them, according to the wealth of the deceased. On taking possession of our new settlement, we destroyed a hundred at least of these, and I examined many of the boxes."<sup>2</sup> "What I have said of the Sitcans applies alike to all the inhabitants residing between Jacootat, or Behring's Bay, to the fifty-seventh degree of north latitude, who call themselves Colloshes or Collushes. These people live in different settlements, independent of one another; though they speak the same language, and are almost all related. They amount to about ten thousand, and are divided into tribes; the principal of which assume to themselves titles of distinction, from the names of the animal which they prefer; as, the

Lisiansky's account of the totemic poles and totemic system of the Tlingits.

advantage of knowing, nor am I aware how the garment in question was used as a lethal weapon.

<sup>2</sup> U. Lisiansky, *A Voyage round the World in the Years 1803, 4, 5, and 6* (London, 1814), pp. 240 sq.

tribe of the bear, of the eagle, the crow, the porpoise, and the wolf. The tribe of the wolf are called Coquontans, and have many privileges over the other tribes. They are considered as the best warriors, and are said to be scarcely sensible to pain, and to have no fear of death. If in war a person of this tribe is taken prisoner, he is always treated well, and in general is set at liberty. These tribes so greatly intermix, that families of each are found in the same settlement. These families, however, always live apart; and, to distinguish the cast (*sic*) to which they belong, they place on the top of their houses, carved in wood or painted, the bird or beast that represents it."<sup>1</sup>

Personal  
names  
derived  
from the  
totems.

Each clan has not only its crest or crests, but also its personal names, which, like the crests, are derived from the totem of the clan. The connexion between the name and the totem is sometimes not very clear, but it always exists. Here, for example, are some personal names used by members of Tlingit clans in the Stikin tribe:—

In the *Nanaari*, a Bear clan of the Wolf class or phratry, we find as names of men *Tlucke* "Ugly" (Danger Face), in reference to the bear; *Gaque*, "Crying Man," with reference to the howling wolf; *Sektutlqetl*, "Scared of his Voice" (to wit, the wolf's); *Ankaquts*, "Bear in Snow."

In the *Detlkoede*, a Raven clan of the Raven class or phratry, we find the personal names *Yetl rede*, "Little Raven"; *Tleneqk*, "One Alone" (the raven on the beach); *Hiqtc tlen*, "Great Frog"; *Yetl ku djat*, "Raven's Wife."<sup>2</sup> Other Tlingit personal names are Silver Eyes, with reference to the eyes of the raven; Shaggy, with reference to the thick hair of the grizzly bear; Frog-sitting-in-the-road; and Lively-frog-in-lake. In the Wolf class or phratry the personal names are mostly derived from the wolf, grizzly bear, killer-whale, petrel, and, among the northern Tlingit, from the eagle. In the Raven class or phratry the personal

names have mostly reference to the raven, frog, hawk, black whale, and eagle among the Southern Tlingits.<sup>1</sup>

~~With regard to the relationship which is supposed to exist between a man and his totem, we are told that the Tlingits do not believe themselves to be descended from their totems, nor do they imagine that at death their souls will transmigrate into their totem animals, birds, or fish. They certainly believe in the transmigration of souls, but they think that in their transigrations the souls of men and animals are restricted to their proper species. Thus they affirm clearly and plainly that a man will be born again as a man, a wolf as a wolf, and a raven as a raven. Nevertheless they consider the members of a clan to be related in some way to their totemic animal. For example, members of the Wolf clan will pray to the wolves, "We are your relations; pray don't hurt us." But though they ask the wolves not to hurt them, they do not themselves scruple to hurt the wolves, for they will hunt them without hesitation. They appear always to explain their relation to their totem by a legend that a mythical ancestor of their clan had an encounter with an animal of the totemic species.<sup>2</sup>~~

According to Dr. Boas, the Tlingits do not believe in their descent from the totemic animals.

Such is the account which Dr. Franz Boas, a high authority, gives of the relationship which is supposed to exist between people and their totems. He may be right in saying that the Tlingits do not now believe in their descent from the totemic animals; yet the myths told to explain some of the totems or crests seem to indicate the prevalence of that belief in former times. Such myths are the stories of the two women who married a grizzly bear and a frog respectively, of the woman who suckled a woodworm, and of the member of the Eagle clan who was turned into an eagle.<sup>3</sup> These tales have the true totemic ring about them; they point clearly to the former identification of the clanspeople with their totems, which is only another way of

But the stories told to explain some of the totems point to a belief in descent from the totemic animals.

saying that the present people are supposed to be descended from the totemic animals.

Belief of the Tlingits in the re-incarnation of the dead.

When a pregnant woman dreams of a dead relation, the Tlingits think that the soul of the deceased has entered into her and will be born again. And when a new-born child resembles a dead kinsman or kinswoman, they conclude that it is the dead person come to life again, and accordingly they give it his or her name. And a Tlingit may often be heard to say, "When I die, I should like to be born again in such and such a family"; or, "If only I were killed, I might return to the world in happier circumstances."<sup>1</sup> Not only do the Tlingits believe that the dead are reborn as men and women, but they used to take steps to facilitate their rebirth. Thus, when a beloved person died, the relations often took the nail from the little finger of his right hand and a lock of hair from the right side of his head and put them into the belt of a young girl of his clan, who was just reaching maturity. Afterwards she had to lead a very quiet life for eight months and fast for as many days, unless she were delicate, when half as many days sufficed. In the former case she fasted steadily for four days, rested two days, and then fasted for the remaining four. After her fast was over, and just before she ate, she prayed that the dead person might be born again from her.<sup>2</sup> In this custom the placing of the finger-nail and hair in the belt of a girl who has just attained the power of becoming a mother appears to be a mode of impregnating her by inserting the soul of the dead in her womb. Substantially, therefore, this custom and the belief which it implies agree with the Central Australian theory of conception.<sup>3</sup> Again, at a Tlingit funeral measures were taken to secure the rebirth of the soul of the dead. The corpse was generally burned, and before it was placed on the pyre, they used to turn it round four times in the direction which they conceive the sun to follow; then they laid the body down with the head to the sunrise. This was

Measures taken by the Tlingits to ensure the rebirth of the dead.

done, we are told, to enable the soul of the deceased to be born again, for if he were laid with his head to the setting sun he would never come back.<sup>1</sup> Clearly the rising sun was thought to bring in his train the souls of the dead to be born again, while the setting sun carried them away with him for ever. This belief perhaps throws light on the burial customs of other totemic peoples, who inter their dead according to certain fixed rules with their heads turned to particular points of the compass.<sup>2</sup>

At funerals all the duties of an undertaker were performed by persons of the other class or phratry, and they alone were invited to the funeral feast. For example, if the deceased was of the Raven class, the invited guests would all be Wolves, not Ravens; and these Wolves would perform the last offices of respect to the dead Raven.<sup>3</sup> Indeed, we are told that a Tlingit employed persons of the other class or phratry to do everything for him—to build his house, to set up his totem pole, to pierce the lips and ears of his children, to initiate them into the secret societies, and so on. For these services he paid them and thereby shewed his respect for them. "The idea of giving property to a member of one's own phratry or of employing him in putting up the house was altogether abhorrent to Tlingit notions of propriety."<sup>4</sup> Yet "according to the unwritten Tlingit law it was incumbent upon every one belonging to a phratry to house and feed any other member of that phratry who should visit him, no matter from how great a distance he might come."<sup>5</sup>

In their dances the Tlingits made much use of their totemic badges or crests, the dancers appearing clad in dresses, masks, and so forth which represented the totemic animal or thing, while they also mimicked the totem by

and disguised to imitate their totems.

their gestures. Even such totems as mountains and rocks were imitated. For example, a dancer who represented a mountain would imitate the clouds which rested on its side in fine weather or completely covered it in bad.<sup>1</sup> When a monument was to be set up to the memory of a dead man, the Tlingits used to celebrate a great festival, to which guests were invited from far and near. However, such festivals were rare on account of their costliness. Sometimes the host would give away the whole of his property and that of his wife too, and would spend the rest of his days in abject poverty, living on the glorious memory of these few days of prodigal munificence. On the evening before the end of this great celebration, the host, who was generally a chief, retired with a slave to another apartment and there attired himself in a singular costume, which was often an heirloom, handed down with the greatest respect from many generations and never used but on such solemn occasions. It differed in different families, but always represented the totem either in part or complete, and was further adorned with scalps, human teeth, ribands, ermine skins, and so forth. The slave who helped to attire his master in this dress always received his freedom for the service. Thus disguised in the likeness of his totem the host came forth from his place of concealment and presented himself to his guests. At the same moment a cry was raised in imitation of the cry of the totemic animal. On the precise manner of the cry depended the life of several slaves; for if it was uttered in a peculiar way they were immediately put to death. Then the host and his family sang their ancestral songs, setting forth the origin of the family and the deeds of their fathers. After that the host sat down and distributed the presents among his guests. Having performed this rite he was entitled to assume the name of a deceased ancestor on the paternal side. The whole festival was called "elevating the dead."<sup>2</sup> We may conjecture that the meaning of the ceremony is

Sacrifice of slaves at funerals.

explained by the Tlingit theory of reincarnation; it was probably supposed that the dead ancestor came to life again in the person of the descendant who assumed his name. Similarly the Hurons, the Iroquois, and other Indian tribes of the United States used to raise up the dead, as they imagined, by bestowing the name of the deceased upon a living person.<sup>1</sup>

Polygamy is or used to be common among the rich Tlingits; but the first wife enjoyed precedence and authority. A chief on the Nass River is reported to have had forty wives. According to the devoted Russian missionary, Father Innocentius Veniaminoff, who laboured among the natives of Alaska in the first half of the nineteenth century, Tlingit women had secondary husbands or legalised lovers, who were always either the brothers or near relations of the primary husband.<sup>2</sup> The custom perhaps points to a former practice of fraternal polyandry among the Tlingits.

Polygamy among the Tlingits.

Secondary husbands, who are generally brothers of the primary husband.

On the death of the husband, his brother or the son of his sister was bound to marry the widow. The failure to fulfil this obligation sometimes led to bloody feuds. But if there was neither a brother nor a sister's son alive, the widow might choose a husband from the other class or phratry to which her late husband belonged.<sup>3</sup> A man's heir is his sister's son, or, if there is none such, his younger brother.<sup>4</sup> A man and his wife's mother shewed respect by not addressing each other directly.<sup>5</sup> Apparently the Tlingits thought

that this common rule of avoidance observed by a man and his wife's mother was a great law of nature which was recognised also by the lower animals ; for when they were digging for clams, which withdraw rapidly into the sand, they used to say, " Do not go down so fast or you will hit your mother-in-law in the face." <sup>1</sup>

### § 3. Totemism among the Haidas

The  
Haidas of  
the Queen  
Charlotte  
Islands.

Scenery  
and climate  
of the  
Queen  
Charlotte  
Islands.

The neighbours of the Tlingits on the south are the Haidas, who inhabit the Queen Charlotte Islands of British Columbia. These islands, so far as tradition allows us to judge, appear to be their original home ; but to the north of them a branch of the Haidas, known as the Kaiganis, now occupies a portion of the coast of the Prince of Wales Archipelago in Alaska, from Clarence Strait westward, together with Forrester's Island.<sup>2</sup> The Queen Charlotte Islands form a chain nearly two hundred miles in length from north to south and are divided by wide channels both from the mainland on the east and from the islands of Alaska on the north. A great part of the islands is rugged and mountainous, with peaks where the snow lies all through the year. Dense forests chiefly of spruce cover the land even to the water's edge. The timber is often of magnificent growth, the straightness and height of the tree trunks being remarkable. Next to the spruce (*Abies Menziesii*), the western cedar (*Thuja gigantea*) and the western hemlock (*Abies Mertensiana*) are the commonest trees. The luxuriance of the vegetation is favoured by the mildness and humidity of the climate ; in winter the rains are very heavy, the sky persistently overcast with clouds, and gales frequent and violent. Snow sometimes falls, but seldom lies long except on the mountains. Hence in the moisture-laden atmosphere ferns and mosses grow abundantly, clothing the boles and

branches of the trees in the forest with a mantle of vivid green. Great trunks, fallen and dead, become at once a garden of moss, saplings, and shrubs. As the trees in sheltered spots almost dip their pendent boughs in the water, locomotion in any other way than by boat or canoe along the shore is nearly impossible. The eastern coast of the islands is indented with many winding inlets and land-locked coves. On some of these deep and narrow fjords, where the mountains rise steeply from the shore to the height of thousands of feet, their upper gorges and shady hollows filled with snowdrifts, their lower slopes veiled in the sombre gloom of the pines, the scenery is of desolate and almost oppressive grandeur.<sup>1</sup>

As the Haidas live almost exclusively on fish, the halibut and the salmon forming their staple diet, they pay little attention to the interior of the country and turn their eyes chiefly to the sea, choosing the sites of their villages with reference to the halibut banks and coast fisheries which engross most of their time. Hence the villages often stand on bleak wind-swept rocks or islands, though generally with a sandy or gravelly beach near them where the canoes can land even in stormy weather. The substantially built wooden houses are placed side by side facing seaward, a few feet above the high tide mark, and being unpainted soon assume a uniform grey colour or grow green and mossy in the damp climate. A cloud of blue smoke hovering over the village in calm weather reveals its presence from a distance; and a nearer view discloses a forest of carved posts in front of the houses, the stages for drying fish, and the canoes drawn up on the beach and covered, when not in use, with mats and boughs to prevent them from warping and cracking in the sun.<sup>2</sup> The Haidas are bold sailors, navigating the wide and stormy seas which surround their islands in their great canoes, which are hewn out of logs of cedar. Some of these canoes can hold a hundred men with all their equipments for a long voyage. They are excellent sea boats, and in them the Indians undertake

The Haidas live chiefly on fish and build their villages beside the sea.

The Haidas are bold and skillful sailors.

trading voyages of hundreds of miles to Victoria in Vancouver's Island and thence to various towns in Puget Sound.<sup>1</sup>

Character  
of the  
Haidas.  
Their  
corruption  
by the  
whites.

Physically and mentally the Haidas are reputed the finest Indians of the North-West coast. Their complexion is fairer and their features handsomer than those of the other tribes, and the intelligent expression of their faces is not belied by a closer acquaintance with them. Unfortunately intercourse with the whites has deeply demoralized this gifted race, and they are now wasted by vice and disease. Even thirty years ago their villages were falling into decay, some of them being completely abandoned, while in others many houses shut up and mouldering away in the damp weather, rotting totem-poles, and paths choked with a rank growth of weeds told the melancholy tale of a people blighted by contact with an alien race.<sup>2</sup>

The  
Haidas  
are divided  
into two  
exogamous  
clans or  
classes, the  
Raven and  
the Eagle,  
with de-  
scendant in  
the maternal  
line.

The whole Haida stock is divided into two clans or classes, which are named respectively the Raven (*Qoala* or *Hoya*) and the Eagle (*Gitina* or *Got*). These clans are strictly exogamous. A Raven man must marry an Eagle woman, and an Eagle man must marry a Raven woman. Descent is in the female line; that is to say, the child belongs to its mother's clan and inherits the rank and property of its maternal uncle. Thus if the mother is a Raven, the children are Ravens; if she is an Eagle, they are Eagles. So close is the relationship between persons of the same clan that marriage within it, or used to be, viewed by the Haidas almost as incest. On the other hand, the members of the other clan were often considered downright enemies. Even husbands and wives did not hesitate to betray each other to death in the interests of their own families. "At times," says Mr. Swanton, "it almost appears as if each marriage were an alliance between opposite tribes; a man begetting offspring rather for his wife than for himself, and, being inclined to see his real descendants rather in his sister's children than in his own. They it was who succeeded to his position and

<sup>1</sup> James G. Swan, *The Haidah Indians of Queen Charlotte's Islands* (Washington, 1874), pp. 2 sq. (*Smithsonian Contributions to Knowledge*, No. 267).

<sup>2</sup> G. M. Dawson, *Report on the Queen Charlotte Islands, 1878*, pp. 104 B sq., 117 B; A. Krause, *Die Tlinkit-Indianer*, pp. 305 sq.

carried down his family line." The two clans or classes are each subdivided into an indefinite number of groups or families, which usually take their names from towns or camping-grounds and appear to be simply local groups. Each family or local group enjoys several prerogatives which it guards jealously: such are the right to bear certain personal names and the right to use certain badges or crests, which are generally representations of animals, though trees, shells, and objects of daily life also occur amongst them. These crests are tattooed on the bodies of their owners, painted on their faces, woven on their clothing, and carved on their houses and utensils. Each family as a rule has several crests, which are explained by traditions setting forth the adventures of an ancestor of the family. Most of these traditions tell of his encounter with an animal or a supernatural being, which from that time on became the crest of his family. Not all the members of the family use all its crests. At first the youth seems to possess the most general crest of the clan only; thus if he is of the Eagle clan, he will have the eagle crest; if he is of the Raven clan, he will have the bear and the killer-whale crests. As he attains higher rank by repeated distributions of property among members of the other clan, he becomes entitled to the privilege of using other crests; but the use of the total number of crests belonging to the family seems to be restricted to its chief. With regard to these Haida crests Mr. J. R. Swanton, one of our chief authorities on the tribe, observes that "they were originally obtained from some supernatural being or by purchase from another family. Although referred to by most writers as totems, they have, however, no proper totemic significance, their use being similar to that of the quarterings in heraldry, to mark the social position of the wearers." Accordingly it would seem that these families or local groups cannot properly be described as totem clans; that term among the Haidas should be restricted to the two great exogamous divisions of the Raven and the Eagle.<sup>1</sup>

Each clan or class is subdivided into an indefinite number of families or local groups, and each of these families has its crests, which are generally representations of animals.

The crests are said not to be totemic.

<sup>1</sup> Fr. Boas, *Facial Paintings of the Indians of Northern British Columbia*, p. 14 (*The Jesup North Pacific Expedi-*

*tion, Memoir of the American Museum of Natural History, 1898*); J. R. Swanton, *Contributions to the Eth-*

Dawson's  
account of  
the Haida  
social  
system.

Somewhat different from the above is the account of the Haida social system given by the late Dr. George M. Dawson, to whom we owe the first fairly full description of the Queen Charlotte Islands and their inhabitants. According to him "a single system of totems (Haida, *kwalla*) extends throughout the different tribes of the Haidas, Kaiganes, Tshimsians, and neighbouring peoples. The whole community is divided under the different totems, and the obligations attaching to totem are not confined by tribal or national limits. The totems found among these people are designated by the *eagle*, *wolf*, *crow*, *black bear* and *fin-whale* (or *killer*). The two last-named are united, so that but four clans are counted in all. The Haida names for these are, in order, *kool*, *koo-ji*, *kit-sinaka* and *σχα-νου-χᾱ*. The members of the different totems are generally pretty equally distributed in each tribe. Those of the same totem are all counted as it were of one family, and the chief bearing of the system appears to be on marriage. No one may marry in his or her own totem, whether within or without their own tribe or nation. A person of any particular totem may, however, marry one of any other indifferently. The children follow the totem of the mother, save in some very exceptional cases, when a child newly born may be given to the father's sister to suckle. This is done to strengthen the totem of the father when its number has become reduced. The child is then spoken of as belonging to the aunt, but after it attains a certain age may be returned to the real mother to bring up."<sup>1</sup>

*nology of the Haida* (Leyden and New York, 1905), pp. 11, 62; *id.* in *Handbook of American Indians north of Mexico*, i. 522. Compare Fr. Boas, in *Fifth Report of the Committee on the North-Western Tribes of Canada*, pp. 26 sq. (*Report of the British Association*, Newcastle-upon-Tyne, 1889, separate reprint); *id.* in *Twelfth Report of the Committee on the Tribes of North-Western Canada*, pp. 648 sqq. (*Report of the British Association*, Bristol, 1898). In these *Reports* Dr. Boas applies the term phratries to the two Haida divisions of the Raven and Eagle; but that term should be restricted to

such exogamous tribal divisions as are themselves subdivided into minor exogamous groups, which seems not to be the case with the Raven and the Eagle divisions among the Haidas. Accordingly in his memoir, *Facial Paintings of the Indians of Northern British Columbia* (*l.c.*), Dr. Boas has rightly designated the two exogamous divisions of the Haidas as clans, not phratries.

<sup>1</sup> G. M. Dawson, *Report on the Queen Charlotte Islands, 1878* (Montreal, 1880), p. 134 B. Dr. Dawson's account is reproduced by Mr. A. Krause (*Die Tlinkit-Indianer*, p. 312).

If the later accounts of the Haida system given by Messrs. Boas and Swanton are correct, as we may assume them to be, it would seem that Dr. Dawson confused some of the families or local groups with the two exogamous clans. The animal crests claimed by the families might easily give rise to such a confusion. With regard to these crests we are told that while theoretically the crests used by families of the Raven clan should be different from those used by families of the Eagle clan, this distinction is not maintained throughout in practice, since some crests, for example the dogfish and the skate, are claimed by families both of the Raven and of the Eagle clan. But as a general rule the two sets of crests do actually differ from each other.<sup>1</sup> A family is not restricted to one crest. It may have, and often has, several crests or emblems which are supposed to commemorate events in the early history of the family. For example, one family has for its crests the frog, beaver, raven, and eagle; another has the bear, moon, dogfish, killer-whale, wolf, and devilfish; another has the killer-whale, owl, bear, and woodpecker; another has the bear, killer-whale, and moon; another has the halibut, eagle, beaver, and land-otter; another has the frog, beaver, starfish, and evening sky; another has the land-otter, killer-whale, woodpecker, and cirrus cloud; another has the eagle, sculpin, and beaver; another has the eagle, humming-bird, beaver, sculpin, and skate; another has the bear, killer-whale, hawk, rainbow, and stratus-cloud; another has the killer-whale, grizzly bear, and black bear; another has the eagle, raven, sculpin, and frog; another has the bear, moon, mountain-goat, killer-whale, storm-cloud, cirrus-cloud, and rock-slide; another has the dogfish, eagle, frog, monster frog, and beaver. And so on.<sup>2</sup>

According to Dr. Boas's enquiries the commonest crests or totems, as he also calls them, in the Raven clan are the killer-whale and the black bear; and the commonest crests or totems in the Eagle clan are the eagle and beaver. Next

<sup>1</sup> J. R. Swanton, *Contributions to the Ethnology of the Haida*, p. 107. *the Committee on the North-Western Tribes of Canada*, pp. 648 sqq. (*Report of the British Association*, Bristol,

<sup>2</sup> Fr. Boas, in *Twelfth Report of* 1898).

As a rule, the crests of the Raven and the Eagle clans differ from each other; but some crests are common to both clans.

Each family may have several crests.

Some crests are much commoner than others.

to them in frequency, though at a long interval, come in the Raven clan the *tsamaos* (a fabulous sea-monster) and the moon; in the Eagle clan the sculpin, the frog, and the raven. In the Raven clan Dr. Boas found the woodpecker, *tsilialas* (killer-whale with raven wings), thunder-bird, hawk, wolf, and cirrus cloud, each respectively claimed as a crest by two families; and the dogfish, devilfish, owl, land-otter, grizzly bear, sea-lion, mountain-goat, *gyitgalya*, rainbow, stratus cloud, storm-cloud, and rock-slide each respectively claimed by one family only. In the Eagle clan Dr. Boas found the dogfish claimed as a crest by two families, and the halibut, land-otter, starfish, humming-bird, skate (?), monster-frog *watsat* (a fabulous personage), *wasq* (a fabulous whale with five dorsal fins), *sgango* (a monster), and evening sky, each respectively claimed by one family only. To put the result of Dr. Boas's enquiries in tabular form:—

Table of the crests of the two Haida clans.

RAVEN CLAN (22 *distinct families*)

Killer-whale crest in 21 families.	Devilfish crest in 1 family.
Black bear       "   14   "	Owl               "   1   "
<i>Tsamaos</i> "   7   "	Land-otter       "   1   "
Moon           "   4   "	Grizzly bear crest in 1 family.
Woodpecker     "   2   "	Sea-lion               "   1   "
<i>Tsilialas</i> "   2   "	Mountain-goat crest in 1 family.
Thunder-bird   "   2   "	<i>Gyitgalya</i> "   1   "
Hawk           "   2   "	Rainbow           "   1   "
Wolf           "   2   "	Stratus cloud     "   1   "
Cirrus cloud   "   2   "	Storm-cloud      "   1   "
Dogfish       "   1 family.	Rock slide       "   1   "

EAGLE CLAN (18 *distinct families*)

Eagle crest in 17 families.	Humming-bird crest in 1 family.
Beaver       "   13   "	Skate (?)       "   1   "
Sculpin      "   9   "	Monster-frog   "   1   "
Frog         "   5   "	<i>Watsat</i> (a fabulous personage) crest in 1 family.
Raven       "   3   "	<i>Wasq</i> crest in 1 family.
Dogfish      "   2   "	<i>Sgango</i> "   1   "
Halibut     "   1 family.	Evening sky crest in 1 family.
Land-otter crest in 1 family.	
Starfish     "   1   "	

By a curious anomaly the raven is not a crest of the Raven clan.

Thus, while the two sets of crests mostly differ, the dogfish and the land-otter occur as crests both among the Ravens and the Eagles. It is remarkable that the raven should appear as a crest in the Eagle clan and not, where

we should expect to find it, in the Raven clan.<sup>1</sup> This anomaly is a puzzle to the Indians themselves<sup>2</sup>

The results of more recent researches conducted among the Haidas by Mr. J. R. Swanton agree to a considerable extent with those of Dr. Boas. He finds that in the Raven clan the killer-whale and grizzly bear crests are the most frequent, and that next to them come the rainbow and the *tsamaos* (a fabulous sea-monster); while in the Eagle clan the eagle and beaver crests are the most frequent, and next to them come the sculpin and frog. The other crests are considerably less common, and many of them occur only in a single family. From this Mr. Swanton infers with some probability that the crests most frequently used are the oldest, and that those which occur only once or twice must have been acquired in comparatively recent times.<sup>3</sup>

He tells us that the killer-whale is considered the oldest crest of the Raven clan, and the eagle the oldest crest of the Eagle clan. "The killer-whale," he says further, "was owned by every Raven family without exception; and the eagle, by almost every Eagle family. Young men are said to have worn these first before assuming the more valued ones; but young men of high family, not yet entitled to wear the higher crests, might nevertheless have them carved upon their grave-posts, if they died in early years. The town and family chiefs were always endeavouring to reserve certain crests for their own exclusive use, but the house chiefs were generally too powerful for this to go very far. The moon, however, seems to have been used exclusively by four or five of the highest Haida chiefs.

. . . Possession of a crest was jealously guarded; and if any chief learned that one of his crests had been adopted by a chief of a family that was considered of lower rank, he would put the latter to shame, and by giving away or destroying more property than the other chief could muster,

The common crests are probably the old crests; the rare crests are probably the new ones.

Possession of the crests was jealously guarded.

force him to abandon it. Thus a chief of the family of Those-born-at-Skidegate once adopted the mountain-goat; but when the chief of Skedans heard of it, he gave away a great many blankets, and compelled him to relinquish it."<sup>1</sup>

Descent of the family as well as of the clan seems to be in the female line.

Descent in the family, as well as in the clan, appears to be in the female line, so that children take both their family name and their crest from their mother, not from their father. This is not indeed directly affirmed, so far as I have observed, by our authorities, but it seems to follow from some of their statements. Thus Mr. Swanton says that "if a man were very fond of his children, he might give them the right to use some of his own crests; but these must be surrendered as soon as the children married. Occasionally a crest of this kind was kept through life; and, according to tradition, one or two crests were given by the man who first obtained them to his children, and thus to the other clan."<sup>2</sup> This statement implies that the acquisition of a crest by a child from his father is unusual and abnormal; from which we may infer that normally the crest is inherited by children from their mother.

Legends told by the Haidas to account for the origin of their crests. The killer-whale crest.

As specimens of the legends told by the Haidas to account for the origin of their crests we may cite the following. The killer-whale crest has been used by people of the Raven clan from the time when they came from the mythical marine being called Foam-Woman. One of her daughters wore a blanket with the figure of a killer-whale's dorsal fin on it, and ever since then the women of the Raven family called People-of-Pebble-Town have worn similar blankets at *potlatches*.<sup>3</sup> Again, the same Raven family is said to use the blue hawk crest because they saw the bird on a certain mountain where blue hawks live; the blue hawk and the thunder-bird are represented in carvings in almost exactly the same form, and both are employed as crests by the Raven family called People-of-Pebble-Town.<sup>4</sup> Again, the same Raven family used wooden war-helmets carved in the shape of

<sup>4</sup> J. R. Swanton, *l.c.*

sea-lions, because a member of the clan is said to have found the first sea-lion and to have made a hat for himself out of the skin of its head.<sup>1</sup> Again, the Ravens adopted the rainbow as a crest, because the chief of all supernatural beings in the woods, called Supernatural-One-upon-whom-it-thunders, was a Raven power and used to appear as the rainbow when he was in full dress.<sup>2</sup> Again, the cumulus and cirrus clouds were the full dress costume of the supernatural being called The-One-in-the-Sea, and as he was a Raven, the Ravens adopted these clouds as their crests.<sup>3</sup> Again, the Raven people use the flicker or golden-winged woodpecker as a crest, because a man of the People-of-Pebble-Town, a Raven family, killed the first flicker, stuffed its skin, and put it on his hat.<sup>4</sup> The moon, mountain-goat, and *tsamaos* are crests imported by the Raven people from the Tsimshians. The *tsamaos* was a personification of driftwood or the "tide-walker"; it could assume several different shapes, such as that of a sea-lion and a black whale.<sup>5</sup> The eagle crest was used by the Eagle people when their families "first came out" from their great mythical ancestress, who rejoices in the title of Property-making-a-Noise. The beaver crest of the Eagle people was brought back from the Tsimshian country by the children of Property-making-a-Noise. The dogfish, another crest of the Eagle people, was first used by a man of the Food-giving-Town-People or, as they were sometimes called, Those-born-at-Skidegate-Creek, who are a Raven family. He found a dogfish on the beach and adopted it as a crest, but gave it to one of his children, who was necessarily an Eagle. That is how the dogfish came to be a crest of the Eagle people. At the same time we are told that Property-making-a-Noise, the ancestress of the Eagles, had a dogfish tattooed on her back when she went to the Tsimshian country.<sup>6</sup> Again, a man of the Gitins-of-Skidegate, an Eagle family, was unfortunately poisoned by eating clams while he lived in

the Tsimshian country; and to console his friends for this domestic bereavement they were given a raven hat. That is how the Eagle people come to have the raven for a crest. The sculpin crest was also received by the Eagle people at the same time; it was first carved on the front of a grave-post.<sup>1</sup> Again, a child playing on the beach found the first starfish. He picked it up and dried it and played with it a long time. Indeed he liked it so much that he begged his friends to carve it on his grave-box. Since then his friends, who were Eagle people, have used the starfish as a crest. Again, two Eagle families, called respectively Those-born-at-Skedans and Sea-Lion-Town-People, tie humming-birds to their hair as a crest, because the great mythical ancestress of the Eagle people, Djilaqons, likewise wore a humming-bird fastened to her hair in a peculiar manner. Again, the Eagle people are said to have adopted the heron as a crest because once, when an Eagle man was returning empty-handed from the chase, a heron came out just at the stern of his canoe.<sup>2</sup>

The Haidas had a comparatively well-developed system of art, which they applied to the decoration of houses, canoes, paddles, horn-spoons, boxes, trays, dance-hats, masks, rattles, batons, and so forth; and among the patterns employed for this purpose the figures of their totemic or crest animals were by far the commonest.<sup>3</sup> Indeed, so far did the artistic bent of the people carry them in this direction that in the opinion of Dr. Boas it even reacted on their social system and proved a most important factor in developing it.<sup>4</sup>

Formerly, every Haida had his crest tattooed on some part of his person, generally on the legs, arms, or breast, most commonly on the back of the hand and forearm.

Apparently the Haidas never tattooed their faces. The patterns were carefully and symmetrically drawn by pricking the skin and rubbing in charcoal, so that they stood out in a bluish tint on the copper-coloured skin. While every member of a household had one of the family crests

The art of the Haidas.

The Haidas used to have their totems tattooed on their bodies.

tattooed on his body, the head or chief of the house used to have every one of them tattooed on his person in order to shew his relation to them all. Among the crests so tattooed which have been observed and recorded are the halibut, cod-fish, *wasko* (a mythical monster), frog, humming-bird, crow, bear, moon, rainbow, dragon-fly, starfish, skate, thunder-bird, killer-whale, sculpin, and dogfish. Some of these creatures were represented with a fair attempt at realism.<sup>1</sup>

While the Haidas appear not to have tattooed their faces, on the other hand they painted their crests on them, sometimes with a close resemblance to nature, laying on the patterns in black, red, blue, and green colours mixed with grease. Thus a man might paint a very natural halibut in red and black on his face, the head of the fish appearing on his brow and the tail on his cheek, and the rest of the fish occupying the intermediate portion of his countenance. Another would paint a killer-whale in black over his right eyebrow and a whale in red over his left eyebrow. A third would adorn the right side of his face with the likeness of a dog-salmon in red and black; while a fourth would decorate the front of his face with the figure of a devil-fish in red and black, the body with its goggle-eyes being plastered on his forehead, while the tentacles of the creature sprawled over his cheeks. Another would depict the sun as a disc with rays between his eyes, while another would display the crescent moon on his forehead or chin and lower jaws. Another would daub the upper part of his forehead with red to represent the red sky of evening; while another would encircle the whole of his face with red patches or cover it with red spots to imitate cirrus clouds either seen on the horizon across the sea or lit up by the warm rays of the rising or setting sun. In these last and in other cases the patterns are, however, so purely conventional that their meaning could not be understood without explanation.<sup>2</sup>

The Haidas also painted their crests on their faces.

The totem-poles or totem-posts of the Haidas.

But the most elaborate and imposing representations of Haida crests are those which they carved and painted on the wooden pillars commonly known as totem-poles or totem-posts. Such monuments were set up by other Indian tribes of North-West America, but among none of them were the totem-poles so numerous, so large, and so elaborately carved as among the Haidas. These poles were from thirty to sixty feet high; and as there were on an average at least two of them for each house, a Haida village seen from a distance used to present the appearance of a patch of burnt forest with bare, bristling tree-trunks. The cost of erecting such monuments was very considerable, sometimes, it is said, even amounting to several thousand dollars, so that only very wealthy people could afford to set them up. The totem-poles were of several kinds, amongst which we may distinguish two principal classes, the house-poles (*keχen*) and the mortuary-poles (*χat*). The house-poles are pillars from thirty to fifty or sixty feet high, and three feet wide at the base, tapering slightly upwards. They are hewn each out of a single cedar tree, and are hollowed out behind like a trough to make them light enough to be set up without much difficulty. One such pole is, or used to be, planted firmly in the earth at the front of every house and abutting against it, and an oval hole cut through the pole serves as the doorway. These poles are generally covered with grotesque figures, carved and painted, and closely grouped together from base to summit.<sup>1</sup> "Speaking generally," says Mr. Swanton, "there were two varieties of house-poles: (1) those which merely bore crests, and (2) those which illustrated some story. In the former class, crests belonging to the family of the house-owner and to that of his wife were usually placed together upon the pole, although occasionally all the crests were taken from one family; but, as will be seen in what follows, there was no fixed rule for the order in which these should be arranged."<sup>2</sup> Thus, for

Two kinds of totem-poles, viz. the house-poles and the mortuary-poles.

Of the house-poles some bore family crests and others illustrated myths.

House-poles bearing crests.

*Expedition, Memoir of the American Museum of Natural History*, 1898).

1878, pp. 115 B, 116 B, 148 B; A. Woldt, *Capitain Jacobsen's Reise an der Nordwestküste Amerikas* (Leipzig, 1884), pp. 40 sqq.

<sup>2</sup> J. R. Swanton, *Contributions to the Ethnology of the Haida*, p. 122.

example, a pole which formerly stood in front of a house of an Eagle family called Those-born-at-Saki, in the town of Ninstints, exhibits an eagle at the top and a bear at the bottom, both of which were crests of the husband's family ; while between them is carved the wolf, the crest of his wife, who was a Raven woman of the family called Xagi-Town-People. Again, a pole which stood at Skidegate shews a dogfish at the top and a raven immediately beneath it, while at the bottom is the killer-whale. Of these the dogfish and raven were the crests of the wife, who was of the Eagle clan ; while the killer-whale was the crest of her husband, who was of the Raven clan. Another pole which stood at Skidegate displays at the bottom the wife's crest, a grizzly bear, and above it two crests of the husband, a raven and a *wasgo*, a fabulous monster, part wolf and part killer-whale, who hunts for black whales at night and brings them away on his back. In this case the wife was a Raven woman of the family of Those-born-at-Rose-Spit, and her husband was an Eagle man of the family of the Big-House-People. Another pole exhibits at the top a grizzly bear, the crest of the wife, who was a Raven woman of the family of Those-born-at-Rose-Spit ; and below the bear are carved successively a dogfish, a raven, and an eagle, all crests of the husband, who was an Eagle man of the family of the Rotten-House-People. At the top the pole ends in a tall cylinder with circles cut round it, one above the other. This stands for a chief's cylindrical hat which was made in segments ; and the more segments it had, the more honourable was the hat. Another pole has a beaver and an eagle, the wife's crests, at the top, and below them the moon and a grizzly bear, both crests of the husband, who was a Raven, while his wife was an Eagle. Another pole displays, from bottom to top, the grizzly bear, the moon, and two figures intended to represent mountain-goats, all of them crests of the husband, who was a Raven, chief of the Sand-Town-People. Surmounting all are two watchmen, as they are called, figures of human beings wearing the usual tall flat-topped hats. Some families had two, others had three of these watchmen. In Haida myths similar figures are mentioned on the house-poles of the supernatural beings ;

The tall cylindrical hat of a chief.

Figures of watchmen.

and it is said that they always gave warning when an enemy approached or anything happened which the owner of the pole ought to know. They are not used as crests. Yet another pole exhibits at the bottom a killer-whale, and above it the moon, both crests of the husband, who was a Raven, and chief of the Pebble-Town-People; above the moon appears the raven, the crest of his wife, who was an Eagle woman; and surmounting all is a figure of the chief himself holding one of the much-prized copper plates under each arm. To put a portrait of the house-owner on his pole was not uncommon.<sup>1</sup>

Story-  
poles, that  
is, poles  
illustrating  
tribal  
myths and  
legends.

These and similar house-poles are purely heraldic. Others are carved to illustrate the myths and legends of the tribe. These Mr. Swanton calls story-poles. They are clearly parallel to the monuments of ancient art, whether Egyptian, Babylonian, Assyrian, Greek, or Roman, which set forth the sacred traditions and religious beliefs of the people who erected them. For example, a pole, which stood at Kloo and belonged to an Eagle chief of the family of Those-born-at-Skedans, exhibits at the bottom a man squatting and wearing an immensely tall cylindrical hat which reaches from his head to the top of the pole. On either side of the hat is a series of three human beings, one above the other, clinging with their hands to the cylindrical hat, as if to support themselves by it. The pole illustrates a story that Raven caused a flood, whereupon a chief named Kenk, with great presence of mind, clapped his hat on his head, and as it grew longer and longer his people swarmed up it to escape from the rising tide of water.<sup>2</sup> Again, a pole which belonged to a Raven chief of the Eagle-House-People is illustrated and thus described by Mr. Swanton: "It

Pole  
illustrating  
the legend  
of the  
great flood  
caused by  
Raven.

<sup>1</sup> J. R. Swanton, *Contributions to the Ethnology of the Haida*, pp. 122-124, with Plates I. and II. As to the cylindrical hats worn by chiefs Prof. E. B. Tylor observes that "the original form of this head-dress may be the native basketry hat, which passes into a wooden helmet surmounted by a cylindrical turret, the number of divisions (*skil*) indicating the wearer's rank or dignity, and being said to represent the number of potlatches or

feasts given by the wearer. It is now only worn in ceremonial dances, but its representation is frequent in paintings and carvings" (*Journal of the Anthropological Institute*, xxviii. (1899) p. 134).

<sup>2</sup> J. R. Swanton, *Contributions to the Ethnology of the Haida*, pp. 124 sq., with Plate V. 2; Franz Boas, *Indianische Sagen von der nord-pazifischen Küste Amerikas* (Berlin, 1895), p. 308.

contains episodes from the Raven story. At the bottom is a figure of the beaver who owned the first house, salmon-lake, and salmon-trap, and who adopted Raven. The small human figure on the head of which this beaver has its front-legs is Raven himself. Above is another figure of Raven playing with the crescent moon which surrounds the head of Butterfly, Raven's companion. This refers to the theft of the moon by Raven. Butterfly is introduced only because he used to go about with Raven. The figure above this, with a frog in its mouth, is said to represent the grandfather of Raven at this time, the frog simply filling up space. Still higher Raven is seen in the act of stealing the beaver's salmon-lake. The lake is the cross-hatched surface curled round the two salmon. The frog on Raven's hat is said to be merely for ornament; and the segmented part rising above it is, as usual, a chief's dance-hat. On top of this dance-hat, finally, Raven appears again in the form of a bird holding the moon in his bill, as he flew with it through the smoke-hole."<sup>1</sup> Again, a pole which stood before the house of a Raven chief near Masset illustrates the story of the man who married a bear, a story which, like the theft of the moon by Raven, has its parallel among the Tlingits; for they tell how a woman, roaming the wood in search of berries, strayed into a bear's den, and how she was obliged not only to marry the bear, but to be herself changed into a she-bear.<sup>2</sup> On the Haida house-pole, which

Pole illustrating the story how Raven stole the moon.

<sup>1</sup> J. R. Swanton, *Contributions to the Mythology of the Haida*, p. 125, with Plate III. 4. The Tlingits also tell how Raven (Yehl) contrived to steal the moon from a chief who kept it shut up in a box, and how on opening the box Raven allowed the moon to fly up into the sky, where it has since remained. In the same way he liberated the sun and stars, which the same chief had kept in two other boxes; for till then the world had been dark. Thus it was Raven who set the great lights in the sky to lighten the day and the night. See H. J. Holmberg, "Über die Völker des russischen Amerika," *Acta Societatis Scientiarum Fennicae*, iv. (1856) pp. 336-339; and for a fuller and

somewhat different version of the legend, see Franz Boas, *Indianische Sagen von der nord-pazifischen Küste Amerikas* (Berlin, 1895), pp. 311-313. The myth contains a good example of the widespread story of the Virgin Birth. In order to obtain access to the chief's house Raven turns himself into a blade of grass or a pine-cone, which is swallowed by the chief's daughter in a draught of water. Thereupon she becomes pregnant and gives birth to a child, who is no other than Raven himself.

<sup>2</sup> H. J. Holmberg, "Über die Völker des russischen Amerika," *Acta Societatis Scientiarum Fennicae*, iv. (1856) pp. 310 *sq.* A similar story, except as to the transformation of the

Pole illustrating the story how a man married a Bear wife.

tells the tale of the man and his bear-wife, the principal figure is the Grizzly-Bear-Woman. She clasps in her hands what appears to be a long tongue lolling out of her mouth; however, we are told that this object is not her tongue but a labret, such as all Haida women used to wear in their lower lips. On her head the Bear-Woman wears the usual conical dance-hat, divided into segments by circles and surmounted in this case by a bear's cub, which thus sits on the top of the pole. In her arms the Bear-Woman clasps two more of her cubs, and a little lower down is a full-length figure of a bear representing her husband. At the bottom of the pole, above the oval opening which formed the doorway of the house, are carved a frog and a raven, which have apparently no reference to the story of the Bear-Woman.<sup>1</sup> Another Haida house-pole, which formerly

Pole illustrating the story how a man made love to a bear's wife and was eaten by the bear.

stood in the village of Masset, also illustrates the legend of the man and the bear. The story ran that Toivats the hunter went to the house of Hoorsts the bear, when the bear was not at home. In his absence the hunter made love to the bear's wife. Coming home the bear found his wife in confusion and accused her. She denied the charge, but the bear was still suspicious, and when she went out to draw water and fetch wood, he tied a magic thread to her dress, and following this clue he found her with her gallant, whom he killed. On the Haida post the injured bear is represented in the act of devouring the man who had injured him.<sup>2</sup> Another

Pole illustrating the story of the man in the fish's belly.

house-pole, whether Haida or Tsimshian is uncertain, exhibits a scene which has sometimes been taken for Jonah in the fish's belly. It certainly represents a man in the belly of a killer-whale, but the legend which it illustrates

woman into a bear, is told by the Tsimshians. See Franz Boas, *Indianische Sagen von der nord-pazifischen Küste Amerikas*, pp. 294 sq.

<sup>1</sup> J. R. Swanton, *Contributions to the Ethnology of the Haida*, p. 127, with Plate V. 1. As to the labrets which the Haida women used to wear in their lower lips, see G. M. Dawson, *Report on the Queen Charlotte Islands, 1878*, pp. 108 B sq. They were made

of wood or bone and projected at right angles to the plane of the face. One of them has been found to measure  $3\frac{1}{2}$  inches in length by  $2\frac{5}{8}$  inches in width.

<sup>2</sup> E. B. Tylor, "On the Totem-post from the Haida Village of Masset," *Journal of the Anthropological Institute*, xxviii. (1899) pp. 133-135, with Plate XII. This fine totem-pole, which is more than forty feet high, now stands in the grounds of Fox Warren, near Weybridge.

appears to be of purely native origin.<sup>1</sup> In the British Museum there is a totem-pole from the Haida village of Kayang, near Masset, in Queen Charlotte Island. The carvings on the pole refer to a story which sets forth how Raven (*Yetl*), swimming in bird shape under water, was caught on the line of some fishermen; how they tried to haul him into the boat, how he clung for dear life to the bottom with his claws, how they tugged and better tugged, till at last the line suddenly slacking they all collapsed in the bottom of the boat. When they pulled themselves together and examined the hook, they found sticking on it a piece of Raven's beak, which had snapped clean off in the desperate tussle. They did not know what to make of it, but took it ashore with them, and while they were confabbing over it in the hut, who should walk in but Raven himself, looking just like a man, but hiding his broken nose. He cajoled the assembled sages into letting him have the piece of his beak in his hand to look at, but no sooner had he got it than he clapped it on his broken nose; the pieces joined together, and away he flew through the smoke-hole in the roof.<sup>2</sup> The story is of special interest for its references to the bird shape of Raven, who in the native mythology, despite his name, commonly appears as a man.

Pole illustrating the story how Raven's beak was broken and mended again.

Besides the tall house-pole which stood in front of the house the greatest Haida chiefs had an inside pole, which stood in the middle of the rear part of the house, and the seat just in front of it was always reserved for persons of the highest rank. These inside poles were also carved with figures of the family crests, one above the other; for example, on one we see, from bottom to top, a frog, a hawk, a raven with two frogs in its mouth, and a grizzly bear; another represents an eagle above and a cormorant below; and so on.<sup>3</sup>

Inner house-poles.

<sup>1</sup> E. B. Tylor, "On two British Columbian House-posts with Totemic Carvings, in the Pitt-Rivers Museum, Oxford," *Journal of the Anthropological Institute*, xxviii. (1899) pp. 136 sq., with Plate XIII. The Pitt-Rivers Museum at Oxford possesses another fine Haida house-pole from the village of Masset. It is over forty feet high and exhibits two "watchers" at the top, with figures of the raven, frog,

crayfish, and killer-whale beneath them. See E. B. Tylor, "Note on the Haida Totem-post," *Man*, ii. (1902) pp. 1 sq. with Plate A.

<sup>2</sup> T. A. Joyce, "A Totem Pole in the British Museum," *Journal of the Anthropological Institute*, xxxiii. (1903) pp. 90 sq., with Plate XIX.

<sup>3</sup> J. R. Swanton, *Contributions to the Mythology of the Haida*, p. 128, with Plate V. 2.

Mortuary-poles are of two sorts, viz. those which support the remains of the dead and those which merely commemorate them.

Like the house-poles, the mortuary - poles (*χat*) may be divided into two classes, namely, grave-poles which contain or support the remains of the dead, and memorial-poles which are simply erected in honour of the departed, whether man or woman. To the Haidas, however, there is no essential distinction between the two. Both are called by them "grave-father," and both sorts were set up by the successor of a dead chief when he entered on office. The mortuary - poles, though sometimes as ponderous as the house-poles, were generally not so tall and not so elaborately decorated. They stood, as a rule, on the narrow strip of land between the houses and the beach, but in no determinate relation to the dwellings. The most elaborate form of these mortuary-poles was called "two grave-fathers," and consisted of a long box with a carved front, capable of holding several bodies, and raised upon two posts instead of one. The carving on the box might represent the crest of the deceased.<sup>1</sup> In other cases the grave-box was placed on the top of a single pole or let into the top of the pole itself. But whether any bodies were placed on the pole or not, it was sometimes carved in imitation of a true grave-pole, stout planks being nailed across it at the top to resemble the front of a grave-box. Both on the shaft and on the cross-piece might be carved the crests of the deceased. Other mortuary - poles are purely commemorative ; they neither support nor pretend to support the remains of the dead. As a rule they consisted of a shaft either plain or slightly decorated with a figure carved at the bottom and another at the top ; these figures often represented the crests of the person in whose memory the monument was erected. For example, a memorial pole set up in honour of a Raven man exhibits a long flattened quadrangular shaft with a grizzly bear at the bottom and a raven perched on the top. The shaft and the raven together stand for the mythical killer-whale called Raven-fin (*Tsilialas*). On the front of the fin were originally hung two of those copper plates, on which the Indians of this coast used to set an extravagant

<sup>1</sup> G. M. Dawson, *Report on the Queen Charlotte Islands, 1878*, pp. 133 B, 148 B ; J. R. Swanton, *Contributions to the Ethnology of the Haida*, p. 129.

value. It was not uncommon thus to lay up a dead man's coppers, as they were called, on his monument.<sup>1</sup> Again, a memorial pole for a chief's wife, a Raven woman of the Sand-Town-People, consists of a plain cylindrical column with a figure of the mythical Cloud-Woman at the bottom and the long-billed figure of a flicker or golden-winged woodpecker perched on the top. Both the Cloud-Woman and the woodpecker were crests used by the woman's family.<sup>2</sup>

The possession of certain crests was not the only prerogative of a Haida family. Each family had in addition the use of certain names,—personal names, house-names, canoe-names, even names of salmon-traps and spoons. A first-born son might be called by the name of the mother's eldest brother, and the second-born by the name of the mother's second brother, or by one of the additional names of the first. But a large proportion of Haida personal names were based on the belief in the transmigration of souls. This belief was general among the Haidas: they thought that the soul of a dead ancestor was often reborn in the person of one of his descendants, and whenever this was supposed to have happened, the newborn child naturally received the name of the ancestor or ancestress who had come to life again in him or her. The medicine-men or shamans professed to learn in a dream or a vision the name of the person who had just been reincarnated, and the infant was named accordingly. To this imaginary power of detecting the dead among the living the Haida medicine-men owed a large part of the influence which they exercised over the people. It was believed that a man was always reborn into his own clan and generally into his own family. Thus a Raven man always came to life again as a Raven, never as an Eagle; and similarly, however often an Eagle man might die and be reborn, at each reincarnation he would still be an Eagle to the end of time. From this it follows that no man could be reborn in his own son, since

Family names of the Haidas.

Many personal names among the Haidas are based on the theory of transmigration: a person bears the name of the dead ancestor, often the paternal grandfather, of whom he is supposed to be a reincarnation.

<sup>1</sup> J. R. Swanton, *Contributions to the Ethnology of the Haida*, p. 130, with Plate V. 3; G. M. Dawson, *Report on the Queen Charlotte Islands*, 1878, p. 148 B.

<sup>2</sup> J. R. Swanton, *Contributions to the Ethnology of the Haida*, p. 131, with Plate VIII. 1.

in virtue of the laws of exogamy and female descent the son of a Raven man was never a Raven, but always an Eagle, and similarly the son of an Eagle man was never an Eagle, but always a Raven. But while a man could not be reborn in his son he might be reborn in his grandson, since the grandson always belonged to his paternal grandfather's clan, though not to his father's. For example, a Raven man had an Eagle son, and the Eagle son had a Raven son, so that on the Haida principles of descent and transmigration the Raven grandfather might be reborn in the person of his Raven grandson. This may explain why among the Haidas, whenever the name of the reborn ancestor was not revealed by the medicine-man, a newborn male child received the name of his paternal grandfather, provided that the grandfather belonged, as he often did, to the same family as his grandson. But if the grandfather was of a different family, his name could not ordinarily be employed; and in that case the grandson would have to receive a name from one of his great-uncles or from some other male member of the family. A girl also received her name from her paternal grandfather's kin.<sup>1</sup> Perhaps the Haida custom and belief in this matter may throw light on the practice of naming sons after their paternal grandfathers which has prevailed elsewhere. For example, among the ancient Greeks the custom was to name the first-born son after his paternal grandfather; it was rare to name him after his own father.<sup>2</sup> It is possible that this Greek practice points back to a theory of reincarnation combined with a system of exogamy and mother-kin, which ensured that a man should always belong to his grandfather's clan but never to that of his father. To say nothing of Pythagoras's doctrine of transmigration, there are some independent grounds for thinking that

not father's name  
The belief may explain a similar nomenclature of the ancient Greeks.

the ancient Greeks believed in the reincarnation of the dead.<sup>1</sup>

With regard to the social obligations which members of the same totemic clan lay under to each other Dr. Dawson tells us that "an Indian on arriving at a strange village, where he may apprehend hostility, would look for a house indicated by its carved post as belonging to his totem, and make for it. The master of the house coming out, may if he likes make a dance in honour of his visitor, but in any case protects him from all injury. In the same way, should an Indian be captured as a slave by some warlike expedition, and brought into the village of his captors, it behoves any one of his totem, either man or woman, to present themselves to the captors, and singing a certain sacred song, offer to redeem the captive. Blankets and other property are given for this purpose. Should the slave be given up, the redeemer sends him back to his tribe, and the relatives pay the redeemer for what he has expended. Should the captors refuse to give up the slave for the property offered, it is considered rather disgraceful to them. This at least is the custom pursued in regard to captives included in the same totem system as themselves by the Tsimshians, and it is doubtless identical or very similar among the Haidas, though no special information on this subject was obtained from them."<sup>2</sup>

Social obligations incumbent on members of the same totemic clan in respect of each other.

As the Haidas intermarry with neighbouring Indian tribes who have similar, though not identical, systems of totemism and exogamy, it is necessary for the purpose of such intertribal marriages to determine the equivalence of the various totemic clans in the different tribes. On this subject we are told that "theoretically a man of the Raven clan was reckoned in that clan, wherever he might go ; and the Ravens among whom he settled were his uncles, elder and younger brothers, sisters and nephews. This would be as true at Sitka or in the Chilkat country, or, for that matter, in Florida, as on the Queen Charlotte Islands ; but

In marrying members of other tribes the Haidas have regard to the totems.

<sup>1</sup> See F. B. Jevons, "Greek Law and Folk Lore," *Classical Review*, ix. (1895) pp. 248 sq.; J. E. King, "Infant Burial," *ibid.* xvii. (1903) pp. 83 sq.

<sup>2</sup> G. M. Dawson, *Report on the Queen Charlotte Islands, 1878*, p. 134 D.

it so happens that the crests of the Raven clan agree with those of the Bear and Wolf clans among the Tsimshian, while the crests of the Eagle clan agree with those of the Raven and Eagle clans among the latter people; and, since crests are considered much more important than the mere name of the clan, each Haida clan considers the two Tsimshian clans bearing its crests its 'friends.' . . . The important point is, however, that a Haida marrying into another tribe always avoids a certain clan among them, the members of which, for one reason or another, he considers his 'friends.'"<sup>1</sup> Similarly, Dr. Boas tells us that "any Haida who has the raven among his emblems, when marrying a Tlingit, is considered a member of the Raven phratry, and *vice versa*, the emblems always deciding to which phratry an individual is to be reckoned."<sup>2</sup> The following table exhibits the equivalence of the exogamous divisions (clans or phratries) and crests among the Haidas, Tlingits, Tsimshians, and Bella Bellas, so far as that equivalence has been determined by Mr. J. R. Swanton:—<sup>3</sup>

Haida.	Tlingit.	Tsimshian.	Bella Bella.
Raven = Wolf	(Eagle) = Wolf and Bear	= Eagle and Killer-Whale	
Eagle = Raven		= Raven and Eagle = Raven	

It is curious that the Ravens of the Haidas should be equated to the Eagles of the Tlingits and Bella Bellas, while conversely the Eagles of the Haidas are equated to the Ravens of the Tlingits, Tsimshians, and Bella Bellas. The reason of the anomaly is apparently unknown.

Though each of the two Haida clans, the Raven and the Eagle, was subdivided into many families, yet all these subdivisions were considered to have had a common origin, and the distinction between the two clans is said to be absolute in every respect. The clans have no governmental functions: their significance is restricted to matters pertaining to marriage and descent. When a man died, the members of his wife's clan, not of his own, conducted the funeral; and when his successor made a *potlatch*, that is, a

feast accompanied by a distribution of property, to set up the grave-post, he invited them to it. At other potlatches he only gave property to members of his own clan.

Families of the same clan were also more apt to go to war together than those of opposite clans. The fundamental

unit of Haida society was the family, and the family chief was the highest functionary. Generally the chief of the

Haida  
chiefs of  
families,  
towns, and  
households.

family was also chief of the town, but the larger places were usually inhabited by several families belonging to both the

clans. In such places the town chief ranked first socially among the family chiefs; he sat in the highest place, directly in front of the inside house-pole at feasts, and properly had his house in the middle of the town. His

reputation was increased by the presence of other families, and his power in war generally rose correspondingly, especially if the families were related to his. Further, every

family was subdivided into households, each of which was governed by its own chief. The house chief's power was

almost absolute, being only limited by the other chiefs and the barriers raised by custom. He could call his nephews together to make war, and as he fitted out the expedition, nearly all the slaves and other booty acquired in the war

went to him. His influence with the other house chiefs varied with the amount of his property; and the power of family chiefs living in a town belonging to another family

depended largely on the number and wealth of their people. Success in amassing property generally governed the selection

of a new chief of the town, of the family, and of the house.

Their  
mode of  
succession  
and  
election.

The successor might be the own brother, own nephew, or a more distant relation of his predecessor. So far as any choice was exercised, it appears to have rested, in the case

of a family or town chief, with the house chiefs, while the sentiments of a household probably had weight in deciding between claimants to the position of house chief. A chief's

household was made up of the persons of his own immediate family who had no places for themselves, his nephews, his retainers or servants, and his slaves. A man's sister's sons

were his right-hand men. They, or at least one of them, came to live with him in their youth, were trained by him, and spoke or acted for him in all social matters. The one

who was expected to succeed him often married his daughter. And on succeeding to the chieftainship a man often wedded one of the wives of his predecessor, the other wives, if there were others, returning to their families with liberty to marry again.<sup>1</sup>

Dawson on the rules of succession to a Haida chieftaincy.

Dr. Dawson's account of the rules of succession to a Haida chieftainship agrees substantially with the foregoing, though he does not distinguish between the three grades of chiefs—the town chief, the family chief, and the house chief. He says: "The chieftaincy is hereditary, and on the death of a chief devolves upon his next eldest brother, or should he have no brother, on his nephew, or lacking both of these his sister or niece may in rare cases inherit the chieftaincy, though when this occurs it is probably only nominal. It is possible—as occasionally happens in the matter of succession to property—that a distant male relative may, in want of near kinsmen, be adopted by the mother of the deceased as a new son, and may inherit the chieftaincy. I have not, however, heard of cases of this kind. Should all these means of filling the succession fail, a new chief is then either elevated by the consensus of public opinion, or the most opulent and ambitious native attains the position by making a *potlatch*, or giving away of property, greater than any of the rest can afford. Should one man distribute ten blankets, the next may dispose of twenty, the first tries to cap this by a second distribution, and so on till the means of all but one have been exhausted. This form may in reality become a species of election, for should there be a strong feeling in favour of any particular man, his friends may secretly reinforce his means till he carries his point. In no case, however, does the chieftaincy pass from the royal clan to any of the lesser men of the tribe."<sup>2</sup>

In these accounts of election to a chieftaincy it is

<sup>1</sup> J. R. Swanton, *Contributions to the Ethnology of the Haida*, pp. 66, 68-70. "When he came to grow up, the boy ceased to stay with his mother. There he was thought to have too easy a time, and became an object of contempt. He was generally sent to live with the uncle to whose place he was to succeed. There he was put

through a rather severe discipline, being kept at work out in the cold, etc." (J. R. Swanton, *op. cit.* p. 50). This account applies to nephews (the sons of sisters) in general, not to the nephews of chiefs only.

<sup>2</sup> G. M. Dawson, *Report on the Queen Charlotte Islands, 1878*, p. 119 B.

interesting to observe the importance of private property in determining political power. Within certain limits the richest man is elevated to the highest position in the social group, whether that group is the household, the family, or the town; the rank of chief is put up to something like auction. Democracy among the Haidas is, or rather was, developing into a plutocracy. Here as in other political institutions of the Indians we seem to detect the germs of the corresponding institutions which their successors in North America have either already set up or to which, for good or evil, they appear to be gravitating.<sup>1</sup> With the Red Man of the North-West the blanket, his unit of currency, appears to be as omnipotent as the dollar with his white brother: by blankets a man acquires the respect and admiration of his fellows; by blankets he rises in the social scale; by blankets he attains to the highest position of power and influence in the community. And if in the old days in addition to blankets he possessed scalps which he had personally abstracted from the heads of a number of his fellow creatures, his claims to nobility were placed beyond a shadow of dispute; he stood on a pedestal of glory from which nothing but the loss of his blankets and scalps could possibly deject him. Things are changed nowadays, scalps and homicide have ceased to furnish a clear title of nobility, which is now based on blankets alone; it is no longer necessary that a nobleman should be stronger and more bloodthirsty than his fellows, but it is absolutely essential that he should have more blankets. To the acquisition of blankets, accordingly, the minds of the rising generation are trained from the dawn of intelligence; and to the acquisition of blankets the mature energies of the adult are directed with a single-minded devotion worthy of a better cause. Nor is the rivalry in this great race for blankets confined to individuals only; it is shared by whole clans, which are perpetually pitted against each other in their endeavour to surpass their rivals in the degree of their nobility, to crush or, to use their own expression, to flatten them under the weight of blankets. "Formerly," we are told, "feats of bravery counted as well as distributions of property, but

The race for blankets.

<sup>1</sup> See above, p. 156.

nowadays, as the Indians say, 'rivals fight with property only.'"<sup>1</sup>

<sup>1</sup> Lest I should be thought to exaggerate the plutocratic tendency of society among these Indians, I will quote some of my authorities. Speaking of the Indians of British Columbia and Vancouver Island more than forty years ago a writer tells us that "the natives judge of rank by two tests in particular—the number of scalps and slaves taken in battle, and the amount of property accumulated. The latter symbol of power is eagerly coveted by them; and as blankets have come generally to be the chief representation of wealth, these are accumulated against the recurrence of the feasts of the tribe, when an opportunity is afforded of displaying the extent of individual resources" (Matthew Macfie, *Vancouver Island and British Columbia*, London, 1865, p. 429). Speaking of the same Indians in later times Dr. Franz Boas, one of the best living authorities on the subject, says: "Before proceeding any further it will be necessary to describe the method of acquiring rank. This is done by means of the *potlatch*, or the distribution of property. This custom has been described often, but it has been thoroughly misunderstood by most observers. The underlying principle is that of the interest-bearing investment of property. . . . The unit of value is the single blanket, now-a-days a cheap white woolen blanket, which is valued at 50 cents. The double blanket is valued at three single blankets. These blankets form the means of exchange of the Indians, and everything is paid for in blankets or in objects the value of which is measured by blankets. . . . Possession of wealth is considered honorable, and it is the endeavour of each Indian to acquire a fortune. But it is not as much the possession of wealth as the ability to give great festivals which makes wealth a desirable object to the Indian. As the boy acquires his second name and man's estate by means of a distribution of property, which in course of time will revert to him with interest, the man's name acquires greater weight in

the councils of the tribe and greater renown among the whole people, as he is able to distribute more and more property at each subsequent festival. Therefore boys and men are vying with each other in the arrangement of great distributions of property. Boys of different clans are pitted against each other by their elders, and each is exhorted to do his utmost to outdo his rival. And as the boys strive against each other, so do the chiefs and the whole clans, and the one object of the Indian is to outdo his rival. Formerly feats of bravery counted as well as distributions of property, but nowadays, as the Indians say, 'rivals fight with property only.' The clans are thus perpetually pitted against each other according to their rank. . . . I referred several times to the distribution of blankets. The recipient in such a distribution is not at liberty to refuse the gift, although according to what I have said it is nothing but an interest-bearing loan that must be refunded at some future time with 100 per cent interest. This festival is called *pasa*, literally, flattening something (for instance, a basket). This means that by the amount of property given the name of the rival is flattened." Thus the appearance of generosity displayed by the lavish distribution of property on these occasions is deceptive: the transaction, if Dr. Boas is right, springs from the most sordid motives, it is nothing but the lending of money, or the equivalent of money, on the most usurious and exorbitant interest. See Franz Boas, "The Social Organization and the Secret Societies of the Kwakiutl Indians," *Report of the United States National Museum for 1895* (Washington, 1897), pp. 341-343. Although Dr. Boas is here dealing with the Kwakiutl in particular, his remarks appear to be applicable generally to the coast tribes of British Columbia. In one respect these savages are, from the purely economic point of view, even more advanced than ourselves; for with us

The succession to property, like the succession to chieftainship, runs among the Haidas in the female line. Succession to property among the Haidas is in the female line.

"The brother of the deceased inherits his property, or should there be no brother, a nephew, or the sister, or, failing all these, the mother. Occasionally some distant male relative may be adopted as a new son by the mother, and be made heir to the property. The wife may in some cases get a small share. As soon as the body has been enclosed in the coffin-box, and not before, the brother or other heir takes possession. When it can be amicably arranged, he also inherits the wife of the dead man, but should he be already married, the nephew or other relative on whom the succession would next devolve is supposed to marry the relict. Should there be no relative to marry her, she may be married again to any other man."<sup>1</sup>

The levirate.

A chief might marry as many women as he chose ; three or four were not uncommon, and there is a tradition of a chief who had ten ; but polygamy does not seem to have been very frequent.<sup>2</sup> The common rule of avoidance between a man and his wife's parents was observed also by the Haidas. A man was bashful before his father-in-law and mother-in-law, and they were bashful before him ; that is, they never addressed each other directly, if they could avoid it.<sup>3</sup>

Polygamy.

Mutual bashfulness of a man and his wife's parents.

The Haidas, like so many other Indian tribes of North America, possess the classificatory system of relationship. In the generation above his own a man calls all the men of his father's clan "fathers," but all the men of his mother's clan he calls "uncles" ; and he calls all the women of his mother's clan "mothers." In his own generation he calls all the men of his own clan who are older than himself "elder brothers" ; and all the men of his own clan who are younger than himself he calls "younger brothers" ; all the women of his own generation and clan he calls his "sisters," but all

The classificatory system of relationship among the Haidas.

no man is as yet obliged by law to swell the bloated fortune of a usurer by accepting his loan at ruinous interest whenever he chooses to offer it. On blankets as the means of paving, or rather carpeting, the way to political power among the Haidas, see also G. M. Dawson, *Report on the Queen*

*Charlotte Islands, 1878*, p. 126 B.

<sup>1</sup> G. M. Dawson, *op. cit.* pp. 133 B sq.

<sup>2</sup> G. M. Dawson, *op. cit.* p. 130 B ; J. R. Swanton *Contributions to the Ethnology of the Haida*, p. 50.

<sup>3</sup> J. R. Swanton, *op. cit.* p. 51.

the women of his own generation of the other clan before marriage he calls "cousins." In the generation below his own a man calls all the men and women of the other clan "children," and the women he calls also "daughters." A woman uses corresponding terms in speaking of members of her own and of the other clan. All the men of her father's generation and clan are her "fathers"; all the women of her mother's generation and clan are her "mothers"; all the women of her own generation and clan who are older than herself are her "elder sisters," and all the women of her own generation and clan who are younger than herself are her "younger sisters"; all the men of her own generation and clan are her "brothers"; and all the men and women of the generation below her own and of her own clan are her "children."<sup>1</sup>

#### § 4. *Totemism among the Tsimshians*

The Tsimshians.

The Tsimshians or Chimmesyans are a small stock of Indians speaking a language of their own, who inhabit the coast of the mainland of British Columbia from the Nass River on the north to Millbank Sound on the south. The valley of the Skeena River is included in their territory. In their social system, habits, and art they are closely allied to their neighbours on the north and west, the Tlingits and the Haidas, with whom they live on terms of friendly intercourse. Like the other coast tribes they subsist mainly on the produce of the sea and the rivers. The annual runs of salmon on the Skeena River and of oolachen or candle-fish on the Nass River furnish them with an abundance of provisions at certain seasons. Oolachen are a great source of revenue to the Niska, the subdivision of the Tsimshians who inhabit the valley of the Nass River; for the oil of this fish is in great demand all along the coast and is indispensable for the great winter *potlatches*. Bears, mountain goats, and other wild animals are hunted, especially by the tribes of the interior. The horns of mountain goats are carved into handles for spoons used at feasts and *potlatches*, and are sold to other tribes for the same purpose. Although they are

Tsimshian fisheries.

<sup>1</sup> J. R. Swanton, *Contributions to the Ethnology of the Haida*, pp. 62 sqq.

good carvers and builders of canoes, the Tsimshians are surpassed in these arts by the Haidas, from whom they still purchase canoes. Their houses are large square structures, solidly built of heavy cedar beams and planks and capable of accommodating from twenty to thirty people. Each house is, or was, presided over by a house chief, while every family and every town had a superior chief; under him were the members of his household, his more distant clan relations, and the servants and slaves. The Tsimshians or Chimmesyans fall into three main divisions, namely, the Tsimshians of the lower Skeena River, the Gitksans or Kitksans of the upper Skeena River, and the Niskas of the Nass River. The dialects of these three divisions differ somewhat, but their customs and institutions are practically identical; at least this is true of the Tsimshians of the lower Skeena and the Niskas of the Nass. Accordingly the following account may be taken to apply to both these divisions and probably to the whole of the Tsimshian stock.<sup>1</sup>

Houses of the Tsimshians.

Three main divisions of the Tsimshians.

The Tsimshians are divided into four exogamous clans, the Raven (*Kanhada*), the Eagle (*Laqskiyek*), the Wolf (*Laqkyebo*), and the Bear (*Gyispawaduweda*). Descent is reckoned in the female line; that is, children belong to the clan of their mother, not to the clan of their father. If he is a Raven and she is an Eagle, the children are Eagles; if he is a Wolf and she is a Bear, the children are Bears. And so on. Of these clans, the Bear is the most numerous, and it is also considered the noblest, because it derives its origin from Heaven, which, as we shall see, plays a great part in Tsimshian religion. The clans reside together in the villages, though members of all four clans are not necessarily found in every village. But in each village the houses of members of the same clan are grouped together.

Exogamous clans of the Tsimshians.

<sup>1</sup> *Handbook of American Indians north of Mexico*, i. 270 sq.; A. Krause, *Die Tlinkit-Indianer*, pp. 317-320; Franz Boas, in *Fifth Report of the Committee on the North-Western Tribes of Canada*, pp. 27-29 (*Report of the British Association*, Newcastle-upon-Tyne, 1889, separate reprint); *id.* in *Tenth Report of the Committee on the*

*North Western Tribes of Canada*, pp. 48 sqq. (*Report of the British Association*, Ipswich, 1895, separate reprint); *id.* in *Eleventh Report of the Committee on the North-Western Tribes of Canada*, pp. 11-13 (*Report of the British Association*, Liverpool, 1896, separate reprint).

Each clan has its own crests or emblems, of which the following is a partial list :—

TSIMSHIAN CLANS AND CRESTS

Clan.	Crests.
Raven . . . .	Raven, codfish, starfish.
Eagle . . . .	Eagle, halibut, beaver, whale.
Wolf . . . .	Wolf, crane, grizzly bear.
Bear . . . .	Killer-whale ( <i>Delphinus orca</i> ), sun, moon, stars, rainbow, grouse, <i>tsemaks</i> (a sea-monster).

Thus every clan, except the Bear, has among its crests the animal after which it is named.

The personal names of each Tsimshian clan have reference not to the person's own totem (which he takes from his mother), but to his father's totem.

Each clan has also its own proper names, which are different for chiefs and for middle-class people. For the Tsimshians, like the other Indian tribes of North-West America, are divided into sharply-marked social ranks or classes, namely, common people, middle-class people, and chiefs. Common people are those who have not yet been initiated into a secret society; by being so initiated they become middle-class people or nobles, as the class is sometimes called; but they can never become chiefs, who form a distinct class. Curiously enough, though children take their clan from their mother, their clan names refer to their father's crest or totem, not to their mother's. Thus the son of a Raven man and an Eagle woman may be called (Raven)-having-no-nest; the daughter of a Raven man and a Bear woman may be called (Raven)-flying-in-front-of-the-house-early-in-the-morning; indeed the eldest daughter of such a marriage always bears this sonorous name, though in common life it is abridged from *Seopgyibayuk* into *Bayuk*. Again, the daughter of an Eagle man and a Raven woman may be called (Eagle)-sitting-on-the-ice or On-a-whale, the reference in either case being to the father's crest, since the whale as well as the eagle is a crest of the Eagle clan. The daughter of an Eagle man and a Wolf woman may be called Eagle-having-one-colour-of-wings. The daughter of a Bear man and an Eagle woman may be called Great-noise (of killer-

whale) or Great-fin (of killer-whale), the reference in both cases being to the killer-whale, which is a crest of the father's Bear clan.<sup>1</sup> Why with maternal descent of the clan the personal names should refer to the paternal crests is not plain; perhaps the custom of naming children after their father's crest marks an attempt to shift descent from the maternal to the paternal line, or at least to strengthen the ties between a father and his children.

Perhaps the custom marks a transition from maternal to paternal descent.

The following account of the system of crests or totems, given by Commander R. C. Mayne, in his book on British Columbia and Vancouver Island, while it is couched in general terms, perhaps applies specially to the Tsimshians; for it incorporates the evidence of Mr. William Duncan, of the Church Missionary Society, who laboured successfully as a missionary among the Tsimshians at Fort Simpson from the year 1857 onwards. The information conveyed in this account is particularly valuable, because it refers to a time when the Indians of British Columbia were still comparatively little affected by white influence, and when, moreover, the importance of totemism in the early history of society was not yet recognised by civilised men, so that their observations on the subject were unbiassed by theories and prepossessions. Commander Mayne's account runs thus:—<sup>2</sup>

Mayne's account of the crests or totems of the Indians of British Columbia.

"I have previously had occasion to refer to the fashion among the Indians of carving the faces of animals upon the ends of the large beams which support the roofs of their permanent lodges. In addition, it is very usual to find representations of the same animals painted over the front of the lodge. These crests, which are commonly adopted by all the tribes, consist of the whale, porpoise, eagle, raven, wolf, and frog, etc. In connexion with them are some curious and interesting traits of the domestic and social life

The crests carved and painted.

(*Report of the British Association*, Newcastle-upon-Tyne, 1889, separate reprint); *id.* in *Tenth Report of the Committee on the North-Western Tribes of Canada*, pp. 48-50 (*Report of the British Association*, Ipswich, 1895, separate reprint); *Handbook of American Indians north of Mexico*, i. 271.

<sup>2</sup> Commander R. C. Mayne, *Four Years in British Columbia and Vancouver Island* (London, 1862), pp. 257 sq. As to Mr. William Duncan's work among the Tsimshians at Port Simpson, see *ibid.* pp. 305 sqq. Commander Mayne incorporates in his book much valuable information furnished to him by Mr. Duncan. See particularly *ibid.* pp. 249 sq., 254 sq., 263 sqq., 284 sqq.

Persons of the same crest may not marry each other. of the Indians. The relationship between persons of the same crest is considered to be nearer than that of the same tribe ; members of the same tribe may, and do, marry—but those of the same crest are not, I believe, under any circumstances allowed to do so. A Whale, therefore, may not marry a Whale, nor a Frog a Frog. The child again always takes the crest of the mother ; so that if the mother be a Wolf, all her children will be Wolves. As a rule also, descent is traced from the mother, not from the father.

The Indians will not kill their crest animals.

“ At their feasts they never invite any of the same crest as themselves : feasts are given generally for the cementing of friendship or allaying of strife, and it is supposed that people of the same crest cannot quarrel ; but I fear this supposition is not always supported by fact. Mr. Duncan, who has considerable knowledge of their social habits, says that the Indian will never kill the animal which he has adopted for his crest, or which belongs to him as his birth-right. If he sees another do it he will hide his face in shame, and afterwards demand compensation for the act.

Presents must be made to a person whenever he exhibits his crest.

The offence is not killing the animal, but doing so before one whose crest it is. They display these crests in other ways besides those I have mentioned, viz. by carving or painting them on their paddles or canoes, by the arrangement of the buttons on their blankets, or by large figures in front of their houses or their tombs. They have another whimsical custom in connexion with these insignia : whenever or wherever an Indian chooses to exhibit his crest, all individuals bearing the same family-figure are bound to do honour to it by casting property before it, in quantities proportionate to the rank and wealth of the giver. A mischievous or poor Indian, therefore, desiring to profit by this social custom, paints his crest upon his forehead, and looks out for an opportunity of meeting a wealthy person of the same family-crest as himself. Upon his approach he advances to meet him, and when near enough displays his crest to the unsuspecting victim ; and, however disgusted the latter may be, he has no choice but to make the customary offering of property of some sort or other.”

In this account of the Indian crests we find almost all the characteristic features of typical totemism, namely, clans

taking their names from animals, using the likenesses of the animals as their badges, refusing to kill the animals after which they are named, or to marry women who have the same animal name and badge as themselves, and, finally, transmitting the name, the badge, and the attendant prohibitions in the female line from the mother, not from the father, to the children. Yet the writer does not use the words totem and totemism, probably because writing in 1862 he had not heard of them. This example should serve as a warning against hastily inferring the absence of the thing from the absence of the word.<sup>1</sup> Certainly the Indians with whom we are dealing do not use the word totem, but they have the institution in a form identical with that in which it occurs among the most typically totemic tribes of North America.

This is typical totemism ; yet the writer who describes it does not employ the words totem and totemism.

The statement made on Mr. Duncan's authority that the Indians will never kill the animals which serve as their crests is particularly important in its bearing on the question of the relation in which a man stands to his totem animal. So far as I remember, no other writer on these North-Western Indians has mentioned their reluctance to kill their totemic animals. In the course of this work I have repeatedly called attention to the paucity of evidence on this important side of totemism in the writings of American ethnologists. Unfortunately it is not quite clear whether in the passage quoted Mr. Duncan refers to the clan totem or to the individual totem, that is, to the *manitoo* ; but apparently Commander Mayne understood him to refer to what we should now call the clan totem, for throughout the rest of the passage he speaks of the crest as if it were the badge of a family, and of an exogamous family, in other words, as if it were a clan totem. If this interpretation of Mr. Duncan's statement is correct, it would seem to follow that the respect for the clan totem which he describes has either disappeared since his time or, what is perhaps more probable, has been overlooked or deemed unworthy of mention by later writers.

The reluctance to kill the totemic animals seems not to be mentioned by later writers.

~~"In all festivals,"~~ says Dr. Boas, speaking of the Niskas, ~~"the totems of the clan play an important part.~~ Carvings representing the totem are worn as masks or head-dresses ;

the owl.

they are painted or carved on houses and utensils, and on memorial columns and totem poles. In all initiations an artificial totem animal brings back the novice.”<sup>1</sup> Some of the dances are dramatic representations of myths. In one ceremony, for example, the mythical thunder-bird is personated by a man dressed in eagle feathers and wearing the mask of the thunder-bird, while mock lightning flashes, mock thunder rolls, and the spectators are drenched with real water thrown on them from the roof. This drama is accompanied by a chorus of women who sing the myth which is being acted by the performers.<sup>2</sup> Again, the Bear clan possesses a mask representing an owl surrounded by many small human heads. This mask is worn at *potlatches* to commemorate the sad story of a woman who was carried off by an owl. He took her away to the top of a tree and there she was heard by her people to weep. They tried to save her, but could not climb the tree. After a time she dried her tears and married the owl. They had a son. When he grew up, the mother told the father owl that she wished to send her son home to her own people. Then his father composed a song for him. His mother told him to carve a head-dress in the shape of an owl, which he was to wear when he danced and to sing the song composed for him by his father the owl. She bade her son good-bye and said that her husband was about to carry her away to a land far off. But the owl first brought her and her son to the house of the old chief her father. When the chief's wife saw the unknown boy, she was afraid; but her daughter spoke to her and said that the boy was her grandson. So the old woman took the boy into her house, while the boy's mother and the owl disappeared. When the boy was grown up, his mother's brother gave a *potlatch* in his honour; and before the blankets were distributed, the boy danced, wearing the head-dress of the owl and singing the song which his father the owl had composed for him.<sup>3</sup>

The Bear clan of the Tsimshians also tell the following tale to explain why they use the crest of the bear. Once upon a time an Indian went out to hunt the mountain-goat. Far away in the mountains he met a black bear, who took him to his home, and taught him how to catch salmon and build canoes. For two whole years the man staid with the bear; then he returned to his own village. But when he came there, all the people were afraid of him because he looked just like a bear. However, one man bolder than the rest caught him and brought him into the house. At first the bear-like man could not speak nor eat anything but raw food. But they rubbed him with magic herbs, and gradually he was retransformed into the shape of a man. After that, whenever he was in want, he called his friend the bear, who came to his help. In winter, when the rivers were frozen and nobody else could fish, he alone caught fresh salmon. He built a house and painted the likeness of a bear on the front of it. His sister, too, wove the image of a bear on a blanket to be used in the dance. Therefore the descendants of the bear-man's sister use the bear for their crest to this day.<sup>1</sup>

Legend of the Bear clan to explain their bear crest.

Again, the Whale clan among the Tsimshians tell the following story to explain why they use the whale crest. Once upon a time a man went out fishing. For three days he fished and caught nothing. Then he cast anchor at a place where a steep hill descended into the water. It so happened that his anchor fell on the house of the whale, who drew the man and his boat to the bottom of the sea. For two whole years the man staid with the whale at the bottom of the sea, and the two years seemed to him like two days. The whale taught him the whale dance and how to ornament his house with the pattern of a whale. When the two years were up, the man rose to the top of the water and returned home, all covered with seaweed. There he

built a house and painted a whale on the front of it. Also he used the mask and the blanket of the whale when he danced. So the descendants of his sisters have used the whale crest ever since.<sup>1</sup>

Legend of the Raven clan to explain their sea-monster crest.

Again, members of the Raven clan among the Tsimshians tell the following story to explain why they carve sea-monsters as their crests on their heraldic columns or totem-poles. There was a great chief who, like the man of the Whale clan, had been taken to the bottom of the sea. Once upon a time he invited the chiefs of the whole earth to a great feast which was to be held at Nass River. All the monsters of the coast came, using killer-whales (*Delphinus orca*) for their boats. So numerous were they that the river swarmed with them. They landed and entered the chief's house, each clad in his peculiar dress, and whenever one of them opened the door, water flowed in after him. Some of these monsters were very dangerous and used to kill everybody who passed by their houses. They all sat down in order in the chief's house, the most dangerous taking their seats at the rear and the less dangerous round the platform nearer the door; and they all kindly promised not to kill people any more, and when they returned home they were as good as their word, for they removed their houses from the track of canoes plying between the villages. So the chief imitated the dresses of the sea-monsters who had been his guests; and he wore these dresses himself, and his descendants carve the sea-monsters on their columns down to this day.<sup>2</sup>

The Tsimshians and other northern Indians explain the origin of their totems by stories of the encounter of their

These Tsimshian legends of the acquisition of crests are typical of the stories told by all the northern Indians—the Tlingits, the Haidas, and the Tsimshians—to explain the origin of their crests. Such stories normally relate how an ancestor of the clan fell in with a beast or fish or bird, who became his helper and whose likeness accordingly the man's descendants in the female line have ever since used as their crest. But it is to be observed that they never, or hardly ever, claim to be descended from the animal, fish,

<sup>1</sup> Franz Boas, in *Fifth Report of the Committee on the North-Western Tribes of Canada*, p. 24 (*Report of the British Association, Newcastle-upon-Tyne, 1889, separate reprint*).

<sup>2</sup> Franz Boas, *l.c.*

or bird in question: according to tradition the creature which they use as their crest was the friend and protector, not the progenitor, of their ancestor. Thus these legends of the acquisition of clan crests or totems remind us strongly of the mode in which the eastern Indians of North America acquired their *manitoos* or individual totems, as I have called them.<sup>1</sup> The resemblance between the myths of the North-Western Indians and the practice of the eastern Indians of North America has been justly pointed out and emphasised by Dr. Boas. "There are a great many cases," he observes, "among the northern tribes in which the crest was acquired by an ancestor of the family in the same way as Indians of the plains acquire a *manitou*. It is told how a man went out into the wilderness, and in the course of events met a supernatural being or animal, which henceforth became his protector. The difference between the north-west coast traditions and those of the plains consists in the fact that the animal once acquired was transmitted by the ancestor to his sister's children. There is hardly a case of traditions in which the family claims direct descent from the crest animal."<sup>2</sup> On the ground of this resemblance Dr. Boas inclines to believe that the clan totems of the North-Western tribes originated in the same way as the individual or personal totems (*manitoos*) of the eastern tribes; in other words, that they were all originally the guardians or patrons of individuals, who transmitted them to their descendants in the female line.<sup>3</sup> We shall return to this question later on.

ancestor with an animal of the totemic species; they do not trace their descent from the animal. Thus the mode in which the totems were acquired resembles the mode of acquisition of a *manitou* or guardian-spirit among the eastern Indians.

Among the Tsimshian and other Indian tribes of the northern coast of British Columbia great importance is attached to the possession of the clan legends, of which

Great importance is attached to the possession of the clan legends.

a few specimens have just been given. Indeed the legend is deemed one of the most valuable properties and highest prerogatives of each clan or family; it is carefully guarded in the same way as material property, and if any person attempts to tell a tradition which does not belong to his clan, he commits one of the gravest offences against the rights of property which are recognised in the Indian code of morality.<sup>1</sup>

Tsimshian  
burial  
customs.

Among the Tsimshians a burial is attended by members of the clan of the father of the deceased, who are paid for their services. They double the body up, place it in a box, and burn it on a pyre; with the body they also burn food and clothing for the use of the deceased. Men and women sit round the blazing pyre and sing all the cradle songs of the clan which are contained in their legends. The remains are then deposited in a small box and placed on a tree.<sup>2</sup>

Reported  
worship of  
Heaven  
among the  
Tsimshians.

Apart from their totemism the Tsimshians are reported to practise a pure worship of heaven. In their opinion Heaven is the great deity, but he has a number of subordinates or mediators called *neqnoq*. While any natural object can be a *neqnoq*, the most important are the sun and moon, spirits appearing in the form of lightning-flashes, and animals. *Neqnoq* means anything mysterious. It is the supernatural will of the deity and also the whistle which is used in the dances and is kept a profound secret. Heaven rules the destinies of mankind; Heaven taught men to distinguish between good and bad, and gave them their religious laws and institutions. Heaven is worshipped by offerings and prayers; the smoke rising from fires is especially agreeable to him. Murderers, adulterers, and those who behave foolishly, talking to no purpose and making a noise at night, are particularly hateful to him. He loves those who take pity upon the poor, who do not try to become rich by selling at high prices what others want. Men make themselves agreeable to the deity by

<sup>1</sup> Franz Boas, *The Mythology of the Bella Coola Indians*, p. 123 (*The Jesup North Pacific Expedition, Memoir of the American Museum of Natural History*, 1898).

<sup>2</sup> Franz Boas, in *Tenth Report of the Committee on the North-Western Tribes of Canada*, p. 52 (*Report of the British Association*, Ipswich, 1895, separate reprint).

cleanliness. Therefore they must bathe and wash their whole bodies before praying. For the same reason they take an emetic when they wish to please the deity well. They fast and abstain from their wives if they desire their prayers to be successful, and they offer by fire whatever they deem valuable, such as eagle-down, red paint, red cedar-bark, lines made of elk-skin, and so forth. However, they think that they can compel the deity to grant their wishes by observing a rigid fast. For seven days they must abstain from food and from seeing their wives. During these days they have to lie in bed motionless. At the expiry of the time they may rise, wash themselves, comb the right side of their head, and paint the right side of their face.<sup>1</sup>

This curious worship of Heaven deserves to be further investigated. It may have been coloured by the influence of the missionaries who laboured for years among these Indians. Mr. William Duncan, of the Church Missionary Society, took up residence among the Tsimshians at Fort Simpson in 1857 and established a school which was attended by many pupils both old and young. In November 1859 he reported that "there is amongst the Indians a great stir of opinion against their heathenish winter-customs, and four of the tribes out of nine have, indeed, cut them off. Those tribes which still adhere to them are carrying them on exceedingly feebly"; and about a year later in an examination held at Victoria pupils drawn from the Tsimshians, Haidas, and Songhies displayed some knowledge of Bible history.<sup>2</sup> From them the knowledge might easily spread to their heathen brethren and so modify their ancient customs and beliefs.

This worship of Heaven may be coloured by missionary influence.

### § 5. Totemism among the Kwakiutl

To the south of the Tsimshians, from Gardner Channel to Cape Mudge, the coast of British Columbia, with the Kwakiutl.

<sup>1</sup> Franz Boas, in *Fifth Report of the Committee on the North-Western Tribes of Canada*, pp. 49 sq. (*Report of the British Association, Newcastle-upon-Tyne, 1889*, separate reprint).

<sup>2</sup> Commander R. C. Mayne, *Four Years in British Columbia and Vancouver's Island*, pp. 305 sqq., especially pp. 319, 345 sq.

exception of the region about Dean Inlet, is occupied by the Kwakiutl, an Indian stock who speak a language differing from that both of their northern and of their southern neighbours. The Kwakiutl language itself falls into three dialects: the Haisla (Xaisla), the Heiltsuk, and the Kwakiutl proper, to mention them in their order from north to south. The Haisla (Xaisla) dialect is spoken on Gardner and Douglas Channels; the Heiltsuk, from Gardner Channel to Rivers Inlet; and the Kwakiutl proper, from Rivers Inlet to Cape Mudge, including the north-eastern portion of Vancouver Island.<sup>1</sup> In these three linguistic and geographical divisions of the Kwakiutl stock the types of social organisation all differ more or less from each other. We will take them in order from north to south.

Three dialects: the Haisla, Heiltsuk, and Kwakiutl proper.

Totemic clans of the Haisla-Kwakiutl.

The most northerly members of the stock, who speak the Haisla (Xaisla) dialect, are divided into six totemic and exogamous clans, which take their names and their crests from their totemic animals and are called respectively the Beaver, Eagle, Wolf, Salmon, Raven, and Killer-whale (*Delphinus orca*) clans. To the south of them the members of the stock, who speak the Heiltsuk dialect, are divided into three totemic and exogamous clans, which also take their names and their crests from their totemic animals and are called respectively the Raven, the Eagle, and the Killer-whale clans.<sup>2</sup> Together, the tribes speaking the Haisla and the Heiltsuk dialects form the northern group of the Kwakiutl. Among them descent on the whole is in the female line,

Totemic clans of the Heiltsuk-Kwakiutl.

Among the Northern Kwakiutl (Haisla and

<sup>1</sup> Franz Boas, "The Social Organization and the Secret Societies of the Kwakiutl Indians," *Report of the United States National Museum for 1895* (Washington, 1897), p. 320; *Handbook of American Indians north of Mexico*, i. 744 sq. Compare F. Boas, in *Fifth Report of the Committee on the North-Western Tribes of Canada*, p. 31 (*Report of the British Association, Newcastle-upon-Tyne, 1889*, separate reprint); *id.* in *Sixth Report of the Committee on the North-Western Tribes of Canada*, pp. 674-676 (*Report of the British Association, Bristol, 1898*); *id.* "The Social Organization and the Secret Societies of the Kwakiutl Indians," *Report of the United States National Museum for 1895* (Washington, 1897), pp. 322 sq., 328.

<sup>2</sup> Franz Boas, in *Fifth Report of the*

*Committee on the North-Western Tribes of Canada*, pp. 29, 31 sq. (*Report of the British Association, Newcastle-upon-Tyne, 1889*, separate reprint); *id.* in *Sixth Report of the Committee on the North-Western Tribes of Canada*, p. 52 (*Report of the British Association, Leeds, 1890*, separate reprint); *id.* in *Twelfth Report of the Committee on the North-Western Tribes of Canada*, pp. 674-676 (*Report of the British Association, Bristol, 1898*); *id.* "The Social Organization and the Secret Societies of the Kwakiutl Indians," *Report of the United States National Museum for 1895* (Washington, 1897), pp. 322 sq., 328.

that is, children belong to the clan of their mother, not to that of their father. But this rule, though it is general, is not absolute; for in certain cases the parents are free to assign their children to the father's clan instead of to the mother's.<sup>1</sup> Thus the type of social organisation which prevails among the Northern Kwakiutl, who speak the Haisla and Heiltsuk dialects, closely resembles that of their neighbours to the north—the Tsimshians, the Haidas, and the Tlingits. All these peoples are subdivided into totemic and exogamous clans with descent in the female line. And the rule of exogamy is not limited to a single people, it extends to them all; a Heiltsuk man of the Eagle clan, for example, cannot marry a Tlingit woman of the Eagle phratry; for those exogamous divisions which possess the same crest or totem are regarded as equivalent to each other, whether they are found among the Heiltsuks, the Tsimshians, the Haidas, or the Tlingits.<sup>2</sup>

Heiltsuk) descent is generally in the female line.

But while the social organisation of the Northern Kwakiutl, who speak the Haisla and Heiltsuk dialects, agrees closely with that of their northern neighbours of alien stocks, it differs decidedly from that of their southern brethren of the same stock, the Kwakiutl proper, who have paternal instead of maternal descent and among whom totemic clans of the ordinary type appear to be absent. To account for this remarkable difference between two branches of the same linguistic stock, Dr. Boas supposes that the Northern Kwakiutl have borrowed both the rule of maternal descent and the division into totemic clans from their still more northerly neighbours of alien stocks; in other words,

Among the Southern Kwakiutl (the Kwakiutl proper) there are no totems, and descent is in the male line. Dr. Boas's view that the Northern Kwakiutl have

<sup>1</sup> Franz Boas, *The Mythology of the Bella Coola Indians (The Jesup North Pacific Expedition)*, p. 121; *id.* "The Tribes of the North Pacific Coast," *Annual Archaeological Report, 1905* (Toronto), p. 239. So predominant is the custom of female descent among the Northern Kwakiutls that Dr. Boas formerly believed it to be invariable. The researches of Dr. Livingston Farrand, he tells us, revealed the exceptions to the rule.

*Committee on the North-Western Tribes of Canada*, p. 32 (*Report of the British Association, Newcastle-upon-Tyne, 1889*, separate reprint): "One of the main facts is that the phratries, viz. gentes of the Tlingit, Haida, Tsimshian, and Heiltsuk, are exogamous, not only among each tribe, but throughout the whole region. A member of the eagle gens of the Heiltsuk, for instance, cannot marry a member of the eagle phratry of the Tlingit. Those gentes are considered identical which have the same crest."

<sup>2</sup> Franz Boas, in *Fifth Report of the*

borrowed

and female  
descent  
from their  
northern  
neigh-  
bours.

that totemism and mother-kin have spread southward among a people who previously had father-kin and no totemic system.<sup>1</sup> Whatever may be thought of the hypothesis that totemism has been borrowed by one people from another, the theory that a people who once possessed paternal descent afterwards exchanged it for maternal descent would require very strong evidence in its support to make it probable, since both intrinsic probability and analogy are strongly against it. For it seems very unlikely that men who had once been accustomed to transmit their rights and privileges to their own children, should afterwards disinherit them and transmit these rights and privileges to their sisters' children instead; and in point of fact, while there are a good many symptoms of a transition from maternal to paternal

<sup>1</sup> Lest I should have misinterpreted Dr. Boas's opinion on this subject I will transcribe his own words. See Franz Boas, in *Fifth Report of the Committee on the North-Western Tribes of Canada*, p. 29 (*Report of the British Association, Newcastle-upon-Tyne, 1889*, separate reprint): "The most southern tribe which belongs to this group [the Heiltsuk] are the Awikyenog of Rivers Inlet. Further south, and among the Bilqula [Bella Coola], patriarchy prevails. The social organisation of these tribes differs fundamentally from that of the northern group. We do not find a single clan that has, properly speaking, an animal for its totem; neither do the clans take their names from their crest, nor are there phratries"; *id.* in *Sixth Report of the Committee on the North-Western Tribes of Canada*, p. 52 (*Report of the British Association, Leeds, 1890*, separate reprint): "The Kwakiutl language is spoken in two main dialects, the Heiltsuk, from Gardner Channel to Rivers Inlet, and the Kwakiutl proper. . . . The tribes speaking the Heiltsuk and Gyimano-itq dialects are in the maternal stage, and are divided into gentes having animal totems; while the southern group are in the paternal stage, and are divided into gentes which have no animal-crest"; *id.*, *Twelfth Report of the Committee on the North-Western Tribes of Canada*, p. 676 (*Report of the British*

*Association, Bristol, 1898*): "The northern tribes have clearly defined totems, which are inherited in the maternal line, and which have animal names and crests. . . . The northern tribes of Kwakiutl lineage show clearly that their ideas have been influenced by the animal totem of the northern tribes. They have adopted to a great extent the maternal descent and the division into animal totems of the northern tribes. The social organisation of the Heiltsuk, one of the most northern tribes of Kwakiutl lineage, is similar to that of the Tsimshian, while their southern neighbours, the inhabitants of Rivers Inlet, who speak the same dialect, retain the more complex organisation of the Kwakiutl [proper]; but they have mainly maternal descent"; *id.* "The Social Organization and the Secret Societies of the Kwakiutl Indians," *Report of the United States National Museum for 1895* (Washington, 1897), p. 323: "Animal totems in the proper sense of this term are confined to these five groups or tribes [the Tlingits, Haidas, Tsimshians, Haislas, and Heiltsuks]. They are not found among the Kwakiutl, although they belong to the same linguistic stock to which the Xaisla and Heiltsuk belong. The clans of the northern tribes bear the names of their respective totems and are exogamous."

descent in other parts of the world,<sup>1</sup> there is, so far as I know, none whatever of a transition in the reverse direction from paternal descent to maternal.

The social organisation of the Southern Kwakiutl differs widely from that of their northern congeners, and is both complex and peculiar. Our principal, almost our only authority on the subject is Dr. Franz Boas, and even he confesses that the subject is very difficult to understand.<sup>2</sup> Others may therefore be excused if they find it even less intelligible. Apparently the Kwakiutl proper are divided into a large number of kindred groups which Dr. Boas variously denominates as groups, clans, gentes, and families, but which for the sake of uniformity I shall call clans. These clans are not at the present day local groups, for a considerable number of them are represented in each village.<sup>3</sup> But in Dr. Boas's opinion each of these clans was originally a local group or village community. He says: "The traditions of the clans show clearly what we must consider the original unit of society among the Kwakiutl. Each clan derives its origin from a mythical ancestor, who built his house at a certain place and whose descendants lived at that place. In a great many cases these places prove to be old village sites. In some, large accumulations of shells are found, which show that they have been inhabited through long periods. We conclude, therefore, that the clan was originally a village community, which, owing to changes in number or for purposes of defense, left their old home and joined some other community, retaining, however, to a certain extent its independence."<sup>4</sup> The clans are in general exogamous, but the custom is not definitely settled, and some clans prefer to marry within their own limits. On the whole, however, marriages outside of the clan are more frequent, because men are

The social organisation of the Southern Kwakiutl is complex and obscure.

Their clans seem to have been originally local groups or village communities.

In general the clans are exogamous.

<sup>1</sup> See, for examples, above, vol. ii. pp. 15, 17, 195-197, 365, 409; vol. iii. pp. 72 sq., 80, 132, 136, 174 sq., 308 sq.

<sup>2</sup> Franz Boas, in *Sixth Report of the Committee on the North-Western Tribes of Canada*, p. 56 (*Report of the British Association*, Leeds, 1890, separate reprint).

<sup>3</sup> F. Boas, in *Annual Archaeological*

*Report*, 1905 (Toronto), p. 240. Here Dr. Boas speaks of the kindred groups as families.

<sup>4</sup> F. Boas, "The Social Organization and the Secret Societies of the Kwakiutl Indians," *Report of the United States National Museum for 1895* (Washington, 1897), pp. 333 sq.

Each Kwakiutl clan has one or more crests and a legend explanatory of the crest. These legends are of two kinds.

anxious in this way to acquire the privilege of using new and important crests.<sup>1</sup> For every Kwakiutl clan possesses a crest or crests consisting of representations of beasts, birds, fabulous monsters, the sun, moon, and so forth. These crests are carved or painted on their houses, heraldic columns or totem-poles, masks, and dancing paraphernalia. Among the beasts and birds which the Kwakiutl use as crests are the bear, wolf, beaver, sea-lion, killer-whale, raven, eagle, and crane; among the fabulous monsters are the thunder-bird, a double-headed snake called *sisiul*, a wild woman with long breasts named Tsonoqoa, who lives in the woods and steals children to devour them, and the spirit of the sea called Iomoqoa, who protects seals and kills hunters. A clan may have several crests; for example, there is one that has for its crests the thunder-bird, crane, grizzly bear, raven, and sun. Each clan has its legend to explain how it came to possess a particular crest. Roughly speaking, these legends are of two kinds. In many of them an ancestor of the clan is said to have met with an animal or a supernatural being, who became his protector and whom accordingly he and his descendants adopted as their crest; in others the ancestor is said to have appeared on earth from above or below or from under the sea wearing the dress, skin, or mask of an animal or a supernatural being, which he afterwards put off.<sup>2</sup> I

<sup>1</sup> Franz Boas, in *Annual Archaeological Report, 1905* (Toronto), p. 240: "According to the group system of the northern tribes, each family of the village community must be necessarily exogamic. The custom among the Kwakiutl is not definitely settled, some of the families preferring marriages outside the group, while others prefer marriages in the group. On the whole, marriages outside of the group are more frequent on account of the eagerness of individuals to secure the privilege of using new and important crests." Here Dr. Boas seems to use the terms group and family as equivalent. This is, so far as I know, Dr. Boas's latest statement on the subject. At first he expressed himself with some hesitation, but believed that marriage

within the clan (gens) was absolutely prohibited. See *Fifth Report of the Committee on the North-Western Tribes of Canada*, p. 32 (*Report of the British Association, Newcastle-upon-Tyne, 1889*, separate reprint). Afterwards he affirmed without qualification that the Kwakiutl clans are exogamous. See Franz Boas, in "The Social Organization and the Secret Societies of the Kwakiutl Indians," *Report of the United States National Museum for 1895* (Washington, 1897), p. 334; *id.*, *The Mythology of the Bella Coola Indians*, p. 122 (*The Jesup North Pacific Expedition, Memoir of the American Museum of Natural History*, November 1898).

<sup>2</sup> Franz Boas, in *Fifth Report of the Committee on the North-Western Tribes*

will illustrate both these classes of legends, beginning with the former.

For example, it is said that the ancestor of the Omanitsenox clan fell in with a number of killer-whales, which had assumed the shape of men and were mending their nets. The chief of these Killer-whale men gave the ancestor the quartz-pointed whaling harpoon, his names, and the right to paint the killer-whale as his crest on the front of his house. Again, the first ancestor of the Kuexa clan is said to have been out hunting bears and to have met with a fabulous bird supposed to resemble a crane. The bird pecked at him and tried to kill him, but he dodged behind a cedar-tree and escaped. When he came home, he carved an image of the crane out of yellow cedar and set it up on the top of a pole outside of his house, and it became the crest of his clan. These legends, as Dr. Boas has pointed out, present a close analogy to the mode in which among the eastern Indians of America a man acquires his individual totem, guardian spirit, or *manitoo*.<sup>1</sup> Again, the Kwatsenok clan tell how a supernatural being came down from heaven in the shape of a bird with a neck-ring of red cedar-bark, how he built a house, cured one of the Kwatsenok clan of madness, and gave him the neck-ring. Since then members of the clan have danced a certain dance wearing neck-rings of red cedar-bark.<sup>2</sup> Again, the Gapenox clan tell of an ancestor of theirs called Counsellor-of-the-World, who lived with his people at Grassy Place. The world was then dark, for the sun never rose, being kept shut up in a box by Day-Receptacle-Woman, who lived at Cut-Beach. So Counsellor-of-the-World walked to see the village at Cut-Beach. There he discovered Day-Receptacle-Woman

sitting in her house eating salmon. At once he turned himself into a baby and entered her womb. So she conceived and in four days she gave birth to a boy, who was no other than Counsellor-of-the-World himself. Then Counsellor-of-the-World cried for the box in which the sun was shut up; and at last to stop him from crying his mother gave it to him. He put it in a canoe and paddled away with it. Then he opened the box, let out the sun, and took off the double-headed serpent-mask of the sun. So it grew light in the world. The Sun spoke and said, "O friend! don't keep me, let me go to the upper world, and let me take care of our world, and it will become day. Now you have my double-headed serpent-mask." Also the Sun said, "O friend! just take care that you don't do any harm to my double-headed serpent-mask. Show the daybreak mask in the winter dance." Thus said the Sun. Then Counsellor-of-the-World bade him good-bye, and the Sun went up into the sky. That is why the Gapenox clan have the daybreak mask and red cedar-bark. They were all inside the box with the Sun.<sup>1</sup>

Examples  
of the  
second  
kind of  
legends.

In the other class of legends which the Kwakiutl tell to explain the origin of their crests, it is said that the ancestor of the clan came down from heaven, or up from the under-world, or out of the sea, wearing the dress, skin, or mask of an animal or supernatural being, that he afterwards doffed the dress, mask, skin, or other disguise and appearing as a man became the progenitor of the clan, who henceforth adopted the animal or thing as their crest. For example, the Neentsa clan tell how two eagles and their eaglet descended from heaven at Cape Scott, where they took off their eagle-skins and became men. The eaglet, or rather the young man, was afterwards drowned at sea, but he awoke to new life, flew up to heaven in the shape of an eagle, and then flew down again, still in the form of an eagle, to his sorrowful parents, who had given him up for dead. In his talons he bore

Descent  
of the

clan from  
an eagle.

<sup>1</sup> Franz Boas and George Hunt, *Kwakiutl Texts*, ii. 393-397 (*Jesup North Pacific Expedition, Memoir of the American Museum of Natural History*, December 1902). This story

of the stealing of the Sun by a cunning hero is widespread among the Indians of North-West America. The Tlingits, for example, tell it of Yehl the Raven. See above, p. 293, note<sup>1</sup>.

a box in which were many whistles to imitate the eagle's scream. Also he wore a double mask and a neck-ring of red cedar-bark, and he became the ancestor of the Neentsa clan.<sup>1</sup> Again, the Sisintle clan, who have the sun for their crest, tell how the sun (*sentlae*) came down from heaven in the shape of a bird, took the likeness of a man, and wandering about the earth came at last to a place called "the Plain at the mouth of the river, where the clover-root is found," in the land of the Kwakiutl. In every tribe which he visited he married a wife, and their descendants are the clan Sisintle. But he resolved to settle among the Kwakiutl in the plain where the root of the clover grows. There he took a Kwakiutl woman to wife, and she conceived and bore him a son. And you may see their house there to this day. On each side of the door is painted a great image of the sun, and the posts are carved in the likeness of men each carrying a sun; and the crossbars which rest upon the posts are also carved like men, but the beams are sea-lions. And in winter, when people dance, the Sisintle clan wear the mask of the sun, and also the mask of a dog called the Sun-Shining-Red-through-the-Clouds; for that dog came down from heaven with the sun. And the heraldic column, or what people commonly call the totem pole, of the clan represents a series of copper plates with a man above them, and above that again is a mask of the sun with beams radiating from it.<sup>2</sup> Again,

Descent of the Sisintle clan from the sun in the shape of a bird.

Descent of the Gexsem clan from the Spirit of the Sea.

<sup>1</sup> Franz Boas, in *Fifth Report of the Committee on the North-Western Tribes of Canada*, p. 29 (*Report of the British Association*, Newcastle-upon-Tyne, 1889, separate reprint).

1889, separate reprint).

and he was very angry, and sailed away with all his people in canoes, leaving his daughter alone in the deserted village. Only a dog and a bitch remained behind with the maiden, and they helped her. So she made four fish-baskets and at low water she placed them on the beach. At the next tide she found the baskets full of fish, and in one of the baskets was a man. He was the son of the Spirit of the Sea, and he carried a box which was small but very heavy, for it contained a whale. He built a large house and married the girl, and he invited all the tribes to a feast and gave them whale flesh to eat. So his descendants still use the mask which represents their ancestor, the son of the Spirit of the Sea. And when they shew the mask they sing this song:—

*It is a tale which came down to us from the beginning of the world.  
You came up, bringing the house of the Spirit of the Sea, you "Growing rich,"  
"Wealth coming ashore," "Covered with wealth," "Mountain of Property,"  
"Really great Mountain." It is a tale which came down to us from the beginning of the world.*<sup>1</sup>

Descent of the Gigilqam clan from the thunder-bird.

Descent of a clan from its crest animal resembles the descent of a clan from its totem; in fact the crest animals seem to be totems.

In some of the foregoing legends a clan traces its descent from an ancestor who first appeared in the form of a bird. Similarly the Gigilqam clan has a tradition that they are descended from the mythical thunder-bird; and the beak of the bird was carved and fastened as a crest to the front of their house, which was also excellently painted till the misplaced zeal of a missionary obliterated the gay heathen blazon under a coat of whitewash.<sup>2</sup> In these cases the descent of a clan from its crest animal resembles the descent of a clan from its totem animal, of which we have met with many examples in the course of this work; and on that and other grounds we might naturally conclude that the animals, supernatural beings, and other objects from which the Kwakiutl clans take their crests are simply their totems. Dr. Boas himself has taken this view in his general summary of the social system of the Indian tribes\* of this region; for he tells

<sup>1</sup> Franz Boas, "The Social Organization and the Secret Societies of the Kwakiutl Indians," *Report of the*

*United States National Museum for 1895* (Washington, 1897), p. 374.

<sup>2</sup> Franz Boas, *op. cit.* pp. 375 sq.

us that "the Kwakiutl are divided into a number of clans, most of which have animals for their totems. Most of these totems are explained in the same manner as those of the northern tribes, while others are considered direct descendants of the totem animal."<sup>1</sup> Yet elsewhere Dr. Boas repeatedly denies that the Kwakiutl clans have animal totems.<sup>2</sup> But as the passage just quoted in which he affirms Kwakiutl totemism is later than those in which he denies it, we may suppose that it represents his more mature opinion, and I shall follow him in that opinion with the less hesitation because it seems to me difficult to distinguish the crest system of the Kwakiutl clans from totemism proper.

However, the Kwakiutl system has certainly some peculiar features which sharply discriminate it, as Dr. Boas has rightly pointed out, from the more normal totemism of their northern congeners the Haislas and the Heiltsuks. In the first place, while among the Haislas and the Heiltsuks the clans are limited in number to six and three respectively, among the Kwakiutl proper the number of the clans is much greater and indeed apparently unlimited.<sup>3</sup> Second, while the clans of the Haislas and Heiltsuks are named after totems, the clans of the Kwakiutl are not so named,<sup>4</sup> but are called either by the collective form of an ancestor's name, or by the name of the district which they inhabit, or again by titles of honour, such as "The Rich Ones" or "The Great Ones."<sup>5</sup> Thirdly, while the clans of the Haislas and Heiltsuks descend in the female line, the children belonging to the clan of their mother, among the Kwakiutl the clans apparently descend in the male line, children belonging to the clan of their father.

Features which distinguish Kwakiutl totemism from ordinary totemism.

<sup>1</sup> Franz Boas, in *Twelfth Report of the Committee on the North-Western Tribes of Canada*, p. 674 (*Report of the British Association*, Bristol, 1898). From the sequel it is clear that Dr. Boas is here speaking of the Kwakiutl proper, not of the northern members of the Kwakiutl stock, the Haislas and the Heiltsuks, who have totemism of the ordinary pattern.

<sup>2</sup> See the passages quoted above, p. 320, note <sup>1</sup>.

<sup>3</sup> Franz Boas, in *Annual Archaeological Report, 1905* (Toronto), p. 240.

<sup>4</sup> Franz Boas, in *Fifth Report of the Committee on the North-Western Tribes of Canada*, p. 29 (*Report of the British Association*, Newcastle-upon-Tyne, 1889, separate reprint).

<sup>5</sup> Franz Boas, "The Social Organization and the Secret Societies of the Kwakiutl Indians," *Report of the United States National Museum for 1895* (Washington, 1897), pp. 332 sq.

On the question of the descent of the Kwakiutl clans Dr. Boas's statements appear to be conflicting.

Yet the question of descent in the Kwakiutl clans seems to be open to some doubt; at least it is difficult to elicit a clear and consistent account of it from Dr. Boas's statements on the subject. At one time he tells us that among the Kwakiutl "the child does not belong by birth to the gens of his father or mother, but may be made a member of any gens to which his father, mother, grandparents, or great-grandparents belonged."<sup>1</sup> At another time he says that among the Kwakiutl proper "a child belongs by blood to both his father's and his mother's family";<sup>2</sup> and, again, that "the Kwakiutl considers himself as belonging half to his mother's, half to his father's gens."<sup>3</sup> If in these passages "gens" and "family" are used, as they seem to be, as equivalents of each other and of "clan," the term which in other passages Dr. Boas applies to the kinship divisions of the Kwakiutl, then the first of the statements which I have quoted appears to contradict the other two. Yet in other passages, again, Dr. Boas speaks as if descent of the Kwakiutl clans was definitely in the paternal line. Thus he observes that "among the Kwakiutl the clans are also exogamic, and certain privileges are inherited in the paternal line, while a much larger number are obtained by marriage";<sup>4</sup> and again, after remarking that the social organisation of the Kwakiutl appears to be in a transitional stage between maternal and paternal institutions, he affirms simply that among the Kwakiutl "descent is in the paternal line."<sup>5</sup>

Apparently children belong to their father's clan, but can be nominated into the

It is to be hoped that in the monograph on the Kwakiutl which may be expected from Dr. Boas he will clear up the obscurity which appears to hang over the simple question, whether among this people children at birth are reckoned to their father's clan or not. So far as I can interpret Dr. Boas's various statements on the subject, I am inclined to

<sup>1</sup> Franz Boas, in *Sixth Report of the Committee on the North-Western Tribes of Canada*, p. 57 (*Report of the British Association*, Leeds, 1890, separate reprint).

<sup>2</sup> Franz Boas, in *Annual Archaeological Report, 1905* (Toronto), p. 239.

infer that a child belongs by birth to his father's clan, but can afterwards be enrolled in any clan to which his father, mother, grandparents, or great-grandparents belonged, and that this enrolment is effected by giving the child one of the names belonging to the particular clan which it is desired that he should join; for each clan has a certain limited number of names, and by receiving the name of one of the clans to which his ancestors belonged a man becomes thereby a member of that particular clan. But by joining another clan a man apparently does not cease to belong to his original clan; chiefs are sometimes members of many clans; for example, we hear of a Kwakiutl chief who was a member of six. In fact a child is generally made a member of another clan as a sort of life-insurance; for by assuming the name and thereby joining the clan of a dead relative he inherits any debts due to the deceased and may thus be provided for in case his father should die, though at the same time he becomes responsible for any debts which his kinsman had left unpaid at his death. If a person does not take the name of a deceased relation, whether father, grandfather, or what not, he neither inherits his property nor becomes responsible for his debts.<sup>1</sup>

clan of their mother, grandparents or great-grandparents.

But while the question of the descent of the Kwakiutl clans remains to some extent uncertain, it seems clear that the clan crests descend through women, every man receiving at marriage his father-in-law's crest as a dowry with his wife and holding it in trust for his future son-in-law. To quote Dr. Boas: "The marriage ceremonies of the Kwakiutl seem to show that originally matriarchate prevailed also among them. The husband always assumes, a short time after marriage, his father-in-law's name and crest, and thus becomes a member of his wife's clan. From him this crest descends upon his children; the daughters retain it, but his sons, on marrying, lose it, adopting that of their wives. Thus the

The crests of the Kwakiutl clans seem to descend indirectly through women; that is, a man receives his crest through his wife at marriage.

<sup>1</sup> Franz Boas, in *Sixth Report of the Committee on the North-Western Tribes of Canada*, p. 57 (*Report of the British Association*, Leeds, 1890, separate reprint). Elsewhere Dr. Boas says that "each clan has a certain limited number of names. Each individual has only

one name at a time. The bearers of these names form the nobility of the tribe" (*Twelfth Report of the Committee on the North-Western Tribes of Canada*, p. 675, in *Report of the British Association*, Bristol, 1898).

descent of the crest is practically in the female line, every unmarried man having his mother's crest ; but still we cannot call this matriarchate proper, as the father is the head of the family, as he gives up his own crest for that of his wife. This law is carried so far that a chief who has no daughters marries one of his sons to another chief's son, the latter thus acquiring his crest. By this means the extinction of gentes is prevented. It seems, however, that the father's gens is not entirely given up, for the natives frequently use carvings of both gentes promiscuously, but certain parts of the father's gens, to which I shall refer presently, are excluded from this use. The following instance, which came under my personal observation, will show the customs of the Kwakiutl regarding this point. Komenakula, chief of the gens Gyigyilkam, of the tribe Tlatlasikoala, has the heraldic column of that gens, and the double-headed snake for his crest. In dances he uses the latter, but chiefly the attributes of the raven gens. His mother belonged to the gens Nunemasekalis, of the Tlautsis ; hence he wears the mask of that gens. He had an only daughter who, with her husband, lived with him. She died and her husband is the present owner of the heraldic column of the gens. The son of this daughter, at present a boy seven years of age, is the future chief of the gens."<sup>1</sup> Again, Dr. Boas writes as follows: "Among the Kwakiutl we find a mixture of paternal and maternal institutions, but the son is not allowed to use his father's totem ; he acquires the right to his totem by marriage, receiving at that time the totem of his wife's father. When, later on, his daughter marries, the right to the totem descends upon her husband. In this manner the totem descends in the maternal line, although indirectly. Each clan has a certain limited number of names. Each individual has only one name at a time. The bearers of these names form the nobility of the tribe. When a man receives the totem of his father-in-law, he at the same time receives his name, while

<sup>1</sup> Franz Boas, in *Fifth Report of the Committee on the North-Western Tribes of Canada*, p. 33 (*Report of the British Association*, Newcastle - upon - Tyne, 1889, separate reprint). The example by which Dr. Boas seeks to elucidate the

descent of the crests is not as clear as might be desired. Is the Gyigyilkam clan the clan of Komenakula's father? What is Komenakula's relation to the Raven clan? What is the crest of his mother's clan?

the father-in-law gives up the name, and takes what is called 'an old man's name,' which does not belong to the names constituting the nobility of the tribe."<sup>1</sup> Again, we read: "One of the essential property rights of each individual is his clan-legend and the use of his crest. According to the Kwakiutl custom, the property right in these objects is held by the men of the tribe. It is, however, not transmitted as a permanent inheritance to the sons, but it is always acquired in marriage. Thus, if a certain man has a right to use the raven as his crest, he will give this crest to his son-in-law about the time when a child is born to the young man. In this way, the son-in-law practically holds the crest in trust for his wife's daughter, because when he in turn is to give up the use of the crest he must deliver it to his daughter's husband, who again holds it in trust for his future daughter. It is clear that in this manner a purely maternal descent is secured."<sup>2</sup> However, it would appear that among the Kwakiutl a man inherits a crest or crests also from his father; for Dr. Boas tells us that among them "the lowest carving on a totem pole is that which the owner inherited from his father. The higher ones are those which he obtained by marriage."<sup>3</sup>

Thus, as Dr. Boas says, the social organisation of the Kwakiutl seems to be in a transitional stage between maternal and paternal institutions;<sup>4</sup> for while the clans perhaps

The Kwakiutl appear to be in a

<sup>1</sup> Franz Boas, in *Twelfth Report of the Committee on the North-Western Tribes of Canada*, pp. 674 sq. (*Report of the British Association*, Bristol, 1898).

<sup>2</sup> Franz Boas, in *Annual Archaeological Report, 1905* (Toronto), pp. 239 sq. Compare *id.*, *The Mythology of the Bella Coola Indians*, pp. 121 sq. (*The Jesup North Pacific Expedition, Memoir of the American Museum of Natural History*, November 1898): "The Kwakiutl have a peculiar organization, which may be considered a transitional stage between maternal and paternal institutions. Descent is in the paternal line; but a man, at the time of his marriage, receives his father-in-law's crest as a dowry, which he holds in trust for his son [-in-law?], so that actually each individual inherits the

crest of his maternal grandfather. The clans are exogamic." It is not clear how on Dr. Boas's shewing "each individual inherits the crest of his maternal grandfather." If I understand Dr. Boas aright, every man receives at marriage the crest of his wife's father, who in turn received it from his wife's father, and so on *ad infinitum*. Thus a man receives the crest of his wife's father, of his wife's maternal grandfather, etc., not of his own father, of his own maternal grandfather, etc.

<sup>3</sup> Franz Boas, in *Eleventh Report of the Committee on the North-Western Tribes of Canada*, p. 9 (*Report of the British Association*, Liverpool, 1896, separate reprint).

<sup>4</sup> See the passage cited in note 2.

transitional state between mother-kin and father-kin. Dr. Boas is of opinion that their original system was father-kin, and that it has been modified by the adoption of maternal institutions.

descend in the male line, the crests appear to descend regularly, if not invariably, through women, each man acquiring his crest at marriage through his wife. The question then naturally arises, Are the Kwakiutl passing from maternal institutions to paternal institutions, from mother-kin to father-kin, or in the reverse direction? Is the female descent of the crests a relic of mother-kin? or is it on the contrary an innovation superposed on an old system of father-kin? In one passage Dr. Boas seems to incline to the former member of this alternative, that is, to the view that the Kwakiutl are passing or have passed from mother-kin or (as he calls it) matriarchate to father-kin or patriarchate; for he says that "the marriage ceremonies of the Kwakiutl seem to show that originally matriarchate prevailed also among them."<sup>1</sup> Yet he afterwards adopted with great decision the contrary view, namely, that the original system of the Kwakiutl was father-kin or patriarchate, which was at a later time modified by the adoption of maternal institutions. "In the north," he says, "a woman's rank and privileges always descend upon her children. Practically the same result has been brought about among the Kwakiutl, but in a manner which suggests that a people with paternal institutions has adapted its social laws to these customs. Here the woman brings as her dower her father's position and privileges to her husband, who, however, is not allowed to use them himself, but acquires them for the use of his son. As the woman's father, on his part, has acquired his privileges in the same manner through his mother, a purely female law of descent is secured, although through the medium of the husband. It seems to my mind that this exceedingly intricate law . . . can not be explained in any other way than as an adaptation of maternal laws by a tribe which was on a paternal stage. I can not imagine that it is a transition of a maternal society to a paternal society, because there are no relics of the former stage beyond those which we find everywhere, and which do not prove that the transition has been recent at all. There is

<sup>1</sup> Franz Boas, in *Fifth Report of the Association, Newcastle-upon-Tyne, 1889*, separate reprint.  
*Committee on the North-Western Tribes of Canada*, p. 33 (*Report of the British*

no trace left of an inheritance from the wife's brothers ; the young couple do not live with the wife's parents. But the most important argument is that the customs can not have been prevalent in the village communities from which the present tribal system originated, as in these the tribe is always designated as the direct descendants of the mythical ancestor. If the village communities had been on the maternal stage, the tribes would have been designated as the descendants of the ancestor's sisters, as is always the case in the legends of the northern tribes."<sup>1</sup>

While the mature opinion of Dr. Boas on the people to whom he has paid so much attention deserves to be received with respect, I have indicated above<sup>2</sup> some of the reasons which lead me, not without hesitation, to incline to the other view, formerly favoured by Dr. Boas himself, namely, that the Kwakiutl are in a stage of transition from mother-kin to father-kin. But it is to be hoped that further researches of Dr. Boas, to whom we already owe so much valuable information on the Indians of North-West America, will clear up this and other obscurities which still remain in the social system of the Kwakiutl.

A very peculiar feature of the Kwakiutl clans is that in winter their organisation is practically dissolved and replaced by a grouping of the people into two great classes, the initiated and the uninitiated, each of which again is subdivided into lesser groups, the initiated being subdivided according to the particular secret society to which each person belongs, while the uninitiated are subdivided according to their age and prospective position among the initiated. The secret societies play a great part in the

But it seems more likely that the Kwakiutl are passing from mother-kin to father-kin.

In winter the social organisation of the Kwakiutl in clans is dissolved and replaced by a grouping of the people into two

<sup>1</sup> Franz Boas, "The Social Organization and the Secret Societies of the Kwakiutl Indians," *Report of the United States National Museum for 1895* (Washington, 1897), pp. 334 sq. Some points in this passage create difficulties. I am at a loss to understand the statement that "the woman's father, on his part, has acquired his privileges in the same manner through his mother"; for in the preceding sentence we had been told that a husband acquires his privileges not through his mother nor

yet from his father, but through his wife ; and with this latter account of the acquisition of a crest Dr. Boas's other statements (above, pp. 329-331) seem to agree. Again, when Dr. Boas says that "the young couple do not live with the wife's parents," he seems to have forgotten the case, which fell under his own observation, of a young couple who lived with the wife's father (above, p. 330). But perhaps that case was exceptional.

<sup>2</sup> Above, pp. 319-321.

classes, the initiated and the uninitiated, the initiated comprising all who are members of a secret society.

social life, not only of the Kwakiutl, but of the other Indian tribes of North-West America. While they are intimately related to the totemic system of the tribes, they are yet distinct from it. Accordingly the fuller consideration of them is reserved for a separate chapter. Here a brief notice of them must suffice. Members of a secret society are believed to be initiated by a patron-spirit, who presides over that particular society, protects its members, and invests them with certain supernatural or magical powers which vary with the society. The right to be initiated into any particular society is hereditary in certain clans and is acquired by a man at marriage in the same way as he acquires his crests through his wife. As the number of presiding spirits is not large, many clans have the same spirit or supernatural being for their patron. Amongst the Kwakiutl and the other Indian tribes of this region the most important patrons are the Cannibal Spirit, the Ghost, the Grizzly Bear, and the Fool Spirit; and corresponding to them the most important secret societies are the Cannibals, the Ghosts, the Bears, and the Fools. Of these the Cannibals rank highest, and next to them the Ghosts. The spirits appear to their devotees only in winter, and accordingly it is only in winter that the secret societies meet for the performance of their dances and ceremonies. Hence the winter season, when the clans are in abeyance and the secret societies are in force, is known among the Indians as "The Secrets" (*tsetsaeka*), a name which they also apply to the ceremonies themselves. The summer season, on the other hand, when the secret societies are in abeyance and the clan organisation is in force, is called by another name (*baxus*), which may be translated "profane," and which is also applied to all uninitiated persons. According to tradition, the secret societies originated in the same way as many of the clans; an ancestor met the patron spirit of one of the societies and was initiated by him. Similarly at initiation the novice is still supposed to be carried off and possessed by the patron spirit of the society to which he belongs; and the object of the whole winter ceremonial is to bring back the youth and to exorcise the spirit which possesses him, in order that, healed of his holy madness, he

Traditional origin of the secret societies. The novice is thought to be carried off by the presiding spirit of the society, and he

may be restored to the society of his relations and friends. It is with this kindly intention that the members of the secret societies perform their various dances, in which they personate their patron spirit, wearing his mask and ornaments and uttering his peculiar cries. The dance is, in fact, a dramatic performance of the myth which tells of the acquisition of the patron spirit. Each society, like each clan, has a limited number of personal names which are bestowed on the members; for the novice is supposed at initiation to receive a new name from the patron spirit of the society. But these secret or sacred names are only used in winter when the spirits are believed to dwell among the Indians; in summer they are dropped and replaced by the personal names of the clans.<sup>1</sup>

must be brought back by masked dancers who represent the spirit.

Like other Indian tribes of North-West America the Kwakiutl believe in the reincarnation of the dead; ~~they think that the soul of a deceased person returns to life in the first child born after his death.~~ This belief is illustrated by the following tale, the events of which are supposed to have happened not long ago. There were two chiefs called Ankoalagyilis and Tsekete. Ankoalagyilis was a twin and boasted that the deity took special care of him, and that he would go to heaven when he died. But he also laid up treasure on earth, for he collected blankets for years and hid them under stones in the wood. His wife helped him to do so. But one day his rival Tsekete followed the two into the forest, stabbed them to death, and threw the bodies, weighted with stones, into the sea. Nobody knew what had become of the chief and his wife. But the dead man had left a son, who in due time married a wife, and she bore him a male child. That child was no other than his murdered grandfather come to life again. When the boy

Belief of the Kwakiutl in the reincarnation of the dead.

*Western Tribes of Canada*, p. 675 (*Report of the British Association* (Bristol, 1898)); *id.* "The Social Organization and the Secret Societies of the Kwakintl Indians," *Report of the United States National Museum for 1895* (Washington, 1897), pp. 393-396, 418-424, 431; *id.* in *Annual Archaeological Report, 1905* (Toronto), pp. 243-247.

was a few years old, he said to his father, "I was once your father and I have returned from heaven." At first his father did not believe him, but the boy said, "You know that your father buried his property and that nobody can tell where it is. I will shew it to you." With that he led his father straight to the spot and shewed him the property, two canoe-loads of blankets. Then the people knew that the murdered chief had returned to life in the person of his grandchild. In time the boy became chief himself, but he magnanimously refrained from murdering his murderer.<sup>1</sup>

The souls of hunters of land-animals are reborn in wolves, and the souls of hunters of sea-beasts are reborn in killer-whales.

However, the souls of the dead are not always born again in human form. Sometimes they must be reincarnated in animals before they come to life again as men. This, in the opinion of the Kwakiutl, is the fate of hunters. The souls of dead men who hunted sea-beasts are turned into killer-whales; and the souls of men who hunted land-beasts are turned into wolves. Only when a killer-whale or a wolf dies, can their souls return and be born again in human bodies. Hunters ornament the bow seat in their canoes and cut a hole in it; this becomes their dorsal fin when they turn into killer-whales after death. The Kwakiutl believe that after the death of a hunter the killer-whale into which he has been transformed will come to the village and shew itself. When many killer-whales approach a village, it is supposed that they come to fetch a soul. But it is not only hunters whose souls transmigrate into the bodies of killer-whales. Once when a killer-whale was killed, the fin shewed a scar as if it had been burnt; and it had happened not long before that a girl had died who had burnt her hand. So the Kwakiutl concluded that her soul had transmigrated into this killer-whale. The belief that the souls of hunters of land animals are reborn in wolves may perhaps account for the treatment of a dead wolf by the Kwakiutl. When a wolf has been killed, its heart is taken out, and all who helped to kill it must eat four morsels of the heart. Then they wail over the carcase,

<sup>1</sup> Franz Boas, in *Sixth Report of the Committee on the North-Western Tribes of Canada*, p. 59 (*Report of the British Association*, Leeds, 1890, separate reprint).

saying, "Woe! our great friend." After that they cover the carcass with a blanket and bury it.<sup>1</sup>

Like other totemic peoples the Kwakiutl tell a tale like that of Cupid and Psyche about a fairy wife, who lived happily with her husband for a time and then left him lamenting. To understand the story you must know that in the opinion of the Kwakiutl twins are nothing but salmon who have assumed human shape and in that guise can bring plenty of their finny brothers and sisters to the fisherman's net. Well, once upon a time there was a chief called Chief-of-the-Ancients. There was no river where he lived and therefore necessarily there were no salmon. That troubled the chief, so one day he said to his younger brothers, "I wish to look for one who is a twin and to make her my wife, that through her the salmon may come." His aunt the Star-Woman bade him go to the graves and search among them for a twin. So he went to the graves and cried out, "Is there a twin here, O graves?" But the graves said, "There is none here." Thus he did to many graves. But at last one of the graves answered, "I am a twin." Then Chief-of-the-Ancients went to it, and gathered the bones, and sprinkled them with the water of life, and the twin woman at once came to life. She was very pretty, and said, "O Chief-of-the-Ancients, why do you come and make me live?" He said, "I wish to have you for my wife." She said, "Beware, Chief-of-the-Ancients! Do me no harm." He took her home and she became his wife, and she made plenty of salmon, for she had only to put her finger in her mouth and dip it in water, and lo! there was a salmon jumping in the water. And when she went into a river the salmon came leaping at her feet. So the chief's salmon-traps were full of salmon, and his heart was lifted up and he grew proud, because he had much food. He spoke angrily to his younger brothers and to his wife; and when the backbone of the salmon caught in the hair of his head, he scolded it and threw it into a corner of the house, and said, "You come from the ghosts, and you catch me!"

Kwakiutl tale of the type of Cupid and Psyche. How a man married a salmon wife and lost her.

<sup>1</sup> Franz Boas, in *Eleventh Report of the Committee on the North-Western Tribes of Canada*, p. 9 (*Report of the British Association, Liverpool, 1896, separate reprint*).

That made his wife Salmon-Maker very sad. She arose and weeping said to the dried salmon in the house, "Come, my tribe, let us go back." Thus she spoke to the dried salmon. And they followed her, for they were her tribe, and they all went away into the water. Chief-of-the-Ancients tried to stop her, putting his arm round his wife's body; but her body was like smoke and his arms went through her. She never came back, and Chief-of-the-Ancients and his brothers became poor again.<sup>1</sup>

### § 6. Totemism among the Salish

The social organisation of the Salish tribes in the south of British Columbia differs from that of the northern tribes; for among the Salish totemism and exogamy are nearly absent and descent is in the paternal line. But among the Coast Salish there is an

When we have passed from the northern to the southern tribes of British Columbia, we find that with the language the social organisation has changed; for whereas the northern tribes, the Haidas and the Tsimshians, with their neighbours the Tlingits of Alaska, are organised in totemic and exogamous clans with maternal descent, among the southern tribes, who belong to the great Salish stock, exogamy and totemism in the strict sense are absent, or nearly so, and descent is reckoned in the paternal line. The social organisation of the Salish tribes in the interior is very loose; there is no recognised tribal unit, no division into exogamous clans, and no hereditary nobility. The people are broken up into village communities occupying each its own permanent village in the river valleys, where they reside during the fishing season. But the population even of the villages is shifting; during the hunting and root-gathering seasons the Indians live dispersed in tents among the mountains.<sup>2</sup> Only among some tribes which dwell on or

near the coast do we find a certain approximation to the clans and crests of the northern tribes ; and it appears to be the opinion of Dr. Boas, one of our best authorities on the Indian tribes of North-West America, that this approximation has come about, not by independent evolution, but through diffusion, the Salish Indians borrowing the crests or totems with their appropriate legends from their neighbours.<sup>1</sup> But while totemism in the usual sense of the term, that is, the organisation of the whole community into totemic and exogamous clans, seems to be lacking among the Salish tribes of the interior, on the other hand individual or personal totems are reported to be universally prevalent among them.<sup>2</sup>

approximation to the system of the northern tribes.

no d

To this subject we shall return in the next chapter. But in speaking of these Indians it is well to bear in mind the statement of Dr. Boas, made many years ago, that "the ancient customs of the Salish tribes of the interior of the Province of British Columbia have almost entirely disappeared, as the natives have been christianised by the endeavours of Catholic missionaries. Only a very few still adhere to their former customs and usages ; for instance, a group of families living in Nicola Valley and another on North Thompson River."<sup>3</sup>

The Salish tribes of the interior are for the most part Christians.

Two tribes of the Salish stock which possess a social system approximating in some degree to the totemic system of the northern tribes are the Bella Coolas (Bilqulas) and the Lillooets. Of these the Bella Coolas are the most northern tribe of the Salish stock. They live isolated from their congeners, being wedged in between alien tribes, to wit, the Haislas on the north, the Chilcotins on the east,

The Bella Coolas, the most northerly tribe of the Salish stock, practise endogamy ; marriage

<sup>1</sup> Franz Boas, in *Twelfth Report of the Committee on the North-Western Tribes of Canada*, p. 676 (*Report of the British Association*, Bristol, 1898) ; *id.*, *The Mythology of the Bella Coola Indians*, pp. 122 sqq. ; *id.* in *Annual Archaeological Report, 1905* (Toronto), pp. 225, 240. The view of Dr. Boas is shared also by Mr. James Teit, who has given us valuable monographs on the Thompson and Lillooet Indians. See J. Teit, *The Lillooet Indians* (Leyden and New York, 1906), p. 254 (*The Jesup North Pacific Expedition, Memoir of the American Museum of*

*Natural History*).

<sup>2</sup> C. Hill-Tout, "Some Features of the Language and Culture of the Salish," *American Anthropologist*, New Series, vii. (1905) p. 682 : "In the tribes of the interior, where group totems, so far as we have been able to discover, are wholly unknown, every individual of both sexes is said to possess his or her personal totem."

<sup>3</sup> Franz Boas, in *Sixth Report of the Committee on the North-Western Tribes of Canada*, p. 80 (*Report of the British Association*, Leeds, 1890, separate reprint).

outside of  
the village  
community  
is for-  
bidden.

and the Kwakiutl on the south. Considered grammatically, their language is more closely related to the dialects of the Coast Salish than to those of the tribes of the interior. A number of terms referring to the sea and to sea-animals are the same in the Bella Coola tongue and in the dialects of the Gulf of Georgia; hence we may safely assume that the Bella Coolas have been differentiated from this group. They inhabit the coasts of Bentinck Arm and Dean Inlet and extend far up the Bella Coola River.<sup>1</sup> The tribe is divided, like the Salish Indians generally, into village communities, and each village has its own crest and its own tradition; but the village community is not exogamous. On the contrary, whereas the southern Coast Salish tribes exhibit a tendency to exogamy, the Bella Coolas have developed a system of endogamy; marriage outside of the village community is forbidden. In this respect the Bella Coolas stand alone among the Indian tribes of the North Pacific coast. The motive which has led them to adopt this unusual rule of marriage, if Dr. Boas is right, is a jealous desire to prevent the crest and the tradition of the village, both of which are highly prized, from being communicated by intermarriage to the people of other villages. "The inhabitants of each Bella Coola village," he tells us, "are not subdivided into clans, gentes, or septs; but each village community forms a unit, and possesses the same tradition." In order to keep the tradition in the tribe, the law requires that no person shall marry outside of his own village community. Thus the clan tradition is kept the exclusive property of the village community by means of endogamy. I have made very careful inquiries in regard to this point, and all the old men make substantially the same statement. Even marriages among near relatives are permitted; and although marriages of people who are distantly related, or not related at all, are preferred, it even happens that cousins marry, or that an uncle marries his niece, in order to keep the clan tradition from being acquired by another village community. It seems, however, that, owing to the influence of the Coast

<sup>1</sup> Franz Boas, in *Seventh Report of the Committee on the North-Western Tribes of Canada*, p. 2 (*Report of the*

*British Association*, Cardiff, 1891, separate reprint).

tribes, the endogamic system has begun to give way to an exogamic system. Powerful and wealthy chiefs marry outside of their own village community, in order to secure an additional clan legend through marriage. This new system agrees with the one prevalent among the Kwakiutl tribes."<sup>1</sup>

Among the Bella Coolas the crests are painted on the house-fronts and on the dancing implements. Thus the Tokoais family have a killer-whale (*Delphinus orca*) painted on the house-front. Tradition runs that their ancestor, hunting in the mountains, found a house on which a killer-whale was painted. The chief who lived in the house presented him with his crest for himself and his descendants. The crest consists of the killer-whale, eagle, swan, and heron. Again, the Spatsatlt family have breaking waves painted on their house-front, and in dances they use the mask of a large kind of whale, of the crow, and of the black bear. Another family uses the mask of The Sleeper and the eagle. Another family paints the moon on the front of the house. Another uses the raven, robin, eagle, whale, the flood-tide, and the bird *tehtlala*; and they paint the sun, moon, and stars on their house-front. Another paints a mountain surmounted by a mackerel sky on their house, and waves are included in their crest.<sup>2</sup> Other people wear eagle masks and eagle

The family crests of the Bella Coolas.

<sup>1</sup> Franz Boas, *The Mythology of the Bella Coola Indians*, p. 116 (*The Jesup North Pacific Expedition, Memoir of the American Museum of Natural History*, November 1898); compare *ibid.* pp. 121, 122, 124 sq. Elsewhere (*Annual Archaeological Report, 1905* (Toronto), p. 240) Dr. Boas has stated the rule, or rather the exception, somewhat differently. He says: "The Bella Coola of the central part of British Columbia, who are neighbours of the northern Kwakiutl tribes, and under whose influence their culture has developed, have also adopted the crest system. The village community is here also the social unit, and each village has its own crest. Here, however, the jealousy with which the property rights in the crest are guarded is so great that at least among chiefs' families exogamy is strictly forbidden." According to

this later statement it is the chiefs who adhere most strictly to the rule of endogamy; according to Dr. Boas's earlier statement, quoted in the text, it is precisely the chiefs who break that rule most frequently. As the two statements seem to be irreconcilable, we may perhaps assume that the later statement corrects the earlier, and that both of them correct Dr. Boas's still earlier statement that each of the Bella Coola tribes "is subdivided into gentes, which appear to be arranged in exogamic groups" (*Seventh Report of the Committee on the North-Western Tribes of Canada*, p. 3, *Report of the British Association*, Cardiff, 1891, separate reprint).

<sup>2</sup> Franz Boas, in *Seventh Report of the Committee on the North-Western Tribes of Canada*, pp. 5 sq. (*Report of the British Association*, Cardiff, 1891,

blankets because their ancestor is said to have been sent down by the Sun wearing an eagle dress.<sup>1</sup> When a person dies, his masks are burnt, and his crest is carved on a memorial column, which also shews how many canoes, copper-plates, head-dresses, and slaves he had given away at potlatches in his life ; representations of these objects are carved or painted on the column. In former times slaves were killed at the burial of a chief, and the number slain was recorded by as many human figures carved on his monument.<sup>2</sup>

The Lillooets, a Salish tribe of the interior of British Columbia.

The Lillooets are an Indian tribe of the Salish stock who inhabit the south-western interior of British Columbia. Their territory, about a hundred miles square, lies entirely within the Coast Range, and is divided in two by the watershed which runs between Mosquito or Pole River and Anderson River. On the whole the country is more rugged and mountainous than that of any other tribe in the interior of British Columbia. From the watershed west and south the climate grows wetter, till in the neighbourhood of Harrison Lake the annual rainfall is very heavy (150 centimetres). Corresponding to the geographical division of the country is the division of the aboriginal inhabitants. Those who live to the south of the watershed are the Lower Lillooets ; those who live to the north and east of it are the Upper Lillooets. But the Lillooets, though they all speak the same language, appear to have no one name to include them all ; the Lower Lillooets they call the Liluet, and the Upper Lillooets they call the Slalemux.<sup>3</sup>

separate reprint). In this passage Dr. Boas speaks of the crest-bearing groups as gentes, not as villages. In the text I have called them families. Dr. Boas adds (*ibid.* p. 6) : " The children belong to the gens of either father or mother, the decision being left to the choice of the parents."

<sup>1</sup> Franz Boas, *The Mythology of the Bella Coola Indians*, pp. 65-67 (*The Jesup North Pacific Expedition, Memoir of the American Museum of Natural History*).

<sup>2</sup> Franz Boas, in *Seventh Report of*

*the Committee on the North-Western Tribes of Canada*, p. 13 (*Report of the British Association*, Cardiff, 1891, separate reprint).

<sup>3</sup> James Teit, *The Lillooet Indians* (Leyden and New York, 1906), pp. 195 sq. (*The Jesup North Pacific Expedition, Memoir of the American Museum of Natural History*). Mr. C. Hill-Tout calls the whole tribe the Stlatlunh ("Report on the Ethnology of the Stlatlunh of British Columbia," *Journal of the Anthropological Institute*, xxxv. (1905) pp. 126 sqq.).

The Lillooets, who are all now nominally Catholics, were formerly divided into clans. It would seem that originally all the people of one village were supposed to be descendants of a common ancestor, for they had a single tradition of their origin. Perhaps then at one time each village community consisted of a single clan. The following is a list of all the clans of which Mr. James Teit, our principal authority on the tribe, obtained information, together with a list of the places at which they are supposed to have originated :—

Place.	Clan.				
Pemberton Meadows . . . . .	<table border="0" style="display: inline-table; vertical-align: middle;"> <tr> <td style="font-size: 2em; vertical-align: middle;">{</td> <td>Wolf.</td> </tr> <tr> <td style="font-size: 2em; vertical-align: middle;">{</td> <td><i>Hailotaux</i> (beings half human, half fish).</td> </tr> </table>	{	Wolf.	{	<i>Hailotaux</i> (beings half human, half fish).
{	Wolf.				
{	<i>Hailotaux</i> (beings half human, half fish).				
Owl Creek on Pole River . . . . .	Owl.				
Upper Lillooet River . . . . .	<i>Sainux</i> (beings half human, half fish).				
Lower end of Seaton Lake at Sqemqain . . . . .	<i>xanaukst.</i>				
Lower end of Slakal . . . . .	<i>lupst.</i>				
Sel (Reservation near town of Lillooet). . . . .	Frog.				
Bridge River . . . . .	Bear (?).				
Fountain . . . . .	Coyote.				

The clans of the Lillooets.

Membership of the clan descended both in the male and the female line. A man could not become a member of his wife's clan nor she of his; but children could claim membership of the clan of both their father and mother, for by blood they were members of both clans. There were no restrictions on intermarriage between the clans. This perhaps means that there were no barriers to marriage within as well as without the clan, in other words, that the clans were not exogamous.<sup>1</sup>

Descent of the clan.

The clans used masks which represented the ancestor or had reference to some important incident in his life. Thus the Sainux clan danced with a mask representing a monster, half man, half fish, and wore cedar-bark dresses. The Wolf clan wore a mask made like the face and head of a wolf, and in their dances were clad in wolf-skins. The Owl clan wore a mask representing that bird, and used owl-feathers attached

Dancing masks and costumes of the Lillooet clans.

<sup>1</sup> James Teit, *The Lillooet Indians*, nominally Catholics is mentioned by p. 252. That the Lillooets are all Mr. Teit elsewhere (*op. cit.* p. 278).

to their clothes, and a head-dress of owl-feathers. The Hailolaux clan used a mask somewhat like the face of a grizzly bear: they painted their hair red, and wore the skins of grizzly, brown, and cinnamon bears when they danced. The people of the lower end of Seaton Lake personated their ancestor when they danced, and wore masks representing the *satuen*, a variety of crane. They used bone whistles at dances, and mimicked the cries of the pelican, crane, and swan. The people of Sel employed masks representing the frog. The people of Fountain wore coyote skins and masks representing the coyote. The Bear clan of Bridge River used bear masks and black-bear skins. All these masks were the property of the clan and could be shown by any man or woman of the clan when he or she was giving a *potlatch*, but not otherwise.<sup>1</sup> They were used at the clan festivals; and the dancers also wore necklaces consisting of the skin and claws or feathers of the animal or bird they personated. Feather head-dresses were worn by the clans who personified birds. Those clans who did not dress in animal skins, garbed themselves in cloaks, kilts, necklaces, and sometimes head-bands of cedar-bark, white, red, or red and white. All dancers put bird's down on their heads.<sup>2</sup> A person who gave a *potlatch* and shewed his mask at it never wore it himself: he hired another man, generally an old man, to wear it, to sing the clan songs, and to dance or act and relate the clan legend. The man hired to wear a mask was liberally paid, because it was thought that masks brought ill luck, particularly an early death.<sup>3</sup> Hence when they had been used once they were hung up on a tree or thrown away, and similar new ones were made to replace them. It was because they represented the ancestors and were therefore associated with the dead that masks were deemed unlucky. For the same reason they were always painted partly white, that being the colour of the dead or of the ghosts. Some people thought that the wearer of a mask would die within the year.<sup>4</sup>

The Lower Lillooets carved or painted the clan totem on various parts of the house and also on grave-posts, and

<sup>1</sup> James Teit, *The Lillooet Indians*, pp. 253 sq.

<sup>2</sup> James Teit, *op. cit.* p. 257.

<sup>3</sup> James Teit, *op. cit.* p. 258.

<sup>4</sup> James Teit, *op. cit.* p. 290.

The masks were not worn by their owners, but by persons hired for the purpose.

sometimes regular totem-poles were erected near the grave-box.<sup>1</sup> These Indians also set up totem-poles in front of their houses, after the manner of the Coast tribes. But the poles were much shorter and not so well carved or painted. The figures differed according to the clan totem. The body was always represented as human; and the face resembled the mask used by the clan—generally it was the face of an animal.<sup>2</sup>

Clan crests carved on houses, grave-posts, and totem-poles.

“The clan totems were to a certain extent considered as guardian spirits of the clan. Some people claim that animals represented by clan masks were the guardian spirits of the ancestor of the clan, and that such animals (or ‘mysteries’) continue to be the guardians and advisers of his descendants. Clans were supposed to take after the qualities of their totem.”<sup>3</sup>

The clan totems considered as guardian spirits of the clans.

The Lillooets observed the custom of the levirate. After her period of mourning was over, the widow married the brother or other nearest male kinsman of her deceased husband. But if she was old and her sons full-grown, she often did not marry, but continued to live with them.<sup>4</sup>

The Levirate.

§ 7. Totemism among the Tinnehs (Dénés)

Having now surveyed the totemic systems of the Indian tribes which inhabit the coasts of Southern Alaska and British Columbia, we turn to the Tinnehs or Dénés, the widely spread Indian nation who inhabit for the most part the interior of Alaska and a great extent of the Canadian territory which stretches from there to the Arctic Ocean on the north, towards Hudson’s Bay on the east, and to the Lillooet mountains on the south. They belong, as we have seen, to the great linguistic family now commonly called Athapascan, of which the most southerly members are the Apaches and Navahoes of Arizona and New Mexico.<sup>5</sup> Among the tribes into which the Canadian Tinnehs are divided the following are the principal:—

The Tinnehs or Dénés, an Athapascan nation of North-West America.

Principal Tinneh tribes.

1. The Loucheux, often called the Kutchins, whose country

<sup>1</sup> James Teit, *The Lillooet Indians*, pp. 272, 300.

<sup>2</sup> James Teit, *op. cit.* p. 217.

<sup>3</sup> James Teit, *op. cit.* p. 283.

<sup>4</sup> James Teit, *op. cit.* pp. 255 sq.

<sup>5</sup> See above, pp. 241 sq., 252.

- The Loucheux or Kutchin. extends north to south from the fishing-grounds of the Eskimo to  $67^{\circ}$  of North Latitude, while it stretches from the Anderson River on the east through the lower valley of the Mackenzie River and the vast forests of Alaska almost to the Pacific on the west. They number about 5500 souls.
- The Mountaineers. 2. The Mountaineers or *Etagotinne*, a small tribe who roam the valleys of the Rocky Mountains.
- The Hares. 3. The Hares, a timid tribe, who hunt along the Anderson and Macfarlane Rivers from the northern shores of the Great Bear Lake.
- The Dog-ribs. 4. The Dog-ribs, who hunt between the Great Slave Lake and Great Bear Lake, east of the Mackenzie River as far as the Coppermine River.
- The Slaves. 5. The Slaves, whose country stretches from the western shores of Great Slave Lake along the banks of the Mackenzie River as far as the outlet of Great Bear Lake.
- The Yellow Knives or Copper Indians. 6. The Yellow Knives or Copper Indians, whose original home appears to have been the valley of the Coppermine River. Alone of all the Tinnehs they formerly boasted of the possession of copper tools wrought out of pieces of that metal which they found scattered on the slopes of a particular mountain. They now roam chiefly over the barren steppes to the north-east of Great Slave Lake.
- The Cariboo-eaters. 7. The Cariboo-eaters, an important tribe, whose territory comprises the waste lands east of Lakes Cariboo, Wollaston, and Athabaska.
- The Chippewayans. 8. The Chippewayans. They are divided into (*a*) the Athabaskans, who hunt around Lake Athabaska as well as along the Slave River, and (*b*) the Chippewayans proper, who dwell on the shores of Lakes Isle-à-la-Crosse, Cold and Heart. They number about 4000 souls.
- The Nahanaïs. 9. The Nahanaïs, who, like the Loucheux, are distributed on both sides of the Rocky Mountains, though their principal seat is west of that range. They number about a thousand, and inhabit the valley of the Stickine River and its tributaries in northern British Columbia.
- The Beavers. 10. The Beavers, who inhabit the vast plains along the Peace River immediately to the east of the Rocky Mountains.
11. The Sekanaïs, whose principal trading-posts are

Forts McLeod and Grahame. Their original home was to the east of the Rocky Mountains; but they, together with the following tribes, now belong to the western division of the Tinnehs.

12. The Babines, numbering about 530 souls, who dwell immediately to the west of the Sekanais on Babine Lake and along the Bulkley valley down to French and Morice Lakes.

13. The Carriers, who live to the south of the Babines. Their villages lie between Tremblay Lake in the north and Alexandria. In 1889 they numbered 1600 souls, but in 1905 these numbers were reduced to 970.

14. The Chilcotins, who live immediately south of the Carriers on both sides of the Chilcotin River. They are the most southern members of all the Canadian Tinnehs. They number about 450 souls.

15. The Tsetsauts on Portland Inlet, an arm of the sea which forms the northern boundary of British Columbia on the Pacific.

These tribes fall into two groups, an eastern and a western. The Western Tinnehs or Dénés are the Sekanais, Babines, Carriers, Chilcotins, and Tsetsauts.<sup>1</sup> While the Eastern Tinnehs are inveterate nomads, constantly moving after the game on which they chiefly subsist, the Western Tinnehs are semi-sedentary, living in permanent villages part of the year but quitting them periodically to hunt the fur-bearing animals. The staple food of these Western Tinnehs is the salmon, which they catch in such quantities that once dried it takes the place of daily bread and enables them to stay longer at home in the village.<sup>2</sup>

Our information as to the social condition of most of the Tinnéh tribes is very meagre; but we are informed that

<sup>1</sup> Father A. G. Morice, "The Canadian Dénés," *Annual Archaeological Report, 1905* (Toronto), pp. 189 sq. <sup>2</sup> Father A. G. Morice, "The Canadian Dénés," in *Annual Archaeological Report, 1905* (Toronto), p. 200.

The Western Tinnéhs are divided into totemic and exogamous clans with descent in the female line.

most of the Western Tinnéhs are divided into totemic and exogamous clans with descent in the female line. The rule of exogamy among the clans is or was strictly observed; we are informed that "no youth would ever dream of seeking the hand of a girl who was a perfect stranger to him if told that she belonged to the same clan as himself."<sup>1</sup> Our principal authority on the subject is the Catholic missionary Father A. G. Morice, who has laboured among the Carrier Indians for many years and has given us some valuable accounts of their old customs and beliefs. He tells us that the Western Tinnéhs (Dénés) are divided into clans or gentes. "These to the number of five, form a kind of very strict relationship, to which, to the present time, they have held very tenaciously. Each of these clans has one or several particular heraldic emblems or totems, the toad, grouse, crow, beaver, salmon, etc.; the image of which formerly received special consideration. This organisation outsteps the village limits, and members of the same clan are to be found in localities very wide apart. But however remote their respective places, they still claim mutual kinship. Now, from time immemorial, a fundamental law in their social constitution has been for individuals of the same clan never to intermarry. So it is that endogamy is looked upon with horror among them. Indeed, I think I am warranted in affirming that marriage with a consanguine, unless a very close one, was preferred to matrimonial union with a co-clansman. As it is, agnation and consanguinity in the direct or collateral line on the paternal side were considered powerful barriers to sexual relations, males and females descended from the same stock being always regarded as brothers and sisters. . . . Such was not the case, however, with consanguinity in collateral lines by the mother's side, cousins of that class, even as near as the first degree, being by a time-honored custom, almost bound to intermarry. And here it is as well to state at once that, in common with nearly all the primitive people, mother-right is the supreme law regulating succession among nearly all the Western Dénés, and I may add that here<sup>2</sup> it admits of no

Marriage of cousins.

Mother-kin and female descent of titles and property.

<sup>1</sup> Father A. G. Morice, "The *logical Report, 1905* (Toronto), p. 201. Canadian Dénés," *Annual Archæo-*

<sup>2</sup> At Stuart's Lake.

exception whatever. On the other hand, another ordinance of their social code forbids titles as well as landed property to pass by heredity into a different clan. Therefore children of a notable among them belonging to their mother's clan, could never inherit from their father. But if the latter had nephews by a sister, one of them was *de jure* his successor, this nephew belonging through his mother to his uncle's clan. Now, by way of compensation, and to permit the notable's children who could not otherwise inherit from him, to enjoy at least, as much as was lawful of their father's succession, one of his daughters would be united in marriage with her inheriting maternal first cousin. As for affinity consequent upon either lawful or unlawful sexual relations, it was simply ignored. Nay, I should say that it was rather considered a powerful incentive to marriage, except when the regulations of the clan organization interfered so as to make the two relatives fellow clansmen. Thus it was, that in the case of a deceased brother's wife, the Dénés treated her conformably with the directions of the Jewish law, and the nephew considered himself in duty bound to espouse her."<sup>1</sup>

The statement just quoted as to the marriage of first cousins is somewhat ambiguous. Elsewhere Father Morice writes that "the kinship resulting from fellow-clanship was reputed to be so strict that it precluded the possibility of co-clansmen intermarrying, while, on the other hand, marriage between even first cousins, if on the mother's side, was quite common, and, in some cases, almost obligatory";<sup>2</sup> and again: "First cousins married each other without any scruple

Cousin-marriages.

<sup>1</sup> Father A. G. Morice, "The Western Dénés, their Manners and Customs," *Proceedings of the Canadian Institute*, Toronto, Third Series, vol. vii. Fasciculus I (Toronto, 1889), pp. 118-120. Compare *id.*, *Au pays de l'ours noir, chez les sauvages de la Colombie Britannique* (Paris and Lyons, 1897), pp. 67 *sq.* In the latter passage it is said that it was the brother, not the nephew, of the deceased husband who was bound to marry the widow: and this is probably the correct statement. Elsewhere also Father Morice observes that "by an immemorial custom, the widow of a

Carrier was also inevitably transferred as wife to the deceased's surviving brother" (Father A. G. Morice, "Are the Carrier Sociology and Mythology indigenous or exotic?" *Proceedings and Transactions of the Royal Society of Canada for the year 1892*, x. (Ottawa, 1893), Transactions, Section ii. p. 112.

<sup>2</sup> Father A. G. Morice, "Are the Carrier Sociology and Mythology indigenous or exotic?" *Proceedings and Transactions of the Royal Society of Canada for the year 1892*, x. (Ottawa, 1893), Transactions, Section ii. p. 112.

if related only through the father's side."<sup>1</sup> The last statement is apparently, though perhaps not really, contradictory of the other two.

Ambiguity of the expressions "cousins on the father's side" and "cousins on the mother's side."

As I have already pointed out,<sup>2</sup> the expressions "cousins on the father's side" and "cousins on the mother's side" are ambiguous, and each of them may cover relationships which to the savage mind are entirely different, though the civilised mind confuses them. For the expression "cousins on the father's side" includes not only cousins who are the children of two brothers; it may include also cousins who are the children of a brother and a sister respectively, since to the children of the brother the children of the sister are "cousins on the father's side." Similarly the expression "cousins on the mother's side" includes not only cousins who are the children of two sisters; it may include also cousins who are the children of a sister and a brother respectively, since to the children of the sister the children of the brother are "cousins on the mother's side." If we would keep our ideas clear, therefore, the expressions "cousins on the father's side" and "cousins on the mother's side" should be strictly avoided. In the passages just quoted which seem to contradict each other Father Morice was probably thinking of cousins who are the children of a brother and a sister respectively; but whereas in the one passage ("first cousins, if on the mother's side") he was thinking of this relationship from the side of the sister's child, in the other passage ("if related only through the father's side") he was thinking of this relationship from the side of the brother's child. At least this interpretation reconciles the two seemingly contradictory statements with each other and with the common usage of savage tribes. We may conjecture, therefore, that among the Tinnehs, as among many other peoples, first cousins are allowed or even expected to marry each other when they are the children of a brother and a sister respectively, but that they are forbidden to marry each other when they are children of two brothers or of two sisters respectively.

Among the Carriers the number of totemic clans was

<sup>1</sup> Father A. G. Morice, "The Canadian Dénés," *Annual Archaeological Report, 1905* (Toronto), p. 201.

<sup>2</sup> Vol. ii. p. 383 note<sup>2</sup>.

four, not five as among other of the Western Tinnehs. Their names and totems were as follows :—<sup>1</sup>

Clans and totems of the Carriers.

TOTEMIC CLANS OF THE CARRIERS

Clans.	Totems.
<i>Ltsemes-yu</i>	The Grouse
<i>Tsa-yu</i>	The Beaver
<i>Yesíl-yu</i>	The Toad
<i>Temten-yu</i>	The Grizzly Bear

Of these native names of the clans *Tsa-yu* means "beaver medicine"; the others are untranslatable and in the opinion of Father Morice "are probably imported from among the heterogeneous tribes from which the whole system is undoubtedly derived." The Grouse clan is by far the most powerful among the Carriers; and the Toad and Grizzly Bear clans are thought to have a sort of affinity which entitles the members of each to consideration and protection at the hands of the other.<sup>2</sup> "In case of extended travelling—which, however, was of rare occurrence—the totem served also as an emblem guaranteeing to the bearer a brotherly reception and constant protection by any member of the same clan he might fall in with"<sup>3</sup> These bonds of kinship between members of the same clan reached even beyond the limits of the tribe; for we are told that "a Babine from the far north-west, if chance brought him in contact with a clansfellow from, say Alexandria, 500 miles to the south, was sure of protection, hospitality and every

Social relations of members of a totemic clan.

<sup>1</sup> Father A. G. Morice, "Notes, Archaeological, Industrial and Sociological, on the Western Dénés," *Transactions of the Canadian Institute*, iv. (1892-93) p. 203. In writing the native names of the clans Father Morice has turned some of the letters upside down, a practice which has also commended itself to many other American ethnologists for the sake, no doubt, of conveying the exact shade of pronunciation more exactly. As the advantages of this peculiar orthography appear to me scarcely to outweigh its

inconveniences, I have taken the liberty here and elsewhere of restoring the letters to the position which they usually occupy in books printed in Europe.

<sup>2</sup> Father A. G. Morice, *op. cit.* p. 204.

<sup>3</sup> Father A. G. Morice, "Are the Carrier Sociology and Mythology indigenous or exotic?" *Proceedings and Transactions of the Royal Society of Canada for the year 1892*, x. (Ottawa, 1893), p. 112.

mark of attachment, though Carrier and Babine might not before as much as have known of each other."<sup>1</sup>

With regard to the nature and meaning of the clan totems among the Western Tinnéhs we have little information. Father Morice tells us that they "were sets of animals or other beings, which were supposed to have had in pristine times something to do with the establishment of those artificial divisions. They were regarded with a peculiar respect almost amounting to veneration, and, on festival occasions, they personified the whole clan and its members, whose symbol or crest they became."<sup>2</sup> At such festivals an effigy of the totem of the clan who acted as hosts was carved and exposed at the door of the house; and every person who did not belong to the clan was expected at entering to make a present to the totem and hence to the givers of the feast; but there was a tacit understanding that he would receive in return at some future time a present of at least equal value. Even to name publicly the totem of another clan was an act which had to be atoned for with the gift of a blanket, a piece of dressed skin, or any article of wearing apparel; else it would be thought that the crest was slighted and the whole clan thereby dishonoured. Specimens of such carved images of their clan totems no longer exist among these Indians,<sup>3</sup> who are now "considerate, virtuous, and law-abiding Christians."<sup>4</sup>

Besides the carved effigies of their clan totems which the Carriers displayed at festivals for the purpose of attracting contributions, it was also customary to place images of the same sort on the mortuary column or on the grave. Only two specimens of such sepulchral monuments survived in the year 1893; both of them represented a beaver carved in the round and perched, one on the top of a pole, the other on the top of a grave. In both cases the deceased was a member of the Beaver clan. The rest of these memorials of

the past have long disappeared, probably destroyed by the zeal of the missionaries or their converts. But carved monuments seem never to have been common among the Carriers; they are not an artistic people like the Haidas.<sup>1</sup>

The practice of tattooing used to be very prevalent among the Western Tinnehs; and the figures tattooed on the breast "had generally a totemic significance"; the marks tattooed on the forearms "referred as a rule to a personal totemic animal revealed in dream, and the bearing of whose symbol was supposed to create a reciprocal sympathy and a sort of kinship between the totem and the tattooed individual."<sup>2</sup> The personal as distinct from the clan totems of the Tinnehs will be considered in the next chapter.

The headmen or representatives of the totemic clans were called *teneza*, "the men," by the Carriers and Babines, but *téné-thié*, "great men," by the Nahanaïs. They formed a privileged class of hereditary nobles, and the hunting grounds were parcelled out as their lawful patrimony, over which no one else had any right. They enjoyed great consideration in the tribe, were respectfully listened to and obeyed so far as obedience consisted with a state of society little above savagery, and on ceremonial occasions they wore a special costume and occupied seats of honour as remote as possible from the door. The whole institution, we are informed, had more points of resemblance to the landed nobility of the Old World than to the class of tribal chiefs; indeed chiefs in the strict sense did not exist among the Tinnehs before the advent of the whites. Even the children of such noblemen enjoyed some consideration and were dubbed *oeskheza*, "true children." Yet belonging as they did to their mother's clan they could not succeed to the rank and property of their father. As the lands belonged to the clan they passed at the death of the headman (*teneza*) not to his own son but to the son of his sister or, failing that, to the dead man's brother; and if

<sup>1</sup> Father A. G. Morice, "Notes, (1892-93) pp. 199-201. Archaeological, Industrial and Sociological, on the Western Dénés," *Transactions of the Canadian Institute*, iv.

<sup>2</sup> Father A. G. Morice, *op. cit.* p. 182.

there were neither brothers nor sisters' sons, the lands and title might pass to a sister or to a sister's daughter. Hence female chiefs were occasionally found among the Western Tinnehs or Dénés.<sup>1</sup>

Marriage  
customs.

Among the Carriers a young man used to serve the father of his betrothed wife for one or two years. During this time he contributed the products of the chase and his other earnings to his future father-in-law and the other relations of his betrothed, receiving her hand at the end of his period of service.<sup>2</sup> Polygamy was common; the higher a man's rank, the more numerous were his wives; we hear of a chief who had as many as six at one time.<sup>3</sup> Among the Northern Tinnehs men made no scruple of having two or three sisters for wives at one time.<sup>4</sup> We have seen that this practice of marrying several sisters at the same time or successively was very common among the North American Indians.<sup>5</sup>

Practice of  
taking  
several  
sisters to  
wife.

Totemic  
clans not  
found  
among the  
Sekanaïs.

The social organisation of the community in totemic clans is not found among all the Western Tinnehs; for example, it is entirely lacking among the Sekanaïs, being replaced, we are told, by a sort of anarchy. That tribe has neither clans nor hereditary nobility with their hunting domains; the fathers of families are the natural chiefs of the group, but their authority is more nominal than real.<sup>6</sup>

Exogamous  
clans  
among the  
Loucheux  
or Kut-  
chins.

On the other hand the large tribe of the Loucheux or Kutchins, as they are variously named, is or rather used to be divided into three exogamous clans or castes, as they are called by the writers who have recorded them.

<sup>6</sup> A. G. Morice, *Au Pays de Pours noir, chez les sauvages de la Colombie Britannique* (Paris and Lyons, 1897), pp. 117 sq.

According to Mr. William L. Hardisty, of the Hudson Bay Company, the names of the three clans were *Chitsah*, *Tain-gees-ah-tсах*, and *Nat-singh*; according to Mr. Strachan Jones, formerly commander at Fort Yukon, the names were *Tchit-che-ah*, *Tenge-rat-sey*, and *Nat-sah-i*;<sup>1</sup> according to Mr. W. W. Kirby the names were *Chit-sa*, *Tanges-at-sa*, and *Nate-sa*.<sup>2</sup> Allowing for local differences of pronunciation and for variations of spelling the three lists seem to be identical.

Mr. Hardisty's account of the clans or castes runs as follows: "With reference to the story about caste it is difficult to arrive at a correct solution of the matter. The fact, I believe, is that they do not know themselves, for they give various accounts of the origin of the three great divisions of mankind. Some say it was so from the beginning; others that it originated when all fowls, animals, and fish were people—the fish were *Chitsah*, the birds *Tain-gees-ah-tсах*, and the animals *Nat-singh*; some that it refers to the country occupied by the three great nations who are supposed to have composed the whole family of man; while the other, and, I think, most correct opinion, is that it refers to color, for the words are applicable. *Chitsah* refers to anything of a pale color—fair people; *Nat-singh*, from *ah-zingh*, black, dark—that is, dark people; *Tain-gees-ah-tсах*, neither fair nor dark, between the two, from *tain-gees*, the half, middle, and *ah-tсах*, brightish, from *tsa*, the sun, bright, glittering, shining, etc. Another thing, the country of the Na-tsik-koo-chin is called Nah-tsingh to this day, and it is the identical country which the Nat-singh occupied. The Na-tsik-koo-chin inhabit the high ridge of land between the Youcon and the Arctic sea. They live entirely on the flesh of the reindeer, and are very dark-skinned compared with the Chit-sangh, who live a good deal on fish. All the elderly men fish the salmon and salmon trout during the summer, while the

obligations  
of the clan  
overrode  
that of  
blood.

young men hunt the moose, and have regular white-fish fisheries every autumn besides. Some of the Chit-sangh are very fair, indeed, in some instances approaching to white. The Tain-gees-ah-tsa live on salmon trout and moose meat, and, taken as a whole, are neither so fair as the Chit-sangh nor so dark as the Nah-tsingh. They are half-and-half between the two. A Chit-sangh cannot, by their rules, marry a Nah-tsingh, although the rule is set at naught occasionally; but when it does take place the persons are ridiculed and laughed at. The man is said to have married his sister, even though she may be from another tribe and there be not the slightest connection by blood between them. The same way with the other two divisions. The children are of the same color as their mother. They receive caste from their mother; if a male Chit-sangh marry a Nah-tsingh woman the children are Nah-tsingh, and if a male Nah-tsingh marry a Chit-sangh woman the children are Chit-sangh, so that the divisions are always changing. As the fathers die out, the country inhabited by the Chit-sangh becomes occupied by the Nah-tsingh, and so on *vice versa*. They are continually changing countries, as it were. Latterly, however, these rules are not so strictly observed or enforced as formerly, so that there is getting to be a complete amalgamation of the three great divisions, such a mixture that the difference of color is scarcely perceptible, and, no doubt, will soon disappear altogether, except what is produced by natural causes. The people who live on the flesh of the reindeer are always darker than those who live on fish, or on part fish and part flesh. One good thing proceeded from the above arrangement—it prevented war between two tribes who were naturally hostile. The ties or obligations of color or caste were stronger than those of blood or nationality. In war it was not tribe against tribe, but division against division, and as the children were never of the same caste as the father, the children would, of course, be against the father and the father against the children, part of one tribe against part of another, and part against itself, so that, as may be supposed, there would have been a pretty general con-

fusion. This, however, was not likely to occur very often, as the worst of parents would have naturally preferred peace to war with his own children."<sup>1</sup>

From the foregoing account it would seem that the three exogamous clans of the Loucheux or Kutchins formerly occupied separate districts, and that they differed in complexion as well as in their modes of life. It is not easy to understand how exogamous and intermarrying clans can in the long run differ in any marked degree physically from each other, since constant and compulsory intermarriage might be expected to produce a uniform type among all the clans which thus mix their blood. We may surmise, therefore, that the statement as to a physical distinction between the clans, and perhaps also as to separate territories occupied by them, is erroneous. This surmise is partially confirmed by the account which the experienced French missionary, Father E. Petitot, gives of the social organisation of the Loucheux. He says: "What distinguishes the Dindjié [Loucheux] from their neighbours is the division of their nation into three camps or fractions, independent of the local division in tribes. These camps take the names of 'Men of the Right' (*Etchian-Kpét*); 'Men of the Left' (*Nattsein-Kpét*); and 'Men of the Middle' (*Tpendjidhoettset-Kpét*). The young people of one camp are bound to choose a wife in the opposite camp. But the men of the middle have the choice between the one and the other camp. The children belong to the camp of their mother. The *Etchian* are reputed white, the *Nattsein* black, and the *Tpendjidhoettset* brown, indications of the mixture of two races and of half-breeds."<sup>2</sup>

Petitot's account of the three castes or clans of the Loucheux.

The names of what Father Petitot calls the three camps or fractions of the Loucheux are clearly only divergent forms of the names given by our other authorities Messrs. Hardisty, Jones, and Kirby; and the separation of these exogamous

The separation of the three clans in different camps

resembles  
the Central  
Australian  
custom.

divisions of the tribe in different camps, but not in different districts, reminds us of the similar separation of the exogamous classes in the camps of the Central Australian aborigines.<sup>1</sup> It is probable that, when the rule of exogamy was first introduced, the intermarrying classes into which the community dissolved itself were locally segregated from each other in order to avoid confusion and mistakes. Indeed without some such segregation it is difficult to imagine how the new rule could have been either understood or obeyed.

Chiefs  
of the  
Loucheux.

The Loucheux generally live in large parties, each band headed by a chief and one or more medicine-men. Though the medicine-men exercise no secular power as chiefs, they acquire through their magical practices an authority to

Polygamy  
of the  
chiefs.

which even the chiefs themselves are subject. All the

chiefs, medicine-men, and those who possess rank acquired by property have two, three, or more wives, so that but few of the young men can marry, unless they content themselves with an old cast-off widow, who, from ill health and the effects of bad treatment, is no longer able to do heavy work. Hence those who have wives are invariably jealous and treat their women most brutally. This is one of the principal causes of the great falling off in numbers of the Loucheux

Female  
infanticide.

tribe. Other causes of the decrease of the population are female infanticide, premature births, and very frequent miscarriages from excessive fatigue. The only reason alleged by the women for killing their infant daughters is

Women  
fewer than  
men.

a desire to spare them the miseries of life. The women are fewer than the men, which coupled with the practice of polygamy among the chiefs and nobles must seriously diminish the number of married men. It is the mother

Hard work  
imposed on  
the women  
by the men.

who disposes of her daughters in marriage; fathers and brothers have no voice in the matter. Yet the women, we are told, are literally beasts of burden to their lords and masters. All the heavy work is done by them. When an animal is killed, they carry the meat and skin on their backs to the camp, after which they dress the skin, cut up the meat and dry it. They hew the wood and draw the water. All the household duties devolve on them: they tend the fires,

<sup>1</sup> See above, vol. i. p. 248.

cook the food, make and mend their husband's and children's clothes, lace the snow shoes, and so forth. In migrating from place to place, if it be winter, the woman hauls the whole of the baggage, provisions, lodge poles, cooking utensils, and perhaps a couple of children on the top of all, while the husband strolls ahead with his gun, horn, shot-pouch, and empty game bag. If it be summer, the man paddles a light canoe, while the woman propels with straining nerves a large clumsy canoe laden with the baggage.<sup>1</sup> Yet these savages have mother-kin, that is, the system which traces descent through women. So little does mother-kin or mother-right, as it is often called, carry with it the social superiority of women to men.

Another Indian tribe of the Tinneh stock who were divided into exogamous clans with descent in the female line were the Tsetsauts, who lived on Portland Inlet in the

Inlet.

<sup>1</sup> "Notes on the Tinneh or Chepewyan Indians of British and Russian America," *Annual Report of the Board of Regents of the Smithsonian Institution for 1866* (Washington, 1867), p. 312. Compare W. W. Kirby, "A Journey to the Youcon, Russian America," *Annual Report of the Board of Regents of the Smithsonian Institution for 1864* (Washington, 1865), p. 418: "The women are much fewer in number and live a much shorter time than the men. The latter arises from their early marriages, harsh treatment they receive, and laborious work they have daily to perform, while the former is caused, I fear, by the cruel acts of infanticide which to female children have been so sadly prevalent among them." Yet with regard to these same Loucheux Indians Father Petitot tells us that "they are gentle, humane, hospitable, intelligent, frank, and good-humoured. They are kind to their women, whose advice they often take to the extent of making them their chiefs" (E. Petitot, *Traditions indiennes du Canada Nord-Ouest*, p. 14). So difficult is it to extract a consistent account of the moral character of savages from the reports of different writers. However, most

observers seem to agree in describing the Tinnehs as unusually gentle, unwarlike, and even timid to a ridiculous degree, though some of the tribes, such as the Chepewyans, Beavers, and Yellow Knives, are less so than others. They never made war on the whites and have been described as "the most peaceable tribe of Indians known in North America." See Samuel Hearne, *Journey from Prince of Wales's Fort in Hudson's Bay to the Northern Ocean* (London, 1795), p. 310; Alexander Mackenzie, *Voyages from Montreal through the Continent of North America* (London, 1801), pp. cxix., cxxiv.; "Notes on the Tinneh or Chepewyan Indians of British and Russian America," *Annual Report of the Bureau of Regents of the Smithsonian Institution for 1866* (Washington, 1867), pp. 307, 308, 309 sq.; E. Petitot, *Mono-graphie des Dènè-Dindjè* (Paris, 1876), pp. 30, 32; *id.*, *Traditions indiennes du Canada Nord-Ouest*, p. 14; A. G. Morice, "Notes, Archæological, Industrial and Sociological, on the Western Dénés," *Transactions of the Canadian Institute*, iv. extreme north of British Columbia, where it borders on Alaska. When Dr. Boas visited the tribe in 1894, it was reduced in numbers to about twelve members, of whom only two could speak their language correctly. By this time the tribe may perhaps be extinct. Some seventy or eighty years ago the Tsetsauts numbered about five hundred souls, but were for the most part exterminated by their enemies the Tlingits. They have no fixed villages, but make a camp wherever they intend to hunt. Their temporary houses are made of bark with a slanting roof, which is propped against the trunk of a great tree. When two families desire to inhabit one house, two of these bark structures are joined together, so that the two roofs slope up and meet each other in the middle, one of them overlapping the other a little to keep out the rain and snow. For the same reason also they set up the house under the shelter of the butt of a tall tree in the forest. When the tribe moves to another place, these houses are taken to pieces and the props tied together and fastened to a tree. On their return to the same spot, the bundles are untied, the props taken out, and the house set up again. In winter, when the doors of the houses are blocked with the deep snow, the exit is through the roof. It is possible that this winter house may be the primitive type out of which the subterranean lodge of the interior of British Columbia has developed. The staple food of the Tsetsauts is porcupine, marmot, mountain-goat, and bear. The skins of these animals furnish them with clothing. In summer they go down the rivers of Portland Inlet to catch salmon, which they dry for winter use. They made fire by means of a fire-drill worked with a bow. Their arrows were headed with flints.<sup>1</sup> The tribe was divided into two exogamous clans, the Eagle and the Wolf, with descent in the female line. Hence if an Eagle man married a Wolf woman, the children were Wolves; if a Wolf man married an Eagle woman, the children were Eagles. Each clan had its own personal names for its members. Children inherited not

from their father but from their mother's brother. The parents of a child changed their names and were called after their child "Father of So-and-So," "Mother of So-and-So." This widespread custom,<sup>1</sup> in so far as it is observed by the Tsetsauts, is explained by Dr. Boas as follows: "There are a limited number of names only in the tribe, probably names belonging to the nobility. When a child reaches a certain age, his father, uncle, mother, or aunt may give it his or her name; and since by this act the former owner has relinquished his place, he also loses the name belonging to the place, and consequently adopts that of the father, mother, or aunt of the owner of the place, thus indicating that he owned the place formerly."<sup>2</sup> On this explanation it is to be remarked that if a father gives his own name to his son, that name cannot be a clan name, since father and son always belong to separate clans, and each clan has names appropriated to its members. The custom of naming parents after their children is practised by other tribes of the Tinneh stock.<sup>3</sup>

Parents named after their children.

The Tsetsauts observe the custom of the levirate: when a man dies leaving a widow, his brother marries her. However, he may not marry her before the lapse of a certain time, for they think that the ghost of the dead husband haunts his widow and would do a mischief to the man who should usurp his rights too soon. During the period of her mourning the widow is supported by her late husband's brother, her future spouse.<sup>4</sup>

The levirate.

The Tsetsauts further observe the custom which obliges a man and his mother-in-law to avoid each other. It is said that this custom is found among all the northern tribes of the Tinneh stock. Among the Tsetsauts persons who stand in this relationship are ashamed to talk to or even to see each other. The mother-in-law leaves the house before her son-in-law enters it, or, if that cannot be done, she hides her

Avoidance of a man and his wife's mother.

Avoidance  
of adult  
brothers  
and sisters.

face or turns the other way while he is near her. Dr. Boas's Indian informant further stated that an adult man must not look at his adult sister. "This custom, he explained, is based on a tradition according to which a man married his sister. Their brothers were ashamed, tied them together, and deserted them; but the man broke the ropes. They had a child, and eventually he killed a ram, a ewe, and a kid of the mountain-goat, put on their skins, and they assumed the shape of goats. He had acquired the power of killing everything by a glance of his eyes. One day his tribe came up the river for the purpose of hunting and he killed them. Then he travelled all over the world, leaving signs of his presence everywhere, such as remarkable rocks. The woman and her child went to the head waters of the Nass River, where they still continue to live on a lake."<sup>1</sup>

Avoidance  
of brothers  
and sisters  
elsewhere.

So far as this tradition bases the avoidance of brother and sister on a desire to remove from them the temptation to incest it is probably correct. We have seen that the mutual avoidance of brothers and sisters is practised by the Navaho and Arapaho Indians of North America as well as by people in other parts of the world. In every case the intention of the custom is probably to prevent incest.<sup>2</sup> Amongst the Tinnehs such precautions would seem to be necessary; for with regard to the eastern tribes of this nation we are informed that "the divine and customary barriers between blood relations are not well observed, for, although it is not considered correct by general opinion, instances of men united to their mothers, their sisters, or their daughters, though not common, are far from rare. I have heard among them of two sons keeping their mother as a common wife, of another wedded to his daughter, and of several married to their sisters, while in cases of polygamy having two sisters to wife is very usual."<sup>3</sup> And speaking of the Southern

wyan Indians of British and Russian  
America," communicated by George  
Gibbs, *Annual Report of the Board of  
Regents of the Smithsonian Institution*  
(Washington, 1867), p. 310. The

Indians of the Tinnéh stock, whom in this respect he contrasts disadvantageously with the Northern Indians, the old traveller Samuel Hearne observes: "Most of the Southern Indians, as well as the Athapuscow [Athapascan] and Neheaway [Nahanai] tribes, are entirely without scruple in this respect. It is notoriously known, that many of them cohabit occasionally with their own mothers, and frequently espouse their sisters and daughters. I have known several of them who, after having lived in that state with their daughters, have given them to their sons, and all parties been perfectly reconciled to it. In fact, notwithstanding the severity of the climate, the licentiousness of the inhabitants cannot be exceeded by any of the Eastern nations, whose luxurious manner of life, and genial climate, seem more adapted to excite extraordinary passions, than the severe cold of the frigid zone. It is true that few of those who live under the immediate protection of the English ever take either their sisters or daughters for wives, which is probably owing to the fear of incurring their displeasure; but it is well known that acts of incest too often take place among them, though perhaps not so frequently as among the foreign Indians."<sup>1</sup>

The last Indian tribe of the Tinnéh stock and indeed of North America whose totemic system we shall notice are the Kenayes or Kenais, who inhabit the Kenai Peninsula and the neighbourhood of Cook's Inlet in Alaska, where they border on the Eskimo. They call themselves Tnaina or Tnai, that is, "men," this name being probably a mere dialectical variation of Tinnéh or Déné. In temperament more taciturn and in manners more dignified than their cheerful lively neighbours the Eskimo, these Indians are expert fishers and ardent hunters. In summer they catch the various kinds of salmon which swarm in their seas and streams; and in the early days of August, when the fishing season is over, they betake themselves to the mountains,

authority quoted in the text is Mr. Bernard R. Ross, of the Hudson's Bay Company.

*Prince of Wales's Fort in Hudson's Bay to the Northern Ocean* (London, 1795), p. 130.

<sup>1</sup> Samuel Hearne, *Journey from*

where they make long and toilsome journeys over the high passes in pursuit of reindeer and mountain-goats, returning lean, worn, and exhausted by privations and fatigue to hunt the beaver until, with the setting in of the first hard frosts, they give themselves up to their winter rest and recreations. In the neighbourhood of the sea their country is an ascending plain dotted with lakes but bare of trees except in the deep ravines, which are clothed with a stunted growth of creeping willows and alder bush. Further inland, as the land rises, you come to a belt of forest and beyond that to the great alpine chain of mountains which runs parallel to the sea, glittering in the distance with its glaciers and eternal snows. Herds of reindeer browse all over this region, retreating with the approach of summer to the inaccessible heights of the mountains, where they may often be seen by the traveller as a moving line of black dots winding over the snow-fields far above.<sup>1</sup>

The Kenais are divided into two exogamous clans or perhaps phratries. According to their traditions the Raven created two women out of different stuffs; one of them became the ancestress of the one clan, and the other of the other. Of the two clans one is divided into six and the other into five septs, which are named as follows:—

- |          |   |                                                                                                                                        |
|----------|---|----------------------------------------------------------------------------------------------------------------------------------------|
| Clan I.  | { | 1. <i>Kachgija</i> , so called from the croaking of ravens.                                                                            |
|          |   | 2. <i>Kali</i> , " " the catching of fish.                                                                                             |
|          |   | 3. <i>Tlachtana</i> , " " a grass-mat.                                                                                                 |
|          |   | 4. <i>Montochtana</i> , " " the inner corner of a hut.                                                                                 |
|          |   | 5. <i>Tschichgi</i> , " " a colour.                                                                                                    |
|          |   | 6. <i>Nuchschi</i> , those who have fallen from heaven.                                                                                |
| Clan II. | { | 1. <i>Tultschina</i> , so called from the inclination to bathe in cold water in late autumn.                                           |
|          |   | 2. <i>Kutluchtna</i> , women fond of stringing glass-beads.                                                                            |
|          |   | 3. <i>Schischlachtana</i> , deceivers like the Raven, who at the creation of the earth and mankind always played tricks on the latter. |
|          |   | 4. <i>Nutschichgi</i> , named after a mountain near Lake Skilach.                                                                      |
|          |   | 5. <i>Zaltana</i> " " " "                                                                                                              |

The country of the Kenais.

Exogamous divisions of the Kenais.

According to ancient custom, the men of the first clan or group of six septs may not marry women of their own clan or group of six septs, but must marry women of the other clan or group of five septs ; similarly the men of the second clan must always marry women of the first clan, not of their own. The children are reckoned to the clan and sept of their mother. However, even in the first half of the nineteenth century this rule of exogamy was no longer strictly observed, and men were allowed to marry women even of their own sept. Old people attributed the great mortality of their tribe to the new practice of inbreeding. A man's heir is his sister's child ; the son inherits very little from his father. A man serves in the house of his future father-in-law for a year ; after that he receives payment for his services and takes his wife home. Rich men have three or four wives.<sup>1</sup>

Exogamy and maternal descent of the divisions.

It deserves to be noted that the Tinnehs share with the coast tribes the belief in the transmigration of souls or the reincarnation of the dead. Thus, with regard to the Chepewyans, a Tinnéh tribe, we read that " they have some faint notions of the transmigration of the soul ; so that if a child be born with teeth, they instantly imagine, from its premature appearance, that it bears a resemblance to some person who had lived to an advanced period, and that he has assumed a renovated life, with these extraordinary tokens of maturity."<sup>2</sup> And of the Tinnehs or Dénés in general Father Petitot observes that " the ancient faith in metempsychosis and the transmigration of souls is deeply rooted in a great number of tribes. It is usually the little children born with one or two teeth (a circumstance common enough among the Dénés) who pass for persons resuscitated or reincarnated. It is the same with those who come into the world soon after the death of somebody. The testimony

Belief of the Tinnehs in the transmigration of souls and the reincarnation of the dead.

Belief of  
the Hurons  
in the rein-  
carnation  
of infants.

of Hearne confirms my assertion. I had much trouble in dissuading the Hareskins from this superstition, and I doubt whether I succeeded. I could not banish from the mind of a young girl the idea that she had lived before her birth under a different name and with different features than those with which I was familiar; nor could I prevent an old woman from claiming the possession of a neighbour's child under the specious pretext that she recognized in it the transmigrated soul of her deceased son. I have known of several such cases. The Hurons shared the same belief. According to Malte-Brun, they buried their little ones beside the paths, in order that the women who passed by might receive their souls and bring them afresh into the world. This power of reincarnation is by the Dénés extended equally to the animals. I have known an unhappy old mother who grieved because a professional witch assured her that she had seen her dead son prowling on the bank of the river in the likeness of a bear. It seldom happens after the death of a conspicuous savage that his companions do not say they have seen him transformed into a two-footed cariboo, a bear, or an elan."<sup>1</sup> Again, Father Morice tells us that "metempsychosis was believed in by the Carriers and the Sekanais and very likely by the other two tribes also [the Chilcotins and the Nahanes], though I could not positively affirm this. It amounted, in their estimation, to the regeneration of persons who had led a virtuous life and were supposed to be rewarded therefor by a new birth. Transformations into beings of a lower order, however, than that of their former condition, were repugnant to their psychological ideas."<sup>2</sup>

When we remember how closely a belief in the reincarnation of the dead is associated with the totemic system of

<sup>1</sup> E. Petitot, *Monographie des Dènè-Dindjié*, p. 59. Under the name Dènè-Dindjié the writer includes the whole Tinneh stock (*op. cit.* pp. 23 sq.). I have not found the passage of Hearne to which Father Petitot refers in confirmation of his statement. The account of the Huron belief in the reincarnation of infants comes from a Jesuit missionary report of the

year 1636. See *Relations des Jésuites*, 1636, p. 130 (Canadian reprint, Quebec, 1858).

<sup>2</sup> Father A. G. Morice, "The Western Dénés, their Manners and Customs," *Proceedings of the Canadian Institute*, Toronto, Third Series, vol. vii. Fasciculus 1 (Toronto, 1889), p. 161.

the Central Australian aborigines,<sup>1</sup> we need not be surprised at finding the same belief held by totemic peoples in other parts of the world ; and if the view is correct that totemism in its origin was simply a theory invented to explain the facts of conception and childbirth, the coincidence of the belief in reincarnation with the practice of totemism in the same tribes may not be accidental but vital.

Totemism associated with the re-incarnation of the dead also in Australia.

The Tinneh or Déné Indians possess the classificatory system of relationship. Thus in the Tâ-nâ-tinne tribe, who seem to be the Hare Indians, in the generation above his own a man applies the same term *Sa-tâ* "my father" to his father, and to his father's brother ; he applies the same term *A-na* "my mother" to his mother, to his mother's sisters, and to the wives of his father's brothers. In his own generation he has separate terms for "my elder brother" (*Sün-no-ga*) and "my younger brother" (*Sün-no-gâ-yă-za*), for "my elder sister" (*Sa-da-za*) and "my younger sister" (*Sa-da-za-yă-za*) ; and he applies the same terms "elder brother," "younger brother," "elder sister," "younger sister" to his first cousins, the sons and daughters of his father's brothers or of his mother's sisters. In the generation below his own he applies the same term *Sa-yă-za* "my son" and *Sa-to-a* "my daughter" to his own sons and daughters and to his nephews and nieces, the sons and daughters both of his brothers and of his sisters.<sup>2</sup>

The classificatory system of relationship among the Tâ-nâ-tinne or Hare Indians.

Again, among the Loucheux or Kutchins in the generation above his own a man applies the same term *Te-angh* "my father" to his father and to his father's brothers ; he applies the same term *Na-aingh* "my mother" to his mother and to his mother's sisters. In his own generation he has separate terms for "my elder brother" (*Soon-da-ga*), "my younger brother" (*Sa-chă*), "my elder sister" (*Sa-che*), and "my younger sister" (*Sa-chith*) ; and he applies the same terms "elder brother," "younger brother," "elder sister," "younger sister" to his first cousins, the sons and daughters of his father's brothers or of his mother's sisters. In the

generation below his own he applies the same term *Sa-tin-ge* "my son" and *Sa-che* "my daughter" to his own sons and daughters and to his nephews and nieces, the sons and daughters of his brothers. But he applies different terms *Soo* "my nephew (?)" and *Sa-ke* (?) "my niece" to the sons and daughters of his sisters.<sup>1</sup>

### § 8. *Reported Totemism among the Eskimo*

The Eskimo appear to be without the institutions of totemism and exogamy.

From almost all the accounts which have been given of the Innuït or Eskimo, who range over an immense but dreary and inhospitable region from Bering Strait on the west to Greenland on the east, it would seem that the institutions of totemism and exogamy are wholly lacking among that people. In these respects, therefore, if the accounts are true, the Eskimo resemble their neighbours in north-eastern Asia, the Chukchee and Koryak.<sup>2</sup> On this subject one good authority, Mr. W. H. Dall, definitely says that "the totemic system is not found among the Innuït."<sup>3</sup> However, a subsequent writer, Mr. E. W. Nelson, who has given us a valuable account of the Innuït or Eskimo about Bering Strait,<sup>4</sup> believed that he had found totemism in that branch of the race. He says: "From Kuskokwim river northward to the shores of Bering strait and Kotzebue sound the Eskimo have a regular system of totem marks and the accompanying subdivision of the people into gentes."<sup>5</sup> What Mr. Nelson calls the totem marks are carved on weapons and implements of many sorts, painted on garments and wooden utensils, and tattooed on faces. Some of these

However, Mr. E. W. Nelson reports that totemism exists among the Eskimo of Bering Strait. Marks which Mr. Nelson regards as

<sup>1</sup> L. H. Morgan, *Systems of Consanguinity and Affinity*, pp. 239 and Table II. pp. 293 *sqq.* In his monograph on the Tinnehs or Dénés the missionary Father E. Petitot gives some indications of the use of the classificatory system of relationship among them; for he tells us that they have no word in their language for cousins, whether first cousins or cousins further removed; they call them all brothers and sisters. Further, they have no words for brother and sister in general, but they have special terms to distinguish elder from younger brothers

and sisters. And further in their language the words for uncle and aunt are derived from the words for father and mother. See E. Petitot, *Monographie des Déné-Dindjé* (Paris, 1876), p. 76.

<sup>2</sup> See above, vol. ii. pp. 348, 352.

<sup>5</sup> E. W. Nelson, *op. cit.* p. 322.

marks represent or refer to the wolf, the otter, the ermine, the raven, and the gerfalcon. "Arrows or other weapons marked with the sign of the wolf or other animal totem mark are believed to become invested with some of the qualities of the animal represented and to be endowed with special fatality."<sup>1</sup> "Women belonging to the wolf gens braid strips of wolfskin in their hair, and the young men and boys wear a wolf tail hung behind on the belt. It is said to have been the ancient custom for all to wear some mark about the dress by which the gens of each person might be distinguished."<sup>2</sup> "It is customary for hunters to carry about with them an object representing their totem. A man belonging to the raven gens carries in his quiver a pair of raven feet and a quill feather from the same bird. The gerfalcon man carries in his quiver a quill feather of that totem bird."<sup>3</sup> Further, we are told that some of the masks worn by the Eskimo at their festivals represent the totemic animals, and that on these occasions the wearer of such a mask is believed to become the creature whose mask he wears, or at least he is supposed to be endowed with its spiritual essence.<sup>4</sup>

totemic are carved on weapons, painted on garments, and tattooed on faces.

Totemic badges said to be worn by members of a totemic clan.

Totemic masks.

Such in brief is the evidence on which Mr. Nelson relies to prove the existence of totemism and totemic clans among the Eskimo. It does not seem to me to be sufficient; and until more cogent arguments are adduced, I prefer to acquiesce in the opinion of Mr. W. H. Dall that the totemic system is not found among the Eskimo.

Mr. Nelson's evidence of totemism among the Eskimo seems insufficient.

## CHAPTER XVIII

### GUARDIAN SPIRITS AMONG THE AMERICAN INDIANS

#### § 1. *Guardian Spirits in general*

Besides the totem of their clan many American Indians possessed a guardian spirit, which they acquired for themselves in dreams and did not transmit to their offspring.

WE have now completed our survey of totemism in the usual sense of the term, that is, of clan totems, in North America. But besides the clan totem, which was hereditary either in the male or the female line and was shared by every member of the clan, many North American Indians stood individually in a certain mystic relationship to a supernatural being, commonly called their guardian spirit, which they neither shared with others nor transmitted to their descendants. As this guardian spirit generally appeared in the form of an animal, and as the man often, though not always, respected the species of animal in which he believed his mysterious patron to be embodied, it is clear that these guardian spirits or tutelary animals bear some resemblance to totems, and accordingly I have called them individual totems<sup>1</sup> to distinguish them from the hereditary totems of the clans.

These guardian spirits have been called individual totems.

To this it has been objected by Professor E. B. Tylor<sup>2</sup> that the guardian spirit of each individual Indian, even when it is embodied in an animal, is something entirely different from the totem of the clan and ought not to be designated by the general name of totem, even with the qualifying epithet individual or personal. The distinction between the two is indeed manifest, and both in my original treatise and in my subsequent writings I have been careful to maintain it; for whenever I speak of totems or totemism in the abstract without qualification, I always refer to the

<sup>1</sup> Vol. i. 49 *sqq.*

<sup>2</sup> E. B. Tylor, in *Man*, ii. (1902) pp. 2 *sq.*

totems of clans. Yet the attitude of respect and affection in which a man stands towards his totemic animal in the strict sense of the word so closely resembles that in which he stands towards his guardian spirit in animal form, that it seems, at least at first sight, difficult to separate them entirely and to affirm that they are wholly unconnected with each other. Indeed some of the most eminent American ethnologists, who have personally studied totemism and the system of guardian spirits as living institutions among the Indians, are so strongly impressed by the connection between the two that they derive the clan totem directly from the guardian spirit, believing that it is nothing but the guardian spirit of an individual ancestor of the clan transmitted by inheritance to his descendants—whether in the male or the female line. But if the clan totem could be proved to have originated in this way, it would be hard to bestow the name of totem on the guardian spirit of the descendants and yet to deny it to the same guardian spirit of the ancestor. This view of the origin of the clan totem will be discussed later on. Whether we accept it or not, the weight of authority by which it is supported entitles it at least to a respectful consideration.

Resemblance of the guardian spirit to the clan totem.

Theory that the clan totem is derived from the guardian spirit.

Others again, admitting a relation between the clan totem and the guardian spirit, invert it by supposing that the guardian spirit is not the original of the clan totem but that on the contrary it has been developed out of it at a time when the totemism of the clans was falling into decay, and when consequently individuals, deprived of the protection of the clan totem, looked about for a personal guardian of their own to supply its place.<sup>1</sup> In support of this view it might be urged, that whereas individual totems or guardian spirits in the form of animals are rare in Australia, where clan totemism is, or rather was lately, in full bloom, they were far commoner in North America, where on the

Contrary theory that the guardian spirit is derived from the clan totem.

<sup>1</sup> This is, if I understand them aright, the view of Mr. E. S. Hartland, Dr. A. C. Haddon, and Messrs. H. Hubert and M. Mauss. See E. S. Hartland in *Folk-Lore*, xi. (1900) p. 68; A. C. Haddon, in *Report of the British Association Meeting at Belfast*,

1902, p. 742; H. Hubert et M. Mauss, "Théorie générale de la Magie," *L'Année Sociologique*, vii. (Paris, 1904) pp. 32 sq. Mr. A. R. Brown, Fellow of Trinity College, Cambridge, tells me in conversation that he shares this view.

other hand clan totemism would seem to have been decadent, the sanctity of the relation between a man and his clan totem being at least much less prominent in America than in Australia.<sup>1</sup>

In this uncertainty as to their relation to each other it is best to consider the guardian spirit by itself.

Whether either or neither of these views as to the relation of guardian spirits to clan totems be correct, the subject deserves to be considered in a treatise on totemism, and accordingly I shall now give some account of the guardian spirits of the American Indians. But to prevent confusion, I have hitherto treated the American clan totems independently and have reserved the consideration of the guardian spirits for a separate chapter. I shall describe the institution of guardian spirits as it existed in the various tribes, and shall then compare its diffusion with that of clan totemism, in order to see whether the comparison may throw light on the relation between the two.

## § 2. *Guardian Spirits among the Algonkins*

Guardian spirits or *manitoo*s best attested for the Algonkins.

The existence of guardian spirits of individuals is best attested among the tribes of the Algonkin stock in Eastern America and again among some of the tribes of the North-West. We shall begin with the Algonkins, among whom the guardian spirit of the individual was known as the *manitoo*.<sup>2</sup> The following account of the *manitoo* or *manitou* is given by the historian Mr. Francis Parkman, who drew his knowledge of it from life as well as from books. It applies to the Iroquois and Hurons as well as to the Algonkins:—

Francis Parkman's account of the *manitoo*.

“Besides ascribing life and intelligence to the material world, animate and inanimate, the Indian believes in supernatural existences, known among the Algonquins as *Manitous*, and among the Iroquois and Hurons as *Okies* or *Otkons*.

<sup>1</sup> I have again and again emphasised the absence of information as to the religious aspect of totemism among the North American Indians; but as this lack of information may be due rather to the inattention of observers than to the indifference of the Indians, I speak with hesitation on the subject.

<sup>2</sup> The word is variously spelt as *manitoo*, *manitou*, *manito*, *manido*, *monedo*, *munedoo*, and so forth. The spelling *manitou* represents the French pronunciation and ought not to be adopted in English. Compare *Hand-book of American Indians north of Mexico*, i. 800 sq.

These words comprehend all forms of supernatural being, from the highest to the lowest, with the exception, possibly, of certain diminutive fairies or hobgoblins, and certain giants and anomalous monsters, which appear under various forms, grotesque and horrible, in the Indian fireside legends. There are local *manitous* of streams, rocks, mountains, cataracts, and forests. The conception of these beings betrays, for the most part, a striking poverty of imagination. In nearly every case, when they reveal themselves to mortal sight, they bear the semblance of beasts, reptiles, or birds, in shapes unusual or distorted. There are other *manitous* without local habitation, some good, some evil, countless in number and indefinite in attributes. They fill the world, and control the destinies of men,—that is to say, of Indians: for the primitive Indian holds that the white man lives under a spiritual rule distinct from that which governs his own fate. These beings, also, appear for the most part in the shape of animals. Sometimes, however, they assume human proportions; but more frequently they take the form of stones, which, being broken, are found full of living blood and flesh.

“Each primitive Indian has his guardian *manitou*, to whom he looks for counsel, guidance, and protection. These spiritual allies are gained by the following process. At the age of fourteen or fifteen, the Indian boy blackens his face, retires to some solitary place, and remains for days without food. Superstitious expectancy and the exhaustion of abstinence rarely fail of their results. His sleep is haunted by visions, and the form which first or most often appears is that of his guardian *manitou*,—a beast, a bird, a fish, a serpent, or some other object, animate or inanimate. An eagle or a bear is the vision of a destined warrior; a wolf, of a successful hunter; while a serpent foreshadows the future medicine-man, or, according to others, portends disaster. The young Indian thenceforth wears about his person the object revealed in his dream, or some portion of it,—as a bone, a feather, a snake-skin, or a tuft of hair. This, in the modern language of the forest and prairie, is known as his ‘medicine.’ The Indian yields to it a sort of worship, propitiates it with offerings of tobacco, thanks it in prosperity, and upbraids it in disaster. If his medicine fails

The term is a general word designating supernatural beings or spirits of every sort.

The personal *manitou* or guardian spirit is obtained by fasting and dreaming at puberty; the thing which appears in a dream to the faster is his guardian spirit, and he wears a piece of it about him.

to bring the desired success, he will sometimes discard it and adopt another. The superstition now becomes mere fetich-worship, since the Indian regards the mysterious object which he carries about with him rather as an embodiment than as a representative of a supernatural power."<sup>1</sup>

The unscrupulous and cowardly might avail themselves of this superstition to shirk fighting.

Thus it appears that a man's career in life might be decided by the animal of which he happened to dream at puberty. Mr. Parkman knew an old Dakota chief, who was greatly respected, but had never been to war, though he came of a fighting family. The reason of his pacific life was that at his initiatory fast he had dreamed of an antelope, the peace-spirit of his people.<sup>2</sup> It is obvious that cowardly and unscrupulous youths might take advantage of this superstition to shirk the hardships and dangers of war; they had only to profess to have dreamed of an antelope or other timorous creature, and the thing was done. "Women fast as well as men,—always at the time of transition from childhood to maturity. In the *Narrative* of John Tanner, there is an account of an old woman who had fasted, in her youth, for ten days, and throughout her life placed the firmest faith in the visions which had appeared to her at that time. Among the Northern Algonquins, the practice, down to a recent day, was almost universal."<sup>3</sup>

Women fast as well as men.

Thus *manitoo* was a general Algonkin term for all the spirits of nature. The guardian spirits of individuals were only one class of these *manitoos*. Early Jesuit account of the *manitoo*.

From the preceding account we gather that *manitoo* was a general term including most of the spirits of nature in which the Algonkins believed. Thus the guardian spirit of the individual was only one of a large class of spirits to which the common name of *manitoo* was given. This description of the *manitoo* agrees with that of the early Jesuit missionaries, one of whom writes that the Montagnets, an Algonkin tribe of Canada "give the name of *manitoo* to every nature superior to man, whether good or bad. That is why, when we speak of God, they name him sometimes the Good *Manitoo*, and when we speak of the devil, they call him the Wicked *Manitoo*. All those who have special knowledge of the good or bad *Manitoo* they call *Mantouisiouekehi*. And so far as these men know only the wicked *Manitoo*, that is to say, the

<sup>1</sup> Francis Parkman, *The Jesuits in North America*, Fourth Edition (Boston, 1870), pp. lxix.-lxxi.

<sup>2</sup> Francis Parkman, *op. cit.* p. lxxi. note <sup>1</sup>.

<sup>3</sup> Francis Parkman, *op. cit.* p. lxxi.

devil, we call them sorcerers.”<sup>1</sup> These sorcerers were supposed to be able to kill people by invoking their *manitoo*. They would shut themselves up in their hut, and the spirits would bring them the souls of their enemies in the shape of stones or other objects, which the sorcerer then struck with a sword or an axe, till the blood ran out and reddened the weapon ; whereupon the person whose soul suffered in this fashion fell sick and died.<sup>2</sup> Before going to hunt, a man would retire to a small hut and there consult his *manitoo*, who was expected to tell him where to find game.<sup>3</sup> The spirit or, as the Jesuits called him, the devil also communicated with the Montagnet Indians in dreams. A man would dream, for example, that an elk appeared to him in his sleep and said to him, “Come to me.” On waking from sleep the dreamer would seek that elk till he found it, and having stabbed it to death he would open the carcase and discover in it some hair or a stone ; and this object, whatever it was, he would carefully keep in order to be afterwards lucky in finding and killing many animals. The precious thing, which thus served as a talisman, was hidden in a bag, into which the owner would suffer no one else to look.<sup>4</sup>

The man kills the animal of which he dreamed and keeps a portion of it as a charm in a bag.

The following is the account which the Jesuit Charlevoix, the historian of French America, gives of the guardian spirit ; like that of Parkman it appears to apply to the Hurons and Iroquois as well as to the Algonkins :—

“They address themselves to the evil genii only to pray not to harm them, but they suppose that the rest are committed to the guardianship of men, and that every man has his own. In the Huron tongue they are called *okkis* and in the Algonkin *manitoos*. The Indians have recourse to them in the dangers they incur, in the enterprises they undertake and when they wish to obtain some extraordinary favour. There is nothing, however unreasonable and immoral, which they do not think themselves entitled to ask of them. But they are not under their protection at birth. To merit that favour they must be able to handle the bow and arrow,

Charlevoix's account of the *manitoo*.

<sup>4</sup> *Ibid.* 1637, p. 50 (Canadian reprint).

and many preparations are needed before they can receive it. It is the most important part of their life. The following are the principal circumstances.

The  
*manitoo* or  
guardian  
spirit  
acquired by  
fasting and  
dreaming.

“They begin by blackening the boy’s face, then they make him fast for eight days without giving him anything at all to eat, and it is requisite that his future guardian genius should manifest himself to the boy in dreams during this time. The hollow brain of the poor lad, who has just arrived at puberty, cannot fail to furnish him with dreams, and every morning they are at great pains to make him tell them. Nevertheless the fast often ends before the appointed time, few boys having the strength to prolong it so far; however, that makes no difference; here, as elsewhere, the convenient custom of allowing dispensations is practised. The guardian genius is always the thing of which the boy has oftenest dreamed; and in truth the thing is only a symbol or figure under which the spirit manifests himself. But it has happened to these people as to all who have departed from the primitive religion; they have clung to the figure and lost sight of the reality.

The  
guardian is  
sometimes  
a part of an  
animal, or  
a piece of  
wood, etc.

“However, these symbols signify nothing by themselves, sometimes it is the head of a bird, at others the foot of an animal, or a piece of wood, in short any common or worthless thing. Nevertheless they keep the thing with as much care as the ancients took in the preservation of their Penates. There is indeed nothing in nature, if we can believe the savages, which has not its spirit; but there are spirits of all orders, and all have not the same virtue. When there is anything which they do not understand, they attribute to it a superior genius, and the mode of expressing themselves is to say, ‘It is a spirit.’ Similarly, but in a higher degree, with men: those who have singular talents or perform extraordinary feats are spirits; that is, they have a guardian genius of an order above the common. Some, and especially the jugglers, try to persuade the multitude that they are subject to ecstatic transports. . . . The jugglers never fail to announce that in their pretended ecstasies their genii impart to them great knowledge of the most distant things and of the future; and as chance (supposing you will not allow that the Devil has a hand in it) will sometimes have it that they

devine or guess aright, they gain great credit thereby and are esteemed geniuses of the first order.
