Liverpool College of Psychotherapy.

AND NATURAL THERAPEUTICS.

The Studies Symbolised.

FOR THE EXCLUSIVE USE OF COLLEGE STUDENTS
By GEO. A. SULLIVAN, Ps.D., D.C., F.L.C.P.

The following symbols are arranged in such a manner that the student may find them an aid to studies. Each symbol represents some study or particular part of a study.

In Biology we seek for the origin of life and find that it is the cell. The cell is symbolised by the small circle with a point in the centre. Life is represented by the square and here we find the four stages, Childhood, Youth, Maturity and Old Age. The mind of man is capable of comprehending life and so we look to the Triangle which represents mind in its three aspects—Mind Conscious, Subconscious and Superconscious.

The mind uses the brain for comprehension and the brain is divided into three departments—the Cerebrum, Cerebellum and the Medulla Oblongata.

The mind cognises the outside world through the five senses and one of the symbols known as the Pentagram (five pointed star) symbolises the voluntary will which acts upon the five senses. The voluntary will works through the Conscious Mind and the Cerebro-Spinal Nervous System.

The other Pentagram represents the Involuntary will which works through the subconscious mind and the Sympathetic Nervous System and controls the five physiological systems.

The Hexagram (six-pointed star) symbolises the studies which each student of the College becomes acquainted with and as follows:

Physiology—The Science of the Body, Anatomy which deals with the structure and economy of the body, Chemistry which treats of elementary substances and the manner in which they are combined or separated, Psychotherapy which deals with the cure of the mind by way of psychoses and neuroses, Osteopathy (art of treating diseases by removing structural derangement by means of manipulation) and Chiropractic which concerns itself only with the manipulation of the spine.

The Ellipse with an horizontal line in the centre symbolises the state of the patient—par meaning normal health, below par ill-health and above par abnormal health.

The two charts of the Brain scarce need any explanation for they are dealt with in other text books of the College.

If each student studies these symbols for a little while he will find out how easy it is to visualise them wherever he may be and thus remember what each symbol represents.
The Studies Symbolised.
The surface of the brain as related to the Cranium.
